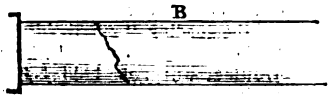
FOUR-WHEELED AND SIX-WHEELED ENGINES.

To the Editor of the Railway Times.

SIR,—Having observed in the *Railway Times* of last Saturday, June 11, an account of an experiment made on the London and Birmingham Railway, with a view to test the question whether, when the axle of a four-wheeled engine was BROKEN, it would be very liable to run off the rails, might I beg of you, through the medium of your valuable paper, to permit me to make a remark on the manner in which that experiment was made?



I admire the spirit which led to such an experiment; but interesting and important as it was, it would have been ten times more so if it had been made a TRUE experiment by employing an axle not *cut straight through*, but one in the really same condition in which it would be if *broken*. Axles in such cases do not (except with *very* rare exception) break square across, as at A, as was purposely done or imitated in the experimental one, by cutting all

1 2

but through in the turning lathe. Hence, the experiment was not a fair one, inasmuch as it did not contain the conditions naturally required of it.

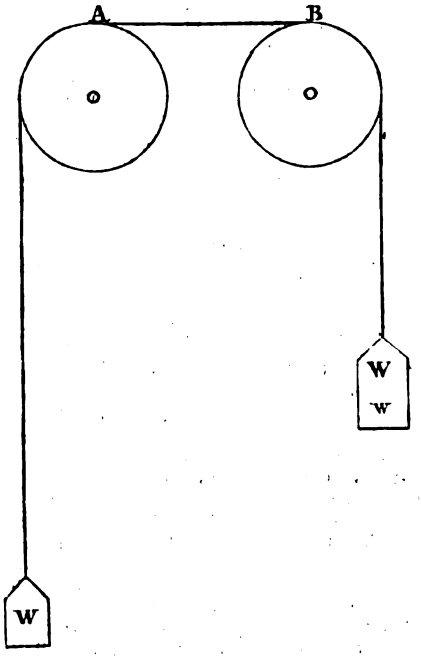
What I would desire to see done is, to repeat the experiment over again with a really *broken* axle—one such as seen in fig. B—and then we shall have, whatever be the result, a *true* result, inasmuch as we try the experiment under the precise condition of the case.

When axle A became broken through, the parts 1 and 2 might continue to revolve, as they certainly would, at slightly different velocities; and yet, from the *cut* being straight through, no tendency would be developed so as to cause the wheels to ride over the rail, and so tend to throw the engine off the rails. This would be from A being cut *straight* through.

In the case of B, however, I fear we should have a much more *natural* result, inasmuch as each part of the axle, tending as it would do to revolve at a slightly different velocity, would develope a *separate* tendency, such as would be indeed most likely to throw the engine or carriage off the rails, by passing into the position as marked in fig. C.

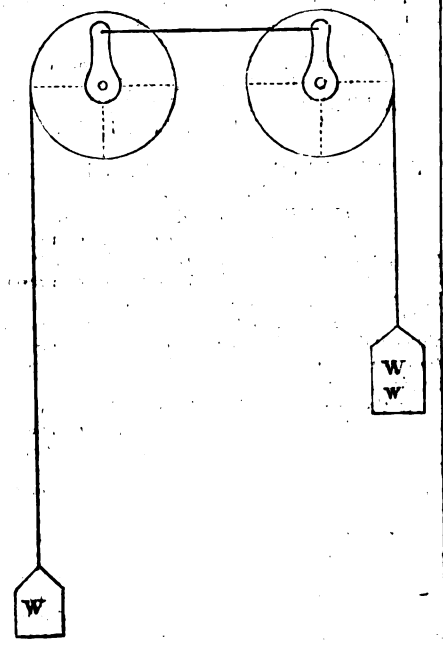
producing a separation beyond the natural gauge of the wheels equal to E. F., as each fractured surface slid over the other. The having tried the experiment related in your paper, exhibited a most creditable spirit of desire to test truth; but I humbly think they missed the object in view by the want of the true natural conditions, and have so left the experiment open to the objections of many

A PRACTICAL MAN.



Manchester, June 21, 1842.

PETERSBURGH AND MOSCOW RAILWAY.—We are assured that the negociations for a loan of 50,000,000 rubles, to be applied to the construction of the projected railway between St. Petersburgh and Moscow, which has been commenced by the Russian Government, will soon have a favourable termination. The house of Stieglitz is at the head of the enterprise on the part of the bankers. The Russian Government is to guarantee at least four per cent. interest, and the liquidation of the shares within five years.—*Dutch Paper.*



AN ATTEMPT TO DEMONSTRATE PRACTICALLY THAT THERE IS NO LOSS OF POWER IN THE CRANK.

To the Editor of the Railway Times.

SIR,—No one for a moment will doubt that if the weight W w be just as much heavier than W as will overcome the friction of the two pullies, the former will descend and raise the latter weight, and thereby prove that in this case there is no loss of power in the machinery beyond the mere friction of the two sheaves.

In order to test the crank by as simple a means as I could devise, instead of the string from A to B, I caused the two pullies to be connected with cranks and side rods exactly like a coupled locomotive engine, and wound a cord round them, so that W w in descending, should raise W; and I

found that the experiment was most satisfactory and successful, proving that through the medium of a crank, a pound would raise a pound (independent of the friction), and consequently there is no *loss* of power, as has so universally but erroneously been supposed.

JOHN DIXON, C.E.

Birmingham, June 26, 1842.

N. B.—To ensure a uniform motion, I had another crank and connecting rod on the opposite side of the pullies, placed at right angles to the one shown on this sketch.

EDINBURGH AND GLASGOW RAILWAY.

To the Editor of the Railway Times.

SIR,—Your correspondent "Scotus" strongly reminds me of the fox and the grapes. No doubt he is a buyer of shares. Be that as it may, I have the pleasure of informing you (upon inquiry) that the Glasgow and Edinburgh Railway can be worked for 33½ per cent. upon the returns. Thus, if the returns are 2,200*l.* per week, amounting yearly to 114,000*l.*, from which deduct 38,000*l.* for working, we have 76,400*l.* remaining to pay 5 per cent. on the capital of 1,500,000*l.*, with 1,000*l.* to dispense with in any way. I trust this statement, which has been obtained from the very best authority, will be sufficient to prove to all shareholders the intrinsic value of the line, and induce them not to be guided by any statements produced by interested parties. The recent fluctuation has been caused by a large number of shares being thrown into the market by two or three executors, which were sold at whatever price was offered. Judging from precedents, it may fairly be assumed that the returns ere long will equal, if not surpass, the most sanguine expectations.

I am, Sir, yours, &c.

VERITAS.

WEST LONDON RAILWAY.

To the Editor of the Railway Times.

SIR,—The shareholders in this hitherto *mismanaged*, and now *not managed at all*, undertaking, are under very great obligations to you for your endeavour to resuscitate it; but they seem to forget "Heaven helps those who help themselves," (the Directors *help themselves* to their salaries, but help in nothing else). What are the "Manchester men" about? They have a very large sum embarked. Do they look on *all* as lost, or whence their apathy? The creditors, with one exception, had agreed to the Directors' scheme to be paid in shares. The bankruptcy of Telfer may have caused some delay, but, to my thinking, the fault is in *ourselves* for continuing the present Board. I am certain, if the creditors, many of whom are shrewed, experienced men, would take the management of the concern, make a new Direction, and infuse some fresh blood, there is every prospect of success; and once completed, there is abundance of traffic to pay well to the new, and something to the old, shareholders.

"Now's the day, and now's the hour;" but if this summer slips away, and nothing done, we are *done*. Why do not the Directors offer to resign, and see if their offer be taken?

I am, Sir, yours, obediently,

A VICTIM.

ACCIDENT ON THE SOUTH-WESTERN RAILWAY.—An accident occurred on the Southampton Railway on Tuesday evening, which was fortunately attended with no other loss of life than that of two cows. In the neighbourhood of Southampton the railway crosses many roads on a level; and as the train, which left Southampton at 8 o'clock that evening, approached one of the roads at the time a few cows were going over it, the engineer used the whistle, which, with the noise of the train, alarmed the cows, and caused them to start down the line of the railway. The engineer perceived the danger, and endeavoured to stop the train, but was not able to effect it before the engine and carriages had knocked down and passed over two of the poor animals. At this moment the train which left London at 5 o'clock passed, but fortunately without any further damage taking place.—*Globe of Thursday.*

THE PROPOSED DEVON AND CORNWALL RAILWAY.

We beg to call attention to the first public movement, since the publication of the Report of the Committee appointed at a county meeting, towards carrying out this all important mean of communication, whereby Cornwall, when it shall be completed, will maintain her connection on an equal footing with the rest of England. We allude to the resolutions of the Falmouth Town Council. To the Bristol and Exeter and the Great Western Railway Companies, the construction of a railway from Exeter to Falmouth, and thence to the Land's End, must be an object of primary concern, as an important feeder to their lines, for there can be no doubt that the passenger and luggage traffic would increase in proportion to the facilities of locomotion. It is estimated, that by the construction of a railway from Falmouth to Exeter, the Great Western would derive an increase of traffic equal to 40,000*l.* per annum, and this too without any extra cost for working, their present steam power being fully equal to this addition. We have seen the estimate by which this is made to appear, and we entertain no doubt of its accuracy.

Such a prospect as this will doubtless obtain favour in the sight of the Great Western Company, and then will come the question, what interest will they take in—what substantial encouragement will they afford to—a railway from Exeter to Falmouth? These preliminaries being ascertained, and taking it for granted that they will be equal to the benefit which the Company may fairly expect to derive from what may be termed an extension of their line, a duty will devolve on Cornishmen of being equally alive to their own interest; that is, it will become their duty to give effect by every means in their power to such arrangements as may be proffered for their concert—presuming that the terms will, of course, be just and equitable, and calculated to benefit all concerned.

The Bristol and Exeter Railway Company fell into difficulties soon after they commenced their undertaking; and from their difficulties they were relieved by leasing their line to the Great Western Company. This arrangement is working profitably for both parties, and in the course of two years the entire line to Exeter will be completed. Should the Great Western Company, acting on this precedent, be disposed to guarantee, for a term, the sum of say 80,000*l.* per annum, so soon as a railway shall have been constructed from Exeter to Falmouth, where is the Cornishman who would object to make an investment, in proportion to his means, for the purpose of ratifying such contract and carrying out this essential mean of connecting the far west with the heart of the empire—of rendering the port of Falmouth the great emporium of the commerce of the world?

The reader may, perhaps, smile at this anticipation, but with a railway through the county we firmly believe Cornwall would soon become the seat of extensive manufactures, and her several ports, especially the port of Falmouth, would be crowded with deeply laden ships. Capacious docks for the reception of ships, and extensive warehouses for storing the products of the world, would quickly arise around the harbour of Falmouth, for no place is more advantageously situated for a grand depot of the products of all the world. Were Falmouth to be made a general storehouse, the mercantile body would soon find it to their interest to save long, tedious, dangerous, and expensive voyages up and down the channels.

With these few hints on this vital question—far more important than all the mines in the county—we leave our readers for the present to ruminate at their leisure.—*Falmouth Packet.*

A Railway Company has been formed chiefly by the King of Naples and the Grand Duke of Tuscany, for a railway between Naples and Florence, by Cevita Vecchia. The Company will require a million's sterling worth of English rails.—*Ddily Papers.*

KYANISING OF RAILWAY SLEEPERS.

INSTITUTION OF CIVIL ENGINEERS.

"*Description of the Tanks for Kyanising the Timber for the Permanent Way of the Hull and Selby Railway:*" By JOHN TIMPERLEY.

Upon the recommendation of Messrs. Walker and Burges, the engineers, it was determined that the sleepers of this railway should be Kyanised in close vessels, using exhaustion and pressure, instead of in the open tanks usually employed. The present communication, which includes a description of the Kyanising vessels and an account of the various circumstances connected with the operation, commences by describing the apparatus, as shown by the accompanying drawing, to consist of two tanks, a reservoir, two force pumps, and a double air pump. The tanks are cylindrical, with flat ends, and are made of wrought iron plates, nearly half an inch in thickness; they are 70 feet in length, and 6 feet in diameter; at each extremity is a cast iron door, flat on the outside and concave on the inner side, provided with balance weights for raising and lowering it. Each end is strengthened by five parallel cast iron girders, whose extremities are held by wrought iron straps, riveted on to the circumference of the tanks. Notwithstanding the great strength of these girders, several were broken by the pressure applied during the process. The vessels are filled with felt, upon which is laid a covering of close jointed fir battens, fastened with copper rivets; this precaution is necessary to prevent the mutual deterioration which would arise from the contact of the iron and corrosive sublimate. There was originally only one brass force pump, 2 inches diameter, and 6 inches stroke; this being found insufficient, another was added of 4 inches diameter, and henceforward a pressure of 100 lbs. per square inch was easily obtained. The air pump is 10 inches diameter, and 15 inches stroke. Its construction is of the ordinary kind. The author gives, in an appendix to the paper, a minute description of the various parts of the apparatus, with the details of their dimensions and weight. The process is simple and rapid; the corrosive sublimate is first mixed with warm water in a trough, in the proportion of 1 lb. of the former to 2 gallons of the latter; the clear solution is then poured off into the reservoir, where water is added until it is diluted to the proper point, which may be ascertained by a hydrometer; a more perfect test is the action of the solution upon silver, which it turns brown at the requisite degree of saturation. The operations of exhaustion and pressure employ eight men for five hours, the whole process occupying about seven hours, during which time from 17 to 20 loads are Kyanised in each tank. It is desirable that the timber should remain stacked for two or three weeks after Kyanising before it is used. It was found that about ¾lb. of corrosive sublimate sufficed to prepare one load (50 cubic feet) of timber. About 337,000 cubic feet of timber were Kyanised, the average expense of which, including part of the first cost of the tanks, was about 5d. per cube foot. The timber was tested after the process, and it was found that the solution had penetrated to the heart of the logs. The paper contains some interesting tables exhibiting the quantity of solution taken up by different kinds of wood with and without exhaustion; from these it appears that the saturation per cube foot in the latter case did not exceed 2.25lbs., with specimens of Dantzic timber, whereas it ranged between 12.24lbs. and 15.25lbs. with pieces of home-grown wood. The author observes that this striking difference may be partly due to the greater compactness of the foreign timber. Appended to this communication is a correspondence between Mr. J. G. Lynde and Mr. James Simpson relative to the best tests of the presence of corrosive sublimate, accompanied by letters from Mr. Colthurst and Dr. Reid; the former of whom describes the process of Kyanising adopted on the Great Western Railway, and the latter suggests the three following tests:—1st, Dilute hydro-sulphuret of ammonia; 2nd, A strong solution of potassa, dilute nitric acid and proto-muriate of tin, also gold-leaf with this solution; and 3rd, Iodide of potassium. Directions are given for the application of these tests. Mr. Lynde also mentions the use of a solution of nitric acid, and by the application of hydriodate of potash detecting the presence of mercury in a specimen taken from the heart of a log of timber 10 inches by 5 inches, and 9 feet long. He also details appearances of the destructive action of the corrosive sublimate upon the iron-work with which it came into contact, which would be prejudicial to the use of iron bolts in Kyanised sleepers. A drawing explanatory of the whole apparatus accompanied the communication.

In answer to questions relative to the process of exhausting the air from the receiver in which the bank-note paper was wetted at the Banks of England and Ireland previously to being printed, Mr. OLDHAM stated, that as an experiment a packet of 1,000 sheets of paper had remained a whole day in water without being wetted through; whereas by exhausting the air from the vessel containing them to a partial vacuum of 22 inches of the barometer, and admitting water, they had been perfectly saturated in five minutes; the edges of the paper, in simple immersion, would rot away before the mass was saturated; by the exhausting process 5,000 sheets of bank-note paper would absorb 16 lbs. of water.

Mr. SIMPSON conceived that exhaustion would facilitate the process of Kyanising; but he believed that if time was allowed pressure would accomplish the same end as perfectly; for he had observed that pieces of wood, which had remained four or five days in a water-main under pressure, had become perfectly saturated. Captain Scoresby, in his account of the whale-fishery, remarks, that when a whale carries a boat down it rarely rises again, most probably because the fish plunges to such a depth that the extreme pressure water-logs the boat. Instances had been known of the specific gravity of the planking being doubled by being carried down.

Mr. NEWTON remarked, that immersion of timber in close tanks had been practised by Mr. Langton many years since for bending timber; a boiling fluid was used in the tanks, and the wood was subjected to heat for a considerable period. He had understood that Mr. Newmarch, of Cheltenham, was the first person who used corrosive sublimate for preserving timber, and that he had prepared and employed considerable quantities of wood. Mr. Kyan subsequently revived the system. In Mr. Oldham's process of wetting paper, pressure was not requisite on account of its open texture. About the year 1819, Mr. Oldham had tried the same process, with perfect success, for preserving meat. Exhaustion had been tried by Mr. Harris for cleansing wool. The cops of wool were put into an exhausted receiver, a solution of an alkali was then admitted; after remaining a short time in the liquid, a sufficient quantity of diluted acid was added to neutralise the alkali, and the wool was washed out in clean water. The process succeeded perfectly, but was too expensive.

Mr. PALMER had employed the Kyanising process for large pieces of timber, for the ribs of lock gates, but had no means of ascertaining the depth to which the mercury had penetrated. The use of corrosive sublimate was first suggested by Sir H. Davy in his lectures at the Royal Institution, as a means of destroying the vegetating process in timber by the combination of the chlorine in the former with the albumen of the latter. Mr. Palmer much doubted whether the means used for exhausting the capillary tubes effected the object, unless the timber was in a dry state, and he considered it equally doubtful whether the solution could be forced to any considerable depth by compression, especially if any moisture actually filled the capillary tubes. The application of pressure in the process of salting meat suggested by Mr. Perkins many years ago was a complete failure.

Mr. SIMPSON observed, that in the experiments of Messrs. Donkin and Bramah pressure alone had been used, and it could easily be understood that owing to the cellular formation of meat, the pressure, instead of forcing the salt through it, caused

Digitized by Google

the substance to collapse, and the brine was prevented from penetrating.

Mr. BRAITHWAITE explained, that in Payne and Elmore's process, although pressure had been found indispensable, the meat was more perfectly prepared when exhaustion was also employed, therefore both were now combined.

Mr. MAY reverted to the subject of Kyanising timber; he believed that exhausting the air from the tanks previously to the admission of the solution was a loss of time, the fluid should be admitted first, or at least while the exhaustion was proceeding; labour and time would thus be saved, and the air would be more completely expelled from the capillary tubes before pressure was applied. It was essential that the timber should be as far as possible deprived of its sap as well as dried; as either sap or moisture appeared to prevent the proper action of the corrosive sublimate.

Mr. CUBITT regretted that experiments had not been made on the same kinds of wood both with and without exhaustion. The experiments on small pieces of foreign (Memel and Dantzic) timber with 80 lbs. to 100 lb. pressure without exhaustion showed an increase of weight of from 1½ to 2 oz. in pieces of about 1-40th part the size of a sleeper, and that result agreed very nearly with his practice with sleepers of Memel and Dantzic timber, when Kyanised without exhaustion under a pressure of 80 lbs. to the inch; sleepers of 2½ to 2¾ cube feet, gaining from 3 lbs. to 5 lbs. in weight by the process. No result had been given of experiments with sleepers of foreign fir timber in which both exhaustion and pressure had been applied, but it appeared that the Scotch fir sleepers, weighing 100 lbs. when Kyanised under exhaustion and a pressure of 100 lbs. to the inch, gained 33 per cent. in weight, which was equal to 3 gallons of water being forced into less than 3 cube feet of timber; he thought that this difference could not be all due to exhaustion, but that it must depend greatly upon the quality of the wood, because under a pressure of 100 lbs. to the inch, the air contained in a tubular substance (such as fir timber) would all be compressed into about 1-8th of its natural bulk without previous exhaustion, so that the difference between 5 lbs. and 30 lbs. forced into a sleeper, could not, he thought, be all due to exhaustion, but must depend upon other circumstances not explained in this paper.

(To be continued.)

RAILWAY ADJUDICATIONS.

IN RE THE GREAT WESTERN RAILWAY.

At the Bristol police office on Tuesday week, the case of rating the Great Western Railway Company, in the parish of St. Philip and Jacob (Bristol), was again brought forward, when it was stated, that in consequence of a recent decision in the superior courts, an agreement had been entered into, so as to confirm the rates, and to take the adjudication from the magistrates, with 40s. costs. Mr. Knapp, on the part of the Railway Company, stated, that that agreement did not bind them to adopt any particular course. The magistrates observed, that the business was settled so far as their jurisdiction was concerned, and it was perfectly competent for the Company to adopt any measures they thought proper. The amount claimed by the parish as due is 355*l.*

MORRIS *v.* THE DIRECTORS OF THE PRESTON AND WYRE RAILWAY COMPANY.

Court of Queen's Bench (Yesterday.)—This was an action for work and labour. The plaintiff had entered into an agreement with the defendants to construct a part of their line of railway for a sum certain; but after this agreement was made, the Directors deemed a deviation from the original line necessary, at least as to a portion of the railway. This change took place during the progress of the work, and the plaintiff, who executed the works newly determined on, now sought to recover a sum of 7,132*l.* for it. The defendants set up two defences; first, that in reality there had been no deviation; and, secondly, that whatever change had taken place was a change for the advantage of the plaintiff, the contractor. It was further contended that by the settled mode of proceeding in these cases of demands against the defendants, no person could maintain an action for work done without first procuring a certificate from Mr. Stevenson, the Engineer of the Company. It was also objected that the contract here had expressly provided for an alteration, and that the action in respect of that alteration should therefore be brought on the contract itself. A verdict for the sum of 632*l.* was taken for the plaintiff; but, on the grounds of defence already stated, the defendants had a verdict for the residue of the demand. A rule had since been obtained to set aside this verdict, and have a new trial, or to submit to an arbitrator the question of the further amount claimed as due to the plaintiff.

Mr. W. H. WATSON showed cause against the rule, which was supported by Mr. Knowles and Mr. Compton.

The Court thought it quite clear that there had been an alteration from the original contract, and that, as such alteration had been expressly provided for by the contract, the plaintiff ought to have declared on the contract itself, and could not maintain the action for work and labour generally. The rule, therefore, for setting aside the verdict must be discharged.

ACCIDENT ON THE MIDLAND COUNTIES' RAILWAY.—An accident, which, we are happy to say, terminated without any serious consequences, occurred on Saturday afternoon last, to the 10 minutes past 4 o'clock train from Leicester to Derby, when about a quarter of a mile past Syston. It appears, from what little information we have been able to obtain, that a cow in an adjoining field to the railway, on the approach of the train, became restive, and, leaping over the rails, got on the line, along which it ran before the engine for several yards. Eventually, it was caught by the engine, knocked down, and dragged for the distance of 45 yards, when the engine ran over it, and, by the concussion, seven of the carriages were thrown off the rails, and many of them shattered. One of the guards was precipitated from the top, and a female was hurt by the smashing in of the carriage, but neither of them sustained any material injury. These were the only two casualties connected with the catastrophe. The blood and entrails of the poor cow were traceable the distance above stated. The train, after a delay of an hour or two, proceeded on its way to Derby. —*Derby Reporter.*

GREAT NORTH OF ENGLAND RAILWAY—EASINGWOLD BRANCH.—The difficulties which have hitherto prevented the formation of a branch line from the Great North of England Railway at Alne Station to the town of Easingwold are now removed, and there is every probability of the object being speedily carried into effect. Private arrangements have been entered into with the several landowners for the purchase of such lands as may be required; and the Committee and shareholders have every prospect of bringing it to a speedy and successful result. The line extends over a surface of ground nearly level, and will be about two miles and a quarter in length. The estimated cost is 8,000*l.*, to be divided into 800 shares of 10*l.* each. The accomplishment of this important undertaking will commence a new era in the history of our beautiful little town, and it will be of considerable advantage to the surrounding neighbourhood, particularly to those towns on the north and east sides of the place. It will extend to Helmsley, Kirbymoorside, Hovingham, and numerous other remote places, all of which will be within a convenient distance for the supply of north coal.—*Yorkshireman.*

EXCURSION TO MATLOCK.—The great pleasure trip from Leicester took place yesterday, but we must reserve details for next week's paper. A special train will leave Derby for Matlock on Tuesday next.—*Derby Reporter*, June 23.

THE MANCHESTER AND LEEDS EXTENSION LINE.—We understand that the workmen in the employ of the Manchester and Leeds Railway Company have already broken ground in York-street, Cheetham, in preparation for excavating the ground for the line, which is to pass at a level of 16 feet beneath the Cheetham-hill-road. A number of the cottage tenants in the property taken by the Company along the line from Collyhurst-lane to Redbank, and in the neighbourhoods of St. George's-road and Scotland-bridge, have received notice to quit; many of the weekly tenants have already left, and the cottages have been pulled down; and with the others the Company are making arrangements to quit as early as possible. All is bustle in the neighbourhood, and the preparations for commencing the works are being made with all expedition.—*Manchester Guardian.*

WILSONTOWN AND COLTNESS RAILWAY.—This new line, which is a continuation of the Wilsontown and Coltness Railway for about ten miles, is now proceeding vigorously, and the two contractors, Messrs. Barr and Ward, have many hundreds of labourers busily engaged in its formation. It is to be completed in 18 months, and will open up a most valuable tract of mineral country between the Clyde coal fields in the west, and the slatey band of ironstone and the Leven seat limestone in the east. From the recent discovery of this most valuable band of ironstone (accompanied by nodules of the richest quality), in the lands of Badallan and Blackhall, there can be little doubt that almost the whole tract along the line is more or less enriched by it. *Glasgow Courier*, June 18.

NOVEL AND IMPORTANT IMPROVEMENT IN RAILWAY WHEELS.—Amongst the many improvements in this department of national wealth, we are informed of one recently patented by Mr. Thomas Banks, Engineer, of Manchester, which bids fair to enhance the safety of the travelling public, and also to effect a considerable economy in the expenditure of Railway Companies. This invention consists in a simple and effectual method of manufacturing or renewing the working surface of that most important article in railway transit, the tyre of the running or travelling wheel, and is accomplished by the application of steel to the peripheries of either old or new wheels, in such a manner that increased durability is insured at an inconsiderable cost in the first production, and a permanent economy in the ultimate result, when contrasted with the best wheels now generally employed. The experimental performance of 6,000 miles of such improved construction of wheels, have satisfied the Directors of an extensive railway in the north of the vast importance of the invention, as no visible wear has been found upon the surface of the tyres, although under the severe test of a break-carriage.—*From a Correspondent.*

TENDERS FOR LOANS.—THE GLASGOW, PAISLEY, KILMARNOCK, AND AYR RAILWAY COMPANY being authorised by an Act, 5 Vic., cap 29, Sess. 1842, to raise an additional Sum on Mortgage, are now prepared to receive Tenders for Loans, in Sums not under £500, and for periods of two, three, or four years. The Tenders must state the rate of Interest expected—not exceeding 4½ per cent. per annum.

Applications are requested to be sent to the Secretary, at the Company's Office in Glasgow, who will give all necessary information.

By Order,
J. FAIRFULL SMITH, Secretary.

Bridge-street, Glasgow, 8th June, 1842.

UNDER THE SUPERINTENDENCE OF THE SOCIETY FOR THE DIFFUSION OF USEFUL KNOWLEDGE.

To be continued every alternate month, the Second Number of

A SERIES OF DIAGRAMS, Illustrative of the Principles of Mechanical and Natural Philosophy, and their Practical Application

Drawn on Stone and Printed in Colours.

*** Each number will contain Three Plates (Imperial by 19), and the Series will commence with Mechanics, which will be comprised in Seven Numbers. No. 1.—The Lever. No. 2.—Wheel and Axle.

EVESHAM, BIRMINGHAM, AND GLOUCESTER JUNCTION RAILWAY.—Applications for Shares in the above undertaking will continue to be received till the 15th of July next, by the respective Solicitors, Messrs. Roy, Blunt, Johnstone, and Walton, 42, Lothbury, City; Messrs. Workman, Bengeworth, Evesham, Worcestershire, and by the Secretary.

By Order,
HENRY STEPHENSON, Secretary.

42, Lothbury, City, June 24, 1842.

CROYDON RAILWAY.—The Directors regret that the great diminution of the number of Passengers since the advance in the fares on the Croydon line, occasioned by the Greenwich Company increasing their Toll, will render it necessary for them to discontinue some of their Trains. The following Trains only will run on and after the 1st July next.

DOWN TRAINS.
From Tooley-street.
Morning—5 minutes after 9 and 11.
Afternoon—20 minutes after 2, 4, 5, 6, and 8.

UP TRAINS.
From Croydon.
Morning—8 minutes after 8, 9, 10, and 12.
Afternoon—20 minutes after 3, 5, 7, and 9.

SUNDAY TRAINS.

DOWN TRAINS.
From Tooley-street.
Morning—5 minutes after 9 and 10.
Afternoon—20 minutes after 2, 3, 4, 5, 6, 7, 8, and 9.

UP TRAINS.
From Croydon.
Morning—5 minutes after 9 and 10.
Afternoon—20 minutes after 2, 3, 4, 5, 6, 7, 8, and 9.

R. S. YOUNG, Secretary.
295, Tooley-street, June 24, 1842.

NEWCASTLE AND DARLINGTON JUNCTION RAILWAY.—TENDERS FOR IRON RAILS AND CHAIRS.—The Directors are prepared to receive Tenders for the supply of 2000 Tons of Iron Rails, each Rail to be 15 feet in length and weighing 65 lbs. per yard. The quality of the Iron in the rail to be equal to No. 3. The Tender to state in detail the process of manufacture which it is proposed to follow to produce the quality. No Tender will be attended to without this statement, and the Company will stipulate with the party whose Tender may be accepted, that the Company may at any time send an Inspector to the works to satisfy themselves that the specified process of manufacture is fully adopted. The delivery to be distributed over 12 months.

A Tender also will be received for the supply of 650 Tons of Iron Chairs.

The Chairs to be cast with a mixture composed of equal proportions of Scotch, Staffordshire, and Welsh pig iron, from the cupola or air furnace. The joint chairs to weigh 28 lbs.; and the intermediate chair, 18 lbs.

Tenders to be delivered on or before the 11th day of July, 1842, at the Company's Office, in York.

The section of the Rails to be in accordance with a drawing or template, which may be seen at 35½, Great George-street, Westminster; or at the Company's Office, at York, where also models of the Rails and Chairs may be seen, and further explanation obtained.

GEO. HUDSON, Chairman.
THOS. FAULCONER, Secretary.
York, 23d June, 1842.

UNITED KINGDOM LIFE ASSURANCE COMPANY, 8, Waterloo-place, Pall Mall, London, Established by Act of Parliament in 1834.

DIVISION OF PROFITS AMONG THE ASSURED.

This Company, established by Act of Parliament, affords the most perfect security in an ample paid-up Capital, and in the great success which has attended it since its commencement in 1834.

In 1841 the Company declared an addition to the Shareholders of one-half of their Stock, and also added £2 per cent. per annum, from the date of the policies, to those parties who had insured with profits.

The Premiums nevertheless are on the most moderate scale, and only a moiety need be paid for the first five years when the Insurance is for Life.

The amount of bonus added to policies since the commencement of the Company in March 1834, to the 31st December 1840, is as follows:

Sum Assured.	Time Assured.	Sum added to Policy.
£1000	6 Years 10 Months	£136 13s. 4d.
1000	4 Years	80 0 0
1000	1 Year	20 0 0

Every information will be afforded on application to the Resident Directors, Edward Boyd, Esq., and E. Lennox Boyd, Esq., of No. 8, Waterloo-place, Pall Mall, London.

Frederick Hale Thomson, Esq., Surgeon, 48, Bernerstreet, attends at the Office daily, about half-past Two o'Clock.

TO BE DISPOSED OF, a STEAM-ENGINE, made by the Horseley Company, in perfect working order; 20-horse power, horizontal motion; erected, regardless of expense, at the Bowling Glass Theatre, the property now being converted to a different purpose.

Apply to W. P. Price, Esq., Gloucester.

BRISTOL AND GLOUCESTER RAILWAY.—The Directors of this undertaking will receive Proposals for LOANS of Money on Debentures, to be issued under the Provisions of the Acts of Parliament, in the month of October next, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest, at the rate of £5 per cent. per annum, payable half-yearly, at the Banks of Messrs. Miles, Harford, and Co., Corn-street, Bristol; and Messrs. Barnetts, Hoare, and Co., Lombard-street, London.

For monies immediately advanced the security of Loan Notes, under the Seal of the Company, will be given, which may be exchanged for Debentures in the said month of October.

Tenders expressing the Sums and terms of years, to be addressed to the undersigned, at the Company's Office, Exchange Buildings, Bristol.

By order of the Committee of Management,
ROBERT FLETCHER, Secretary.

Office, Exchange Buildings, Bristol, May 30, 1842.

THE SHEFFIELD AND ROTHERHAM RAILWAY COMPANY are wishful to borrow a sum of Money on their Mortgage Debentures, at 4½ per cent. interest, for a term of five or seven years, at the option of the lender, and in amounts of not less than 800*l*.

The Interest on the Company's Mortgage Debentures falls due on the 30th of June and 31st December, and is always paid punctually to the day.

The Money is wanted in order to pay off part of their original loan upon certain of the existing Mortgages now about falling due, and which the Company decline to renew at 5 per cent.

Application to be made personally or by letter to the Company's Secretary, Mr. Thomas Pearson, at Sheffield, or to us,

THOMAS BADGER, Rotherham,
HENRY VICKERS, Sheffield, } Law Clerks.

Sheffield, June 17, 1842.

N.B. To persons at a distance it may be necessary to state that this Railway has been in operation nearly four years, and has paid its proprietors very handsome dividends after payment of all interest on loans, and expenses.

GREAT WESTERN RAILWAY.—OPENING TO TAUNTON, on FRIDAY, the 1st JULY.

In consequence of the intended extension of the Bristol and Exeter Railway beyond Bridgewater, new Train-bills have been prepared, and may now be had at any of the Company's stations.

All the present down trains will proceed beyond Bridgewater to Taunton (about 30 miles from Exeter).

A train will also leave Bristol at Four o'Clock for Taunton, calling at every station.

From Taunton up trains will start daily (excepting Sundays) at half-past 7,* a. m., quarter-past 9, quarter-past 11, half-past 12, p. m., half-past 2,* quarter-past 4, half-past 5,* and night mail at a quarter-past 11.

The trains marked * only run to Bristol and Bath.

There will be extra trains from Paddington to Bristol for the Agricultural Meeting on the 13th and morning of the 14th July.

Early applications should be made at either of the Company's principal stations for the conveyance of live stock or implements for the show at Bristol, in order to prevent disappointment.

By Order of the Directors,
CHARLES A. SAUNDERS,
THOMAS OSLER, } Secretaries.

Offices, London and Bristol, June 22, 1842.

NOTICE TO THE CONSUMERS OF

MESSRS. JOS. SYKES & SONS, the Sole Contractors for, and only Importers of these descriptions of STEEL IRON, being determined to adopt every practicable expedient to protect the fair Trader in, and Consumer of these several Marks, HEREBY GIVE THIS PUBLIC NOTICE, that from the 31st March, 1835, no Iron of the above Marks has been or will be delivered by them without the additional Mark of | SYKES | being impressed thereon; such last-mentioned Mark having been adopted by Messrs. Jos. Sykes and Sons for the further protection of themselves and the Public. And all Persons who shall impress the Marks or any one of the Marks

upon any Bar Iron, either with or without the additional Mark | SYKES | will be proceeded against.

Hull, June, 1842.

MANUFACTURING PREMISES on a large scale WANTED in London or the immediate neighbourhood, consisting of large and wide lofts with ground floor. Parties having such to dispose of to address full particulars, with lowest rent that will be taken, to A. B., *Railway Times* Office, Fleet-street, post-paid.

SHEFFIELD, ASHTON-UNDER-LYNE, AND MANCHESTER RAILWAY.—TENDERS FOR LOANS.—The Directors are prepared to grant Mortgages, under the powers of their Act of Parliament, for Loans of Money, in sums of not less than £200 each, and for periods of three, five, or seven years, at the option of the lender. Interest at the rate of 5 per cent. per annum will be paid half-yearly, for which interest warrants will be given for the period agreed on, payable at the Company's bankers in London, Manchester, or Sheffield.

Further information may be obtained at the Company's Offices in Manchester or Sheffield; at the Office of T. J. Parker, Esq., Sheffield; Messrs. Bagshaw and Stephenson, Manchester; or Messrs. Johnson, Son, and Weatherall, Temple, London.

By Order,
JOHN PLATFORD, Secretary.

Manchester, April 27, 1842.

THE SURVEYOR, ENGINEER, AND ARCHITECT.—No. 30, price 1s. 6d., with Three 4to. Plates, will be published on the 30th instant, containing a Plan for Improving the River Mondego; Papers on Agricultural Engineering; Remarks on Italian Architecture; Parliamentary Instructions for Railways; Specification of a Pier at Kincardine, by the late J. Rennie; on Dry-Rot in Timber; Specification of Locomotive Engines; the Timber Trade and its connection with Building; on the New Scaling Instruments for Surveyors; Church Architecture in England; Shenley Chapel of Ease; Reviews of Scientific Books (*Illustrated with Wood-Cuts*); Lectures by Professor Cowper and by Mr. J. Smith, on Projection; with the usual mass of miscellaneous intelligence.

Weale, 59, High Holborn.

BIRMINGHAM AND DERBY RAILWAY.—At at Meeting of Shareholders of the Birmingham and Derby Railway Company, held in George Yard, London, on the 21st June, 1842, present—

WILLIAM CRAWSHAY, Esq., in the Chair,

Mr. Prance,	Mr. Warmington,
Mr. Piffard,	Mr. Barber,
Mr. Rougemont,	Mr. Geo. Crawshay,
Mr. Shuter,	Mr. Cash,
Colonel Blane,	Mr. Phillips,
Mr. De Zoete,	Mr. Hoghton,
Mr. Cazenove,	Mr. Mark,
Mr. Routh,	Mr. Marten,
Mr. Jackson,	Mr. Hastie, M.P.

It was Resolved unanimously, upon the motion of Mr. Marten, seconded by Mr. De Zoete—

"That a Committee be appointed to correspond with the Directors, and obtain such information as may be deemed necessary as to the present state and management of the Birmingham and Derby Railway, and that the said Committee consist of the Chairman of this meeting, together with

"Sir Oswald Mosley, Bart.	Mr. Routh,
Mr. Marten,	Mr. Warmington, and
Colonel Blane,	Mr. Shuter."
Mr. Hastie, M.P.	

WILLIAM CRAWSHAY, Chairman.

Resolved unanimously—"That the thanks of this meeting be given to the Chairman, for his able and impartial conduct in the Chair."

GLASGOW, PAISLEY, AND GREENOCK RAILWAY COMPANY.—NOTICE is hereby given, That the Half-yearly General Meeting of Proprietors will be held pursuant to Act of Parliament, on Friday, the 1st day of July, 1842, in the Sheriff Court Hall, Greenock.

The Chair will be taken at Twelve o'Clock.

ROBERT D. KER, Chairman.

The Transfer Books will be Closed on the 27th instant, and will remain so until after the meeting.

WYNDHAM HARDING, Secretary.

Railway Office, Greenock, June 16, 1842.

SCOTTISH UNION FIRE AND LIFE INSURANCE COMPANY; instituted 1824, and incorporated by Royal Charter.

LONDON BOARD.

Charles Balfour, Esq.	Robert Murray, Esq.
J. Deans Campbell, Esq.	R. Oliverson, Esq.
J. Gordon Duff, Esq.	Divie Robertson, Esq.
Robt. Gillespie, Esq.	H. F. Sandeman, Esq.
James Gooden, Esq.	John Small, Esq.
John Kingston, Esq.	Daniel Stoddart, Esq.

SUTHERLAND MACKENZIE, Esq., Manager.

London Offices, 449, West Strand, and 78, King William Street, City.

LIFE DEPARTMENT.

The additions made to the Life Policies granted by this Corporation for the last seven years vary from 41 to 65 per cent. on the premiums paid, and average 54 per cent. on the sums assured—a result, it is believed, far more favourable to the assured than any other Company has hitherto accomplished, when the low rates of premium charged by this Corporation are taken into consideration.

The next division of life profits will take place in December, 1846, being an interval of five years, and persons entering before the 1st of August next will enjoy one year's additional rating, and rank at next division of profits for five complete years.

Forms of proposals may be had at the offices, 449, West Strand, and 78, King William street, City.

F. G. SMITH, Secretary.

LONDON AND DOVER (SOUTH-EASTERN) RAILWAY.—The Public are respectfully informed that the TRAINS now RUN for the conveyance of passengers, parcels, horses, and carriages from the London Bridge Station as under:—

To Tunbridge, stopping at New Cross, Croydon, Reigate, Godstone, Edenbridge, and Penshurst—9 30, a.m.; 11 30 a.m.; 2 30 p.m.; and 5 30 p.m. SUNDAYS—8 30 a.m.; 6 30 p.m.

From Tunbridge, stopping at Penshurst, Edenbridge, Godstone, Reigate, Croydon, and New Cross—7 45 a.m.; 10 30 a.m.; 8 p.m.; and 6 p.m. SUNDAYS—8 30 a.m.; 6 30 p.m.

Horses and carriages can be embarked and disembarked at the New Cross as well as at the London Bridge station, at each of which post-horses may be had to convey carriages to or from any part of London, at a charge of 10s 6d., including post-boy. They will be in readiness also at the Tunbridge station on the arrival of every train to convey carriages to Tunbridge Wells, at 10s. 6d. each, including the driver, and to all other places at 1s. 6d. per mile.

Omnibuses ply for every train between the London Bridge station and the following coach offices, viz.:—Griffin's Green Man, Oxford-street; the Universal office, Piccadilly; the Cross Keys, Wood-street; the Swan with Two Necks, Lad-lane; and at any of Messrs. Horne and Chaplin's offices, at which, and at the London Bridge station, parcels may be booked for all places in connexion with the railway.

Full particulars and time-tables may be obtained at the London Bridge Station, and at the Offices of the Company, 10, Coleman-street.

By order,
JOHN WHITEHEAD, Secretary.

10, Coleman-street, June 1, 1842.

BOLTON AND PRESTON RAILWAY COMPANY—TENDERS FOR LOANS ON MORTGAGE.—The Directors of this Company are prepared under the powers of their Acts of Parliament, to receive TENDERS for the LOAN OF MONEY, in sums of not less than £200, and for terms of 3, 5, 7, or 10 years, and to GRANT MORTGAGES of the said undertaking, and of the Rates, Tolls, or monies arising therefrom, as securities for such Loans, bearing interest at the rate of £5 per cent. per annum.

INTEREST WARRANTS, for the whole term for which the loan shall be made, will be delivered to the Lenders along with the Mortgages, and be made payable half-yearly, at the Company's Bankers in London, or Bolton, as may be preferred.

The Tenders are to express the sums, and the term of years for which the same are proposed to be lent, and to be addressed to the Secretary, at the Company's Office, Bolton.

By order of the Board of Directors,
PETER SINCLAIR, Secretary.

Bolton, 24th May, 1842.

TRAVELLING BY RAILWAY FROM LONDON TO THE NORTH.—JUNE 1st, 1842.

Trains leave the Euston-square Station, and arrive as under—

Spread Eagle, Regent Circus, and
Griffin's Green Man and Still, Oxford-street.

HORNE & CHAPLIN, Proprietors.

TO ARCHITECTS.—SEYSSEL ASPHALTE COMPANY, CLARIDGE'S PATENT, established March, 1838, for working the Mineral Asphalte Rock of Pyrimont Seyssel.

This valuable material has been extensively used since its first introduction into this country for the following purposes:—Foot pavements, public and other; in the carriage approach to mansions, garden walks, and terraces; the flooring of kitchens and other basement office; salso of coach-houses and stables, dog kennels, barn floors, cow-houses, piggeries, poultry-houses, tun-rooms and maltings; for roofing, covering of railway and other arches, the lining of under-ground cellars near rivers to prevent the ingress of the tides; also in covering the ground line of walls, to prevent damp rising, thereby rendering the basement stories in the worst situations both dry and warm. It is an excellent cement, as applied to docks, breakwaters, or walls built for resistance to the encroachments of the sea, lining of tanks, fish-ponds, and other hydraulic purposes.

Several extensive works have been executed by this Company for the Board of Ordnance and her Majesty's Commissioners of Woods and Forests. The Asphalte has been used at the Thames Tunnel, also at the London and Greenwich Railway, where it has been laid over a surface of 400,000 superficial feet, to prevent the percolation of water; at the Great Western, Birmingham, Midland Counties', South-Western Brighton, and other railways; at the South Metropolitan, Highgate, and Nunhead Cemeteries.

The Asphalte of Seyssel is perfectly free from smell, and is not acted upon by the change of temperature.

Books of testimonials, with scale of prices, can at all times be had at the Company's depot.

J. FARRELL, Secretary.

Stangate, Surrey side of Westminster Bridge, April, 1842.

ARCHITECTS, BUILDERS, AND OTHERS.

For the purpose of securing the use of the genuine article, architects and others are particularly requested to insert in their specifications "The Seyssel Asphalte, Claridge's Patent," and not merely "asphalte" or "bitumen," as in many cases where these terms have been used, gas tar, and other worthless and offensive compositions have been introduced.

In the Press,

AN EXPERIMENTAL INQUIRY INTO the Advantages attending the Use of CYLINDRICAL WHEELS ON RAILWAYS, with an Explanation of the Theory of adapting Curves for those Wheels, and of its application to practice; and an Account of Experiments, showing the Easy Draught and the Safety of Carriages with Cylindrical Wheels: By W. J. MACQUORN RANKINE, Civil Engineer.

Edinburgh: R. Grant and Son, 82, Princes-street. London: Longmans. Dublin: Curry and Co.

NEW EDITIONS of the following useful Works are just published at the *Railway Times* Office, 122, Fleet-street:

I.

TUCK'S MAP OF THE RAILWAYS for 1842 throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

II.

ROBINSON'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Map, and an official List of Coach and Cab Fares to all the Metropolitan Railways, Corrected to June. Price 1s., in cloth.

III.

ROBINSON'S RAILWAY DIRECTORY FOR 1842, containing the Names of the Directors and principal Officers of the Railways in Great Britain, derived from authentic sources, price 1s.

IV.

TABLES OF HACKNEY CARRIAGE FARES from the BIRMINGHAM RAILWAY to all parts of the METROPOLIS, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

V.

TABLES OF HACKNEY CARRIAGE FARES from the GREAT WESTERN RAILWAY to all parts of the Metropolis, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

THE TENTH THOUSAND.

Just published, *in a Sealed Envelope*, price 3s., and sent free, on receipt of a Post office Order, for 3s. 6d.,

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection; followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases, &c.

By J. L. CURTIS and Co., Consulting Surgeons, London.

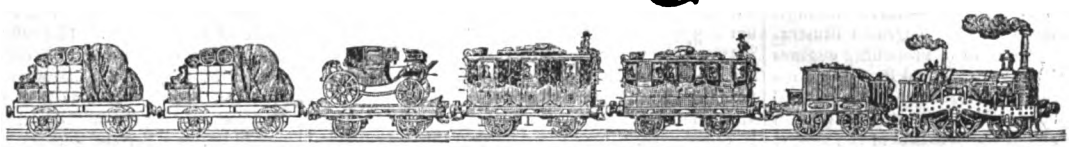
TENTH EDITION—Published by the Authors, and sold by Balliere, Medical Bookseller to the Royal College of Surgeons, 219, Regent-street; Strange, 21, Paternoster-row, London; Guest, 51, Bull-street, Birmingham; T. Sowler, No. 4, St. Ann's-square, Manchester; G. Philip, South Castle-street, Liverpool; Fannin and Co., 41, Grafton-street, Dublin; Drummond, 114, High street, Edinburgh; and sold in a *sealed envelope*, by all Booksellers.

OPINIONS OF THE PRESS.

"This work, *a tenth edition* of which is now presented to the public, *ten thousand copies having been exhausted since its first appearance*, has been very much improved and enlarged by the addition of a more extended and clear detail of general principles, as also by the insertion of several new highly interesting cases. We feel no hesitation in saying that there is no member of society by whom the book will not be found useful, whether such person hold the relation of a *parent*, a *preceptor*, or a *clergyman*."—*Sun*, evening paper.

"This is a work that we fear there exists too much need for to cause us to hesitate to recommend it for general perusal. Every branch of those frightful maladies, whether the result of immoral habits or secret vices, is here succinctly treated, and divested of all medical technicality, plain and easy directions are given for the best mode to be pursued in all cases, however complicated or apparently hopeless. To the married, as well as the unmarried, this little work alike affords consolation and cure in peculiar cases, and we are doing a service to society in recommending it to general notice."—*Essex and Herts Mercury*.

"Messrs Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable."—*Magnet*.



Messrs. Curtis and Company are to be consulted daily at their residence, No. 7, Frith-street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. The communication must be accompanied by the usual consultation fee of £1, and in all cases the most inviolable secrecy may be relied on.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate-street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Bride, Fleet-street, Middlesex.—Saturday, June 25, 1842.

TELEGRAPHIC RAILWAYS; OR, THE SINGLE WAY, recommended by Safety, Economy, and Efficiency, under the safeguard and control of the Electric Telegraph; with particular reference to Railway Communication with Scotland, and to Irish Railways. By WILLIAM FOTHERGILL COOKE, Esq.

Contents: Objects of the Treatise—Distinguishing Characteristics of present Railways—Evidence before Select Committee—Advantages of Telegraphic Communication—Mode of working the Blackwall Railway, by the Electric Telegraph—Description of the Electric Telegraph—Plan for a "Telegraphic" Railway—Course of an Express Train—Ballast Waggons—Permanent Obstruction—Crossing of Two Trains—Description of Signals—Concluding Remarks on Single Way—Mixed Lines—Scottish Junction Line—Irish Railways—Advantages common to Single, Mixed, and Double Lines—Public Confidence—Reduction of Stock—Income from Telegraph—Alertness—Adaptation to Wants of Country—Conclusion.

London, Simpkin, Marshall, and Co.; Liverpool, Wareing Webb, Castle-street; Manchester, Simms and Dirham; Birmingham, Wrightson and Webb; Leeds, Slocombe and Simms.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secresy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For farther Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

Just published, a second Edition of the
ATMOSPHERIC RAILWAY.

A LETTER to the Right Honourable the Earl of Ripon, President of the Board of Trade. By JAMES PIM, M. R. I. A., Treasurer of the Dublin and Kingstown Railway Company; with plates, 8vo., price 2s.

John Weale, 59, High Holborn.

TO RAILWAY COMPANIES, RAILWAY CONTRACTORS, BUILDERS, IRON FOUNDERS, IRONMONGERS, COACH BUILDERS, and GENERAL DEALERS.—Important SALE of SURPLUS RAILWAY STORES, &c. &c., belonging to the London and Birmingham Company, at the Camden Town Station.—Mr. BIRKETT has received instructions from the Directors of the London and Birmingham Railway Company to offer for Sale by Auction at the Store Yard of the Company's Station, Camden Town, on Tuesday, July 12, 1842, and following day, at Eleven, the following very Important PROPERTY, constituting THEIR SURPLUS STORES, and comprising upwards of 150 tons of bar, scrap, and cast-iron; several tons of spring, shear, blister, and other steel; sets of patent carriage springs and axle boxes; a large and varied assortment of ENGINEERING TOOLS and IMPLEMENTS used in the construction and maintenance of Railways.

The articles of ironmongery comprise 2,400 gross of wood screws, about 14 tons of iron pins, nails, and rivets; a large assortment of hinges; sledge and other hammers; anvils, chisels, files, screw and shell augurs; large quantity of chain and iron wire; copper and iron wire gauze, &c. &c.; together with numerous other articles, comprising railway lamps of every variety; larry wheels and boxes, barrow-wheels; drain tiles; tool handles of all kinds; 10 *iron safety chests, with patent rack locks*; about 32,000 oak pales; 28 pieces of American oak; several waggon cloths; articles of office furniture; neck straps, chains, and cloths for horses; 50 hammocks, with mattresses, blankets, &c. &c.; and a large quantity of mens' clothing.

The above property, being nearly all new and of first-rate quality, will be found eminently deserving public notice. As the articles are exceedingly varied, a reference to the Catalogues is particularly requested; and which may be had, 14 days before the Sale, on application at the Storekeeper's Office, Camden Station; at the Company's Stations, Euston-square and Birmingham; at the other Stations on the Line; and of Mr. Birkett, Estate Agent and Auctioneer, Wallingford, Berks.

May be viewed on and after the 5th July, 1842.

AN ELEGANT AND USEFUL PRESENT.
Just Published, in One Volume, price 5s. 6d., handsomely bound, with gilt leaves, sides, and back, and illustrated by
FOUR HUNDRED ENGRAVINGS,

PICTURESQUE EXCURSIONS; forming, by means of its engravings and descriptive letter-press, a complete Guide to, and Remembrancer of, all scenes of interest connected with the following places and their neighbourhoods:—Richmond, Hampton Court, the river Thames from Kingston to the Nore, Margate, Ramsgate, Dover, Hastings, St. Leonard's, Brighton, Shoreham and its Railway, Worthing, Bognor, Southampton, Netley Abbey, Lymington, and the Isle of Wight. Edited by Arthur Freeling.

"A work in which the elegant and the useful are eminently combined."

London: Ackerman, Strand; *Railway Times* Office, Tilt and Bogue, Fleet Street; and all Booksellers.

THE SURVEYOR, ENGINEER, AND ARCHITECT.—No. 30, price 1s. 6d., with Three 4to. Plates, will be published on the 30th instant, containing a Plan for Improving the River Mondego; Papers on Agricultural Engineering; Remarks on Italian Architecture; Parliamentary Instructions for Railways; Specification of a Pier at Kincardine, by the late J. Rennie; on Dry-Rot in Timber; Specification of Locomotive Engines; the Timber Trade and its connection with Building; on the New Scaling Instruments for Surveyors; Church Architecture in England; Shenley Chapel of Ease; Reviews of Scientific Books (*Illustrated with Wood-Cuts*); Lectures by Professor Cowper and by Mr. J. Smith, on Projection with the usual mass of miscellaneous intelligence.

Weale, 59, High Holborn.

MANUFACTURING PREMISES on a large scale WANTED in London or the immediate neighbourhood, consisting of large and wide lofts with ground floor. Parties having such to dispose of to address full particulars, with lowest rent that will be taken, to A. B., *Railway Times* Office, Fleet-street, post-paid.

THE ATMOSPHERIC RAILWAY.

At the sitting of the British Association in Manchester on Tuesday last, in the "Mechanical Section," Professor Vignoles made his communication on pneumatic railways. Having covered the most of the wall behind the chair with diagrams illustrative of the proposed system of propelling engines by atmospheric pressure, the learned Professor proceeded as follows:—Mr. President,—The general interest of late attached to the generation of motion on railways by means of the pressure of the atmosphere, and the fact that, for the last two years, experiments of this sort have been publicly exhibited in the neighbourhood of London, must be the excuse for my presuming to present myself before the British Association, and attempting to be the humble expositor of the very ingenious and remarkable invention which is so characteristic of the present age. The allegations of the parties who have brought it forward, particularly of the inventor himself, to whom I shall presently take the liberty of calling your attention as a townsman of Manchester, are well worthy of consideration; more especially as the subject is exciting that degree of interest that certain parties are about, and have recently begun, to adopt it in one of the railways of the United Kingdom, and the Government have thought fit to depute some of those official parties to make a special Report on the subject. Sir Mark Brunel has said, with very great propriety, that it was much easier to describe an operation when finished, than when in the course of preparation. I claim, therefore, your indulgence, if, in this respect, I have to describe an operation, which, if not quite in its infancy, at all events has not met that degree of public attention which it so eminently deserves. I consider that the time has now arrived when it is quite proper that this principle of producing motion should be put before the public in a familiar manner, and I am happy and proud in having been selected as the instrument to bring it thus before the public, for the first time in an official manner. The object of this discourse is to invite discussion—to court inquiry—to elucidate truth. When we consider the enormous expense which we have incurred in the construction of the principal lines of railway, and the still greater proportionate expense in working them out, it is not singular that all the efforts of ingenious men should be directed to the ascertaining, amid the numerous secrets which nature still holds, some means of producing motion upon more economical principles. I will take the liberty of making a quotation from one of the most eminent railway individuals in this country—from one who has done more towards advancing the improvements of railway conveyances than any other man, Mr. Henry Booth, the talented Manager of the Liverpool and Manchester Railway. He says, that in all countries, and under all circumstances, "it is an object worthy of the statesman and the philosopher to give a right direction to public expenditure, and to prevent the reckless waste of the national resources." I will glance for a few moments, and very briefly, at the preliminary operations conducted by other persons on this subject. It is generally known that, for even two centuries past, many ingenious persons have sought to produce what I think has been at length accomplished successfully—economical motion by means of the pressure of the atmosphere. Poppy, Lewis, Valence, Medhurst, and Pinkus, are known to all as inquirers on this subject. Many of their speculations are curious, and some of them are very wild. Those who remember the proposition of Valence, who actually wanted to place the passengers within the receiver of an air-pump, will not be surprised if there exists a general distrust with respect to any thing that bears the name of pneumatic railway. In fact, every proposition to advance such an invention has been received with ridicule by the public, and with coldness by the scientific world. [illegible] have said, proposed to put the passengers inside of his tube, but Medhurst [illegible], by keeping the locomotive [illegible], and putting his passengers [illegible] contriving what was called a water valve. I am not going to trouble you with a description of it, it is sufficient to say that it was not practicable. Pinkus afterwards suggested the rope-valve, which did not keep the air tight; and we are at length indebted to Mr. Clegg (whom I am happy to see here), whose invention for illuminating this assembly with gas is already so well known to the whole of Europe—it is to him we are indebted for the practical usefulness to which this invention has at length arrived. But, though Mr. Clegg has discovered the most practicable method of bringing this invention into operation, it was Medhurst who took the first step which led to the inquiry as to the effective valve, through which should pass some description of connection by which the moving power in the pipe should be connected with the carriage in which the passengers were to be conveyed. With this brief account of what has been attempted, let me as briefly endeavour to put before you what it is necessary *a priori* to effect, in a greater or lesser degree, in order to obtain the economical results which alone are worthy of the attention of the public. First, then, it is necessary that there should be a pipe *pro tempore* air-tight, but not so air-tight as that a perfect vacuum should be produced within it, but that it should be so tight that a vacuum capable of working effectually should be obtained. This can only be done by having what engineers call a valve, that closes over a slott or opening, which it is necessary to make in the pipe in order that communication between the emptying power in the pipe and the carriage should pass. Having the valve made to a sufficient degree of perfection, it is necessary that there should be introduced into it something to fill the pipe, which something we call a piston. This piston should fit readily, adapt itself with extreme facility to the pipe, be cheap, very rough, not likely to get out of order, capaple of adapting itself to crevices, to planes of undulation in the railway, and to vertical sections: occupying the smallest possible space, and yet effectually to stop the pipe for the moment. It was no less necessary that the rod of the piston should be firmly connected with the carisges by slides, covered with certain fluids which render the valves capable of opening easily and quickly, making them at once flexible and strong, so that after the train had passed, by means of the pressure of the atmosphere, the valve should be sealed down again instantly, in order that the pipe should be again exhausted, and ready to receive the next train. It is also necessary that a certain amount of vacuum should be obtained in front of this piston, and it is equally necessary that there should be an effective atmospheric pressure behind it; and lastly, and not least, it is necessary that all this should be done in a simple, and above all in an economical way. I hope I shall be able to prove to your satisfaction, from the drawings before you, and the explanations with which I shall accompany them, that all these requisites shall be successfully attained. Mr. Vignoles then pointed out on the diagrams, which were drawn to the full size, the piston, the air pipe by which motion was to be produced, the piston rod, collars, valves, grooves, &c. &c., and the purposes for which they were respectively designed. From this explanation it appeared, that the motion of the engine was to be effected in the following manner—stationary engines were to be placed at certain intervals along the lines of railway; these engines were to work air-pumps, and these pumps were to be connected with branch lines to the general main pipe, which was to be between the lines of railway. By this contrivance the air was to be exhausted in front of the piston to a certain amount of rarefaction, proportioned to the power employed, or to the load to be impelled. Certain rollers were to be employed for opening the valve behind the piston to admit the atmospheric air, which, instead of rushing in from the end of the pipe, and thereby encountering a vast amount of friction, enters immediately at the back of the piston, and, as experiments had proved, give at least 99 per cent. more of the whole effective pressure of the atmosphere. That pressure impels the piston forward in the pipe with a most extraordinary degree of velocity. The piston carries a piston-rod with it; and in the middle of this rod there is a strong plate, called a coulter, which passes through the valve, and attaches itself to the perch which is fastened to the frame of the carriage. The effect of all the other arrangements are depending on the remarkable ingenuity by which the rollers successively open and shut the valves. It was not sufficient that the valves should be closed down merely, but that they should be, to a certain extent, hermetically sealed, so as to make them air tight. This was effected by a particular composition (which was alike ingenious with the rest of the invention), consisting of a mixture of bees'-wax and tallow. The proportions of these would depend much on the climate where the machine was used, or the season of the year. A small variation in either of those articles, which were extremely cheap, would render the composition suitable to every climate and every season. There is a small groove, about an inch wide and 1¼ inches in diameter, situated on the top of the air-pipe, between the valve and what is called the arm. This groove was to be filled with the composition; and a heater, or seal, passing into the groove, forces down the composition, and hermetically seals the valve. The heater was a hollow piece of iron, containing a few grains of charcoal to keep it warm, for otherwise the composition would adhere to the metal; but, being partially warm, it comes away perfectly clean, leaving the whole of the composition in the groove. As the carriage passes along, connected with the piston by means of the coulter, the heater moves through the groove, and successively seals down the valve, and renders the pipe sufficiently air-tight for another carriage to move over the same ground in five minutes after. During the last two years Mr. Vignoles said, he had observed a railway similarly constructed, in constant operation; and, notwithstanding the state of dilapidation in which the whole concern had been, the business was performed with a most extraordinary degree of accuracy. Indeed, the difficulties arising from negligence were such, that one would have supposed the patentees wished to prevent the invention from coming into general use, instead of introducing it to public notice, by the adoption of a more perfect apparatus. It was necessary that the pipes should be prepared with the least possible expense; they were therefore cast in the rough, and, after they came out of the sand a *cutter was* passed through them, and they were then made ready to receive the piston in the following simple, effective, and economical manner:—The pipes, which are cast in from 9 to 12 feet, are placed on a furnace, or receptacle (very well known to the masters of iron foundries) and are raised to a heat capable of melting tallow; a mop dipped in tallow is then introduced into one end of the pipe, and a small wooden piston that fits it follows up the tallow, thus coating, or tinning as it is called, the inside of the pipe. This tinning of tallow soon becomes almost as hard as plaster of Paris, forms a perfectly smooth and polished interior, and the seasons have apparently no effect upon it. Having alluded to the discussions that had taken place respecting the relative advantages of locomotive and stationary power, when the Liverpool and Manchester Railway was constructed, Mr. Vignoles pointed out the waste of power arising from friction, atmospheric pressure, and other causes, and then drew attention to a table giving a comparative analysis of the power of his air pipe under various circumstances. The result was, that, with a pipe 6 inches in diameter, and an air-pump 21 inches in diameter, he could, having deducted all resistances, drive a carriage laden with 45 tons, with a uniform velocity of 30 miles an hour. Mr. Vignoles also exhibited and explained to the meeting a diagram representing the various degrees of pressure in various inclinations, and remarked, that the general adoption of the atmospheric railway would not only be a great public convenience, there being no necessity for stopping from one end of the line to the other, but that the saving effected would be very considerable. He also ob-

Digitized by Google

served, that railways already constructed might with a very trifling expense, be adapted to the pneumatic principle. A commission had been appointed for the purpose of investigating the proposed plan; and, although they had not reported in a satisfactory manner, still they pronounced opinions respecting the system which were quite conclusive as to its practicability. The Directors of the Dublin and Kingstown Railway had obtained a Government grant for the purpose of extending their line two miles further. This extension of the line was to be constructed by him, and the locomotive power was to be on the pneumatic principle. He hoped, at the next meeting of the British Association, to be able to report on the results of that undertaking.—(The learned gentleman was much applauded at the conclusion of his address.)

Professor Willis, President of the section, who had taken the chair in the course of the proceedings, said, the greatest praise was due to Mr. Clegg, the inventor, whatever might be the ultimate probability of success.

In consequence of the lateness of the hour, the President said he should postpone the discussion until the section met the following day,

Thanks were then given by acclamation to Professor Vignoles, and the assembly separated.—*Manchester Guardian*, Wednesday.

BREAKAGE OF AXLES ON RAILWAYS.

We extract from the *Manchester Courier* of Saturday last the following report of proceedings that took place on the previous Thursday in Section G (mechanical science) of the British Association sitting in that town:—

Mr. Vignoles rose to read a paper "On the Axles of Locomotive Engines." He said, the present paper was rather to awaken a spirit of inquiry in a town like Manchester, situated in the centre of a great railway district, than to elucidate a subject which had derived great interest by certain recent accidents. The late fatal accident on the Paris and Versailles Railway in particular had drawn attention to this subject, the breaking of one of the axles of a locomotive having been said to be the cause of that catastrophe. His own opinion was that such was not the fact, inasmuch as it was not the driving axle which gave way; and he, therefore, regretted to see that the accident had been attributed to the principle on which the machine was constructed. Though there was a difference between that accident and the one on the Brighton Railway, it was evident that the same causes led to an aggravation of the effects; he alluded to the practice of driving trains by means of two engines coupled together, in front of the carriages, of different construction and unequal power. The danger of this practice must be obvious. He alluded to the case of two engines so coupled, descending an incline; the weaker engine being first, in the event of the driver checking the steam, the heavier one not being checked at the same time, it was evident that the greater momentum with which it would press forward must run the risk of overwhelming the whole. Engines behind railway trains were objected to on this very principle, because it was held almost impossible to check them in time, and in the event of an obstacle in front they were liable to run forward, and destroy the carriages. The paper went on to discuss the comparative advantages and merits of crank or straight axles—for he thought the question of four or six wheels was not of much importance, though it had been dragged into the discussion, so that the weight or strain was fairly distributed—and he gave his own experience decidedly in favour of the straight axles, which he said had been tried for many years on the Dublin and Kingstown Railway without accident, and at a saving of expense. He regretted that a prejudice against these axles had kept them so much out of use. The paper alluded to the opinions of two eminent French engineers (M. François and Col. Obert) which had been recently published, and from which it would appear that we must seek for the removal of these accidents by other means than those to which attention was at present directed. These gentlemen had given an opinion that the accident resulted from the iron of which the axles were composed undergoing a chemical change, being crystallised or magnetised in the course of long use, which rendered it brittle and liable to break. His own observation had certainly led him to believe the same appearances they had described in broken axles; to such a degree, indeed, that he had been led to doubt in some instances if they might not have been made of cast instead of wrought iron. Mons. François was of opinion, that a magnetic action upon iron would deprive it of that compact character which distinguished wrought iron, rendering it open and porous, and that the friction to which axles were subject might produce such an effect. His remedy was to change the axles so frequently that they should not have time to undergo this change. He also advised that new iron should not be used for the manufacture of axles, being more liable to undergo the change than old.

Sir J. M. Brunel related, in corroboration of this last opinion, an accident to the train in which he had come down to Rugby. One of the wheels of the tender had broken, and certainly the broken pieces at the point of separation were so crystallised that they resembled cast iron. He thought this must be the result of the immense strain upon them by the velocity at which they moved, which, as had been suggested, wrought a gradual change in the iron.

Mr. Heaton Hodgkinson (who had just entered) regretted that he had not had the advantage of hearing the paper which had been read, so far as it related to crank and straight axles. He was of opinion that the mere strain upon wrought iron first bending it one way and then another, would destroy its ductility, and render it liable to break. Deflect a rod of iron, however little, and it would never return exactly to the same position, and its elasticity and strength was weakened at every repetition. Now, he thought the strain on axles upon railways might act in the same manner.

Mr. Fairbairn mentioned the case of a crank axle broken on the Leeds Railway, and thought the heavy strain on those axles along those portions of the line which were much curved, first one way and then the other, would produce the effect described by Mr. Hodgkinson. He attributed the weakness of axles, however, in a great measure to the practice of cold swaging in the making of them, which must destroy the ductility of the iron. He differed with Mr. Vignoles on the subject of six and four-wheeled locomotives, and thought the balance of safety was in favour of the former; in the latter case the breakage of a wheel or an axle was sure almost to be attended with an immediate and serious accident, whilst the six-wheeled locomotive might run a considerable distance before any inconvenience resulted. He agreed with Mr. Vignoles as to the desirability of dispensing with the crank axles. He thought it a very important question, and one in which it was desirable experiments should be made with a view of determining the matter.

Mr. Hawkins stated, that a paper on the subject of the changes which the iron of axles underwent had been laid before the College of Civil Engineers in London, and was printing, so that it would probably be before the Association in a day or two. On that occasion a number of broken axles were exhibited, composed of fibrous iron, and which had become crystallised.

The Chairman understood at present they had two opinions before them; one that the iron underwent a change whilst in use on the rails; the other, that it assumed the crystallised form in the forge of the axles.

Mr. Garnett was sorry Mr. Roberts (of Sharpe, Roberts, and Co.) was not present. He understood he had just returned from Paris, where he had been led to think the accident did not result from the breaking of the axle, but from the engine getting off the line.

The Chairman thought the question raised, nevertheless, one of interest, and being capable of experiment and illustration, ought not to be lost sight of.

Mr. James Nasmyth observed, that iron cooled with welding heat would be different to that cooled in a different manner, and this was an important subject. "Cold swaging" had been attended to by Mr. Fairbairn. The meaning of the term was hammering iron or continuing to hammer it after it had lost its red heat. The effect produced on the nature and strength, or the closeness of the iron by this means was very great, and he would venture to suggest that in such cases it should be subjected to the process of annealing; in other words, that the axles so made should be put into ovens at a red heat, and subjected to slow cooling—if possible that they should remain there and cool with the oven. The importance of this process was seen in the making of wire, which if so brittle as scarcely to bear bending, after this process became so ductile as to be capable of being woven into a cloth. As to whether the iron of which railway axles were made underwent a change from the action to which it was subject by the vibration of the engine, he thought it was such a common-sense view of the subject that it could hardly be doubted. That such iron must ultimately be rendered brittle and break, he thought there was no question. He thought that a series of experiments on this subject would be most valuable. With reference to magnetism and electricity—gentlemen were apt to find a name for a difficult question—they attributed it to electricity, and there the subject was laid aside. (Laughter.) On the question of magnetism, however, he observed, that he thought it an interesting inquiry, and the non-oxydisation of rails on lines where the traffic only went one way, he was of opinion bore very strongly on this question.

The Chairman—Is that a fact?

Mr. Nasmyth said, on railways where the traffic only went one direction, no oxydisation of the rails was perceptible in his experience, while on others the contrary was the case. He alluded to the London and Blackwall line, where the traffic was both ways on the rail, and there the incrustation of oxyde was so great that large cakes fell off at once.—(Laughter.) Gentlemen seemed surprised. But he might come home to Lancashire again, and he would take the sidings of railways in this neighbourhood, where carriages were worked both ways, and there they might see oxydisation going on, whilst the rails close by, worked only in one direction, were totally free from it. (Hear, hear.)

The Chairman said, this was a curious fact, and asked whether it occurred on lines running from east to west, as well as those running north and south?

Mr. Nasmyth said, it did. He had satisfied himself of this fact some time since, and had mentioned it to Mr. Arago. This effect was not confined, he observed, to the rails alone, but was communicated to the chairs, &c.

The Chairman asked if Mr. Nasmyth thought, supposing axles had attained the fibrous state from being in use, the process of annealing would restore them?

Mr. Nasmyth answered in the affirmative. He agreed with Mr. Vignoles in preferring the straight axle to the crank.

Mr. Burdekin, Mr. Graham, Sir J. Robison, and other gentlemen whose names we could not learn, took part in the discussion, which was of too great a length to be reported in full.

The Chairman, at the suggestion of Mr. Fairbairn, said he was sure the section would be most happy if Mr. Nasmyth would lay his very interesting facts before them at a future meeting in a written form, so as to be printed in their transactions, and was sure all present must have derived much pleasure from listening to them. (Applause.)

Mr. Vignoles, in reply, said his own experience went to the contrary of what Mr. Nasmyth had stated about oxydisation.

Before the meeting separated, strong expression of opinion was given that an application for a grant of money should be made to the Committee of recommendations, for the purpose of carrying on experiments on this subject.

THE RAILWAYS' REGULATION BILL.

House of Commons, June 24.—Mr. W. Gladstone moved the third reading of this Bill.

The Bill was then read a third time.

Sir Henry Hardinge then proposed the following clause by way of rider:—"That whenever it shall be necessary to move any of the officers or soldiers of her Majesty's forces of the line, ordnance corps, marines, or the police force, by any railway, the Directors thereof shall and are hereby required to permit such forces respectively, with their baggage, stores, arms, ammunition, and other necessaries and things, to be conveyed at the usual hours of starting, at the prices contracted for by the Secretary at War for the conveyance of such forces, on the production of a note signed by the proper authorities."

Mr. Craven Berkeley objected to the bringing up new clauses at that period of the Bill. When he proposed to bring up a new clause on Saturday, it was objected to, on the ground that the Bill related only to the public safety, and not to the convenience of the public. He should object to the introduction of the clause as foreign to the Bill.

Viscount Howick observed, that many clauses were proposed last Saturday which were admitted to be good in themselves, but were objected to as being contrary to the preamble of the Bill. He wished, however, to know whether the right hon. gentleman was prepared with a clause the principle of which he admitted on Saturday, for the purpose of indemnification to the owners of property in the vicinity of railways, if it should sustain any damage by the sparks from the engines on the railways.

Mr. W. Gladstone was not aware that he had made any undertaking to propose a clause on the subject of fires occasioned by sparks from railway steam-engines. As for damage by fire in this mode, he believed that there was not sufficient positive information as to the law or the facts of the case to justify the distinct description of the case given by the noble Lord on Saturday. He did not think that the House could conveniently introduce a clause on this subject in the present Bill.

Viscount Howick said, that when he mentioned that the Bill gave new and enlarged powers to railway proprietors, and allowed them to go on the lands of the neighbouring proprietors to their line of road, he suggested that it was only fair in return that there should be some declaratory clause as to the payment of damages to the proprietors of property for loss sustained by fires occasioned by sparks from railway engines. He thought, from the position of the right honourable gentleman, and after the conversation that took place on Saturday, that he would have been enabled, in an hour or two, to get minute information as to what was the law of the case; and that he would, on the next stage of the Bill, have proposed a clause on the subject. He would suggest that the further consideration of the subject should be postponed for two days, so as to allow him time for the preparation of a clause on this subject.

Mr. W. Gladstone said, that this was a Bill of very great importance, and he knew that some parties were waiting for the Bill to pass before they entered upon some works of great importance. With reference to the point referred to by the noble Lord, he could only say that he did not think that they were in possession of a sufficient legal authority to justify the assumption taken by the noble Viscount. At any rate the opinion of the legal authority of the Board of Trade was contrary to that of the noble Lord on the subject.

Sir H. Hardinge said, that the clause which he proposed to bring up was essential to the public service and in consequence of the want of some arrangement of the kind great inconvenience had arisen some time since.

Lord John Russell wished to remind the right honourable gentleman that he had repeatedly stated that the only object of the Bill which he introduced was the public safety, and he objected to the introduction of any clauses into the measure which had not reference to that subject. He did not think that it was fair to argue both ways, for that must be the case if the right honourable the Secretary of War was to be exempted from the rules which were made strictly to apply to all other members.

Mr. J. Jervis could not help recollecting that the right honourable gentleman objected to a clause which was introduced by his noble colleague (Lord R. Grosvenor), because it was foreign to the alleged object of the Bill, and this was only rejected by a majority of one. After this circumstance it certainly appeared extraordinary to allow the introduction of a clause on this point.

Mr. Darby thought that this new clause had little to do with the alleged object of the bill, and it certainly was open to the same objections which were urged on Saturday by the right honourable gentleman against other clauses which were proposed by various honourable members.

Mr. Labouchere thought this was a Bill for the single object of providing for the safety of travellers on railways, and it was scarcely fair to introduce any other clauses. If a case of great public inconvenience were made out, he might consent to the introduction; but the right honourable gentleman had stated no such inconvenience, and he would therefore oppose the present clause.

Sir Henry Hardinge said that, if the house insisted upon it, he would withdraw the clause, and would bring in a separate Bill, although inconvenience had already happened to the public service.

Sir Robert Peel said that, in sending the troops to the East Indies there was a delay of of 24 hous, for the want of such a clause, and he hoped the galant officer would waive his objection, for the convenience of the public service.

Mr. V. Smith objected to the introduction of such a clause, foreign to the object of the Bill, on the third reading.

Captain Boldero observed that the troops were now frequently obliged to be sent by the third-class carriages, at most inconvenient hours, and he hoped this clause would be allowed to pass, as it would tend much to the comfort and safety of the troops.

Mr. H. Lamton trusted that such an appeal to a gallant officer would not be made in vain.

Mr. Berkeley would at once waive any objection—(cheers)—and would be the last to interpose any difficulty to the public service. (Cheers).

The clause was then agreed to. On the question that the Bill do pass,

Mr. O'Brien called the attention of the right honourable gentleman, the Vice-President of the Board of Trade, to the bad accommodation provided for the third class passengers. Great care might be taken of old women and ecclesiastics—(laughter)—but very little for the most numerous of all passengers, the poor.

The Bill then passed.

PROCEEDINGS IN THE HOUSE OF COMMONS ON RAILWAYS.

LIVERPOOL AND MANCHESTER RAILWAY.

June 27.—Bill reported; to be ingrossed.

STOCKTON AND HARTLEPOOL RAILWAY.

June 27.—Message from the Lords, that they have agreed to the Bill with amendments.

June 28.—Lords' amendments agreed to.

June 30.—Mr. Speaker reported the Royal Assent to the Bill.

THAMES HAVEN DOCK AND RAILWAY.

June 27.—Message from the Lords, that they have agreed to the Bill without amendment.

June 30.—Mr. Speaker reported the Royal Assent to the Bill.

Opening of the Railway from Bridgewater to Taunton.—Yesterday morning the line of the Great Western Railway was further extended, by being opened from Bridgewater to Taunton, a distance of 11¼ miles. At six o'clock the first public train of carriages started from the terminus at Paddington for Taunton—the extreme distance from London being now completed is 162¾ miles—the distance of road not completed, but which is proceeding with great rapidity, is 30 miles to Exeter from Taunton.

RAILWAY PLEASURE EXCURSIONS.

MIDLAND COUNTIES' AND NORTH MIDLAND RAILWAYS.

On Wednesday last, about 700 respectable persons left this town and county on a railway trip, to visit the romantic town of Matlock. The arrangements both on land and water, were under the able direction of Mr. J. F. Bell, and the day passed over without a single accident, if we except a few hats falling into the briny deep, commonly called the Cromford Canal. At half-past seven, with a splendid morning, the gay company well boxed up in the elegant carriages belonging to the Midland Counties' Railway Company, started from the Leicester station, and the number of pleasing faces exhibited when the band struck up "Nix my Dolly," proved to a demonstration, the character of Windy in the farce, "that having started out on a journey of pleasure—pleasure they were determined to have." This we safely say was the case on Wednesday. On the train arriving at the Amber Gate station on the North Midland Railway, a general movement took place, and in about 20 minutes five barges were well laden, to convey them 6 miles on the Cromford Canal. This appeared the most tedious part of the trip, when in about one hour and a quarter, all were safely landed at the village of Cromford, and not one of the ladies troubled with that horrid sensation—sea-sickness. To reach Matlock, a mile further was performed after the pedestrian mode of conveyance, the visitors being amply repaid by the kindness of Mr. Arkwright, who allowed them the privilege of walking through his delightful park. The head-quarters of the party were fixed at the Old Bath Hotel, but from the crowded state of the house, many were compelled to go *elsewhere*. Some indeed had taken care to carry their own prog, where on the Heights of Abraham, they enjoyed a quiet pic-nic set out. In the course of the day some of the party visited the splendid gardens at Chatsworth, while others explored the caverns and lead mines, not forgetting the High Tor and the Heights of Abraham. At a quarter before seven the band moved off, and at 20 minutes after 11 all were safely landed at the Leicester station.—*Leicester Herald*, June 25.

Railways in Italy.—The *Journal des Chemins de Fer* publishes a letter, addressed by Mr. Brunel to the Royal Railway Company from Genoa to Piedmont and to the frontiers of Lombardy. In this letter Mr. Brunel summarily states the result of his surveys, undertaken in order to determine the best line for the projected road. After the most minute investigations he has acquired the conviction that the railway offers no difficulties which his experience cannot easily conquer. In the distance which separates Genoa from the frontier towards Milan, and which may be evaluated at 120 kilometres (30 French leagues), 25 only run through a rough and difficult country, and out of this number 15 at most present serious but not insuperable obstacles. The remainder of the line will pass over the most favourable ground. Thus the passage of the Apennines, the name of which, as Mr. Brunel remarks, sounds so awfully to an English ear, is formidable only to an inattentive and unskilful observer, and all the conditions for the inclines and curves will be accomplished without extraordinary labour.

Clarence Railway Company.—This Company have at last commenced running their own *coaches* on their *own line* under the management of Mr. Child, the indefatigable Superintendent, who has now brought the affairs of the Company to so prosperous a state, that some months back it was publicly stated that the *income* from the line *exceeded* the *expenditure* by a sum amounting to nearly 900*l.* monthly. Should the same spirit continue in the management of the Company's affairs as that which now exists, the shareholders of the *present* generation may yet hope to have a return for their long embarked capital.—*Durham Advertiser.*

LONDON AND BLACKWALL RAILWAY COMPANY—SPECIAL MEETING.

A SPECIAL meeting of the proprietors of the London and Blackwall Railway Company was held on Tuesday, at the London Tavern, Bishopsgate-street, WILLIAM ROUTH, Esq., in the chair, for the purpose (as stated in the advertisement) "of taking into consideration the power given to this Company by the Act of Parliament passed in the present session, entitled 'An Act to alter, amend, and enlarge the powers and provisions of the Acts relating to the London and Blackwall Railway,' to borrow on mortgage or bond such sums of money as shall be authorised by an order of a general or special general meeting of the Company, not exceeding in the whole the sum of 66,000*l.*, and to make such order thereon as may be determined by the said meeting."

There was a very numerous attendance.

The CHAIRMAN said, this was a special meeting called for the purpose of determining whether the Directors should be authorised to raise by debentures the sum of 66,000*l.*, under the Act passed during the present session of Parliament; and, although in strictness of form no other business could be discussed on the present occasion, the Directors would be happy to afford every explanation in their power upon any matter which the meeting might deem it desirable to ask for information, while there were one or two points respecting which, whether asked or not, his colleagues and himself were anxious that some information should be given. (Hear, hear.) The two principal subjects upon which he would now trouble the meeting were, first, the necessity of raising the amount to which he had referred; and secondly, certain rumours with respect to steam-boats, which it seemed had got into circulation. With regard to the former point, he begged to remind the proprietors that the capital of the Company, under the previous Acts, was 800,000*l.* raised on shares, and 200,000*l.* by debentures. When the proprietors gave the Directors permission to apply to Parliament for power to raise this additional sum of 66,000*l.*, it had been asked what proportion of it would be permanently required, and his answer had been, that probably 20,000*l.* would be the requisite sum, which answer was, in effect, that after disposing of the surplus property, the capital of the Company would be 1,020,000*l.*; and he saw no reason to depart from that statement now. (Hear, hear, hear.) The property unsold had been estimated by Mr. Tite at 70,000*l.*; and he knew of no reason why that estimate should be called in question. There had been some excess in the engineering department, and under the 50 feet clause additional compensation had in some cases fallen on the Company; but there had been some saving in other items, and he did not believe that, if the 20,000*l.* were exceeded at all, the excess would be above 5,000*l.* (Hear, hear.) It might be said, why not sell the surplus property at once. When he informed the meeting, that of 84 lots, valued at 30,000*l.*, which were offered for sale during the present month, only 34 had been disposed of, and when they reflected how disadvantageous the times were for such sales, he was sure they would see that the interests of the Company were served by holding the property for a further period. As a proof that such further holding had not in other instances been imprudent, he might mention that in January last, the Directors had disposed of several lots for double the sum for which on a previous sale they had been compelled to "buy them in." It was strongly the opinion of the Directors that the surplus property should not be sold at the present moment, but at the same time the credit of the Company required that the debts contracted should be paid, and hence the necessity for the present meeting. With respect to steam-boats, he begged to state that not one penny of the Company's funds had ever been expended on them. (Hear, hear, hear.) Perhaps in strictness he was not called upon to say anything further on that subject, as the railway proprietors had no business to inquire from what source the capital embarked in the steam-boats had been derived—(hear, hear)—but before the meeting separated he would doubtless have an opportunity of entering more fully into the matter. In the mean time the Directors would feel happy to hear any observation that might be offered, or to answer any question, and then he should propose the following resolution:—

"That this meeting do order that the said Company shall borrow on mortgage or bond the sum of sixty-six thousand pounds; and the Directors are hereby authorized to borrow that sum according to the provisions of the Acts of Parliament relating to this Company."

Mr. L. LEVY presumed from the Chairman's statement, that whatever profit or loss might accrue from these steam-boats, the railway proprietors had nothing to do with it?

The CHAIRMAN said, he would touch upon that question presently.

Mr. LEVY said, the railway fares were much too low. He knew that the views which he entertained on this subject were unpopular, but he did not see why railway proprietors should be patriotic enough to consult the public interest, without attending at the same time to their own. They had supplied the public with a good railway, and they had a right to receive a fair price for the accommodation. (Hear, hear.) He had had experience in such matters from his childhood, and every day's experience convinced him more and more that extreme lowness of fares was not, and could not be, remunerative. The Directors of the Blackwall Railway, in fixing their rates of charge, had begun at the wrong end; they had commenced with fares much, very much, too low—fares which with no possible amount of traffic could compensate the Company. (Hear, hear, hear.) He did not mean to bring forward any motion on the subject, contenting himself with these suggestions to the Directors, who were men of business, well qualified to give the question due consideration. He was satisfied that if only an additional penny were put upon the fares, a great revenue would accrue to the Company, while the public would not feel it, and even then the charge would be no more than it ought to be. Frequently the trains were crowded to excess, but at fourpenny fares, the Company did not receive, and could not expect to receive, any remuneration.

The CHAIRMAN hoped he need not assure the honourable proprietor that the question of fares had received, and continued to receive the anxious consideration of the Directors. He was bound to say, that there was no present intention on their part of increasing the charges. The present meeting, being specially convened, were not competent to come to any decision on the subject, otherwise he should have felt happy to go into it, and to explain the reason which had induced the Board to fix and adhere to the present rates. An opportunity would, however, be offered at the general meeting in August next, and then his colleagues and himself would explain their views upon this important topic more fully. (Hear, hear, hear.)

Mr. Serjeant GAZELEE said, he certainly felt surprised that the Directors should on the present occasion have brought forward a proposition for raising so large a sum as 66,000*l.*, for he recollected that at the last meeting he had been taken somewhat sharply to task by the Chairman, who had said that, although they were taking power to raise that amount, it did not follow that it would be necessary to raise the whole of it. On that occasion the Chairman had said there was no pleasing him (Mr. Gazelee), for that he complained of so frequent applications to Parliament, and yet grumbled at the precaution taken to obviate the necessity of a future application. It appeared, however, that he (Mr. G.) had proved a true prophet when he predicted that if powers were taken the whole amount would speedily be called for. Not only was it so now, but the Directors had taken the very earliest opportunity of exercising the powers granted by the Act, not even choosing to defer the question till the August meeting. For his own part, as one deeply interested in the undertaking, he was not disposed to vote away money in the dark, and was desirous therefore, before this question came to a vote, to be informed upon several points; and to save the meeting the annoyance of a long speech, he had written down a few questions which, with the permission of the proprietors, he would now propose. He had understood that there were two descriptions of surplus property, the one between the Brunswick Wharf and the Minories, the other between the Minories and Fenchurch-street. Now, with respect to the former, he wished to know if it were still unsold, and if so, whether it had been valued at 90,000*l.*, and, as regarded the latter, at what amount it was valued. He wished to know also whether a rental of 8,000*l.* had not been expected from the arches. Then came the very important question whether any proceedings had been taken or were in progress against the contractors, for their delay in supplying the machinery connected with the carriage of goods. At the last meeting the Directors had stated, and seemed rather to pride themselves on the fact, that because there was in the contract no penalty for non-completion by a given time, larger damages for loss occasioned by the delay in the delivery of the machinery could be recovered. At the same meeting they had stated, that goods would be conveyed in about a month from that time, but he had in vain watched, week after week and month after month, till lately, when he found that goods were carried. He wished to know whether any profit was derived from the goods' traffic, as he saw no statement of the returns in the usual traffic tables. Again, he was desirous of ascertaining what the erection of the machinery in Crutched Friars had cost, and whether the entrance originally built for carts had not proved too small, and what expense had been incurred in pulling it down and rebuilding it. He thought the Company ought to have proper surveyors to obviate the necessity of such an occurrence. Moreover, he should be glad to know what rent the Company paid for the Brunswick Wharf, at Blackwall. He saw in the Bill lately before Parliament a great deal about the East and West India Docks, and although no doubt the shares of that undertaking might be benefitted by certain proceedings, there were a great many proprietors of the railway who had no interest in, and cared nothing for, the Docks. (Hear, hear, hear.) He should like to know, too, what amount of dues, as compared with the rent, the Railway Company derived from the Wharf. After what the Chairman had so explicitly stated no one could for a moment believe that the steam-boats to which reference had been made had been paid for out of the funds of the Railway Company, but he begged to ask whether a preference had not been given to these boats. He himself had not leisure to make inquiries for himself, but when he saw statements put forth in the railway journals, and suffered to remain uncontradicted, he felt it his duty to have any doubtful point cleared up, and as no one else appeared disposed to put questions he had reluctantly been obliged to come forward. Having once commenced, he would touch upon one or two points more. Why were not the Watermen's boats allowed to use the wharf? This subject had been particularly alluded to in the *Railway Times* of last Saturday, and in the same number of that journal he noticed other causes of complaint. It was stated that passengers

Digitized by Google

from Herne Bay had not their luggage properly attended to. Then followed a very good suggestion as to the encouragement of pleasure excursions, and next, a statement that 25,000*l.* would not be sufficient finally to complete the railway, but that a further quarter of a million would be required. It was further alleged that the Directors were anxious to purchase the ship-yard of Green and Wigram, but after the statement made by the Chairman, he supposed *that* was a fabrication. It was next asserted that the rope broke on an average once a day. They had heard a good deal on this subject from Mr. Robert Stephenson at the last meeting, and he should be glad to know how the case really stood. Then he should like to know whether any money beyond the 200,000*l.* authorised by the Act of Parliament had been borrowed. It had been stated that there was in the Bill recently before Parliament a clause giving a preference to certain steam-boats. (Hear, hear, hear.) He was of opinion that such clause, if it really existed, should have been read to the meeting, which authorised the Directors to proceed with the Bill. It had, however, if introduced at all, been introduced without consulting the proprietors, and, as he was informed, on the bringing up of the Report—a most unusual course, which might almost justify a charge of attempting to smuggle the measure through the House. The Bill, however, had not passed with such a clause, and he only alluded to it because he did not think that in introducing it the Directors had paid that attention to the proprietors which they ought. The learned gentleman concluded by apologizing for trespassing on the time of the meeting, and sat down amid applause.

Mr. JAMES WHISHAW suggested that the new Act should be read, before proceeding further.

The SOLICITOR (— Tyerman, Esq.) accordingly read the marginal notes—*that* being deemed sufficient. The clauses seemed to embody nothing bearing upon the topics under discussion.

The CHAIRMAN said, he would now endeavour to answer, *seriatim*, the questions put by the honourable proprietor. He could not allow the learned gentleman the sole credit of being a true prophet as to the money to be raised, for he himself had stated from the Chair, that when the Act was obtained, the money must be borrowed. As regarded the surplus property, perhaps it would be as well that he should read a letter from Mr. Tite, from which it appeared that the total estimated value was 68,985*l.* [The letter was here read.] If the meeting desired it, he would state what portion consisted of houses, and what of other descriptions of property. (Loud cries of "No, no.") The Directors had nothing whatever to conceal. With respect to a rental from the arches, he believed it was contemplated in the first Act that they should be built so as to be convertible into houses, from which an annual rental of 8,000*l.* would be derived, but they had not been so constructed. No proceedings had been instituted against the contractors for the goods machinery. In the commencement of the goods traffic there had been delay, and the proprietors could not regret it more than did the Directors. The arrangements were now complete, although the amount of goods traffic was very trifling. Perhaps the cause of this was the uncertainty which existed as to the duties, only sugar being now taken from the Docks; and as the carmen had not one-fourth part employment for their several establishments, it was not likely that they would allow the Railway Company to profit much in this department. He hoped he need not say that the receipts from the goods traffic would be carried to the Company's accounts. The erections at Crutched Friars had cost, he believed—but was not quite sure—about 1,400*l.* The entrance for carts was originally too small, and the alterations had cost about 20*l.* or 30*l.* Mr. Jackson was in the room, and could speak positively on this point.—[Mr. JACKSON—It was under 20*l.*]—With respect to he rent of the Brunswick Wharf, the Company paid 600*l.* per annum for the part occupied by their station, and under an agreement they were to receive one-third part of the gross wharfage. This year, and for the next year, they had agreed to pay 1,430*l.* per annum, in commutation for the two-thirds of the Dock Company—the Railway Company receiving the whole of the wharfage dues, and he did not think the Directors would be accused of having made an imprudent bargain when it was known that in one week the wharfage dues amounted to 150*l.*—

Mr. W. CRAWSHAY thought it extremely impolitic that such questions should be answered. (Loud cries of "hear, hear.")

The CHAIRMAN regretted very much that, in justice to the character of his colleagues and himself, he should be under the necessity of answering them.

Mr. CRAWSHAY said, the proprietors had to trust to the discretion of the Directors. Great mischief might arise from these questions, which by means of the press would now be made public, when it was known that they received 150*l.* a week from that which cost but 1,400*l.* per annum. (Hear, hear.)

Mr. Serjeant GAZELEE had no wish whatever to press any question the answering of which might be productive of injury to the undertaking, or inconvenience to the Directors. He was only anxious that the rumours in circulation should be contradicted or confirmed.

Mr. CRAWSHAY did not believe that the learned gentleman had any improper motive, but he was satisfied that such questions as that about the wharf ought not to be answered. (Hear, hear.)

The CHAIRMAN said, with respect to the other questions of the learned proprietor, a preference had unquestionably been shown, and he hoped would always be shown, to those boats which made the Brunswick Wharf their home. (Hear, hear.) Was the honourable proprietor aware that the Watermen's boats were endeavouring to take away the trade of the railway by running to the west end of the town for 6d.? It was on that account that a heavy wharfage had been imposed, and if *that* did not succeed in repressing their efforts, something else must be tried. (Much applause.) As to the luggage of passengers, he was aware that inconvenience had arisen in particular instances, but it had been caused by the endeavours of the Directors to keep up only such an establishment as was commensurate with the ordinary traffic. The Herne Bay boats sometimes brought 300 or 400 passengers more than their average, and, unless the Railway Company kept a large number of additional servants beyond what were usually required, some slight inconvenience must arise on these extraordinary occasions. (Hear, hear, hear.) As regarded excursions, he was glad that the learned proprietor had alluded to the matter, as it showed that he at least could appreciate the efforts made by the Directors to bring traffic to the line. The Directors had no intention of purchasing the yard of Messrs. Green and Wigram, nor Mr. Lovegrove's tavern, although it would give them great pleasure to find the traffic increase so as to render it necessary to take the opinion of the shareholders as to the policy of making these purchases. ("Hear, hear," and a laugh.) Next as to the rope. He held in his hand a return of the number of times that a breakage had occurred——

Mr. D. SALOMONS (a Director) thought it was not necessary to enter into details.

The CHAIRMAN said, it was as well that the matter should be fully discussed. In the present month of June the rope had broken on the 2nd and again on the 14th, and a swivel had given way on the 4th, making in all 3 breakages out of about 3,500 trips. (Hear, hear).

Mr. LEVY—Give the parties who bring forward these statements rope enough. (Laughter).

The CHAIRMAN—Such statements were usually very much exaggerated. At the utmost the breaking of the rope did not involve a delay of more than a quarter of an hour, so that even in that case the passage was quicker than by the river. With regard to the clause for the hiring of steam-boats, it had orginated in what transpired at a meeting of the London and South-Western Railway proprietors, who had pressed upon their Directors the policy of feeding the railway by steam-boat traffic. The Directors of the Blackwall Company had accordingly consulted the Board of Trade and Lord Shaftesbury, and the opinion of these parties was, that as the railway was intended to relieve the Pool, it was within the scope of the orginal Act, and quite legitimate, that power should be taken to carry out this object by the hiring of steam-boats. Two proprietors, however, petitioned against the clause, one of them having an interest in Gravesend steam-boats running to London Bridge; and however anxious the Directors were to carry such clause, and however ready to bring it forward again should another application to Parliament be rendered necessary, they felt that as they had not ascertained the sentiments of the proprietors at large, and as time did not admit of doing so, they ought not to persist in what might prove a costly contest, and therefore the clause had been withdrawn. He trusted he had said enough to show that the Directors had not in this matter been neglectful of the interests of their fellow-proprietors. (Hear, hear, hear.) He believed he had now answered the whole of the learned gentleman's questions.

Mr. Serjeant GAZELEE—The money borrowed?

The CHAIRMAN—The Directors had borrowed on their own personal responsibility, and still owed 35,000*l.*

Mr. WHISHAW wished the clauses in the new Act as to borrowing, and those respecting steam-boats, to be read.

The CHAIRMAN said, the clauses relative to steam boats were somewhat lengthy, but should be read if required. They were, however, only such as were inserted in all Pier Acts, and had reference to the regulation of captains using the wharf, and the recovery of dues from the owners of vessels.

It was intimated that it was not necessary to read the clauses in question.

The SOLICITOR then read the clause as to borrowing, which was in the usual form.

Mr. WHISHAW inquired if it were proposed to take power now to raise the whole of the 68,000*l.*

The CHAIRMAN said it was, and unless something unexpected should arise to enable them to dispose of the surplus property to advantage, the power would be exercised to the full extent.

Mr. LEVY hoped it would not be long before the surplus property was sold—not more than a year or two.

The CHAIRMAN thought it ought to be sold within a year.

Mr. JOHN BIGG said, it had been stated at the last meeting that the surplus property was estimated at 70,000*l.* He wished to know how much of it had been disposed of in the interim.

The CHAIRMAN—To the extent of 13,000*l.*

Mr. BIGG—To what purpose is it intended to apply the money now to be borrowed?

The CHAIRMAN—To pay off the debts of the Company.

Mr. BIGG—Have you any statement of those debts—of the largest of them?

The CHAIRMAN—No.

Mr. WHISHAW—What will be done with the proceeds of the surplus property?

The CHAIRMAN—The bonds of the Company, which fall due in three, five, and seven years from the date of their issue, will be paid off with the money as far as it will go.

Mr. CRAWSHAY—Are you sure there will be any surplus?

The CHAIRMAN—That question belongs more to Mr. Tite than to the Directors. I have stated on the faith of Mr. Tite's estimate, that the surplus property will produce 68,000*l.*, and from Mr. Tite's previous accuracy, I think there is no reason to doubt in the present instance. I believe the permanent addition to the capital will not exceed 25,000*l.*

Mr. WHISHAW—But you do not want to pay off the bonds yet?

The CHAIRMAN—Some of them fall due next year.

Digitized by Google

Mr. Crawshay—An idea is entertained that you will require the whole of the sum now proposed to be borrowed, and the proceeds of the surplus property as well. I wish to know if you think that you will have 35,000*l.* or 25,000*l.* arising from the sale of the surplus property applicable to the reduction of the Company's capital?

The Chairman—I have no doubt of it. (Hear, hear, hear.)

Mr. Crawshay—What then will be the permanent capital of the Company?

The Chairman—There is one contractor not yet finally settled with, so that it is impossible to say precisely, but I believe it will be from 1,020,000*l.* to 1,025,000*l.*

In answer to some further questions,

Mr. Titt said he had been requested, in estimating the surplus property, to take into consideration the state of the times. He had no doubt that it would realise 68,000*l.*, if not something beyond.

Mr. Crawshay wished to know whether they were to consider the capital account closed—whether the expenditure of the undertaking was done with, or if any further works were contemplated.

The Chairman said, the Directors contemplated no further outlay, except the construction of a station at Cannon-street-road, which would cost about 100*l.*

Mr. Serjeant Gazelee inquired if the raising of this 66,000*l.* might not be postponed till the August meeting. He had no wish to cause embarrassment to the Directors, but he should oppose the resolution, unless it were stated that it was absolutely necessary to raise the money immediately. The Directors could, if they pleased, hold the general meeting early in August, so that little more than a month need elapse, and he did not suppose the creditors were so clamorous as not to wait for a month. He had said at the last meeting that all the 66,000*l.* would be required, and so it had, although at the time the contrary had been intimated.

The Chairman would give the gentlemen of the press credit for general accuracy, but, if they stated that at the last meeting he had intimated that the whole of the 66,000*l.* would not be wanted, they had been in error. With respect to the immediate necessity for raising the money, the Company were in debt, and it was due to their credit and honour that such debt should be liquidated as soon as possible. (Hear, hear.) Refusing to-day to grant the means of paying it, would not add to the respectability or promote the interest of the Company. (Hear, hear, hear.) He might add, that there were at present facilities for borrowing, which might not soon occur again.

Mr. Wilson was convinced that the proprietors would not hesitate at once to put the Directors in a position to discharge themselves from the heavy responsibilities which they had incurred. (Hear, hear.)

Mr. Levy, to put an end to further discussion, would at once move the resolution for raising the money.

Mr. Wilson would second it with much pleasure.

Mr. Bigg said, the explanations of the Chairman were most lucid and satisfactory, and he esteemed it a most fortunate circumstance for the Company, that they possessed so able a Chairman. (Loud applause.) He (Mr. Bigg) had come into the room somewhat prejudiced against the raising of so large a sum; but so clearly had the subject been set forth, that the resolution should have his support. He took leave, however, to differ entirely from the Chairman on the question of steam-boats. He (Mr. Bigg) was one of the petitioners to whom the Chairman had referred, and although there were but two names attached to the document he believed it had had some weight even with the Directors. He would take that opportunity of stating his belief that whenever a meeting should be called to authorise the expenditure of the Company's funds, directly or indirectly, on steam-boats, or any speculation not germane to the purposes of the Company, such proposition would not meet with the support of the proprietors at large, and certainly should have his strenuous opposition. (Hear, hear, hear.)

Mr. George Rennie, jun. (a Director) said, when the proprietors had done him the honour to elect him to a seat at the Board, he had declined joining others of the Directors in the steam-boat speculation, because he considered that he could best perform his duty to his fellow proprietors in the railway by remaining quite independent of collateral projects. He was satisfied, however, that but for these steam-boats the Gravesend traffic would never have been developed, for before they were established, not another boat had touched at the Brunswick Wharf. (Hear, hear, hear.) He would call upon the proprietors to relieve the Directors from these steam-boats, not that they were an unprofitable speculation—for he believed the contrary was the fact—but because the Directors ought not, in his opinion, to have so much responsibility upon them. He was convinced that the boats had been put on solely to develope the traffic of the railway, which but for them—the finest on the station—must have remained to this day undeveloped. (Hear, hear, hear.)

Mr. Salomons addressed the meeting at considerable length, on the subject of the steam-boats. He asked the shareholders to place full confidence in the Direction—a purer than which, he was convinced from his own feelings, and an observation of the conduct of his colleagues, did not exist in the city of London. (Hear, hear.) He then adverted to the difficulties which, about the time of his joining the Board, some 12 or 18 months ago, the Directors had to encounter—difficulties which had now happily been surmounted—but which nothing but the circumstance of having incurred heavy personal liabilities in the Company's behalf, could have enabled them to get over. They had now a most magnificent and a most useful work, and one which he had no doubt would ultimately prove profitable. (Hear.) The Directors had found themselves in collision with a strong force of vested interests, so strong that even the public improvement effected by the railway would have been entirely defeated, if the Board out of their own proper monies had not embarked in the steam-boat speculation—thus not only proving to the public the superiority of the route *viâ* Blackwall, but demonstrating to the owners of existing boats, that great economy could be effected by availing themselves of the Brunswick Wharf. He would state, without fear of contradiction, that but for the railway boats not one passenger from Gravesend would ever have come to the line. (Hear, hear, hear.) He believed that a large proportion of the Company's revenue now arose from these Gravesend passengers, and was it now to be said that the Directors had done wrong in this matter? In the first place, they had a perfect right to do as they pleased with their own property; but he would go further and say, that should future loss arise, the railway proprietors at large, for whose benefit the speculation was undertaken, and to whose advantage it had contributed, ought to participate in such loss. He had, however, no fear that such a contingency would arise, for the speculation was returning profits which were suffered to accumulate, and he trusted the time would come when the whole outlay on these boats would thus be reimbursed, and the Directors receive the thanks of the proprietors for their exertions. (Hear, hear, hear.) The proprietors should not be led away by mere clamour—they should not make charges against the Directors in the dark—(hear, hear)—they should not write the Directors down, but bring forward their complaints where they could be answered. For his own part he should not be sorry to be relieved from the responsibilities of office. The proprietors, however, might secure the services of abler and wiser men than the present Board, but they could not find a more honest or more honourable body. (Hear, hear, hear.) There must be full confidence between the proprietors and the Directors who acted for them. Did any one suppose that the Directors had pocketted the Company's money, or that on the contrary they had not done everything in their power to promote the interest of the undertaking? They had now come to the end of their enterprise, and ought be relieved from the responsibilities which in the attainment of that object they had incurred. As to the steam-boat clause, of which so much had been said, did the Directors seek to make it compulsory; did they wish to put a chain across the river to prohibit vessels from passing Blackwall? No such thing. The Board of Trade had taken the same view of the matter as themselves, and said it would contribute greatly to the convenience of the public if the Pool could be cleared—a proposition which no one would call in question. The Directors had merely asked for power to hire steam-boats, and that only with the consent of four-fifths of the proprietors, and they asked for this power, because they were convinced it would be to the advantage of the railway. No one could quarrel with the honourable proprietor who said he should hereafter oppose such a clause, merely because of a difference of opinion, but he thought he must have some interest in the London Bridge steamers, otherwise he could not have taken up such a position. The honourable gentleman concluded by again asking for a continuance of confidence from the proprietors, so as to keep the Directors in heart. (Applause.)

Mr. Bigg wished to state, in explanation, that he had not, and never had, any pecuniary interest in any steam-boat whatever. (Hear, hear.)

The Chairman said, as the boats had been alluded to, he would read a statement of results, which would probably be interesting. Up to March, 1841, there were no boats to Gravesend from the railway, so that the traffic from that source might at that date be deemed a blank. The following was a comparative statement of the traffic of the summer months since:—

		Passengers.
March	1841	920
April	,,	10,389
May	,,	26,168
June	,,	40,184
July	,,	50,584
August	,,	72,328
September	,,	59,212
October	,,	25,649
November	,,	12,879
December	,,	13,227
January	1842	11,847
February	,,	12,377
March	,,	23,945
April	,,	28,700
May	,,	56,678
June	,,	about 70,000

From these figures, the meeting might judge whether the Directors had acted wisely, as regarded the interests of the railway, in starting the boats. (Hear, hear, hear.) They had not done so without consulting some of the largest and most influential proprietors, and obtaining their sanction. The vessels were now being worked at a considerable profit, which, however, it was not meant to divide, but to allow to go on accumulating. Should, however, any loss arise, he had no doubt that although not a sixpence would be taken from any railway proprietor without his full consent, the Directors could make out such a claim as honourable men would not resist. (Applause.)

The resolution was then passed unanimously.

The Chairman announced that the business of the meeting was now at an end.

Mr. Wilson, in very complimentary terms, moved the best thanks of the proprietors to the Chairman and Board of Directors, for their general zeal and ability in the Company's service, and particularly for their prudent experiment in regard to the steam-boats.

Mr. Serjeant Gazelee begged to be allowed to second the motion. He had deemed it his duty to ask certain questions, because the subject had been prominently put forth in the newspapers. He had no wish to cause any inconvenience to the Directors, and was perfectly satisfied with the explanations that had been given. (Hear, hear, hear).

The motion was carried by acclamation amid loud applause.

The Chairman said, the Board were very grate-

Digitized by Google

ful for this further mark of confidence. It frequently happened that with the best intentions, the conductors of the public press were led into unfounded and exaggerated statements, but he presumed that it was not the wish of the proprietors that the Directors should enter into a paper war. (Hear, hear.) They preferred to meet their co-proprietors face to face, and they trusted that on all future occasions the explanations they had to offer would be deemed as satisfactory as they appeared to have been that day. (Renewed applause.)

The meeting then separated.

LONDON AND BIRMINGHAM RAILWAY COMPANY—SPECIAL MEETING.

A SPECIAL general meeting of the proprietors of the London and Birmingham Railway Company was held yesterday at the Euston Station, GEORGE CARR GLYN, Esq., in the chair, "for the purpose of determining the steps which it may be expedient to take in virtue of the powers granted to the said Company, under the Act of this session, 'for making a branch railway from the London and Birmingham Railway at Coventry, to communicate with the towns of Warwick and Leamington, in the county of Warwick.'"

The SECRETARY (R. Creed, Esq.) having read the advertisement convening the meeting,

The CHAIRMAN spoke to the following effect:—I am almost sorry, gentlemen, that you should have the trouble of attending on the present occasion, but it is requisite as a public body, that all our proceedings should be in strict conformity with the letter of our Act. I trust, however, it will not be necessary that I should occupy your time for more than a few minutes, in stating what has transpired in reference to the purpose of to-day, since we had last the pleasure of meeting you. It will be in the recollection of such of you as attended the general meeting held in Birmingham in February last—and those who were not present will have learned it from the report of the proceedings which it is our custom to circulate among the proprietors—that the Directors were on that occasion empowered to conclude an agreement for the lease of the proposed branch line from Leamington and Warwick to Coventry, at the rate of 5 per cent. per annum on the estimated cost, such cost not to exceed 130,000*l.*, and subject to an equal division of any surplus proceeds. Soon after that meeting, and just previous to the appearance of the London and Birmingham Company before Parliament, the Directors were apprised that notices had been lodged for two other lines, the one from Rugby and the other from Hampton-in-Arden, both to the same points as the line which this Company had proposed to lease. Under these circumstances, gentlemen, it became necessary that the Directors should consider the merits of these several schemes, and the influence which each would exert to the interest or prejudice of the main line; and after due deliberation they came to the conclusion that from a variety of causes, which it is unnecessary, and might perhaps be improper, that I should specify, the project from Warwick and Leamington to Coventry ought to have the undivided support of this Company. But, gentlemen, when this step had been determined on, we found that our allies in the country—the parties immediately interested in bringing forward the scheme—were not, in point of fact, so well prepared to proceed as we had expected they would have been, and as they ought to have been before proposing to us to take a lease of the line. Deeming it, however, of paramount importance that the Leamington and Warwick project should be carried out in preference to either of the others, your Directors lost no time in taking up the matter actively and prominently, and from that moment the opposition of the influential land proprietors, which, although partaking of a local character had been in several instances somewhat formidable, ceased. After lengthened negociations—for I am bound to say that there was no attempt at imposition or extortion on the part of the landowners—after considerable negociation, an amicable arrangement was concluded, and the Act was passed. During the progress of the measure through Parliament it was necessary, however, to make provisions for several contracts which had been entered into under the cognizance and on the credit of the Birmingham Company—for, in fact, the landowners would treat with no other party—and these have been comprehended in the Act. One of the clauses, which it is not necessary that I should read, relates to the leasing of the line, and would have been substantially the same whether this Company had taken a prominent part in the undertaking or not; but the other, which, with your permission, gentlemen, I will now lay before you, is of a peculiar character, and has led to our meeting this day. It is as follows:—

"And whereas the said railway may be worked with greater economy and advantage to the public by the London and Birmingham Railway Company than by the Company by this Act incorporated, and it is expedient that in the event of the said London and Birmingham Company being willing to undertake the execution or subsequent management of the said railway, they should be enabled, with the consent of the Company by this Act incorporated, to purchase the same, or a share or interest therein, and to hold and exercise, or to participate in the enjoyment and exercise of, all the powers, rights, and privileges of the said last-mentioned Company in reference thereto; be it therefore enacted, that it shall be lawful for the said London and Birmingham Railway Company, by and with the authority of three-fifths of the proprietors therein who may be present, either personally or by proxy, at some general or special general meeting of the said Company, to purchase, and for the Company by this Act incorporated, by and with a like authority on the part of the proprietors in the last-mentioned Company, to sell and transfer the undertaking by this Act authorised, or any share or interest therein, to the said London and Birmingham Railway Company, and whether before or after the completion thereof (but subject to any existing mortgages, contracts, agreements, or liabilities affecting the same); and on the completion of such purchase, the said London and Birmingham Railway Company may have and hold the said undertaking, or the share therein purchased by them, and use, exercise and enjoy, or participate in the use, exercise, and enjoyment of all the rights, powers, and privileges conferred by this Act on the said Company hereby incorporated; and for such purpose it shall be lawful for the said London and Birmingham Railway Company, if they see fit, by and with such authority as aforesaid, to create such additional number of shares as may be necessary for completing such purchase or for constructing and working the said railway, provided the amount to be raised by such additional shares, together with any other sums which may be subscribed and paid under the powers of this Act, shall not exceed the amount of capital by this Act authorised to be raised for the purposes of this undertaking."

It is under that clause, gentlemen, that we now ask your concurrence in the plans which we propose to carry out. Upon what course the Leamington and Warwick people may follow I cannot pretend to speculate, but doubtless it will be determined at a meeting which they propose to hold in the ensuing week. I have only to repeat, gentlemen, that this matter is one of considerable importance to the London and Birmingham Company. All that we now ask of you is, power to create such a number of shares for carrying out the scheme as may be found necessary, and that you will leave a little discretionary power in our hands—feeling, as I trust you do, that in this, as in all other matters, we are actuated solely by a desire to promote the best interests of the London and Birmingham Railway, in the prosperity of which we are all deeply concerned. (Hear, hear, hear.) I now beg leave to propose the first resolution:—

"That the Directors be empowered, on behalf of the London and Birmingham Railway Company, to purchase the undertaking called the Warwick and Leamington Union Railway, authorised by an Act of the present session of Parliament, with all the rights, powers, and privileges given to the Company incorporated by such Act, and to carry into effect the said undertaking by such ways and means, and under such Direction and Management, as they may see fit: or otherwise, to purchase from time to time such share or interest in the said undertaking, and such participation in the said rights, powers, and privileges, and to contribute towards, and assist in the execution of, the said undertaking, in such a manner and in such proportion as to them may seem expedient."

The DEPUTY-CHAIRMAN (J. F. Ledsam, Esq.)—I beg to second the resolution.

Mr. JONES—What sum of money will be required?

The CHAIRMAN—The original estimate of the cost of construction, as made by the promoters of the line, was 120,000*l.*; but it is only fair to state, that during the progress of the Bill some addition has been made to the contracts. The powers of the Act extend to the raising of 173,000*l.*

Mr. JONES—What number of new shares will it be necessary to create?

The CHAIRMAN—*That* we cannot at present state precisely, as we do not know whether all, or what portion of, the Leamington and Warwick people will choose to divest themselves of their interest in the undertaking.

A PROPRIETOR—I think we ought to have the whole or none.

The CHAIRMAN—I quite agree with you, Sir, that it is highly desirable we should possess the whole; but I cannot think that, if that is impracticable, we should have none, for we may still secure enough to exercise a directing influence. (Hear, hear.)

The resolution was then carried unanimously.

The CHAIRMAN—The next resolution, gentlemen, is vague, and necessarily so. It is as follows:—

"That in order to provide the funds necessary for the above purposes, the Directors be empowered (subject to the provision of the Act authorising the said Warwick and Leamington Union Railway) to create, from time to time, such number of new shares in the undertaking of the London and Birmingham Railway, and under such terms and conditions, as they may see fit, and to borrow from time to time such sums of money on the credit of the Warwick and Leamington Union Railway as they may deem necessary."

The whole shares so to be created cannot exceed 175,000*l.*, and may be much less, perhaps 100,000*l.*, perhaps only 50,000*l.*, or possibly the whole 175,000*l.*

The PROPRIETOR (who spoke before)—If only a small number of shares are issued, it will be difficult to distribute them equally.

The CHAIRMAN—We shall in that case pursue the same course as was taken with certain of our more recent issues. We shall apportion one new share to every holder of a certain number of existing shares; and those proprietors who hold a less number, will be entitled to receive their proportion of the new issue in money. It will be recollected

Digitized by Google

that a similar process has already been adopted, some claiming the shares, and some the premium. By this means all the proprietors, however small their interest, will be benefitted in proportion to their several holdings. (Hear, hear, hear.)

The resolution was then carried unanimously.

Mr. JONES—Is there any estimate of probable traffic?

The CHAIRMAN—The whole has been prepared, and, if necessary, shall be laid before you. I stated at Birmingham that if no other project had been in the field—if no branch line had been in contemplation from Rugby or Hampton—probably the Birmingham Company might not have deemed it necessary to take up the Leamington and Warwick scheme; but as a line *was* to be constructed, it was highly important, for reasons which I am sure you will excuse me for not detailing, that the control over it should rest with this Company. (Hear, hear, hear.)

After a pause,

The CHAIRMAN—Gentlemen, there is no other business to be brought before you to-day, but we hope to have the pleasure of meeting you in August, and proposing a dividend for your sanction.

Captain PORTER moved a vote of thanks to the Chairman, and the meeting broke up.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—Observing in your publication of Saturday, that an action is commenced against you for a libel on one of the Sub-Engineers of the Brighton Railway, I have only to express my sincere wish that you will give the gentleman an opportunity of proving that there has been at least one honest man in the active Management of the works, for I doubted it, although I have devoted more time to the examination of the affairs, and manner of conducting the works, than any other shareholder.

I am, Sir, yours, &c.,

ARGUS.

LONDON AND BRIGHTON RAILWAY.

To my Brother Shareholders.

GENTLEMEN,—The time of our annual general meeting is drawing nigh, and I should be very glad to see a meeting publicly called of the shareholders in this town and neighbourhood, previously, for the purpose of concerting what is best to be done for the protection of our property. There cannot be a question that there is something very bad in the Management, and if this were put on a sound foundation we need not fear but we should yet reap splendid results, as witness the weekly increasing receipts. The immediate object of the present letter is to *revive* and keep us all *wide awake* as to what is due to ourselves, and I shall endeavour to give and keep before you a few *promptings*.

1st. If our Chairman or any of the Directors have an interest or seat at any other Railway Board, they are unfit to act for us. and we should put others from our own body into their places. This should be strenuously insisted upon, as I understand our Chairman has many duties to attend to.

2nd. Mr. Wood, our late Secretary, should be sought out and called to account, as, independently of his defalcations, small as they were held out to be (but which I greatly doubt), his presence may throw some important light on the Management which we have all suffered so much from.

3rd. I should like to moot the responsibility in right seriousness of the Chairman and Directors for the services which they have undertaken for us. I should not leave responsibility to be in *name* only; and if it can be shown that they have been neglectful of the trust confided to them they should be personally called to account, seeing they are paid and receive wages.

4th. If they have not kept clear and proper accounts for the settlement with the South-Eastern Company for a portion of the railway, they should be made personally liable therefor, and we should not suffer from any delay in the payment of that large sum which the South-Eastern are now ready to pay to us.

5th. Most rigid inquiry should be made into the management of the clerks and the counting-house, and I should move that some fit and competent person be appointed to see after that department and the accounts.

6th. We should have a fearless scrutiny, and cross-questioning put to the Chairman, and perfect freedom of debate at the meeting, and I trust that Mr. Parsons, or some other able hand, will not hesitate to probe everything to the utmost.

These are a few hints hurriedly thrown together; others will yet occur, but in the meantime I shall be glad to see my efforts seconded to have a meeting called in this town immediately.

I am, yours, &c.,

A BRIGHTON SHAREHOLDER.

Liverpool, June 29, 1842.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—Accept the hearty thanks of a suffering shareholder for the very able and clear manner in which you have endeavoured to protect the property of myself and others in this unfortunate line. It has come within my personal knowledge this last week, that in consequence of your strictures a very large shareholder went up to town purposely to inquire into your allegations. He had an interview with our most bland Chairman, who was politeness itself; but all the information he could get was, that it was not true, and that it was not worth while to reply or take any notice of your effusions. My information is, that the shareholder was so dissatisfied that he immediately gave instructions to his London broker, and has gradually parted with nearly 400 shares.

The many instances of gross neglect and incapacity which you have been the means of bringing under the notice of the public, make your statements of consequence to those who, like myself, embarked a considerable sum as an investment; and I do fearlessly assert, it is the duty of the Directors immediately, if these assertions are incorrect, to give an official contradiction, and not to sit down with apathy, when by so doing they could save the property of the shareholders from so serious a depreciation.

I am inclined to believe your assertions; for, Mr. Editor, if you will inquire in this neighbourhood (Chorley) you will there find Mr. Rastrick does not rank as the first engineer of the day. It is said the Bolton and Preston Company have sacrificed something like 50,000*l.* on a tunnel, which is now obliged to be made into an open cutting, under the able and enonomical Engineer-in-Chief of the Brighton line.

Is there anything to prevent the Brighton, South-Eastern, and Croydon lines all being worked under one Management, one Engineer, one Secretary? It would be an immense saving to the three lines. Of course the Directors and Engineers of our line would object. I throw out this hint, and perhaps some able correspondent might suggest a plan that would be mutually advantageous. The shareholders must look after their own interest, or else goodbye to any dividend.

I am, Sir, yours, &c.,

A LANCASHIRE SHAREHOLDER.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—I beg the assistance of your powerful pen to draw public attention to the following facts:—

At the time there was an opposition in the shape of van or waggon on the Brighton road, goods were brought down by rail at very low prices, indeed, so much so, that I have paid only 1s. for parcels weighing nearly 50 lbs., and in quantities of 3 or 4 cwt. paid at the rate of 2s., and subsequently 2s. 6d. per cwt. One by one the vans were taken off. As soon as the Directors thought they had the entire monopoly in their hands, they raised the price of goods most materially, and now actually charge for a parcel above 14 lbs. 1s. 6d., and so on in proportion to its weight.

Recollect this to the tradesman, and those who like myself, are constantly in receipt of two or more parcels daily, becomes a considerable tax.

I suppose it will be urged they have a perfect right to charge what they please; and so undoubtedly they have, provided by such charge they are not prejudicing the interests of the shareholders.

Now this proceeding of raising the prices to such an amount, when they conceive they possess the monopoly, will have the effect of causing the trade to establish and support a van; this being done, I think the interests of the shareholders will suffer. I ascertain from experience that the van lately started brings down and takes back parcels at *less than half* what I am charged by the Company.

I have accordingly given directions to all my London correspondents to send by van, stating that if they send by railway while the present system continues, I will deduct the difference from their accounts.

I must beg to say, in conclusion, that not in the very remotest way am I, or is any one belonging to me, connected with the van in question.

I am, Sir, respectfully, yours,

HENRY S. KING, Bookseller.

1, North-street, Brighton, June 30, 1842.

MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

SIR,—Notwithstanding the various letters touching the above in your journal of last week, each having, no doubt, a particular object in view (one, however, that will not at present be attained), that of raising the price of the shares, and attributing the recent fall to some unprincipled jobbers, not one grapples with the cause correctly, however well they may be acquainted with it. The real cause is well known to observant minds. This railway, of all others, is dependent on its resources to a locality labouring under long and unparalleled depression, without prospect of immediate recovery, and its receipts have not warranted the price of its shares. This fact will be fully proved now that the half-year is nearly closed, and its receipts ascertained. This will be found sufficient to account for the late depression—though a slight re-action has occurred, it must inevitably return. The "Contented Shareholder" has done more to prove the cause of the late fall than either of the other problematical disputants. Take his own figures and estimate—

For this half-year (which amount is yet to be proved.)		£109,000
From which deduct working expenses	£43,600	
Interest on loans	36,000	
Do. on guarantee	2,000	
		81,600
Leaving		£27,400

to pay a dividend on the paid-up capital of 1,300,000*l.*, a sum indeed scarcely sufficient to pay 4 per cent. It may be said these calculations are at random. I, however, take the receipts as your contented correspondent suggests, and the working expenses, as stated in the Company's past Reports, are laid down at 2,000*l.* per week, an amount I have underrated considerably. I leave to your correspondent all the content he can draw from those deductions. He, however, goes still further in calculating for the ensuing half-year, which he lays down as 151,000*l.* Assuming this to be correct, he just comes to the conclusion of Mr. Pease, in a letter in your journal a few months ago, wherein he states—

Income at 5,000*l.* per week		£260,000
Working expenses	£100,000	
Interest on capital at 5 per cent., 3,200,000*l.*	160,000	
		260,000

and Mr. P. further stated at the time that 5 per cent. was as much as the concern could pay at present, or indeed should have done. Having no other reason to address you last week or this (I regret you could not find room for my letter last week), than to trace the cause of depression as correctly as possible, and trusting to your insertion of this,

I am, Sir, yours, respectfully,

JUSTICE.

Manchester, June 27, 1842.

BIRMINGHAM AND GLOUCESTER RAILWAY—GOODS' TRAFFIC.

To the Editor of the Railway Times.

SIR,—As the table published in the *Railway Times* of Saturday, June 25, is calculated to mislead such of the proprietors in this Company as were not at the last general meeting in February, and who may not therefore be aware of the explanations then given, I am instructed to send you a correct statement of the receipts on goods, &c. for the period embraced by the table in question.

The Directors do not think it necessary to notice the mis-statements in the margin of the table, and in the letter signed "A Shareholder." I am, Sir, yours, &c., GEORGE KING, Sec.

FOUR-WHEELED AND SIX-WHEELED ENGINES.

To the Editor of the Railway Times.

SIR,—Having felt a good deal interested in the experiment recently made on the London and Birmingham Railway, in which the front axle of a four-wheeled engine was cut, in order to ascertain what would be the effect of a broken axle on engines of this description, I beg to make a few remarks on the letter in your last number, signed "A Practical Man;" and I am the more inclined to do so, as I have heard nearly similar arguments to those of your correspondent made use of by other parties.

These arguments are all based upon an assumption which appears to be entirely unfounded, namely, that when railway axles break they do not break straight across, but break in a diagonal line. This your correspondent asserts is the case, except in some very rare instances; whereas I think it can be shown that a diagonal fracture is nearly, if not quite, an impossibility in a straight axle.

In a paper of mine, recently read before the Institution of Civil Engineers, I have endeavoured to show the causes of a certain deterioration which takes place in railway axles, and which produces their fracture. Without discussing this point here, however, I shall merely observe, that every broken railway axle presents the crystallised texture which is well known by the name of "cold short iron." To this fact there is, so far as I am aware, no exception; and it necessarily follows, from a consideration of the nature and habitudes of iron, that so long as the axle continues tough and fibrous it cannot possibly break. The only mode by which fibrous iron can be broken is by tearing it asunder. No single blow, however intense, can break a bar of fibrous iron of any considerable size. To tear asunder a round bar of fibrous iron, one inch diameter, requires a force of about 20 tons; and therefore a railway axle of four inches diameter would require a force of 320 tons acting in the same way. But this tearing asunder is not by any means an instantaneous operation, but requires some minutes, during which the bar lengthens considerably, and becomes much thiner at the place of fracture. But if, instead of a tensile force, a blow were given, the iron by its elasticity would bend and recede from the blow; and if the blow were sufficiently powerful permanently to bend it, the iron would, while it recedes from the blow with the same velocity as the striking body originally possessed, react upon the body striking it, which would then only follow at its original velocity, *minus* the amount it had lost in the collision. It follows, therefore, that no single blow can be given to a bar of fibrous and elastic iron greater than will cause it to bend, unless the body striking is so immeasurably more powerful than the body struck that the reaction produced upon the striking body is almost inappreciable in reducing the velocity of its motion, in which case there would be no limit to its effects. But for this purpose we must have a striking body whose momentum we must measure, not by hundreds of tons, but by thousands, if we would fracture by a blow a railway axle, of four inches diameter, of fibrous iron; and it is probable, therefore, that before this occurred, the whole machine to which the axle was attached would be broken up, and the axle no longer oppose the force of the stroke.

Very different to this is the effect on an axle consisting of the cold, short, or crystallised quality of iron. A single blow, and that too of no very great intensity, is sufficient to break it: but it always breaks as nearly as possible in a straight line across the axle, and not in the diagonal line stated by your correspondent. A tolerably extensive acquaintance with the habitudes of iron enables me to state of my own knowledge that this always occurs both with round and square bars of iron; and on inquiry from parties who have had the most experience with railway axles, they confirm this opinion in every particular. I cannot, therefore, but consider that your correspondent, "A Practical Man," labours under a mistake, and that he will find on more particular examination and inquiry, that the axles always break in the manner I have stated. I of course do not here allude to crank axles; for with them the effects of torsion exert a very considerable influence in many cases of fracture, and the joint effects of the two forces are very likely to produce a diagonal fracture. In some few cases of this kind which I have become acquainted with, no inconvenience has been experienced similar to that supposed by your correspondent: for when the engine has *inside bearings*, the effect is simply to press the flanges of the wheels tighter and tighter against the rails, which will then either bend the rails or gradually stop the engine.

Considering then that straight axles always break in the way here stated, I think that the experiment lately made on the London and Birmingham Railway was planned with the greatest judgment, in order to imitate in the most exact manner the effects of a broken axle; and had it been made in the way suggested by your correspondent, "A Practical Man," exception might well have been taken to it as an experiment incompatible with practice. But even if it were possible for an axle to break as stated by your correspondent, he is wrong in the amount of extension which would take place. He states that this extension would be equal to the distance shown in his third section and marked E, F; whereas it would be exactly half this amount, as may easily be seen by inspecting the figures given in your last number, the extension being only equal to the angle of the diagonal, and not to twice this angle as stated.

If your correspondent can adduce any instances where straight axles have broken diagonally, it would be desirable to publish them, both for the purpose of investigating the theory of broken axles,

Digitized by Google

and for his own vindication; as it must be observed that he states, *as a fact*, that straight or square fractures are comparatively exceedingly rare. On the contrary, I am quite satisfied that straight fractures are the rule, and diagonal fractures the exception. If any such can be found, I have no doubt they will have arisen from the action of the *break* having been applied in those cases, which would to some extent produce the effects of torsion. But as this cause cannot affect the straight axles of engines, the whole argument of your correspondent on the subject of the recent experiment is a mere "figment of the fancy," with which no "Practical Man" ought to meddle when treating of mere matters of fact.

I am, Sir, your obedient servant,

CHARLES HOOD.

Earl-street, June 29, 1842.

BIRMINGHAM AND DERBY RAILWAY.

To the Editor of the Railway Times.

SIR,—Permit me, through your assistance, to offer a few remarks for the consideration of the shareholders in the above-named Railway Company, with reference to some of the statements which are reported to have fallen from their Chairman at the special meeting of the Company, held at Birmingham on the 2nd of this month.

In the published report of the proceedings of that meeting the Chairman is made to say, in answer to some expressions of dissatisfaction at the entire failure of the expectations held out to the shareholders, that "a gradual improvement was taking place, as would be seen when they compared their present receipts with those of corresponding periods of the past year, and the twelve months preceding." Let the shareholders really make this comparison for themselves, and they will perceive the real value of the alleged improvement, which they are to infer has taken place in consequence of the "attention" the Directors have bestowed upon the affairs of the Company. It is not very easy, however, to draw a correct comparison between the three periods in question, for during the whole of the year 1840, and the first five months of 1841, the allowance for the carriage of mails, about 100*l.* per week, did not appear in the traffic returns, although the service was performed. Again, during the whole of the first half-year of 1841, and a part of the second, the goods traffic returns were falsified—one proof among others of the sort of "attention" which has been given by the Directors to the affairs of the Company; and thirdly, a diminution in the amount of toll to the London and Birmingham Company, since the opening of the direct line, gives a small increase in the net total of the receipts during part of the present half-year, without any real increase of traffic. A good deal of analysis is therefore necessary, in order to arrive at a correct conclusion. The allowance for the carriage of mails first appeared in the traffic return of the week ending 5th June, 1841, and that month, which furnishes also the latest data, will therefore, perhaps, afford the nearest approach to a correct comparison, leaving altogether out of sight the net totals, which, as before observed, do not give a correct idea of the actual traffic, being affected differently by the amount of toll.

The traffic returns for the month of June, up to the latest date of publication, for the three periods alluded to, are as follows:—

1840.	Passengers, &c.	Goods.
Week ending June 6.....	£1,300	£140
„ „ 13.....	1,519	188
„ „ 20.....	1,453	169
1841.	**Passengers, &c.**	**Goods.**
Week ending June 5.....	£1,137	£281
„ „ 12.....	962	367
„ „ 19.....	970	353
1842.	**Passengers, &c.**	**Goods.**
Week ending June 4	£926	£262
„ „ 11	921	286
„ „ 18	998	294

The returns for the above-named periods of 1840 are, it is true, peculiarly favourable, although without the due allowance for mails, owing to the partial opening of the North Midland, and the incompleteness of the Midland Counties' Railways; and in 1841 the falsification of the goods' traffic returns causes a larger amount to appear under that head than in reality existed; but the passenger traffic of the two latter periods may safely be compared, and would seem to show that this alleged improvement has been so "gradual" as to be imperceptible, and so "steady" as to be nearly stationary, and rather retrograde than otherwise. A comparison between any other periods of this and the preceding year, after a similar analysis, will not show results at all more favourable, although this direct line, which was to have produced so large an increase, has been in operation since the middle of February.

The Chairman is further made to say in the published report, in answer to an observation made by Mr. Crawshay as to the small stake in the concern held by the Directors, that "it was a larger stake compared with their capital than was held by the Directors of any other Company." So sweeping an assertion is, to say the least, somewhat startling. The Directors (eight in number exclusive of Mr. Crawshay, who stated at the meeting, according to the same report, that "he had declined acting with the present Board") hold among them 249 old shares out of 6,300, and 274 new shares, issued at 25 per cent. discount, out of 6,800. The shareholders can therefore judge for themselves in this matter, from their own knowledge and means of information. On the other hand, one shareholder alone holds about three times as much as the whole of the eight Directors put together, and another holds singly about four-fifths of their entire stake. Both of these, the two largest proprietors, besides several other principal shareholders, have long since withdrawn their confidence from the present Board. At the late special meeting the Directors had, it is true, a majority of votes in their favour, but the majority of shares, had they been reckoned, would probably have been on the other side. The Company's Act of Parliament gives a large preponderance in votes to the small holders, added to which the possessor of 200 original shares, paid in full, was excluded altogether from voting in favour of the amendment, on a technical objection raised by the Solicitor of the Company, who had just recorded his own votes on the other side. It may perhaps be doubted whether a victory so achieved can be considered either as a triumph or as a proof of confidence such as to justify the present Board, under whose auspices the property of the shareholders has progressively deteriorated until it has become almost valueless, in continuing to ride over a proprietary, those of whom who have the largest stake have every reason to believe, from observation and inquiry, that the causes of this ruinous failure are to be found in the system of management followed by the present Directors—a system which was denounced nearly a year ago in the recorded Report of a Committee of proprietors, but which has been persevered in notwithstanding, and in spite of every argument and remonstrance of those most interested, and in the face of the understood assurances of the Chairman himself to the members of that Committee, both individually and collectively.

I am, Sir, your most obedient servant,

CHARLES C. BLANE.

London, June 28, 1842.

NEWCASTLE AND NORTH SHIELDS RAILWAY.—The alterations and improvements recently made at the station of the Newcastle and North Shields Railway have been amply tested this week. The traffic during the races has been beyond all precedent; and yet amongst the many thousands of persons conveyed up and down every hour in the day, no one has had to complain of delay, confusion, or annoyance of any kind. On Monday 2,735 persons passed on the railway; on Tuesday 2,595; on Wednesday 3,521; and on Thursday 6,395.—*Newcastle Journal.*

RAILWAY MANAGEMENT.

LETTER II.

To Railway Shareholders.

GENTLEMEN,—I now proceed to inform you whom you *should* elect for Directors—an office which requires firmness, intelligence, and fidelity, and which qualities so very few of our present Railway Boards possess. In the first place I should recommend that Directors be chosen from the largest shareholders resident near either terminus or along the line, provided *such* persons possess talent sufficient to hold the office, and provided also they be not Directors of more than one other railway, and that one not possessing any interest, or being situated near the line at which Boards they possess seats.

Supposing this course to be adopted, we should soon have an efficient Directory. Men, *working* men—they are our object—Directors who *can afford* to spend their time for the benefit of the railway—Directors to whom money and time are secondary objects. For these we should select retired merchants, for they possess a knowledge of business, and are used to the detail of accounts; officers in the army or navy possessing a practical knowledge of railways, and who would know how to command the numerous subordinates now employed.

Add to these two classes gentlemen of influence, and a good substantial Board of Directors is formed.

It may be argued that these are not the parties qualified for Directors, and that officers of the army or navy are just the reverse of what Directors should be. To this my only answer is—try them. If they are not found better, why then, I will for the future place implicit confidence in the Directors we now possess.

But I am convinced, fellow shareholders, that they will be of great service. I possess shares in numerous railways, yet cannot find an efficient Directory. As respects the *landowning* Directors, for by that name will I term those I have classed under the head of "gentlemen of influence," I am convinced that they would do a signal service to any railway. They know the soil, are acquainted with the country, and perhaps possessing the confidence of their neighbours might be of use, in preventing much litigation with *small* landowners, &c.

Then again, retired merchants, under which class I allude to any individual who has been connected with accounts, and who has now the time to bestow on railway affairs, and who will not allow the interests of his brother shareholders to be sacrificed to the jobbing propensities of one-half of the present officers.

And now as regards "Secretaries." This officer is, in fact, no more than a managing clerk in a mercantile establishment, with the exception that he does less work and receives more pay. Yet we find these gentlemen so swelled up with their own importance, that shareholders can never obtain an interview, or if they can, never a civil answer—never a ready attention such as ought to be shown. I do not say that every Secretary is of this kind, but there are a great number, far too many, such.

Besides, some of these Secretaries are not fit for the office—not even conversant with the affairs of their own Company, and not even talented enough to form a skilful opinion on any one given subject; and yet such men receive from 200*l.* to 1,000*l.* per year. Surely such a state of things as this ought not to continue—and would not, if shareholders were more alive to their own interests.

And now, Gentlemen, it only remains for you to exert yourselves to remedy these evils. Let every man feel conscious of his own strength, value his own vote, trust not too much to the Directors' representations, and believe me we shall soon have what is so much required—a fair return for our capital, and a flourishing railway.

I am, Gentlemen, your most obedient servant,

DIOGENES.

June 26, 1842.

NOTES TO THE TRAFFIC TABLE,

(on the opposite page.)

2. *Misses* toll to London and Birmingham 13*l.* 9s. 3d.

3. Main line, 53 miles; Tewkesbury branch, 2. — Total length, 55 miles.

4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone. The Company are now before Parliament for power to raise the capital to 500,000*l.*

8. Receipts include the Northern and Eastern toll, &c.

12. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester and Chester and Crewe lines, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 134½ (83½+21+31.)

14. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 169½ (118½+18+33.) The *rent* of the branch lines is together 903*l.* 16s. 11d. per week. There is likewise a *toll* payable to the Exeter Company, which, on the basis of the first half year's traffic, amounts to 130*l.* per week.

15. The dividends have been hitherto (up to 31st December, 1841) appropriated to completing the line and works.

17. The 29*l.* 14s. 1d. from goods, &c. is for toll only.

18. Ten per cent. is the maximum dividend allowed by the Company's Act.

19. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. The dividend is *nominally* at the rate of 9*l.* 10s. per cent., but to the original shareholders it is equal to 12*l.* 15s. per cent., as the dividend on the original shares is paid upon 100*l.*, although only 90*l.* has been called for; and on the quarter shares upon 25*l.*, although up to the 31st of December last only 5*l.* had been called for. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

20. The dividend is from the opening, and on the old shares alone.

21. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table.

22. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company. The sum applicable to the purpose of the dividend declared on the 10th of March, was 11,125*l.*, of which amount 10,051*l.* 17s. 1½d. had been earned prior to July 31st, 1841.

23. Capital of 993,300*l* includes new capital for widening the line, &c. The want of dividend does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table includes the receipts from the footpath, but is exclusive of the Brighton, Croydon, and Dover toll.

24. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount. The Gosport branch is included in the length stated.

25. Including Toll, &c., from Sheffield Company, and after deducting omnibus charges, &c.

26. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

27. The 4,581*l.* 6s. 3d. are the receipts after deducting omnibus charges, and payments to other Companies.

28. The receipts for goods, &c., include, horses, 28*l.* 4s. 6d.; carriages, 38*l.* 2s. 0d.; dogs, 3*l.* 18s. 0d.; parcels, 221*l.* 13s. 8d.; cattle, 36*l.* 4s. 6d.; corn, 5*l.* 18s. 3½d; heavy goods, 480*l.* 11s. 6½d.; coal and lime, 90*l.* 18s. 10d. —Total, 905*l.* 10s. 10d.

30. The present returns are for the Newcastle race week.

31. The 3,850,000*l.* is the *nominal* capital on which dividends have to be paid; the amount actually raised is 3,000,000*l.* The details of the receipts are as follows—Passengers, 2,749*l.* 2s. 11d.; carriages and horses, 168*l.* 14s. 0d.; parcels, 180*l.* 3s. 3d.; mails, 50*l.* 5s. 9d.; merchandise, 936*l.* 8s. 9d.; minerals, 216*l.* 19s. 5d.; cattle, 36*l.* 10s. 0d. — Total, 4,338*l.* 4s. 1d.; including North Midland proportion of Manchester and Leeds traffic, amounting to 126*l.* 5s. 2½d.

32. The receipts are after deduction of Liverpool and Manchester toll.

33. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 134*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 32¼ miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

34. The capital of 533,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).

35. The returns are inclusive of Manchester and Birmingham toll.

38. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

One who has Deeply Suffered.—*A few lines from a late number of our daily contemporary, the* Times, *will answer our correspondent. The conductors of that journal, whose efforts in exposing swindling are honourably known to all the world, after very guardedly alluding (such is our beautiful law of libel!) to a most flagrant case which has since been placed under judicial investigation, say: "Having thus given an outline of the case, the question naturally arises how innocent or thoughtless persons may be protected? The merchants have no right to ask from a public journal to put itself forward, by an open and direct exposure, to meet the expense and trouble of a prosecution for libel, which must attend even a favourable verdict. * * * There seems to be no reason, when a case is so marked and perfectly notorious as that above described, why they should not publish the fact as an advertisement to all the world, giving a guarantee to the channel through which it is made known."*

Railway Dividends.—*A correspondent recommends that, as many disputes arose last Christmas from the want of a right understanding as to which party the dividend ought to be paid to in the case of transfer, on and immediately after the 31st December (in some cases the seller selling the dividend and taking a commensurate price—in others not selling it, but receiving it himself), it would be well for all Railway Companies to close their transfer books on the last day of the half-year, and have it an understood matter that the dividend would belong of right, and would be paid, to the party who should stand registered as the proprietor of the share on such closing of the transfer books, say, on the 30th June and 31st December, and this whether he should have sold or not. It would (he adds) be competent for such proprietor, if he wished to have his dividend paid to any other person, to assign it to such person in writing, which being delivered to the Secretary would be sufficient voucher for him. The matter is worthy of attention in the proper quarter.*

A Subscriber *who dates from* Gloucester, *but whose letter bears the* Bristol *post mark, must do something more than abuse honourable men before he can hope to find a place in our columns; he must give us either facts or arguments.*

Ubique's *plan would take up more room than we can conveniently spare, and after all would answer little good purpose.*

C. T. H.—*We are much obliged to our correspondent. The Edinburgh and Glasgow Returns come to us from the Company. We have not lately received a separate account of the traffic on the Shoreham branch of the Brighton Railway.*

R.'s *calculations have been received, and we beg to offer him our best acknowledgements for the trouble he has taken. As the half yearly meetings are just at hand, we think it better to defer any alteration till they are over; but we assure our intelligent correspondent the matter shall not be lost sight of.*

R. A. B.—*The Bill has received the Royal Assent.*

Junius *(relative to the "Feathers" at Merstham, and the Trustees of the Turnpike-road) received. Let us hear further from him.*

Amicus—*A petition for leave to introduce a Bill was presented, about three sessions back, but it was found that the Standing Orders had not been fully complied with, and leave was not granted. Since that time, the project has slumbered.*

We wish all our correspondents would write legibly, upon one side only of the sheet, and not use the thin paper now becoming so fashionable. The additional postage would not be much, and a vast deal of needless trouble to us and our printers would be avoided.

*** Our publisher will gladly give double price for any one of the following numbers, to enable him to complete sets. For the year 1838—January 13th, 20th, and 27th; February 3rd and 10th; and October 27th. For the year 1842—February 26th.

THE RAILWAY JOURNALS.

The Stamp Returns for the nine months ending the 31st of March last (published by order of the House of Commons), show the following results:—

RAILWAY TIMES .	**113,374**
Railway Magazine . .	50,500

The total number of Supplement stamps (for Double Numbers) used by the *Railway Times*, during the above period, was 10,874, thus showthe ordinary circulation of the *Railway Times* to be more than double that of its contemporary.

THE RAILWAY TIMES.

SATURDAY, JULY 2, 1842.

A SPECIAL meeting of the Blackwall Railway Company was held on Tuesday, and a full report of the proceedings will be found in another part of our present number. The meeting was looked forward to with very considerable interest, in consequence of various rumours which were afloat with reference to the position and Management of the undertaking. In our last publication we inserted two letters on the subject, and it will be seen that the various points therein touched upon, were brought forward at the meeting by Mr. Serjeant GAZELEE. Anything more complete than the explanations given by the Chairman it would not be easy to imagine. Every word he uttered was to the purpose, and we recommend his example, in this respect, to the attention and imitation of Chairmen generally, some of whom, we are sorry to see, are smitten with an itch for long speeches, to the great impediment of business, and to the annoyance of their auditors. The Directors of the Blackwall Railway ought to feel obliged to the learned Serjeant, whose questions appear to have been put in no unfriendly spirit, for giving them an opportunity of vindicating their past proceedings. We gather from the concluding observations of the Chairman, that they deem it *infra dig.* to avail themselves of the public journals to correct misapprehensions or contradict misstatements, and therein they exhibit, in our opinion, a spirit not at all worthy of them. Railway Directors, and much greater men than they, may affect to undervalue the influence of the press, but they must know, and do know, that after all it is the prime mover in public affairs, and in affairs which, like those of Railway Companies, interest a large body of individuals. We will not say that Directors should rush into print in correction of every petty mistake, but we do say, that when, as in the case of the Blackwall Company, so much misapprehension is generally entertained, it would only be discharging a duty incumbent upon them if the active Managers were briefly and clearly to state the real facts of the case—thus probably preventing many a timid shareholder from sacrificing his property to the machinations of those by whose agency injurious rumours are usually propagated, and in nine cases out of ten invented. It would seem, however, as if the only notice which certain railway officials condescend to take of the press is by lawyers' letters and actions for so-called "libel." The Directors of the Blackwall Railway had far too complete an exculpation to bring forward, to seek an appeal to the harassing proceedings of law—the last, and indeed sole, resort of conscious culprits.

Digitized by Google

Of the matters discussed on Tuesday the steam-boat question was the most prominent. It was mentioned very distinctly by the worthy Chairman—and we are sure no one will doubt any statement made by him—that not a sixpence of the Railway Company's funds had been embarked in this steam-vessel speculation. We confess that even had it been otherwise we should not have seen any great enormity in the business. The result of the Blackwall boats has fully borne out the anticipations of those who started them, as respects the development of the traffic of the railway; and it seems to us that just as legitimately may the Directors of a Railway Company endeavour to improve their revenue by offering the collateral facilities of a steam-boat, as seek to attract the public to their line by entering into arrangements—generally attended with some amount of pecuniary sacrifice—with the owners of omnibuses or stage-coaches, or in improving the approaches to their own property. The principle is in both cases the same; and the only matter for consideration is, whether such an expenditure be politic, and likely to prove advantageous—a question which, like most similar questions, must be left to the discretion and judgment of those to whom the management has been entrusted. In the instance of the Blackwall Company it is very evident, from the statements made at the meeting, that there was and is no desire to force foreign speculations upon the proprietors. At the same time it is clear to us that the line will never attain a satisfactory degree of success until very much more than has yet been attempted shall be effected from the river. Upon the river traffic the undertaking must, from its position, be mainly dependent; and even a losing speculation *quoad* steam-boats might be amply remunerative through the traffic thus brought to the railway. The whole question deserves the best attention of the proprietors, and we trust will receive it. If by any honourable means they can profitably increase their traffic, such means they ought as men of business to adopt; and without quibbling about terms or clauses, there can be little doubt, we think, that these means would consist with the *spirit* of their Act of Incorporation.

The subject of fares was mooted by Mr. Levy, who has on previous occasions reprobated the adoption of very low charges. The meeting, however, being special, the matter was not discussed, but probably it will be revived at the general meeting in August next. We are glad to find, from what fell from the Chairman, that there is no intention of raising the fares. Even the small addition of 1d., recommended by Mr. Levy, would probably affect the receipts very prejudicially. The locality of the Blackwall Railway marks it out as pre-eminently a low-fare line. It is the extremely moderate charges by water which attract to Gravesend the vast multitudes that daily visit that not very attractive spot, and unless low fares by railway be combined with low fares by river, all the attempts of the Directors to develope a passenger trade from that district will be in vain. Of course we do not recommend that any Company should persist in charges which are found not to be remunerative—and on some lines reduction has perhaps been carried to an improper extent—but in the case of the Blackwall, with so much competition on all sides, and with so large a field for operation as the metropolis alone can present, we do not think the proper limit has been passed. A comparison of the charges and results of the Greenwich line and the Blackwall—the former with important attractions of which the other cannot boast—would appear to demonstrate that to their low fares are the latter Company indebted for a very large proportion of their revenue. Augmentation of charge is at all times to be deprecated, and in this instance would, we are satisfied, prove deeply injurious.

The branch line from Leamington and Warwick to join the London and Birmingham Railway near Coventry, is now sure to be constructed without delay. A special meeting of the London and Birmingham Company was held yesterday, to consider the steps best to be taken in the matter. The details will be found in another part of our journal. It would appear that the scheme will be carried out with the capital of the proprietors of the main line—certainly that the control of the undertaking will rest with that Company. The latter arrangement is indispensable to the accommodation and convenience of the public, and probably also to the success of the branch line as a paying speculation.

When we alluded last week to the case of the young man Bull or Ball, charged with embezzling the funds of the London and Brighton Railway Company, we stated that we could scarcely credit the rumour which had reached us on the eve of publication, that the affair was to be "settled" (such is the polite phrase for the illegal act of compounding felony), but it would appear from a notice in the *Brighton Guardian* of Wednesday, that the report was not wholly without foundation. Our contemporary, after publishing the particulars which we gave last week relative to the prisoner's examination at Union Hall Police-court, says:—

"With this information the reader is prepared to proceed with the case. There is, it seems, a most extraordinary, and indeed a most unconstitutional, power given in the London and Brighton Railway Act, viz., that the Directors may compound a felony, and securing themselves against loss may turn a thief loose and unpunished upon society. The prisoner's friends are respectable persons, and the Directors or their agents are now in treaty with them to compensate them for the loss which the Company has sustained; but as some difficulties have arisen in the settlement of the precise terms of the compromise of this legalised compounding of felony, application was made on Monday further to remand the prisoner—and the ground on which the application was made is of the honesty which characterises the whole transaction. 'We ask,' said Mr. Henry Faithfull, 'to have the prisoner remanded, *to further the ends of justice*'—those 'ends of justice' being no other than extracting the money deficient, or a portion of it, from a parent's hard earnings, to shelter a reprobate and a thief from the punishment he merits. The magistrates were clearly averse to the proceeding; but finding that the law warranted the application, they even complied with the request, remanding the prisoner till Thursday next—Major Allen giving especial direction that information of the prisoner's remand be forthwith given to Mr. Silvani, who came to the Bench last week, when the private hearing took place, to charge the prisoner with obtaining from him two gold chains, under pretence of submitting them for selection to a friend, and then absconding with them to London, where it is charged that the prisoner pawned them. The duplicates of two gold chains were found upon him when taken."

In another part of the same publication our contemporary observes:—

"The shareholders in the London and Brighton line of railway are certainly the most unfortunate speculators in the world; their interests are sacrificed at every turn. Not long ago their Chief Secretary, Mr. Thomas Wood, absconded with a considerable sum of money; and not till he had decamped did the plundered shareholders learn that the diligent Directory had omitted to take any security from their officer. Nor does this lesson appear to have had the effect even of making those who have the management of the Company's affairs more careful. There are, it appears, no sureties for the young man, Frederick Ball, who, it will be seen by our police report, is now in custody on a charge of embezzlement, and is declared a defaulter to the extent of 300*l*. *Five months ago*, about the time he received his appointment, Ball gave in the names of two responsible persons to be his sureties; but though the Company is saddled not only with *twenty* Directors, including a double-salaried Chairman, but with *two sets of lawyers*, the time has not been found to have the securities entered into; and consequently the Company will lose the whole of this sum of 300*l*., unless something by way of compromise can be extorted from the fears of a fond and distracted mother. This is a pretty system of management truly. A young man of fashionable habits is engaged at the paltry salary of 30*s*. a week, large sums of money are entrusted to him, no security is taken, and, as we hear, the accounts are only checked *once a month*. The wonder is not that one rogue has been discovered, but that an honest servant is to be found in the establishment. While the Directors swallow turtle and guzzle champagne, the poor *employés* are put upon the most miserable and inadequate pay; and even the precaution of taking security, so necessary to counteract the temptation constantly placed before them, is wickedly as well as carelessly neglected. This matter must, we apprehend, be brought under notice at the approaching half-yearly meeting of shareholders."*

Verily, this matter, and many other matters of comparatively more moment, *ought to be* brought under notice at the next meeting, but whether they will be so or not we cannot take upon ourselves to say. So long-suffering, so patient under injuries and insults, are railway proprietaries, that it would not greatly surprise us if, instead of reprimanding and cashiering their present precious Board of Direction, it should be proposed by some of the tools of the Management to vote them the especial thanks of their dupes! The proprietors at large may rely on it that no stone will be left unturned to secure so desirable an object for Mr. John Harman and his colleagues. Already, we understand, these immaculate Managers are canvassing for proxies in all directions. Let the proprietors be on their guard. No apprehension of injury to the undertaking ought for a moment to prevent them from thoroughly probing the past and present mode of Management to the bottom. Even should the shares be at all affected—and we know that the mere dread of such an occurrence induces not a few timid proprietors to slur over many matters which otherwise they would closely scrutinise and unflinchingly expose—even should the share-market be for a time affected, no permanent mischief, but quite the reverse, will result. What care the public *who* are Directors, so that the accommodation offered by the railway is what it ought to be? The Board may be the purest, and presided over by an unimpeachable Chairman, or the most corrupt that ever shared in the plunder of unscrupulous underlings, but so long as money's worth is

* We have since been told that the matter has been "arranged," and the prisoner discharged! Surely the conduct of the magistrates who sanctioned such a proceeding, deserves the notice of Sir James Graham, the Home Secretary.—Ed. R. T.

Digitized by Google

supplied for their money in the way of locomotion, the public at large care not one straw about the matter. With the proprietors, however, the case is far otherwise. Upon the character and conduct of those to whom they entrust the management of their affairs it depends whether they shall suffer the misery of hope deferred, or at once realise, as they ought to realise, a return on the money embarked in the speculation.

As a straw will indicate the direction of the wind, so does the ease of this peculating clerk bear testimony to the mode in which the Directors of the Brighton Company look after the interests of their constituents. "Fashionably dressed" young men employed at a salary of 30*s.* a week—large sums of money passing through their hands—their accounts checked only once a month! Is it any wonder that robbery upon a large scale should be the result? And if our contemporary be correct, so gross has been the neglect of the Twenty Directors, and "two sets of lawyers," to say nothing of Secretaries and Superintendents, that even the security offered by the friends of this young man has been, from want of attention to certain forms, rendered useless. If the proprietors act as they ought to act—and as they would act in their individual concerns—they would hold each and every one of these same Directors personally responsible for the amount of the prisoner's thefts. One would suppose that the Brighton lawyers would have been more *faithful* to their trust. It is reported that many thousand pounds, never yet brought forward in any statement of accounts, are due to these gentlemen, so that in prospect of what they are to receive they might have been somewhat more vigilant. By the way, are there no means of "taxing" the bills of these gentry? Directors may have the strongest possible reasons for "passing" the accounts of their legal advisers, but it is for the proprietors of Railway Companies to see that work has been rendered for the amount charged; and, moreover, that *the lawyers have not created and cut out work for themselves*, and that no members of the Board have directly or indirectly profitted thereby.

As regards the Brighton Railway the shareholders have, as our contemporary remarks, been "the most unfortunate speculators in the world." Mr. Wood's flight appears not to have taught the Directors wisdom. Perhaps it were worth the while of the proprietors to ferret out the hiding-place of the runaway. It is generally believed that it would be no very difficult matter. If, with safety to himself, it could be arranged that Mr. Wood should have an opportunity of "making a clean breast of it," there are parties connected with the Brighton Railway whose position we should by no means envy. Let an effort be made, but do not let the officer sent in pursuit receive *private* instructions not to capture the fugitive. The *shareholders* have no reason to dread the carrying out of any threat on the part of Mr. Wood, that if pursued he will produce certain papers by no means creditable to *somebody*.

A letter from a Liverpool correspondent on the subject of this railway will be found in another page. Its recommendations are well deserving of notice. The Lancashire proprietors should consult together previous to the half-yearly meeting, and so too should the London proprietors, to arrange an effective course of proceeding. Unless something of this sort be done, there is little chance of a successful issue. Boards of Direction, with their tools and *cadies*, are too compact and powerful a body for the scattered and aimless efforts of proprietors in public meeting assembled. A well-digested onset would clear the concern of the whole set, and before the proprietors can hope to repair in any way the mischief which has already been done, out they must go—Directors and Director-Secretaries—Engineers and sub-Engineers, aye, if they should even have sufficient wealth (honourably acquired of course) to hold largely of the Company's bonds. Unfortunately there is much injury done that cannot now be repaired, but there is still enough worth contending for, and one vigorous effort will suffice. We shall have something further to say on this topic hereafter.

The Railways' Regulation Bill was read a third time in the House of Commons yesterday week. The clause of Sir Henry Hardinge, relative to the conveyance of troops (as adverted to in our last number), was carried after some little conversation, but without any division. For ourselves we cannot, as we have previously said, see any valid objection to the clause, which, after all, is one more of form than otherwise. There may be objections to the time at which the clause was introduced, and if it in any way compromised the rights or privileges of the Companies it should have our determined hostility; but it is quite clear that its non-introduction at an earlier stage was altogether an omission on the part of the authorities, seeing that it is not by any means likely it would have encountered serious opposition.

In the course of the discussion (as elsewhere recorded) several other points were incidentally referred to. Viscount Howick wished that the owners of property ignited by the sparks from locomotive engines should be more fully protected, but nothing definite was done in the matter. For this species of damage by fire the Railway Companies would, as we take it, hold themselves in every respect responsible, but it must first be proved that the conflagration did really arise from the passage of the trains. And then if the owners of hay-ricks or wheat-stacks choose to fix these erections in immediate proximity to a railway (and in more than one instance we have recently had ocular demonstration of the fact), who are to blame but themselves should damage arise? One corner of a field cannot be much more eligible for such erections than another; and if danger is carelessly or *on purpose* encountered, it is not right that the Companies should be the victims.

Mr. Gladstone stated that some parties were waiting for the passing of the Bill before they entered upon works of great importance. We believe that this has reference to the clause for allowing Companies to take possession of land for the purpose of remedying or preventing slips. We know of at least one Company who are placed in a most unfortunate position from their inability legally to enter upon adjoining land indispensable for their operations. The Royal Assent to this Bill will remove all difficulty, and as we have reason to believe that the case alluded to is by no means a singular one, we shall be glad, if for this reason alone, to find the measure become law. The rights of the landholders are amply secured; and although the effect of the clause will undoubtedly be to check the ravages of those land-sharks who look upon Railway Companies as their proper prey, it will much facilitate negociations between the Companies and those lords of the soil who are disposed to accept a liberal price—for we are satisfied none other would be offered—for their property.

Altogether, the rejection of the measure for the present session would probably not be attended with any particular inconvenience to the Companies or detriment to the public; but having once been brought forward, we trust it will be carried in due course through the Upper House. If it should be of no great importance in itself, it may at least serve to prevent future legislation at a moment when popular clamour or private prejudice may exert a much more powerful influence against the system than they happen at present to possess.

An adjourned special meeting of the proprietors of the Glasgow, Paisley, and Ayr Railway Company was held last week in Glasgow, at which it was resolved, under powers granted by their late Act, to augment the capital of the undertaking to the extent of 156,250*l.*, by the creation of 12,500 new shares of 12*l.* 10*s.* each. A new share is to be in the first instance offered to the holder of every existing share—the option of taking such new shares to cease on the 12th instant. A preferable dividend, at the rate of 5 per cent. per annum on the amount paid up will accrue upon this new issue.

While we regret the necessity for so considerable an augmentation of the Company's capital, it is very clear that the terms offered to investors are most favourable, namely, a guarantee of 5 per cent. in perpetuity; and when the many still undeveloped sources of traffic upon this line are fully brought out, there is little doubt, we think, that the advantages to permanent holders will be very considerably increased. At present we regret to see that the line is suffering severely from the depression of trade so common, unfortunately, throughout the empire, and more especially in that district of the north.

We learn, with much gratification, that the works upon the Kilmarnock branch are so far advanced as to ensure its opening by April next. The numerous collieries with which that part of the line is studded cannot fail to add largely to the Company's revenue, while the extreme beauty of the scenery must attract in great numbers the pleasure-seekers of that populous locality. On the whole, we see no reason to doubt of the ultimate success of the speculation, although from a combination of untoward circumstances a suitable return has been delayed longer than the shareholders could have wished, or than we had seen cause to anticipate.

Towards the end of last week we were informed that Mr. Crawshay had resigned the Chairmanship of the Northern and Eastern Railway Company, but from the peculiar position of the Company at this moment, we could not persuade ourselves that the information was correct. It appears, however, from a letter from Mr. Crawshay himself, which we elsewhere publish, that we were too incredulous. Mr. Crawshay *has* resigned, and with him, we believe, some of the officers of the Company.

We alluded last week to the voice of the Falmouth Town Council in favour of the proposed railway through Cornwall and Devon, and we learn from a local journal that "the movement of the Council towards giving effect to the Report of the Committee appointed at a county meeting in favour of a railway from Exeter to Falmouth was well followed up by the inhabitants of Truro on Wednesday [week].

Digitized by Google

when a series of resolutions in favour of this *desideratum* was agreed to unanimously. The gentlemen who moved and seconded the resolutions were Messrs. W. M. Tweedy, Stokes, Passingham, Captain Kempe, Captain Wightman, and Mr. Neville." This, as we said before, is all very well; but it is not enough. *The "inhabitants of Truro" must subscribe for shares*, and if we were to remonstrate with them through a whole page, we could not more fully expound what is at once their duty and their interest.

SEVERAL claims for "compensation," with reference to the Halifax branch of the Manchester and Leeds Railway, were determined last week.

The Governors of Waterhouse Charities claimed for about four acres of land. There were also subsidiary claims. The witnesses for the claimants estimated the property and consequential damage at from 1,600*l.* to 1,800*l.*; the Company had offered 1,200*l.*; and the jury awarded 1,007*l.*

In another case (Sir C. Ibetson *v.* the Company) the witnesses valued the property (10,158 yards) at 4,063*l.*, 3,811*l.*, and 3,301*l.*, respectively. The jury returned a verdict for 2,016*l.*; the Company had offered 1,200*l.*

In a third case the witnesses testified to value and damage amounting to about 2,100*l.*; the Company had offered 1,600*l.*, and the jury found for 1,750*l.*

—o—

WE mentioned last week that the Atmospheric railway apparatus was likely to be laid down in the Thames Tunnel for the conveyance of passengers. We have since learnt that it is proposed to apply the apparatus to the ascent and descent, not only of passengers, but horses, carriages, goods, &c., by means of the existing passenger shafts, so as entirely to obviate the necessity for further openings, which of necessity must be of a very expensive character. It is believed that the cost of the apparatus would not amount to one-tenth part of the sum necessary to form carriage approaches, as originally intended. Sir I. M. Brunel, the eminent engineer of the tunnel, immediately on inspecting the railway at Wormwood Scrubbs, discovered how applicable it would be to the extraordinary work which he has with so much energy and skill brought nearly to completion.

—o—

IT would seem as if disappointment generated patriotism in railway, as in other, affairs. In the Report of the House of Commons' Committee on Public Petitions, we find noticed one presented by Mr. T. Duncombe, praying for alteration of the "Railways' Bill." The petitioner is Mr. "Rees Price, of Tyne Hall, Great Ilford, in the county of Essex"—the same gentleman who has recently been engaged in law proceedings with the Eastern Counties' Railway Company. The exact terms of the petition we do not know, but doubtless they are severe enough.

—o—

A CORRESPONDENT states that "the first meeting of the Directors of the Yarmouth and Norwich Railway Company since the passing of the Act, was held in London on the 28th June, when the Directors present proceeded to elect George Stephenson, Esq., Chairman of the Board, and Sir E. Lacon, and John Long, Esq., Deputy-Chairmen. Mr. Robert Stephenson and Mr. James Routh were appointed Engineer-in-Chief and Resident Engineer; and Mr. Patteson, late of the North Midland, Secretary. The necessary arrangements were likewise made for the commencement of the works, which will take place as soon as possible after the first general meeting of proprietors, to be held early in August."

—o—

WE learn with much pleasure from the *Brighton Gazette*, that "the towns of Hastings and St. Leonard's are beginning to feel the advantage of the new railway [the South-Eastern] which is now opened as far as Tunbridge. It makes a great saving of time between London and those towns, the journey being performed now in five instead of eight hours. The best proof of its good management is to be found in the fact that not a single parcel or package has gone wrong, nor has any mistake occurred." This is highly to the credit of the Directors and officers of the Company.

—o—

WE print to-day, according to promise, the answer of the Directors of the Great Western Railway Company to the circular of the Board of Trade, relative to "locking-in." The document in question says all that can be said in favour of the previous practice of the Company, and is well worthy of a careful perusal.

—o—

WE think the course determined upon by the Directors of the Birmingham and Derby Railway Company (as intimated in our advertising columns), with reference to the proceedings of Mr. Crawshay and his co-proprietors, to which we alluded last week, a most unwise one, as calculated to exasperate angry feelings, which perhaps a little explanation might soothe. We fear we shall have frequent occasion to recur to this business. In the meantime, a letter from Lieutenant-Colonel Blane, one of the gentlemen who are dissatisfied with the present Management, will be found elsewhere.

—o—

LONDON AND GREENWICH RAILWAY.—We are informed that the gentleman elected a Director of this Company, in lieu of Moses Asher Goldsmid, Esq., who resigned, is Andrew Kennedy Hutchison, Esq., who was one of the late candidates to represent the Tower Hamlets in Parliament.

—o—

A CORRESPONDENT of the *Northampton Herald*, in alluding to the "locking-in" system, says—

"An occurrence took place on the London and Birmingham Railway, on Friday, which goes so far to support your argument in favour of one unlocked door that I feel it my duty to apprise you of it. The day mail train having stopped on reaching Harrow, contrary to its orders, it was found on inquiry that the roof of one of the carriages—the fourth (!) from the engine—had been set on fire by a falling cinder, and actually burnt through. The dryness of the weather may be considered as in part the cause, and at all events no blame is attributable to any one. But what I desire to notice is the *tranquillity of the passengers*. Had the doors been locked I am convinced something like a panic must have ensued, not only in the carriage that was fired but in those adjoining. Yet, though everybody was alarmed and eager to look out of the windows, not one of the passenger was seen to open the door. Knowing they *could* open the doors, they felt, as Sydney Smith says, 'intensely comfortable.'"

CHELTENHAM AND GREAT WESTERN UNION RAILWAY.

To the Editor of the Railway Times.

SIR,—The Directors of the Cheltenham and Great Western Union Railway Company having, at the last half-yearly meeting of the proprietors, promised to convene a special meeting at an early period, may I presume, through the medium of your journal, to call the attention of my brother-shareholders to the important business which will then be submitted to them.

It will be unnecessary here to enter into a detailed statement respecting the enormous difference between the cost of the completed portion of the line and the original estimate for the same; suffice it to say, it is let on lease to the Great Western Company at 17,000*l.* per annum.

At the forthcoming meeting it is expected that our Directors will come prepared with some definite arrangements as to the future course to be adopted; and if the interests of the shareholders are studied, it will be to transfer, on equitable terms, the whole railway to the Great Western Company, and leave it for them to finish. They could easily accomplish what would amount to insanity in the Cheltenham Company to attempt. I trust that none of our shareholders would object to such a transfer, provided the terms are fair. We must not look to the present market price of our shares as a criterion to guide us, nor to the amount paid on them, but to the capabilities of the line itself; and bad as the nominal value of the shares is, we cannot suppose that the Great Western Company could buy them, and thus get possession of the line—but if the Act lately obtained enables them to do so, they could give us their certificates in exchange for ours.

As I before stated, the railway is let for 17,000*l.* per annum, which yields to the present proprietors (after paying salaries to Directors, Secretary, Sub-Engineer, &c. &c.) an annual dividend of 2*l.* 10*s.* per share. But suppose the Cheltenham Company were annihilated, and the whole rent paid direct to the shareholders, there would then be a dividend of 3*l.* per share per annum, there not being more than 5,500 shares to receive the same. Now, if we get half Westerns with 50*l.* paid, in exchange for our shares with 80*l.* paid, I cannot conceive that it would create any dissatisfaction to either Company, as each kind of stock would receive the same dividend; but if our Directors are enabled to make a better bargain, they will be entitled to our best thanks.

I would now suggest, that whenever the meeting is called the shareholders be early in attendance, and that we meet together at least one hour before the commencement of business, in order to be prepared with such resolutions as shall be thought necessary to counteract any efforts of the Directors which may not be considered of a satisfactory character.

I am, Sir, yours, respectfully.
J. C. H.

Calne, June 27, 1842.

CHELTENHAM AND GREAT WESTERN UNION RAILWAY.

To the Editor of the Railway Times.

SIR,—Your correspondent "B." appears determined to circulate a favourable opinion of this "good thing," which he states, at present prices, "a purchaser will reap a dividend of 9 or 10 per cent." upon his investment.

The rent paid by the Great Western for the use of this railway is 17,000*l.* per annum; from this must be deducted 4,577*l.* 19*s.* 8*d.* as the annual charge for interest, office and Directors' expenses, printing, &c., and the further sum of 5,500*l.* for interest upon 10,000*l.* debt of the Company, say together 10,000*l.*, leaving 7,000*l.* to pay interest upon 5,000 shares, which I take to amount to 1*l.* 8*s.* per share, or 5 per cent. upon the present market price of 28*l.* per share.

If the credit of the Company should continue unfavourable to their borrowing this large sum, the remaining 20 per cent. must be extracted from

Digitized by Google

the unfortunate shareholders; but in either case there can be no difference in the amount of interest.

If your correspondent "B." will take the trouble of using a few figures, I believe that he will soon discover that a considerable portion of the last dividend (the second only) was paid out of the last 7½ per cent. call, or capital of the Company.

I am, Sir, your obedient servant,
AN ORIGINAL SUBSCRIBER.

London, June 29, 1842.

NORTHERN AND EASTERN RAILWAY.

To "T. A.," whose letter of the 21st instant appeared in the Railway Times *of the 25th instant.*

SIR,—I do not hold myself liable to be called upon to notice any anonymous charge, but as my public capacity of Chairman of the Board of Directors of the Northern and Eastern Railway is so lately terminated, I should be sorry that any misapprehension as to my conduct, or present interest in the concern, should exist at the moment of my resigning into other hands its ostensible management. Upon reference to the report in the *Railway Times* of the special meeting of proprietors held on the 15th instant, you will find that "I had no hesitation in saying that I had recently sold 200 shares, and which 200 shares I had purchased subsequently to my original connection with the Direction." Upon the resuscitation of this Railway Company (for it had become nearly defunct), I engaged with others, by written agreement, to hold a certain number of shares, until paid up in full, or the road completed to Bishop's Stortford; and my engagement extended to 200 shares of 100*l.* each, or 400 shares, as now constituted, of 50*l.* each. These 400 shares I still hold, and have not parted with one of them; nor have I in any way trafficked in shares beyond the purchase and sale of the 200 shares in question; and which purchase and sale I conceive myself as much justified in making as I should have been had I not been a Director of the railway, for I have not availed myself of any information beyond what every other shareholder or the public possessed; and I repeat, that so far from my sale of the 200 shares in question having been the *effect* of the decision of the Board to sell the forfeited shares, it was the cause of such recommendation; as I conceived that the facility of disposal which I had met with in my 200 shares would enable the Company to sell their forfeited shares without loss; and upon this was the decision of the Board made to recommend the sale of the forfeited shares, and not until then.

I have here repeated the exact fact connected with all the "trafficking in shares" of the Northern and Eastern Railway which I have been concerned in; and I have at this moment an interest of 20,400*l.* in the said railway.

I am, Sir, your obedient servant,
WILLIAM CRAWSHAY.

London, June 27, 1842.

NORTHERN AND EASTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—I perused with interest the letter of "A Shareholder," in your last week's journal, and was prompted to refer to my copy of the Directors' Report of 13th August, 1840, stating that a loan of 100,000*l.* had been obtained on the personal security of some of these gentlemen; and, subsequently, another loan of 50,000*l.*, both at the rate of 6 per cent. per annum—a tempting bait, by the bye, under guarantee. It further states, that those gentlemen claimed the privilege of taking up as many shares at par (at any time at their option, prior to the re-payment of the loan of 150,000*l.*) as would guarantee them againt liability—a proposition it was then hoped the proprietary would cordially approve of.

Now, for my own part, I felt exceedingly gratified at the time at this proposal, though satisfied that any monied man (and scores are daily on the look-out for chances of advancing cash securely at 5, or even 4 per cent.) would gladly embark his means in such a "safe risk," as is evidenced by the fact that 5 per cent. railway debentures command premium, and the Northern and Eastern has now assumed unquestionably a prosperous aspect. I felt assured that the strenuous exertions of these gentlemen would, from the extent of their personal stake, be devoted to the bringing quickly this fine railway line into lucrative operation, and that such Directors would be liberally recompensed in taking up the shares at par whenever they yielded a satisfactory premium; an inducement by way of bonus for their disinterestedness.

I yet believe, that had this mode of dispersing the 3,180 50*l.* shares (equal in cash to 150,000*l.*) been adopted, the shareholders would have felt themselves the obliged party, however considerable the premium derivable by those Directors might have proved; besides which, after cancelling the loan, the Company would derive for its exigencies upwards of 8,900*l.*, the aggregate of instalments paid up (computing them to average 2*l.* 16s. per share) beyond the Directors' surplusage of 9.000*l.*

Until recently we had nearly reached the desideratum "par," and this summer's half-yearly meeting (August ensuing), but for a fitful cloud interposing, would in all probability have seen us pass the Rubicon. No mist shrouded the vision of the legal adviser in August 1840, although the self-same Act of Parliament that now so inflexibly biases opinion did not then prompt those liberal-minded Directors to tender these shares for competition. I much fear (though I rejoice at the cause) that it will soon be regretted that opportunity to redeem the interest at stake is likely to be so prematurely sacrificed.

I am further apprehensive it will prejudice the position of some shareholders—executors, for instance, who are not warranted, from their tenure as Trustees, in tendering in behalf of their clients for these forfeited shares, however eligible the chance. The resources of others may be locked up in other securities, so debarring them from participation; nay, sales may even be forced unseasonably.

A restrictive clause might have been inserted in the proposals (which are somewhat vague) for the purpose of disseminating these shares equally in small holdings amongst the shareholders tendering, which would induce the latter to retain their respective allotments preferably to throwing them on the market.

It does not appear that the new issue of shares will for some time heavily tax the traffic earnings, since, although it might not have been so understood in the room at the special meeting of the 15th, we are now apprised that such shareholders will only participate in dividends to the extent of the calls paid up.

Further, as the amount will vary in the respective tenders, how will future buyers know the extent of the final call they become liable for?

There was a slight inaccuracy as to date in a letter regarding traffic inserted in the *Railway Times* of the 18th instant. It should have stated—

		Average per Week.
Nine months' receipts, 12th Sept. 1840, to 13th June, 1841	£17,910	£460
Six months' receipts, 13th June, 1841, to 13th December (not September)	23,243	894
Six months' receipts, 13th Dec., 1841, to 12th June, 1842	27,702	1,065

Succeeding weekly averages seem very promising,—they now nearly reach 1,500*l.*, independent of goods' traffic, as yet inoperative.

I am, Sir, your obedient servant,
VIGILANS.

June 23, 1842.

NORTHERN AND EASTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—I would beg to suggest to the Directors of this undertaking the propriety, in the distribution of shares that is about to take place, of allowing no one individual to retain a considerable number of them; for having the case of Mr. Williams fresh in their recollections, it must appear evident that where a proprietary is numerous and substantial there is a much greater chance of the calls being regularly paid than where it is confined, and the shares held by few individuals. I deem it also incumbent on the part of the Directors to give the present shareholders the preference in the distribution that is to take place. These remarks have been elicited by an advertisement I have seen in the *Railway Times* of this week, and to which I would beg to call the attention of the Directors.

As far as my own observation leads me, I believe that individuals holding from 20 to 100 shares in undertakings of this kind, do so more for the sake of permanent investment than do persons holding double or treble that number.

A SHAREHOLDER.

Devon, June 27, 1842.

NORTHERN AND EASTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—The statement of receipts at ALL the stations for seven months immediately preceding the raising of fares in November last, and for the seven months immediately following the advance, was intended as a refutation of the assertion, at the general meeting on the 15th instant, "that the Company had suffered a loss of many thousands, by the raising of fares," but "A Landowner, &c., &c., on the Line," has discovered, that the gain was only at the three furthest stations, and that there was a loss at the three nearest stations, viz., Lea Bridge, Tottenham, and Edmonton, and adding a reiteration of the previous assertion, "that the raising of fares had damaged the receipts."

Please to remark, that the fares to Lea Bridge and Tottenham had the second-class fares advanced 1d. only, and the first and third-class were not altered. This penny advance could not be the cause of the great falling off at those two stations; there was a more considerable advance at Edmonton, viz., 6d., 3d., and 1d., on first, second, and third-class. But remark, that where the gain appears there was an advance of 6d. on each class, except at Ponder's End, where the advance was 6d. on first-class, and 3d. on second; the whole showing that the falling off in receipts was confined to where the advance was the least. Indeed, the alteration at Lea Bridge and Tottenham was made from 12d. 9d. 8d., to 12d. 10d. 8d., as being a better division of fares.

I am, Sir, yours, &c.,
A. B.

POWER OF THE CRANK.

To the Editor of the Railway Times.

SIR,—I beg to offer a few observations on a communication published in your last number, and signed by J. Dixon, C.E.

Your correspondent has mistaken the real action of the crank, inasmuch as he has not applied the power to the crank-pin, as is the case in the steam-engine, but has employed the constant radius of a circular pulley to give motion to the crank; and as he could not have obtained a circular motion *of the second pulley* with any kind of regularity without a second pair of cranks, placed at right angles with the first pair, by which connection he has assimilated the effect of the cranks to that of wheels or straps, he has obviated the inconvenience resulting from the single crank, and has thereby obtained a result that cannot be obtained by the crank alone.

I will in a few words endeavour to point out my meaning more clearly.

When motion is communicated by the crank-pin, the power of leverage is constantly varying from 0 to the length of the radius of the crank, and from that radius again to 0, for every half revolution of the crank.

For instance, when in the ordinary beam-engine the crank is in a vertical position, or in a direct line with the connecting rod, the power communicated by the action of the steam on the piston, has no tendency whatever to make the crank revolve, because the crank in that position offers no leverage; but turn the crank in the slightest degree, get

Digitized by Google

the engine over her centre, and then the connecting rod and crank being no longer in a line, a leverage is created, and away she goes with increasing power, until the crank stands perpendicular to the connecting rod, when the effect is at its maximum, and then gradually decreases until the crank is once more in a direct line with the connecting rod, when all effect ceases.

The motion produced in this manner would be so irregular as to be inapplicable to any useful purpose, but the fly-wheel, that beautiful and perfect reservoir of power, having been introduced, a regular motion has been obtained, but at the cost of that amount of power which is requisite to keep the mass in motion at its proper speed—and this amount of power is the principal loss that is occasioned by the use of the crank.

Theoretically (with the above exception) there is no loss of power in the action of the crank, because the distance travelled by the engine piston is directly proportionate to the leverage obtained by the crank, so that when the crank passes over the centre, its leverage being small, the distance travelled by the piston, and consequently the expenditure of steam, is comparatively small also—for the leverage of the crank will be equal to the chord of the arc described by the crank pin, while the action of the piston will only be equal to the versed sine of that arc.

J. D., by placing his motive power over the circumference of his pulley, exerted a power equal to the weight multiplied by the half circumference of the pulley, whereas had he applied his weight to the crank-pin, the power expended would only have been equal to the weight multiplied by twice the radius of the crank. Supposing that in both cases the crank was allowed to make only half a revolution, which is all that it could make, if the weight were applied to the crank pin.

The fly-wheel takes up a very considerable quantity of power, and I have no doubt that a good pair of marine engines, united by cranks working at right angles, will do more effective work than could be done by a double acting rotative engine with a powerful fly-wheel; but then such engines can only be employed on certain occasions; they would be excellent for corn-mills, but would not do for iron works, where a fly-wheel is indispensable.

I agree with your correspondent against the opinion of those who consider that there is a great loss of power in the use of the crank, only we arrive at our conclusion by different roads, *mais tous les chemins mènent à Rome.*

I remain, Sir, yours, &c.

London, June 27, 1842.

RAILWAY BENEVOLENT SOCIETIES—MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

Sir,—Being a constant reader of your journal, I am aware of your readiness at all times to insert anything of interest respecting railways; whether it be to benefit the public, the proprietary, or servants employed on them.

The subject to which I now wish to draw your attention, as well as that of the Directors of Railways, is Benevolent Institutions. The great number of persons employed now upon railways, and their peculiar liability, especially in some occupations, to disease and accident, render these institutions a desideratum in every Company. Of their desirableness the almost universal adoption of them is proof. Their utility admitted, it becomes necessary to consider how they should be constituted and governed to make them most efficient and most useful.

The present management of most of these societies is bad; they are as often made an instrument for picking the pockets of the working men of their hard-earned wages, to pay exorbitant salaries to secretaries and surgeons for work never performed by them, as to supply the necessities of their members when disqualified from labour by sickness or accident. I could give you several examples would it not be intruding too much on your space, but for the purpose of illustration I will give you one.

On the Manchester and Leeds Railway there exists one of these societies, styled *par excellence* "Benevolent," of which every working man of the Company is compelled to be a member. The funds are raised by stopping a certain portion regularly from their wages, proportionate to the amount, or the benefits to be derived, or rather held out.

This society is managed by a Committee composed of the following persons:—The Board of Directors, the Law Clerk, Secretary of the Company, General Superintendent of the Executive, Resident Engineer, Superintendent of Locomotive department, the master coachmaker, surgeon, storekeeper, chief clerk in the General Superintendent's office, check clerk, chief inspector, clerks in charge at the Manchester and other stations; assistant inspectors, and "one operative from every class in the service of the Company *residing at Manchester*;" "and each operative member shall be elected by a majority every Lady-day, &c." Here is a Committee composed essentially of *ex officio* members, for the appointment of members of Committee by the working men is mere farce, well knowing that if they were to attend the meetings of Committee, they must do nothing contrary to the wishes of their superiors for fear of risking their situations.

Now, mark the result. A Secretary is to be appointed, and this office very naturally devolves upon the General Superintendent's chief clerk, who, I suppose, because he is chief clerk, has a higher salary for keeping the books (not half an hour's work in a week) than many of the booking clerks, who are confined in an office 12 or 14 hours a day. Next a medical officer is required; this as naturally falls to the lot of a Director's nephew or near relation; whether he is a person in whom the men who pay him have confidence or not is to the Committee of no consequence. The surgeon of this society (for there is only one) resides a mile from the station at Manchester, and is appointed for *the whole line*—to above 500 men living at various distances, from one to sixty miles. Is it to be expected that when a man is ill of a fever in Leeds he can be attended daily, not to say oftener, which is frequently required, by a man living in Manchester? No; but he must pay for it. Then, again, the rate of payment. In Manchester the usual rate of payment to medical officers of these societies is 2s. per annum per member, and in Leeds 2s. 6d. to 3s. 6d. per annum per member, where gentlemen holding the highest medical appointments in the town accept them. The Society of the North Midland Railway pays 5s. 6d., but the Committee of the Benevolent Institution of the Manchester and Leeds very liberally pay their surgeon 10s. per head per annum. To show the kind of medical attendance supplied by this gentleman, I have several cases before me, but it is useless copying them out, as for him to attend them better is obviously impracticable. Of this complaints have repeatedly been made to the Committee, and when a memorial was forwarded to them last June, signed by all the men at the Leeds station, a resolution was passed empowering them, in case of sudden emergencies, to call in medical aid, which should be paid for out of the funds of the society. This was done in several instances at the Leeds station, but when the surgeon's bills were handed to the Committee, nearly the whole of them were disallowed, and the men had to pay them themselves.

Having witnessed on a very extensive scale how well working men manage these societies themselves, I am fully convinced that if those connected with railways were under the sole direction of the individuals who supply the funds, and ought to receive the benefits, they would be much better managed than they are at present, and be much more efficient and useful. I forward you these remarks at the urgent request of men connected with all the railways having termini in Leeds, as they say they dare not make any active interference themselves for fear of giving offence to their superiors.

By inserting this, and thereby making Directors cognizant of these matters, you will confer a lasting obligation on hundreds of readers of the different companies. If you think the subject requires further notice, I shall be happy to propose a plan to obtain the desirable end.

I am, Sir, yours, respectfully,

ONE BENEFITTED BY THE PRESENT SYSTEM.

[We shall be glad to hear further from our correspondent.—Ed. R. T.]

BIRMINGHAM AND GREAT WESTERN RAILWAYS.

To the Editor of the Railway Times.

Sir,—The following comparative traffic of the Birmingham and Great Western lines will no doubt be interesting to many of your readers.

The Birmingham line opened throughout September, 1838. Its gross receipts were as under:—

First six months, from 1st January to 30th June, 1839, 270,241*l.*; or per week, 10,500*l.*—Spring.

Second six months, from 1st July to 31st December, 1839, 343,910*l.*; or per week, 13,250*l.*, increase, 73,669*l.*—Autumn.

Third six months, from 1st January to 30th June, 1840, 343,194*l.*; or per week, 13,250*l.*, increase none—Spring.

Fourth six months, from 1st July to 31st December, 1840, 405,040*l.*; or per week, 15,500*l.*, increase 62,000*l.*—Autumn.

Fifth six months, from 1st January to 30th June, 1841, 382,452*l.*; or per week, 14,750*l.*, decrease 22,000*l.*—Spring.

Sixth six months, from 1st July to 31st December, 1841, 429,023*l.*; or per week, 16,500*l.*, increase 47,000*l.*—Autumn.

Seventh six months, from 1st January to 30th June, 1842, 396,000*l.*; or per week, 15,250*l.*, decrease 33,000*l.*—Spring.

The Great Western opened throughout, June, 1841.

The gross receipts as under:—

First six months, from 1st July to 31st December, 1841, 337,352*l.*; or per week, 13,000*l.*—Autumn.

Second six months, from 1st January to 30th June, 1842, 310,000*l.*; or per week, 12,000*l.*, decrease 27,000*l.*—Spring.

By the above, we perceive the Birmingham first year produced £614,000

The Great Western ditto..... £647,000

From this latter, is to be deducted the charge of the Exeter and Cheltenham lines..... 54,000

Leaving..... £593,000

All that remains to be inquired is, whether the resources of the Great Western were as much developed at the end of its first year as the Birmingham were, and whether the auspices of the trade and prosperity of the country were equal at those periods. The first Birmingham Spring receipts were equal to its preceding Autumn. Its last Spring receipts fall short 33,000*l.* of its preceding Autumn. The Great Western fall short 27,000*l.*!!!

I am, Sir, yours, &c.,

A CONSTANT READER.

June 27, 1842.

EDINBURGH AND GLASGOW RAILWAY.

To the Editor of the Railway Times.

Sir,—Your correspondent "Veritas" ("Veritas, *junior*," I presume) should remember that there is a fable regarding a fox who had lost his tail, as well as about a fox and sour grapes. The question is one of *facts*, and these alone should be looked to. "Veritas" states that, *if* the returns are 2,200*l.* per week, there will be a dividend of 5 per cent., on the *assumption* that the railway can be worked for 33½ per cent. But the *fact* is, there has never been a return of 2,200*l.* upon *any week* since the railway opened, and that the return for the last week was exactly 1,819*l.* 17s., being at the rate of 19,767*l.* per annum below the estimate of "Veritas." Further, on turning to your reports for the four weeks ending 29th January last, and for the four weeks ending the 25th current, I find (taking by chance three of the principal lines—the Grand Junction, Liverpool and Manchester, and the London and Birmingham) that the receipts during the winter season are to those in June in the proportion of 165 to 205; that is to say, that the winter receipts average about 20 per cent. weekly below those in the present month of June.

"Veritas" assures us that he has had his information on the "very best authority." I infer the Railway Company. The value of his informa-

Digitized by Google

tion, supposing it all right, may be judged of from the above *facts*. Allow me to add, however, that his informants may be mistaken. I find that the Company, when in Parliament, estimated the revenue at 154,000*l.* yearly, and it seems now that even "Veritas" is content to drop out 40,000*l.* per annum. Further, their Act shows that the railway was estimated to cost 900,000*l.*, and it is now admitted that it will cost 1,500,000*l.*, being an addition of 600,000*l.* If the conjectures of the Company as to the expense of working be not more accurate than their estimates of the cost of the line and revenue, it will follow that "Veritas's" "very best authority" is of small value.

I am, Sir, yours, &c.,

INVESTIGATOR.

EVESHAM, BIRMINGHAM, AND GLOUCESTER JUNCTION RAILWAY.

To the Editor of the Railway Times.

SIR,—In reply to "Common Sense," I take this opportunity of informing him that the amount 69,647*l.* 14s. is the result of a detailed estimate of the total cost of the proposed railway. With reference to the plan and section, there being 26 planes in the total length of the line, and the scales to the published plan and section being horizontal 100 feet to an inch, and vertical 200 feet to an inch, I consider the number of planes by far too numerous to be embodied in so condensed a form. I therefore only showed the leading gradients. With reference to the "crossing of roads," all turnpike and public roads are shown; and with regard to "a summit embankment of 8 feet high," I am afraid your correspondent is wandering.

I am, Sir, your obedient servant,

JOHN ADDISON, Engineer.

Delahay-street, Westminster, July 1, 1842.

THE TOLL QUESTION—CROYDON AND GREENWICH RAILWAYS.

To the Editor of the Railway Times.

SIR,—With great submission to "A.B.," I neither "mistook nor misstated," his meaning in my former letter; on the contrary, I distinctly admitted the principle he contended for, namely, that the "*partner advancing double the amount of another should either get interest for his additional capital or a double share of the profits*" and I based my advocacy of the Croydon principle upon the fact that it would effect a distribution of profit to be derived from the Croydon traffic in the way considered just by "A. B.," that is in proportion, *not* to the length of the line, *but to the cost of the works*, and I am only surprised that so "right-minded" a man as "A. B." should be so blinded by prejudice as not to see that the Croydon principle, whether it be in the abstract and as a fundamental theorem correct or not, yet that it would clearly give the Greenwich Company all that "A. B." on their behalf asks for—even if they were to be considered as coach proprietors working over hilly or bad ground, inasmuch as they would get a greater rate of profit per mile from the Croydon traffic than the Croydon Company would for working over their level (*level!*) or good ground. I have not forgotten that the Bill which the Croydon formerly applied for "was only lost for one year," nor perhaps has it escaped "A. B.'s" recollection that the additional lines of rails, which it was the object of that Bill to secure, have been made, but I have no more desire to "chuckle" than the Croydon Company have to "act *dishonestly towards* the Greenwich Company," or to claim a right to evade the toll to the Greenwich Company, or to interfere with vested rights; or in short, to do ought that they would not that others should do unto them. Oh, that the question could be considered without prejudice by either party.

I am, Sir, your constant reader,

C. D.

London, June 28, 1842.

THE TOLL QUESTION—CROYDON AND GREENWICH RAILWAYS.

To the Editor of the Railway Times.

SIR,—Much has been written on the subject of the Greenwich and Croydon toll, and we seem now as near a settling as we were two years since. I am a Greenwich shareholder, but I think both Companies are to blame—the Directors for the course they have taken, and the shareholders for allowing it; it is now quite time they gave up *pro* and *con*, and made it a question of business. If the Directors cannot agree, let about half a dozen moderate business-like men be selected from each Company, let them meet with a determination to split differences and work together, and I am quite satisfied we should soon have such tolls and such fares as would produce a large traffic and a profitable revenue to both Companies.

Yours obediently,

R. A. B.

June 30, 1842.

"LOCKING IN" ON RAILWAYS—THE GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—Much has been written, much has been talked, both, by the "*docti indoctique*," upon the subject of locking passengers in railway carriages, and it appears as yet but to little effect.

Parliamentary orators have declaimed against it. Learned Lords have spoken in its favour. The witty and punning Canon of St. Paul's has brought his light artillery to bear upon it, and Railway Directors have given ground, as if their very pompousness and importance depended upon the maintenance of the system. Now, while I profess an utter indifference as regards myself, whether I have the privilege, while a train is in motion, of opening the door of a carriage and jumping out, to the imminent risk of my neck, or of being "cabined, cribbed, confined," and thus having my neck saved whether I will or no, yet, still I do not see the reasonableness, propriety or justice, because one man is fool, or mad enough if the carriage door be unlocked, to jump out and break his neck, of endangering the lives of ninety-nine sane people, as in the case of such an accident as that at Versailles, to save the life of this mad one.

Neither can I approve or stomach the way and manner in which this subject has been taken up by the Directors of the Great Western Railway. They are obliged, in deference to public opinion, to leave one door of the carriage unlocked, but in order that they may conquer, as it were, this expression of public opinion, they allow that door only to be left open which, in case of an accident, would, by the passengers availing themselves of the Directors' permitted egress, expose them to a certain danger, the passing of another train, in exchange for their having escaped from, perhaps, an uncertain one.

To what possible cause can this unwillingness to provide for the public safety, or, if you will, to give in to public opinion, be traced? Is it arising from "the insolence of office?" It does appear to me, that if Railway Directors will persevere in this (to the majority of the public) obnoxious system, it is quite time that some controlling power, in this respect at least, were given to the Government, by which they might perserve the lives and liberty of her Majesty's subjects from being injured or assailed.

I am, Sir, your obedient servant,

P. Z.

"LOCKING-IN" ON RAILWAYS—GREAT WESTERN RAILWAY.

THE following is the answer (to which we referred last week) of the Great Western Railway Directors to the Board of Trade:—

Railway Station, Paddington,
June 1, 1842.

SIR,—In compliance with the desire of the Lords of the Committee of Privy Council for Trade, as expressed in your circular letter of the 26th ult., the attention of the Directors of this Company has been called to Major-General Pasley's Report on the practice of locking the doors of railway carriages, and to their Lordships' opinion upon that subject, as well as upon the danger of using a four-wheeled locomotive engine coupled with and preceding a six-wheeled engine, when drawing a heavy train. Upon the latter topic it seems only necessary to mention that there is not one four-wheeled locomotive engine belonging to this Company.

Adverting to the other point, I am desired to acquaint you that while the Directors resolve to comply with their Lordships' suggestion, in deference to the supervising authority of the Board of Trade, they feel impelled, by a strong sense of public duty and responsibility, to declare their firm conviction, upon the practical experience of the two systems, that danger instead of security may ensue from the course recommended, of travelling with unlocked doors. They trust that it will not seem inconsistent with the respect due to the authority of the Lords of the Committee of Privy Council for Trade, and which they are so prompt to evince on this occasion, if they state generally the grounds on which they differ so materially from the conclusion at which their Lordships appear to have arrived.

I can assert, unhesitatingly, that the practice of locking both doors did not originate with this Company, as has been surmised, from any selfish considerations of mere convenience or saving of money. It was the result of an anxious and careful review of every circumstance affecting public safety, as the paramount object and duty of the Directors, with a desire to promote at the same time, in subserviency to it, the greatest personal comfort and advantage to travellers with the least obstruction to them, consistently with that security of life and limb which, under the various contingencies of locomotion, must ever demand the calm and considerate reflection of all who are responsible for the management of such traffic.

Upon reference to the few casualties which had occurred upon other railways previously to the opening of the Great Western line, it was quite apparent that the most serious accidents were solely attributable to the facility of passengers quitting the carriages during the journey, of which, indeed, the deeply lamented fate of Mr. Huskisson is a sad and memorable instance.

In the evidence given on the Great Western Bill before the House of Commons, by Mr. Booth, Treasurer of the Liverpool and Manchester Railway, long after the opening of that railway, he recorded, as the only fatal accident which had then occurred, the case of a "man in the second-class of carriages who insisted on jumping out, against the remonstrance of those who were near; he jumped out and was lamed and died." Other subsequent accidents were of the same nature, and strongly confirmed the fact of danger and insecurity arising from the same cause.

It appeared to the Directors that the risk of such fatal consequences must be greatly augmented in proportion to any increase of speed which would be attained; they also foresaw that in the event of a train being suddenly thrown from the rails or suffering from any violent concussion, the alarm of the moment, even after the real cause of it had subsided, would expose the passengers to a still greater danger, by some sudden and simultaneous attempt upon their part to open the doors and precipitate themselves from the carriages, perhaps while the train might have accelerated motion; possibly even on the brink of some high embankment, or against the parapets of a bridge or viaduct, or the side walls of a tunnel.

Assuming that no such impulse could have time to operate until the train had come actually to rest, the most fearful consequences may be readily imagined to a number of passengers, men, women, and children, straggling to the opposite line of rails, should an engine be approaching, while the Company's servants may be actively engaged in repairing the accident or replacing the engine or carriages on the rails. What might be the aggregate extent of mischief or loss of life under such a panic it would be impossible to foretel; but the bare supposition

Digitized by Google

of it seems sufficient to justify, if not to demand, a prevention, if any could be suggested; even the short stoppage of a train on the journey, which will occasionally happen from some trivial derangement of the machinery of the engine, affords an opportunity for the passengers to alight upon the line from the carriages, which may lead to similar fatal consequences. Another risk was contemplated, which has since, in fact, not unfrequently happened on other lines, that of passengers endangering themselves by endeavouring to mount the steps of the carriages when a train had just started, or when about to arrive at a station, in attempting to leave the carriages while in motion, by springing towards the platform, and falling in the attempt.

To provide against these and similar casualties, the Directors came to the resolution that both doors of the carriages ought to be locked while the train was in motion, as a protection to their passengers.

Four years have now elapsed since that course was adopted, and practical experience has proved the wisdom of it. Not one accident has occurred to a passenger travelling by the regular passenger trains on this railway from any such risk. The Company have conveyed upwards of 3,900,000 persons in their passenger trains with locked doors, and the only serious injury sustained during the whole period (excluding, of course, the two accidents to luggage trains at Faringdon-road and Sunning, where there were only open trucks), was the case of a gentleman in a second-class carriage, when travelling by a mail-train in September last, suddenly thrown from the rails, owing to a subsidence of the ground, where the locked door could have no effect whatever upon it.

On the other hand, while it would be improper to pretend to speculate upon the number of accidents which may have been prevented by the plan hitherto adopted of locking both doors, two circumstances must be briefly adverted to, as throwing some light on that part of the subject. In the first place, while the Directors ascribe the freedom from accident to passengers on their line to that precaution, and deduce, as they conceive, strong evidence of security from it, they can further corroborate that view by proving, unhappily, five reverse instances since the opening of the railway, in which accidents have occurred on their own line to the conductors, guards, or other servants of the Company, from the mere circumstance of their doors being unlocked, or of their having personal access to and from the carriages while the train was apparently in slow motion, approaching or leaving a station. I am enabled to affirm, that in each instance they were individuals well practised in their duty, and consequently far less liable to such a casualty than passengers. They were perfectly sober, and the occurrences were in broad daylight. In two cases death ensued, and in two others life was only saved by the amputation of the injured limb. If the anxiety of passengers to press forward from the railway carriages as they arrive, even merely to obtain a seat in an omnibus, was only seen and watched with the care and anxiety which is natural to those who are daily witnessing it in practice, the Directors think that more calm consideration would have been given to the comparative advantage and safety of their system.

They adduce the other corroborative proof of the safety of the practice from the Report of the Officers of the Board of Trade, addressed to the Earl of Ripon, dated 5th February, 1842, and published by order of Parliament, which enumerates more than 20 cases which have occurred of deaths or injuries sustained within the comparatively short period of 16 months, by persons travelling on the trains of different Railway Companies, where one door at least had been left unlocked, each of which was in some degree referrible to that cause, or at least it might have been avoided if they had been travelling in carriages with locked doors.

It is true that these are principally classed under the head of "accidents attended with personal injury to individuals, owing to their own negligence or misconduct," and may be supposed, therefore, to come within the general description mentioned in Major-General Pasley's Report; but can it be justly assumed that Directors of railways are absolved from blame, if, with a foreknowledge of the ignorance or imprudence of those whose safety may be hourly committed to their charge, they fail to provide a remedy or prevention so easy and so simple as the mere fastening of both doors of the carriages during the journey? If it were done only for the purpose of saving the life of a person devoid of common prudence, or reckless from liquor, and therefore incapable of preserving himself, the system would still seem to be warranted, unless it could be shown that greater danger would ensue therefrom to other passengers.

This point brings into prominent view the whole question of the fearful catastrophe on the Paris and Versailles Railway, as claiming most serious consideration in reference to the whole system of railway management.

While this Board attempts to establish the fact that no accident has hitherto happened in this country from locked doors, and proves from incontestable authority that several have occurred from the opposite plan, they do not in the least degree disregard or shrink from the necessity of taking into account and calmly investigating all the circumstances connected with that most appalling event in France as bearing upon the subject.

It has been generally assumed, that the loss of lives on that occasion was augmented in the result by the doors of their carriages having been locked. It must be universally admitted, that that circumstance did not in any way occasion the accident itself, but was merely an accessory cause after the occurrence, aggravating its consequences. Now, the best information which has hitherto been obtained states, that the unprecedented violence of the concussion entirely smashed at the moment the five or six carriages which were next to the two locomotive engines, and it has been related that the carriages were totally consumed by fire within a few minutes. Is it, then, credible, that from the carriages so smashed the mere fastening of a door with lock and key would of itself prevent the egress of a passenger, otherwise capable of motion? It is difficult to divine what must have been the peculiar character and construction of such carriages, which were manifestly broken to pieces by the blow, the doors of which were supposed to be kept so fastened by the bare locking with a key, that the passengers were incapable of being extricated! Those who know what is the mere effect of the ordinary racking motion on the best constructed railway carriages, without a blow, can assert that a very slight displacement indeed will either open a door, in spite of being locked, or will effectually fasten a door when unlocked, and obstruct its opening, even although considerable force be applied to it. It would, indeed, be a singular fact, and far beyond ordinary belief, that in any one of the bodies of the Paris and Versailles carriages so smashed both the doors should have been retained in their position, and continue closed by the mere aid of the lock, after such a violent blow, as to prevent the extrication or release of the sufferers from the carriages if they had been still alive. Be this, however, as it may (and the bare contemplation of the possibility of such a case is admitted to be most appalling to the imagination), upon calm reflection it must be inquired if there be any and what similarity in the circumstances leading to or affecting that awful catastrophe, which could in any way apply to a disaster on the Great Western Railway.

The accident itself is justly ascribed to the breakage of an axle on a four-wheeled engine, placed in front of a six-wheeled engine. This view of it appears to have been taken by their Lordships, as explained in the last paragraph of your letter. On the Great Western Railway there are none but six-wheeled engines, and the tenders also almost exclusively have six-wheels. The carriages likewise upon the Paris and Versailles Railway were upon four wheels only, and the lightness and slightness of construction not only has been proved by the lamentable extent of the recent accident, but is attested by those who have seen and examined them, as presenting scarcely any obstacle to sudden demolition if thrown from the line of rails, or struck with a violent blow.

The carriages in use upon this line are almost all upon six wheels, of the most solid construction, with an under frame-work, calculated to withstand the most severe shock or collision; the second-class carriages, which travel nearest to the engine, have a larger open space at both sides, above each small wicket-door, affording a much wider scope for escape than the door itself. The windows of the first-class carriages are unusually large, and would, with nearly equal facility, admit the escape of every passenger in case of need; supposing, which is however beyond belief, that the conductors and guards (there being usually four, and sometimes five, with each long train) should be disabled, or neglect to attend instantaneously to unlock the door under such pressing circumstances of danger.

There are various other points in detail, upon which it seems unnecessary here to dwell, which tend to establish the total dissimilarity of the two supposed cases; and it was only after the most mature reflection and discussion since the accident in Paris, that the Directors, being convinced of the safety of locked doors, and seeing distinctly the marked and essential difference between the circumstances of the two lines, came to the resolution to adhere to the practice, the propriety of which they conscientiously believe to be sustained by every view which their own experience or general information has enabled them to take on that most important subject.

Having now touched upon some of those various arguments which have more immediate relation to safety, I am desired to refer concisely to the minor question affecting the comfort and convenience of the public, which has been uniformly studied by the Board of Directors in connection with the system of locked doors. And here it is of importance to draw the clear distinction between the circumstances of the traffic of this line and that of most other railways in this country. It is well known that one essential peculiarity in it is the general admixture of a very large traffic for short distances between populous towns on the railway, with a considerable traffic between the distant termini of the three lines, embracing a length of nearly 170 miles, traversed by each long train of this Company; numerous passengers travel between Paddington and Windsor, and Reading, and Oxford, as well as between Chippenham or Bath and Bristol, by the same trains which convey persons for the whole distance between London and Cirencester, or London and Bath, Bristol or Bridgewater. This renders a peculiar arrangement of carriages to be necessarily adopted for each separate traffic; for instance, a passenger for Cirencester must not be admitted to a carriage which is to be left either at Slough or Reading, or which is to travel onward to Bridgewater; nor must a passenger destined to Bath or Bristol be placed in a carriage which is to diverge from the Great Western line at Swindon to proceed towards Cheltenham. Some position must be selected, therefore, in the stations of this line, as of other railways, where, by means of a barrier, and an examination of tickets, passengers only who have paid can be admitted to the carriages, and they can be so separated and directed where to place themselves with reference to their destination as to avoid confusion or mistake, and prevent any fraud on the Company. The customary system with railways generally is to accomplish that by placing a policeman at the entrance to the platform, refusing admittance (excepting under special permission) to any but those who are about to travel by the train.

The wish of the Directors upon this line has been to give to passengers and to the public as much latitude as possible at all times in passing on to the platform with friends or servants, allowing them to remain there until the departure of the train, or waiting on the spot in expectation of its arrival, at any station on the line. So long as the carriage door, by being locked, could form the barrier under the control of the Company's ser-

Digitized by Google

vant, of course inaccessible excepting by the production of a ticket or voucher, almost unlimited freedom was given as a privilege to every individual wishing to attend and witness the arrival or departure of his friends, or to see the working of the traffic. The Directors also were thereby enabled to relieve their passengers at once from the annoyance of keeping their tickets, to be subsequently asked for when alighting to leave the railway (excepting where they had to quit the carriages for refreshment at Swindon, and re-enter them), which system seemed to give almost universal satisfaction, as preventing frequent altercation or disputes about the alleged loss of tickets during the journey. The Company's stations were consequently arranged and constructed so as to admit of the quickest and most convenient egress for passengers, under shelter, without confusion, and with the greatest facility for the delivery and transport of luggage from the train to conveyances in waiting to receive them. Time was saved by collecting the tickets before the hour of departure, instead of waiting to collect them by a protracted stoppage at intermediate stations, or within a short distance of the final arrival of the train, by any stoppage expressly ordered for that purpose. At the same time it would be neither candid nor fair to deny that one ground of complaint has been frequently alleged to the system of locking the doors, in creating a difficulty to those who may urgently require it of getting out at the stations in the course of the journey. To this reasonable objection the Directors have always paid the utmost attention; orders were given to the Company's servants to interpose no difficulty or impediment whatever to any request from a passenger to alight; and although it must be acknowledged that several complaints on that subject were made some months ago, a more general instruction to facilitate that object was issued in the month of March last (of which I herewith forward a copy), and the Directors have reason to believe that no instances have since occurred of any departure from or inattention to their orders. They had already determined to print and circulate that regulation, for the guidance and convenience of all passengers, at the time when your letter was received, under the belief that the general knowledge of it would best accomplish the purpose in view.

The consequences of unlocking the doors will be, that every station or platform must be fenced off, and the passengers alighting required to pass through some narrow gate or channel, to deliver up their tickets for the journey performed; those who may be waiting at intermediate stations to proceed onwards must be kept separate, until the arriving passengers shall have been cleared away with their luggage, and none but persons travelling with tickets can be admitted (excepting under special circumstances) to the platforms. Time will be lost upon the journey, and there will be more frequent disputes about the tickets: passengers must to a great extent be left to alight upon their own knowledge of the stations to which they are destined, inasmuch as they can enter the carriages of their own accord; and those who may require to get out on the journey, must do so upon their own responsibility, or upon the chance of being left behind, if the train is about to start.

These points it is readily admitted, are all matters of detail and of inferior importance, and would not of themselves weigh for an instant in favour of the practice of locked doors, if it could be shown to be attended with any reasonable chance of danger. They are, however, all of them in some degree inherent in the management of this line, which the Directors believe to have received the general approbation of the public, and, as such, they relinquish the advantages of them with regret, which they are persuaded will be equally felt by the passengers themselves as soon as they perceive the necessary and inconvenient consequences arising from the change of plan suggested by General Pasley's Report, and confirmed by the opinion of their Lordships.

It will now become the duty of the Directors, in acting upon the recommendation of the Board of Trade, to do so with the least possible annoyance or discomfort to the public, and they assume that there can be no objection on the part of their Lordships to the carriage-doors remaining locked until the starting of the train from the terminal station of the railway. This may enable the Board partially to relax some of the regulations which would be otherwise necessary to control the admission of passengers to their platform and carriages, and in that case the doors would be only unlocked at the moment of departure of the train. There are some arrangements now to be made at the stations essentially necessary for the security of passengers and for the protection of the Company from fraud, which will require a short intervening period before the new plan is brought into practice, but the Directors hope to be able to commence it early in next week, and no time shall be lost in giving full effect to it.

They desire me to apologize for having trespassed at so much length in vindication of the system of locking both doors of the carriages, which they adopted, and which, for the reasons stated, they still think the safest and the wisest course. They yield their own opinions in deference to that of the Board of Trade, and merely desire to record, by this letter, that the responsibility of any consequences ensuing from it must not attach ro them, while they will anxiously devote themselves to pursue the same object of endeavouring to avert every chance of danger or injury, and to secure every reasonable advantage or convenience to the public in the management of their traffic upon their line.

I have, &c.

(Signed) CHAS. A. SAUNDERS.

S. Laing, Esq.
Railway Department, Board of Trade.

Great Western Railway,
London Terminus, Paddington, March 15, 1842.

Complaints having been recently made of the refusal by attendants on the trains to open the carriage doors, to enable passengers to alight when they may from unavoidable causes require so to do, I am desired to give the most strict orders to all conductors and guards, that they instantly comply with any application from a passenger who may be desirous of getting out for such purposes whenever the stoppage of the train will permit it, and more especially at all the stations where the engine may have to take in water, or where delay may from any other cause be likely to take place. While the conductor and guards act with the utmost promptitude in opening the door of the carriage for any such purpose, they may, of course, represent to the passenger the necessity of his resuming his seat as quickly as possible, to prevent delay to the train, or the loss of his journey.

(Signed) CHAS. A. SAUNDERS,
Gen. Superintendent of the Line.

KYANIZING OF RAILWAY SLEEPERS.

(*Continued from page 676*).

The PRESIDENT thought that the greater degree of absorption by the Scotch fir might be accounted for by its open texture, whereas the foreign timber was more compact and also contained more turpentine. It might also have been wetter than the Scotch fir, which he believed had been the case.

Mr. TAYLOR observed that hitherto the attention of the meeting had been entirely directed to mechanical action, but that the chemical combination of the corrosive sublimate with the albumen of the wood was the point most insisted upon by Kyan; it was supposed to be similar to the operation of tanning hides, in which the tannin of the bark combined with and saturated the animal gelatin, which would not otherwise be permeable by the fluid in which it was placed.

Lieutenant OLDFIELD suggested that if the timber when piled in the tank was subjected to the action of heat at 212°, the moisture contained in the capillary tubes would be expelled in the form of steam, and that on the admission of the solution the tubes would instantly be filled with it, because of the partial vacuum formed in them.

Mr. COLTHURST observed, with regard to the tests for ascertaining the amount of saturation of the timber, that he had tried all those described by Mr. Lynde, and had not been able to discover the presence of mercury in the heart of any of the timbers prepared for the Great Western Railway; their dimensions were 6 inches by 12 inches. Dr. Faraday had, he believed, detected it by the aid of the galvanic battery in the heart of a piece of timber two feet square, after simple immersion in the solution for 14 days.

Mr. Moss had tried many experiments as to the most delicate tests for ascertaining the depth to which the mercury had penetrated; the most satisfactory test was gold-leaf, as from its strong affinity for mercury the presence of the latter was immediately detected. The mode of proceeding was to put some fibres of the wood to be tested into a small test tube, mixed with a portion of dry carbonate of soda; then to place over, but not in contact with it, a small piece of gold-leaf, and apply heat to the bottom of the tube. If any mercury was present, in however small a quantity, the fumes would rise and discolour the gold-leaf.

Mr. W. CUBITT said that timber was at all times, more or less, charged with moisture; he had found deals, supposed to be dry, lose 10 per cent. of their weight from steam drying; it was evident that the presence of moisture in the pores of the wood must militate against the success of Kyanising by simple immersion, unless it was continued for a very long period. In close tanks, when exhaustion and pressure were resorted to, the moisture was perhaps of less importance, but still, if the sap was extracted, and the timber previously dried, the process of Kyanising would be more efficient.

Mr. S. SEAWARD adopted Mr. Palmer's position as to the almost impossibility of forcing the solution through the capillary tubes of a long piece of timber, the pressure being applied equally all over the surface. He believed the present method of Kyanising to be very imperfect, and alluded to a number of sleepers so prepared for the West India Dock warehouses having been recently discovered to be decayed.

Mr. MARTIN confirmed this account of the decay of the sleepers: 50 out of 70 were destroyed; they had been prepared by simple immersion, and had been down about five years. He had understood that some of the wooden tanks in which the solution was kept at the Anti-Dry-rot Company's yard were decayed,

Mr. C. MAY believed that the destruction of the tanks might have arisen from the constant corrosive action of the mercury, and not from decay. The capillary vessels of timber being filled with air and sap, under exhaustion the air would expand and drive before it a considerable portion of the sap and moisture. In preparing the compressed trenails and wedges he used steam, and found that the pores were opened by it; he suggested that steam should be blown through the tanks until all the timber in them was raised to a certain temperature, and then by opening the communication with the reservoir, the solution would rush in and fill up the vacuum.

Mr. COWPER believed that it was only necessary to bring the chlorine of the corrosive sublimate and the albumen of the timber into contact, when sufficiently dry, to insure the preservation of the wood. He had occasion to try experiments with paper pulp, and was constantly annoyed by its decaying, but the addition of a small quantity of chlorine had preserved it good for two years, and he believed that it would continue unchanged.

General PASLEY confirmed the statement as to the increase of the specific gravity of timber from long immersion at considerable depths. He had found all the timber, except the mainmast, in the *Royal George*, at a depth of about 90 feet, waterlogged. The oak timber had increased on an average more than 50 per cent. above its usual specific gravity.

Mr. F. BRAITHWAITE remarked upon the doubt which appeared to exist among members as to the correctness of that part of Mr. Timperley's paper where a sleeper containing 3 cubic feet of timber

Digitized by Google

was reported to have increased 30 lbs. in weight. Mr. Braithwaite had made some experiments, the result of which showed that a piece of Memel timber containing 533 cubic inches, and weighing when dry 9 lbs., became double its weight when subjected to a pressure of about 320 lbs. per square inch without previous exhaustion; the machine which he used not being provided with an air-pump. A smaller piece of American pine, containing 76 cubic inches, and weighing 1 lb. 7 oz., increased in weight to 3 lbs. under a similar pressure; this, he contended, established the correctness of Mr. Timperley's report. There appeared also to be a misconception as to the amount of corrosive sublimate employed, the paper states that ¾ lb. was the quantity used for each load of timber of 50 cubic feet. He promised to make some further experiments and report them to a future meeting.

Mr. BULL had prepared considerable quantities of boards for the Calder and Hebble Navigation, by immersing them in the solution for two or three days, which was about double the period allowed by the patentees. He had some specimens of the boards, and in almost all of them there was an appearance of decay in various stages. An oak board, 1 inch thick, Kyanised in 1839, had lain ever since upon the damp ground exposed to the air; the sap part was entirely decayed, but the heart remained sound; fungus was, however, growing upon it. Poplar boards, Kyanised in 1838, 39, and 40, were all partially decayed; those which were not prepared, and had been exposed in the same situation for the same period, showed, however, more symptoms of decay. In preparing the timber he had always followed the instructions of the patentees, and had tested the strength of the solution with the hydrometer, but had mixed up fresh solution even more frequently than was supposed to be required. On dismantling one of the tanks for holding the solution he found the ironwork partially destroyed, and entirely covered with globules of mercury.

Mr. THOMPSON explained that the hydrometer was not a correct testing instrument if any vegetable matter was present in the solution; that the tanks on the premises of the Anti-Dry-Rot Company were necessarily made of unprepared timber; that the bi-chloride of mercury in solution would penetrate any length of timber, if the extremities of the sap vessels were exposed to its action, but that it would not penetrate laterally without pressure; it was not therefore surprising that a watertight tank of unprepared wood should decay on the outside, even if filled with the solution. With regard to the strength of the solution, at first it was believed that 1 lb. of corrosive sublimate to 20 gallons of water was sufficiently strong, and much timber had been so prepared, but experience had since proved that the strength of the mixture should not be less than 1 lb. to 15 gallons, and he had never found any well-authenticated instance of timber decaying when it had been properly prepared at that strength; as much as 1 in 9 was not unfrequently used. In a cubic foot of wood prepared under a pressure of 70 lbs. per square inch, mercury had been found by the galvanic battery to have penetrated to the heart.

Mr. HORNE mentioned that a new process had been invented by Mr. Payne for rendering timber proof against dry or wet rot, and the ravages of insects, for increasing its durability, and rendering it incapable of combustion. The mode of proceeding was to impregnate the wood with metallic oxides, alkalis, or earths, as might be required, and to decompose them in the interior of the wood, forming new and insoluble compounds.

Mr. TAYLOR drew the attention of the meeting to a "Method for the Preservation of Woods," which had been read before the French Academy of Sciences, by Dr. Boucherie. It was argued that all the changes in wood were attributable to the soluble parts they contain, which cause fermentation and subsequent decay, or serve as food for the worms that so rapidly penetrate even the hardest woods. By analysis it was found that sound timbers contained from 3 to 7 per cent. of soluble matter, and the decayed and worm-eaten rarely more than 1 or 2 per cent.; since therefore the soluble matters of the wood were the causes of the changes it underwent, it became necessary for its preservation, either to abstract the soluble parts, or to render them insoluble, by introducing substances which should prevent their fermenting. This might be done by many of the metallic salts or earthy chlorides. Pyrolignite of iron was particularly recommended, as being a very effective substance, and cheaper than corrosive sublimate. The process was, to immerse the end of a tree, immediately after it was felled, in the solution of metallic salt, when, the vital energies not having ceased, the fluid was absorbed throughout all the pores of the tree by a process which is termed "aspiration." The fluid had been applied in bags to the base of the trees when in a horizontal position, or to one of the branches, or by boring holes to the heart; a few branches and a tuft of leaves being always left at the top of the principal stem. It was necessary to apply the process speedily after felling the timber, as the vigour of the absorption was found to abate rapidly after the first day, and became scarcely perceptible about the tenth day, whilst in dead wood, or where there was any accidental interruption of the flow of the sap during growth, the "aspiration" entirely failed; resinous trees absorbed less of the fluid than any other. The ends proposed to be attained by this process were chiefly — preserving from dry rot; increasing the hardness and elasticity; preventing the usual changes of form or splitting; reducing the inflammability, and giving various colours and odours, according to the nature of the fluid absorbed.

TRESPASSERS ON THE EASTERN COUNTIES' RAILWAY.—On Friday, we are informed, the workmen of the Eastern Counties' Railway Company constructed a brick wall near the Ilford station, so as to prevent the occupiers of some newly-erected small houses belonging to Mr. Groves, of Ilford, having access thereto, through some land the Company had purchased. Mr. Groves immediately employed a builder to take the wall down, which was executed with dispatch; the railway police threatened to take Mr. Groves into custody, but Mr. Grenelle, one of the Company's agents, prevented this. Words, however, ran high, and a great crowd of persons assembled. It appeared that Mr. Groves had originally sold the land in question to the Company, and had reserved a right of way for his family and servants, but the agreement had not expressed for his tenants. On the same day the Company's men bricked up a doorway opening from the garden of Mr. Hazlehurst, of Ilford, upon the slope of the railway. Mr. Hazlehurst, it is stated, in his arrangement had reserved a right to this door, for the purpose of calling his workmen from the garden on the opposide of the railway, undertaking to keep the key himself. Some maid-servants, however, had been seen to come through this door to look at the trains passing, which it was contended warranted the Company in bricking up the door-way, particularly as the Company had paid Mr, Hazlehurst 300*l.* in lieu of building him a foot bridge, besides 1,050*l.* for the land taken for the railway, of which he had merely taken a lease at rack rent, subsequent to the passing of the Railway Act, and re-building for him proper fences and walls. Mr. Freeman, a farmer, near Romford, and his son, have lately been fined for trespassing on the railway, at a place it seems they imagined they had a right to cross.—On Monday Mr. T. Duncombe presented a petition from Mr. Price, of Ilford, praying for protection of owners and occupiers of land adjoining railways.—*Essex Standard*, of Yesterday.

—o—

THE ATMOSPHERIC RAILWAY.—The two miles which are about to be laid out in continuation of the Dublin and Kingstown Railway will bring it fairly into practice; but what will our readers think (even amid all the remarkable and gigantic plans of our age) of its probably immediate application to a considerable portion of a road between Genoa and Milan! Of this vast and splendid undertaking we have not heard all the particulars; but Mr. Brunel, we believe, has just returned from surveying the line. It will extend about 150 miles, from Genoa to Milan, with a branch to the Lago Maggiore. The grand difficulty exists in the egress from Genoa to cross the Apennines; but of our Engineer now-o'-days, as of the military hero of old, we may say—

"Nor Alps nor Apennines can keep him out;"

and thus we find that though the ascent is in some places as 1 in 30, and the average for the first 30 miles as 1 in 50 or 60, yet by the aid of the atmospheric apparatus, there is no impediment to prevent the surmounting of this elevated barrier. Then on the other side, with a descent of 1 in 180, the trains will sweep towards Milan and the lovely lakes of Italy. We have only to add a striking fact—we have heard of merchant-princes of old in these parts, and we boast of them among ourselves here in the British capital; but it will probably astonish most people to learn that one merchant of Genoa has subscribed 800,000*l.* to this railway, with a pledge not to sell a single share till it is completed.—*Literary Gazette.*

HUNGERFORD MARKET STEAM PIER.—Fast and commodious Steam Packets leave this pier DAILY as under:—For the Town Pier, Gravesend, nine, ten, eleven, and half-past two. For Rosherville Pier, half-past eight, half-past nine, half-past ten, and half-past eleven; Woolwich every hour; Greenwich every hour and half-past every hour; Richmond half-past nine, quarter before ten, ten, half-past ten, eleven, and three o'clock; London Bridge, Westminster, Vauxhall, Red House, Battersea, and Chelsea. Also to the Southampton, Brighton, Dover, Croydon and Greenwich Railways every quarter of an hour.

A. L. LEITH, Clerk.

YARMOUTH AND NORWICH RAILWAY.—NOTICE is hereby given, That the Shares to be appropriated to Landowners on the line of the Yarmouth and Norwich Railway will not be reserved after the 1st August next.

Applications for the same to be made to Messrs. Rackham and Cooke, of Norwich; and Messrs. Reynolds and Palmer, of Yarmouth; and to the Secretary, at the Office of the Company in London.

By order,
H. PATTESON, Secretary.

Warnford-court, Throgmorton-street,
June 30, 1842.

SOUTHAMPTON DOCK COMPANY.—NOTICE is hereby given, That the 10th day of July next (the day fixed by the Company's Act of Parliament for payment of the Half-yearly Interest to the Proprietors) falling on a Sunday, the usual *Warrants* for payment of the said Interest will be *issued* and *receivable* on and from Saturday the 9th.

The Directors take this opportunity of also apprising the Proprietors that the tide water is now admitted into the Tidal Dock, and that it is intended to open that Dock for business in the course of the ensuing month of July.

The Directors also give Notice, that they are receiving Loans of Money on Debenture, secured upon Mortgage of the undertaking, and of the Rates and Tolls arising therefrom, under the provisions of the Company's Act, in sums of not less than £200, and for the terms of Three, Five, or Seven Years, on Interest at the rate of £5 per cent. per annum, to be paid Half-yearly at the Banking House of Messrs. Williams, Deacon, and Co., London. Tenders to be addressed to the Secretary.

By order,
GEORGE SAINTSBURY, Secretary.

Southampton Dock Office, 19, Bishopsgate Within,
June 28, 1842.

MANCHESTER AND BIRMINGHAM RAILWAY.—The Directors hereby give NOTICE, That a Special General Meeting of the Shareholders will be held at the Manchester Station, in London Road, on Friday, the 8th of July, at Twelve o'Clock, when they will lay before them a Statement of the causes of delay in opening the line throughout.

THOMAS ASHTON, Chairman.

Manchester, June 30, 1842.

This day is published.

THE THEORY AND PRACTICE OF PROPELLING THROUGH WATER, with observations on the comparative Resistance offered by Water to Bodies moving through it at different velocities; comprising also, a Description of an Improved Method of applying Mechanical Power to Steam Navigation, for which her Majesty's Letters Patent have recently been granted to the Author.

By HENRY BOOTH.

Liverpool: Printed by Thomas Baines, Castle-street, and sold by him; by John Weale, High Holborn, London; and by all booksellers. Price One Shilling and Sixpence.

TO CONTRACTORS.—The Gosport Pier Company invite the attention of Contractors to the plans and specifications of their intended works, which will be ready for inspection at the offices of Messrs. Cruickshank and Wakefield, and Mr. James Hoskins, Solicitors, at Gosport, from the 6th to the 20th day of July next.

Sealed Tenders are to be delivered before 12 o'Clock at noon on the 20th day of July next, at the office of Messrs. Cruickshank and Wakefield, Gosport, addressed "To the Chairman of the Directors of the Gosport Pier Company—Tender for Works."

The works comprise a considerable quantity of excavating and dredging, as also of piling, and the construction of iron vessels as floats.

The Directors do not bind themselves to accept the lowest Tender.

Gosport, June 23, 1842.

NOTICE TO THE CONSUMERS OF

G&OO.S

MESSRS. JOS. SYKES & SONS, the Sole Contractors for, and only Importers of these descriptions of STEEL IRON, being determined to adopt every practicable expedient to protect the fair Trader in, and Consumer of these several Marks, HEREBY GIVE THIS PUBLIC NOTICE, that from the 31st March, 1835, no Iron of the above Marks has been or will be delivered by them without the additional Mark of | SYKES | being impressed thereon; such last-mentioned Mark having been adopted by Messrs. Jos. SYKES and SONS for the further protection of themselves and the Public. And all Persons who shall impress the Marks or any one of the Marks

G&OO

upon any Bar Iron, either with or without the additional Mark | SYKES | will be proceeded against.

Hull, June, 1842.

LIFE DEPARTMENT.

The additions made to the Life Policies granted by this Corporation for the last seven years vary from 41 to 65 per cent. on the premiums paid, and average 14 per cent. on the sums assured—a result, it is believed, far more favourable to the assured than any other Company has hitherto accomplished, when the low rates of premium charged by this Corporation are taken into consideration.

The next division of life profits will take place in December, 1846, being an interval of five years, and persons entering before the 1st of August next will enjoy one year's additional rating, and rank at next division of profits for five complete years.

Forms of proposals may be had at the offices, 449, West Strand, and 78, King William street, City.

F. G. SMITH, Secretary.

WHOPE, LONDON AND BRIGHTON RAILWAY CARRIER, AND CARRIER IN GENERAL, 149, North-street, Brighton, begs to return his sincere thanks to his numerous friends for their kind, constant, and continual favours for so many years, and respectfully informs them that all Goods designed for him must be at the London and Brighton Offices by Four or Five o'Clock in the afternoon at the latest, and the same will be delivered the following morning—Sundays excepted, on which day no business will be transacted.

His Inns in London are—the Old White Horse Cellar, Piccadilly; Griffin's Green Man and Still, Oxford street; the White Horse Inn, Friday-street, Cheapside; and the Nag's Head Inn, Borough.

In addition to his general business, he has opened his Office, 149, North-street, Brighton, as a

GENERAL BOOKING OFFICE,

where Goods, Luggage, and Parcels are received and forwarded to all parts of the kingdom, or warehoused as directed—W. H. being persuaded that an office of this kind was much wanted at so populous and public a place.

Please to observe, also, that Waggons, Vans and Carts, for the removal of Goods to or from any place or part of Town or Country, may be had as heretofore.

W. H. hereby informs his friends also, that he continues to warehouse Goods for any space of time, as he has done for a number of years.

N.B.—No claim for loss or damage allowed if not made within three days after delivery.

BIRMINGHAM AND DERBY RAILWAY.

(COPY.)

Birmingham, June 28, 1842.

William Crawshay, Esq.

SIR,—I have laid your letter of the 23rd instant before the Directors of the Birmingham and Derby Railway, and the subject of it having been considered, I am requested to say in reply, that although it is, as it always has been, the wish of the Directors to give every information to the Proprietors as to the state and condition of the undertaking, they do not consider themselves at liberty to engage to communicate officially on this subject with any but the general body of Proprietors at some General or Special Meeting of the Company, or as may be directed at such Meeting, that being also the mode which the Act of Incorporation particularly points out for such purpose; and as the meeting at your counting-house in George Yard, on the 21st instant, at which you presided, appears to have been of a private nature, the Directors feel it their duty (with every respect for the opinions of the gentlemen there assembled) to decline engaging to communicate, as you propose, with the Committee there appointed.

I am, Sir, your most obedient servant,

(Signed) HENRY SMITH,
Chairman of the Directors.

TRAVELLING BY RAILWAY FROM LONDON TO THE NORTH.—JUNE 1st, 1842.

The Train heretofore leaving London at 2 p.m. is now discontinued.

The Train leaving London at 6 a.m. is a quick Train throughout, and is the only Day Train by which Passengers can reach Darlington and Newcastle in the same day.

Coaches leave Newcastle for Morpeth, Berwick, Dunbar, Hoddington, and Edinburgh, early in the morning, and during the day.

Time is allowed for refreshments at Wolverton, Derby, York, and Darlington.

RAILWAY EARTH-WAGGONS.—WANTED, from 200 to 300 in good working order, and which will bump with those shown in the accompanying sketch. Apply, by letter giving full particulars, to Messrs. Grissell and Peto, Lambeth, London.

THE BRITISH LITERARY, SCIENTIFIC, AND GENERAL LIFE ASSURANCE COMPANY.—To be Incorporated by Royal Charter.—Founded for the purpose of affecting Assurances on Lives and Survivorships, the granting and purchasing of Annuities, the Endowment of Widows and Children, and the advancing of Money on Annuity, Mortgage, and other available Securities.

CAPITAL, £500,000, in 50,000 Shares of £10 each.
Deposit per Share on subscribing ..... 2s. 6d.
Ditto, on Allotment ..... 20s. 0d.

CONSTITUTION OF THE COMPANY.

A Capital of Five Hundred Thousand Pounds to be subscribed; and no member shall, according as the deed of settlement will provide, be liable beyond the unpaid part of his original subscription to the Capital of the Company. The Company stipulating that in all contracts entered into by them, no Member shall have ever be liable for, or called upon, on any account or pretence whatsoever, to pay a larger sum than the amount of the Shares held by him or her; and such stipulation is to be considered as a component part of every contract or obligation entered into by the Directors or any of them on behalf of the Company.

In order to cover the preliminary expenses of the Company, each applicant for Shares shall pay a deposit of 2s. 6d. per share on subscribing, to enable the Company to commence business unburthened with those expenses which are unavoidable in the formation of a new establishment.

On the Allotment of Shares a call of 1*l.* per share shall be made, after which no calls shall take place within six months of each other, and no call at any time to exceed 1*l.* per share; at the same time it is confidently expected that the call of 1*l* per share, on Allotment, will prove amply sufficient to secure the object for which the Company has been established.

The Company to be solely a proprietary one, it having been proved that, whilst many offices profess to give what they call a bonus, or return of profits at certain periods, upon calculation it will uniformly be found that the extra charge in such cases would, at a proper rate of interest, have produced on the death of the assured, a much larger sum than the bonus ever amounts to.

One-tenth of the profits will be appropriated to the relief of those engaged in Literary and Scientific pursuits, including Editors, Reporters, and others connected with that gigantic Literary Power—The Public Press. The said Tenth to be paid to the "Literary Fund Society," or in such other manner as the Directors think fit. In the former case two Directors and one Auditor will be requested of that Society, to act in conjunction with those of the Company, to see the Deed of Settlement fully carried out in this respect.

Within one month after the Allotment of Shares, a General Meeting of the Shareholders will be called, to elect three Directors and one Auditor, to act with the Directors and Auditors who may previously have accepted of office: so that the Shareholders in this Company may not, as in most new Companies, be shut out from all control over their affairs for five years after the formation of the Company.

Three Directors and one Auditor to retire annually, being eligible for re-election.

The accounts of the Company to be audited at the close of every year.

As an illustration of the amount required to be paid up, and the great profits which the Shareholders have reaped from similar Institutions, and to show not merely the safety, but the advantages to be derived from investments of this kind, the attention of capitalists and others is directed to the following table.

	Shares.	Amount paid up.	Price per Share	Profit per Share.
Provident	£100	£10	£20	£100 per ct.
National.....	100	5	11	120
Law	100	10	29	190
Rock Life	20	2	7	250
Sun Fire Office	100	10	36	260
Union	100	20	103	433 10s.

Whilst in the Licensed Victuallers and Protestant Dissenters' Offices it is difficult to procure a Share at any price.

Applications for Shares to be made in London to the Secretary, at the Temporary Offices of the Company, 73, Great Russell-street, Bloomsbury-square, and of J. Cobb, Esq, 15, Clifford's-Inn; Messrs. Seboim and Hoyland, stock-brokers, Brown-street, Manchester; Mr. C. J. Towneley, stock-broker, Liverpool; Mr. John Potter, stock-broker, Albion-street, Leeds; Messrs. Robertson and Co., Royal Exchange, Edinburgh; and Mr. J. Watson, stock-broker, Glasgow, from whom every information may be had.

PARIS AND ROUEN RAILWAY.—Offices of the Company, 52, Rue Basse du Rempart, Paris.—By the Seventh Article of the statutes of the Company, the Ninth Call of One-Tenth of the Capital will be due and payable on the 12th July, 1842.

The Shareholders are therefore requested to pay the said Call of £2 per Share on or before that day, to either of the undermentioned Bankers:—

London—Messrs. Stone, Martins, and Stones.

Liverpool—Messrs. Moss and Co.

Paris—Messrs. Jacques, Laffite, and Co.; Messrs. Charles Laffite, Blount, and Co.

ADOLPHE THIBAUDEAU, Secretary.

N.B.—Interest will be charged at the rate of 5 per cent per annum on all payments not made on or before the 12th instant.

Paris, 1st July, 1842.

SHEFFIELD, ASHTON-UNDER-LYNE, AND MANCHESTER RAILWAY.— TENDERS FOR LOANS.—The Directors are prepared to grant Mortgages, under the powers of their Act of Parliament, for Loans of Money, in sums of not less than £200 each, and for periods of three, five, or seven years, at the option of the lender. Interest at the rate of 5 per cent. per annum will be paid half-yearly, for which interest warrants will be given for the period agreed on, payable at the Company's bankers in London, Manchester, or Sheffield.

Further information may be obtained at the Company's Offices in Manchester or Sheffield; at the Office of T. J. Parker, Esq., Sheffield; Messrs. Bagshaw and Stephenson, Manchester; or Messrs. Johnson, Son, and Weatherall, Temple, London.

By Order,
JOHN PLATFORD, Secretary.

Manchester, April 27, 1842.

BRISTOL AND GLOUCESTER RAILWAY.—The Directors of this undertaking will receive Proposals for LOANS of Money on Debentures, to be issued under the Provisions of the Acts of Parliament, in the month of October next, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest, at the rate of £5 per cent. per annum, payable half-yearly, at the Banks of Messrs. Miles, Harford, and Co., Corn-street, Bristol; and Messrs. Barnetts, Hoare, and Co., Lombard-street, London.

For monies immediately advanced the security of Loan Notes, under the Seal of the Company, will be given, which may be exchanged for Debentures in the said month of October.

Tenders expressing the Sums and terms of years, to be addressed to the undersigned, at the Company's Office, Exchange Buildings, Bristol.

By order of the Committee of Management,
ROBERT FLETCHER, Secretary.

Office, Exchange Buildings, Bristol, May 30, 1842.

NEWCASTLE AND DARLINGTON JUNCTION RAILWAY.—TENDERS FOR IRON RAILS AND CHAIRS.—The Directors are prepared to receive Tenders for the supply of 2000 Tons of Iron Rails, each Rail to be 15 feet in length and weighing 65 lbs. per yard The quality of the Iron in the rail to be equal to No. 3. The Tender to state in detail the process of manufacture which it is proposed to follow to produce the quality. No Tender will be attended to without this statement, and the Company will stipulate with the party whose Tender may be accepted, that the Company may at any time send an Inspector to the works to satisfy themselves that the specified process of manufacture is fully adopted. The delivery to be distributed over 12 months.

A Tender also will be received for the supply of 650 Ton of Iron Chairs.

The Chairs to be cast with a mixture composed of equal proportions of Scotch, Staffordshire, and Welsh pig iron, from the cupola or air furnace. The joint chairs to weigh 28 lbs., and the intermediate chair, 18 lbs.

Tenders to be delivered on or before the 11th day of July, 1842, at the Company's Office, in York.

The section of the Rails to be in accordance with a drawing or template, which may be seen at 35½, Great George-street, Westminster; or at the Company's Office, at York, where also models of the Rails and Chairs may be seen, and further explanation obtained.

GEO. HUDSON, Chairman.
THOS. FAULCONER, Secretary.

York, 3rd June, 1842.

GREAT WESTERN RAILWAY.—OPENING TO TAUNTON, on FRIDAY, the 1st JULY

In consequence of the intended extension of the Bristol and Exeter Railway beyond Bridgewater, new Train-bills have been prepared, and may now be had at any of the Company's stations.

All the present down trains will proceed beyond Bridgewater to Taunton (about 30 miles from Exeter).

A train will also leave Bristol at Four o'Clock for Taunton, calling at every station.

From Taunton up trains will start daily (excepting Sundays) at half-past 7,* a.m., quarter-past 9, quarter-past 11, half-past 12, p.m., half past 2,* quarter past 4, half-past 6,* and night mail at a quarter-past 11.

The trains marked * only run to Bristol and Bath.

There will be extra trains from Paddington to Bristol for the Agricultural Meeting on the 13th and morning of the 14th July.

Early applications should be made at either of the Company's principal stations for the conveyance of live stock or implements for the show at Bristol, in order to prevent disappointment.

By Order of the Directors,
CHARLES A. SAUNDERS, } Secretaries.
THOMAS OSLER, }

Offices, London and Bristol, June 22, 1842.

EVESHAM, BIRMINGHAM, AND GLOUCESTER JUNCTION RAILWAY.—Applications for Shares in the above undertaking will continue to be received till the 15th of July next, by the respective Solicitors, Messrs. Roy, Blunt, Johnstone, and Walton, 42, Lothbury, City; Messrs Workman, Bengeworth, Evesham, Worcestershire, and by the Secretary.

By Order,
HENRY STEPHENSON, Secretary.

42, Lothbury, City, June 24, 1842.

V.

TABLES OF HACKNEY CARRIAGE FARES from the GREAT WESTERN RAILWAY to all parts of the Metropolis, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

THE TENTH THOUSAND.

Just published, *in a Sealed Envelope*, price 3s., and sent free, on receipt of a Post-office Order, for 3s. 6d.,

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection; followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases, &c.:

By J. L. CURTIS and Co., Consulting Surgeons, London.

TENTH EDITION—Published by the Authors, and sold by Balliere, Medical Bookseller to the Royal College of Surgeons, 219, Regent-street; Strange, 21, Paternoster-row, London; Guest, 51, Bull-street, Birmingham; T. Sowler, No. 4, St. Ann's-square, Manchester; G. Philip, South Castle-street, Liverpool; Fannin and Co., 41, Grafton street, Dublin; Drummond, 114, High street, Edinburgh; and sold in a *sealed envelope*, by all Booksellers.

OPINIONS OF THE PRESS.

"This work, *a tenth edition* of which is now presented to the public, *ten thousand copies having been exhausted since its first appearance*, has been very much improved and enlarged by the addition of a more extended and clear detail of general principles, as also by the insertion of several new highly interesting cases. We feel no hesitation in saying that there is no member of society by whom the book will not be found useful, whether such person hold the relation of a *parent*, a *preceptor*, or a *clergyman*."—*Sun*, evening paper.

"This is a work that we fear there exists too much need for to cause us to hesitate to recommend it for general perusal. Every branch of those frightful maladies, whether the result of immoral habits or secret vices, is here succinctly treated, and divested of all medical technicality, plain and easy directions are given for the best mode to be pursued in all cases, however complicated or apparently hopeless. To the married, as well as the unmarried, this little work alike affords consolation and cure in peculiar cases, and we are doing a service to society in recommending it to general notice."—*Essex and Herts Mercury*.

"Messrs Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable."—*Magnet*.

Messrs. Curtis and Company are to be consulted daily at their residence, No. 7, Frith-street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. The communication must be accompanied by the usual consultation fee of £1, and in all cases the most inviolable secrecy may be relied on.

TO ENGINEERS.—A young Gentleman who has been about twelve months in a Surveyor's office, and subsequently served two years with an Engineer in general practice, is desirous of engaging himself to an Engineer with whom he may obtain additional practical experience for two years. No salary is required for that term. The Advertiser is a good Draftsman, and has had some experience in directing workmen and in field works. Respectable references will be given and required.

Address A. B., care of Leyland and Son, booksellers, Halifax, Yorkshire.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate-street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Brides, Fleet-street, Middlesex.—Saturday, July 2, 1842.

Ashford—Messrs. Jemmett and Co.
Cranbrook—Messrs. Wilmshurst and Co.
Tunbridge and Tunbridge Wells—Messrs Beeching and Son.
The Country Branches of the London and County Banking Company.

By Order,
JOHN WHITEHEAD, Secretary.

10, Coleman street, July 9. 1842.

HAMBURGH, July, 1842.

HIS MAJESTY THE EMPEROR OF AUSTRIA,
AND
HIS MAJESTY THE EMPEROR OF RUSSIA,

HAVING authorised and GUARANTEED several DISTRIBUTIONS of MONEY DIVIDENDS, by which LARGE FORTUNES may be obtained, HEINE BROTHERS, at HAMBURGH, are now selling Genuine and

WARRANTED SELECTED

BONDS for the said Distributions. Persons desirous to purchase may receive, PREVIOUS to giving any order, the PROSPECTUS, with full PARTICULARS, upon addressing, WITHOUT DELAY, a line to

HEINE BROTHERS, at HAMBURGH.

As we receive frequently Applications for CERTIFICATES, we must beg to observe, that a CERTIFICATE is QUITE DIFFERENT from a BOND, and that there is a great difference again between BONDS and SELECTED BONDS—the SELECTED BONDS *ONLY* TAKING PART IN THE DISTRIBUTION WHICH FOLLOWS THE SELECTION, and which should never be overlooked, being of the greatest importance.

In Royal Octavo, 3s. 6d., cloth, lettered, with four Engravings.

TELEGRAPHIC RAILWAYS; OR, THE SINGLE WAY, recommended by Safety, Economy, and Efficiency, under the safeguard and control of the Electric Telegraph; with particular reference to Railway Communication with Scotland, and to Irish Railways. By WILLIAM FOTHERGILL COOKE, Esq.

Contents: Objects of the Treatise—Distinguishing Characteristics of present Railways—Evidence before Select Committee—Advantages of Telegraphic Communication—Mode of working the Blackwall Railway, by the Electric Telegraph—Description of the Electric Telegraph—Plan for a "Telegraphic" Railway—Course of an Express Train—Ballast Waggons—Permanent Obstruction—Crossing of Two Trains—Description of Signals—Concluding Remarks on Single Way—Mixed Lines—Scottish Junction Line—Irish Railways—Advantages common to Single, Mixed, and Double Lines—Public Confidence—Reduction of Stock—Income from Telegraph—Alertness—Adaptation to Wants of Country—Conclusion.

London, Simpkin, Marshall, and Co.; Liverpool, Wareing Webb, Castle-street; Manchester, Simms and Dirham; Birmingham, Wrightson and Webb; Leeds, Slocombe and Simms.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This Invention, besides its superiority for general telegraphic purposes, in point of expedition, secresy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

AN ELEGANT AND USEFUL PRESENT.

Just Published, in One Volume, price 5s. 6d., handsomely bound, with gilt leaves, sides, and back, and illustrated by

FOUR HUNDRED ENGRAVINGS,

PICTURESQUE EXCURSIONS; forming, by means of its engravings and descriptive letter-press, a complete Guide to, and Remembrancer of, all scenes of interest connected with the following places and their neighbourhoods:—Richmond, Hampton Court, the river Thames from Kingston to the Nore, Margate, Ramsgate, Dover, Hastings, St. Leonard's, Brighton, Shoreham and its Railway, Worthing, Bognor, Southampton, Netley Abbey, Lymington, and the Isle of Wight. Edited by ARTHUR FREELING.

"A work in which the elegant and the useful are eminently combined."

London: Ackerman, Strand; *Railway Times* Office, Tilt and Bogue, Fleet Street; and all Booksellers.

EVESHAM, BIRMINGHAM, AND GLOUCESTER RAILWAY.—NOTICE is hereby given, That it is intended forthwith to apply to Parliament for leave to bring in a Bill to extend this line of Railway to Warwick, in connection with the London and Birmingham Railway to the metropolis.

Dated this 6th day of July, 1842.

By order,
HENRY STEPHENSON, Secretary.

42, Lothbury, City.

MANCHESTER AND BIRMINGHAM RAILWAY—TENDERS FOR LOANS.—The Directors of the Manchester and Birmingham Railway Company are prepared to GRANT MORTGAGES (under the powers of their Act of Parliament) of the TOLLS and WORKS of their undertaking, as a security for loans of money in sums of not less than £500 on each mortgage, and for the periods of three, four, and five years, from December 25, 1841, at the option of the Lender. Interest warrants, calculated a the rate of £4 10s. per cent. per annum, and payable at the Company's Bankers in London or Manchester, on the half-yearly days on which the Interest will become due during the whole period of the Loan, will be delivered to the Lender with the Mortgages.—Particulars, explaining the peculiar eligibility of this Security, may be obtained at the Company's Offices, No. 43, Piccadilly, Manchester; or at the Office of Slater and Heelis, Princes-street, Manchester.

THOMAS ASHTON, Chairman.

Manchester, 17th Feb. 1842.

TO RAILWAY COMPANIES, RAILWAY CONTRACTORS, BUILDERS, IRON FOUNDERS, IRONMONGERS, COACH BUILDERS, and GENERAL DEALERS.—Important SALE of SURPLUS RAILWAY STORES, &c. &c, belonging to the London and Birmingham Company, at the Camden Town Station.—Mr. BIRKETT has received instructions from the Directors of the London and Birmingham Railway Company to offer for Sale by Auction at the Store Yard of the Company's Station, Camden Town, on Tuesday, July 12, 1842, and following day, at Eleven, the following very Important PROPERTY, constituting THEIR SURPLUS STORES, and comprising upwards of 150 tons of bar, scrap, and cast-iron; several tons of spring, shear, blister, and other steel; sets of patent carriage springs and axle boxes; a large and varied assortment of ENGINEERING TOOLS and IMPLEMENTS used in the construction and maintenance of Railways.

The articles of ironmongery comprise 2,400 gross of wood screws, about 14 tons of iron pins, nails, and rivets; a large assortment of hinges; sledge and other hammers; anvils, chisels, files, screw and shell augurs; large quantity of chain and iron wire; copper and iron wire gauze, &c. &c.; together with numerous other articles, comprising railway lamps of every variety; larry wheels and boxes, barrow-wheels; drain tiles; tool handles of all kinds; 10 *iron safety chests, with patent rack locks*; about 32,000 oak pales; 28 pieces of American oak; several waggon cloths; articles of office furniture; neck straps, chains, and cloths for horses; 50 hammocks, with mattresses, blankets, &c. &c.; and a large quantity of mens' clothing.

The above property, being nearly all new and of first-rate quality, will be found eminently deserving public notice. As the articles are exceedingly varied, a reference to the Catalogues is particularly requested; and which may be had, 14 days before the Sale, on application at the Storekeeper's Office, Camden Station; at the Company's Stations, Euston-square and Birmingham; at the other Stations on the Line; and of Mr. BIRKETT, Estate Agent and Auctioneer, Wallingford, Berks.

May be viewed on and after the 5th July, 1842.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. ALLSOP will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

IRON BASES FOR RAILWAYS.

[From a Correspondent of the *Monmouthshire Merlin*.]

In preparing or forming a railway line we find various earths and stratified beds cut through, such as soil, marl, sand and gravel, sandstones, chalk, and limestone. These varieties are deposited in the valleys to form a level line, or nearly so—therefore great inequality of the line so far prepared must be the result, some parts being solid, whilst others are comparatively soft. This being invariably the case, the question as to what kind of base should be laid upon such line ought to be asked, and gravely considered, having at the same time, due regard to the safety of the public, amount of outlay, durability of the railway when completed, and cost of keeping it in repair.

There are five kinds of base well known, upon which the railway bar is or may be laid—viz., stone blocks with cast-iron chairs; cross sleepers with cast-iron chairs; balk timber, laid down longitudinally; concrete; and lastly, cast-iron.

Stone blocks, cross sleepers, and balk timber, have been adopted, more or less, upon all the existing lines, but at what cost, and how far they have answered the expectations of the respective engineers may be difficult to learn. But no doubt the cost has very far exceeded the estimates in almost every instance; and the expense to keep them in repair has been, and still continues to be, much greater than was ever contemplated by the most eminent of those gentlemen. But it must be self-evident to every reflecting mind, that none of the modes already adopted are the most secure and economical that might have been resorted to. With respect to stone blocks—from the nature of the line, owing to its inequality, some of the blocks will remain firm whilst others will give way, and shrink many inches from the pressure that is passing over them. Here we may pause and ask, what are the consequences of the blocks giving way? We answer, the chairs give way. The bar is often displaced from its proper position, and sometimes deflects, thus causing the railway to become uneven. It is this unevenness, therefore, that produces the tremulous motion which is so often complained of by passengers when the train passes over the line, and hence life and property are continually in jeopardy. Besides, the wear and tear of engines and carriages go on at a much greater ratio from the same cause. To avoid these evils, then, I submit that it would be well for engineers not only to abandon entirely the use of blocks in future, but to remove as speedily as possible, without interrupting public business, those already laid down.

With regard to cross sleepers, it must be confessed that they are an improvement upon the mode considered; nevertheless, there are objections even against their use. The following may suffice:—1. Sleepers do not form a continuous base, which must be admitted is indispensable. 2. The texture of the wood varies much, some is more open than others; hence, decomposition (and which cannot be restored) does not go on in an equal degree. In process of time this will cause great variableness in the time, and produce effects not at all to be desired. Besides sleepers being laid down on solid as well as on soft earth, will occasion great irregularity in the railway bar. The pliancy of one part of the sleepers owing to the soft road, and the rigidity of the other which are laid upon the stratified part, will necessarily cause the bar to give way; and hence arises the unpleasant motion of the carriages, as before mentioned. In some instances the balk has been laid down longitudinally, which forms a continuous base, and which also removes the first objection urged against the use of sleepers. But still, objections may be stated, and justly too, against the balk base. The same objection will apply to the timber under review as we have stated against sleepers, owing to the texture and age not being precisely the same; and also, however carefully the timber may be selected when it is subjected to wet and dry and pressure, it must give way. It may be urged, also, that the tieing of the balk together, either by timber or iron, owing to the irregularity of the road, as before observed, the bar will become distorted, and similar results will inevitably follow (but perhaps not to the same extent), as from the adoption of stone blocks and cross sleepers, consequently the time cannot be far distant when such constructed lines as we have been describing must be reconstructed. A serious reflection this for Directors of railways. But suppose we admit, for the sake of argument, that the balk base answers every purpose that may be reasonably desired. I beg to inquire at what cost per mile such base can be laid down; and at what cost per mile also it can be kept in proper repair for the safety of the public; and also the probable duration of such base? We all must admit that from the enormous outlay required to construct railways, the materials necessary to form the base for such construction should be as uniform and as indistructible as possible. Then it is very evident that the present lines may be improved upon. Hence a concrete base would be certainly preferable to either of the plans adopted, were it not a question of expense, but that ought not to have any consideration in the minds of the Directors or Engineers, if no other mode could be devised, because the public have a right to expect that the most secure line shall be laid that can be accomplished, regardless of cost. Consequently it has often occurred to me, after witnessing some experiments on the Birmingham and Gloucester Railway, that a continuous base consist-of cast-iron would not only be the most desirable, because safe to the public, but infinitely less liable to give way, of any that have hitherto been adopted. The subject of the experiments alluded to is Reynold's Permanent Way. I have made inquiries as to the cost of such a base, and also to the expense of keeping it in repair; and I am prepared to prove, if necessary, that such cost and expense would be far less, besides less objectionable, than has been expended on the others stated. Cheapness of construction, therefore, permanency of the line, and security to passengers and property, must be of the utmost importance, and ought to claim the serious attention of Engineers and Directors, before they decide upon what kind of continuous base they shall adopt.

GREAT WESTERN RAILWAY—THE NEW ARRANGEMENTS.

[From the *Bath Chronicle*.]

The public are greatly complaining of the new regulation on the Great Western Railway, in consequence of which the friends of those who have occasion to travel by the Company's carriages are unable, with the same freedom as heretofore, to see them off, or to receive them at the termination of their journeys. The subject is, indeed, occupying so much attention that it would be a neglect of duty on our part not to notice it.

In the first place let us state that we do not join in the undiscriminating censure with which it is too much the custom to visit the Directors of this magnificent line as regards this point, any more than we have joined it as regards other points. We have given heed to all the questions which have been raised respecting the arrangements on the line, and we feel in justice bound to express our conviction that the various regulations have been adopted with a due regard to the convenience of the public, and that even those which have been felt in practice to be the most inconvenient, have been acted upon under the impression that they have been necessary and desirable.

In this spirit let us briefly discuss the particular grievance which we have above mentioned. On first hearing the complaints on this head, we must say that we did not attach much importance to them, and that we viewed the change of system as unavoidable. Inquiry and experience have, however, caused us to entertain different opinions respecting the matter; we cannot but see that it is a *real* grievance, and we feel assured that, sooner or later, it must be removed. The altered plan is meant to obviate the following apprehended cause of loss to the Company. The carriage doors being unlocked, it is contended that there is now nothing to prevent fraudulent persons from getting into the carriages without tickets, and that, when they arrive at any place to which they desire to go, there is nothing to prevent them from getting out, and, on being asked for their tickets, from eluding payment by saying "Oh, we are not passengers; we have come to meet, or to see off, some friends." This is the main reason which is assigned by the gentlemen connected with the working of the line for the general exclusion of the public from the stations. Being anxious to give nothing but a perfectly fair statement of the case, we must add that, on special request being made, written passes are granted to persons who wish to meet, or see off, their friends. It has become manifest, however, that these do not provide for the general exigencies of the case. The persons who wish for passes must be at the station some time before arrival or departure of trains, the passes having first to be written and stamped by the clerks, and then to be sent to the Superintendent, who may be engaged in the performance of his duty at some distance from the booking office; it happens, therefore, that as the difference between railway and ordinary time continually causes late arrivals at the stations (a matter in which the public may fairly crave some indulgence), the privilege, which is very courteously granted when time will admit, is in a great proportion of cases unavailable to those who desire it.

Now as to the nature of the grievance itself, we must say that we do not think it at all exaggerated. As example is at all times much preferable to speculative discussion, we will narrate an instance which has, within the last week, happened to ourselves. Having occasion to "see off" a lady, we we accompanied her to the Bath station, and on applicaiion we received "a pass" from the Superintendent, to whose urbanity, politeness, and courteous behaviour, on all occasions which have come under our notice, we are glad of an opportunity of bearing every testimony. On arriving at the top of the stairs, we and our friend found that there was no liberty of walking up and down on the spacious platform as usual, but that the waiting passengers were railed off in a very small enclosure, somewhat in the form of a sheep-pen at a country market, the occupants of which were subjected to draughts of air from various quarters, without having it in their power to escape colds and coughs by the exercise of walking up and down. We had not been there two minutes before there was an influx into the inclosure of a recruiting corporal and nine recruits, who, being greatly elated with beer, were in what is commonly called "high feather," and commenced entertaining each other with all kinds of obscenities and blasphemings, in the attempt to avoid the hearing of which the ladies who were present had to huddle themselves up into the furthest corner of the small enclosure, which however was by no means sufficiently remote to prevent their ears from being still polluted with the blackguardisms and shocking impieties of the persons to whom we have alluded. Now, here is a case which might happen to any lady, attended or not, in consequence of the new arrangements which prevent passengers from getting out of earshot of such things as the above, and which, happening to an unprotected female, must be of a greatly aggravated painfulness. But if this isolated example should not be considered of much weight, we shall beg any person who knows what railway travelling is to call to mind the bustle and hurry consequent on the getting in or getting out of a hundred or two of passengers, on the arrival or departure of a train, and then ask himself how he would like his wife, or daughter, or child, or infirm friend or relative, to be subjected *alone* to the annoyances or risks thereunto appertaining? We most cheerfully record our sense of the very great civility which characterises the demeanour of the Company's officers, from the highest to the humblest, on all occasions; but it is manifestly impossible that three or four, or a half-a-dozen, attendants however kindly intentioned—when, too, they have to look after their more immediate business—can prevent the evils of which the public justly complain in this respect, or supply the place of

Digitized by Google

those necessary assistances which can be properly rendered by none but friends or relatives.

To the argument that the new arrangements, however disagreeable, are necessary, and cannot therefore be avoided, we must demur, and we do so on what we consider to be unassailable ground, viz.: we believe that on no other line, though the carriage doors are unlocked, are there any such restrictions. In the case of the London and Birmingham line, for instance, on which the traffic is greater than that on the Great Western, there are no such regulations, and we have never heard that the Directors have had occasion to regret the accommodation which they afford to the public. With this fact looking us in the face, we feel that there is no occasion for us to bring forward other arguments to show that a similar indulgence may be safely granted to the friends of passengers by the Great Western line.

We wish to conclude, as we set out, by disclaiming all desire to attribute to the Directors of the Great Western Railway any wilful neglect of the convenience and wishes of the public. We are convinced that they think that the new regulations are necessary, and, under the circumstances, for the best. We are, however, equally sure that the public generally do not think so—that they are justified in not thinking so—and that sooner or later a change will be deemed advisable by the gentlemen who have the control of this great national undertaking.

COMMUNICATION BETWEEN ENGLAND AND IRELAND.

The parties interested in the Holyhead line have put forward the following statement:—

The advantages [says the statement] that would accrue from the formation of a railway between London and Holyhead are too obvious to need comment; suffice it to say, that if such a means of communication existed, the duration of the journey between the metropolis of England and that of Ireland would be reduced to 17 hours—viz., 10½ hours from London to Holyhead, half-an-hour stoppage there; 5 hours from thence to Kingstown, and 1 hour for contingencies. At present the journey *via* Liverpool to Dublin occupies an average of 23 hours, of which 12½ are occupied by the sea voyage. The duration of the latter, however, is of course variable. By the returns moved for in the House of Commons in the present session it appears, that from Holyhead the longest duration of any voyage to Kingstown has been 21 hours 11 minutes, and the shortest 5 hours and 24 minutes; whilst from Liverpool the longest sea voyage has been 31 hours 48 minutes, and the shortest 9 hours. It must, however, be observed, that a more powerful class of steamers has been in use at the Liverpool than at the Holyhead station; and if the same description of vessel was at the latter port, the duration of the voyage would be proportionately reduced, and rendered more certain. By the same returns it appears that the cost to the Government of carrying the day mails from Liverpool to Kingstown in the year 1841, amounted to 45,230*l.*; and from Holyhead to Kingstown, 13,403*l.*, making a total of 58,638*l.*; whilst the receipts in the same period were, from the Liverpool station, 12,809*l.*, and from the Holyhead station, 2,575*l.*, making a total of 15,384*l.*; thus showing a net loss to the Government at these two stations alone, in one year, of 43,254*l.*, the greatest amount of such loss being incurred at the Liverpool station. It appears also by the same returns that the expenses of carrying the mails from Milford Haven to Waterford, in the same period,

Were	£21,647
And the receipts	983
Showing a loss of	£20,664

which, being added to the loss incurred at the other two stations, gives a total of 63,918*l.* in one year! It must be observed also, that this sum is exclusive of interest on the cost of the vessels, or of any sinking fund for their renewal, which can hardly be estimated at a much less sum than between 30,000*l.* and 40,000*l.* per annum. In round numbers, therefore, it is not too much to say that the Government suffers an annual loss of 100,000*l.* in the carriage of the Irish mails from the three stations of Liverpool, Holyhead, and Milford Haven. It is quite manifest that if a plan could be suggested for carrying these mails at the same cost to the Government as at present, and which at the same time would afford the advantage of a railway between Holyhead and London, an object of vast national importance would be thereby attained. This object it is proposed to effect as follows—and it may be confidently stated that parties will immediately come forward to carry out the plan if it should receive the legislative sanction, viz.:—That a railway be make from Chester to Holyhead, at a fixed sum—the Company making it to run the risk of the estimate being exceeded. That the three packet stations of Liverpool, Milford Haven, and Holyhead, be concentrated at the latter port; the mails for Waterford and the south of Ireland being conveyed by land carriage from Dublin. That the Railway Company be at the expense of working and maintaining the vessels, but under Government officers and under the superintendence and control of the Government. That the Government pay to the Company, for a limited number of years, a rent equal to the net loss now incurred by them at the three stations, and at the end of such period that they have the option of taking the railway at a valuation, or of continuing the rent. By this means there would be two mails daily between London and Dublin, and the duration of the journey between those places would be reduced, as before stated, to 17 hours. As between Liverpool and Dublin, the journey would be performed in 10½ hours, viz., 4½ hours per railway, including stoppage, and 6 hours by water, including 1 hour for contingencies—thus effecting a saving of more than 2 hours on the present journey. As between London and Waterford, by way of Milford Haven, the present duration of the journey is not less on an average than 32 hours. By means of the Holyhead Railway the mails would be in Dublin in 17 hours, and would be conveyed from thence by land to Waterford in 9 hours, showing a saving of 6 hours in the journey, which would of course apply to the whole of the south of Ireland. As regards the communication between Bristol and Waterford by way of Milford, the journey now averages 27 hours. By means of the railways from Bristol to Chester, now in course of construction, and of the Holyhead Railway, the journey from Bristol to Dublin *via* the latter port, would be about 16 hours, and from thence to Waterford, 9, which would show a saving of 2 hours. It therefore appears that all parts of England would gain in their communication with Ireland, by the concentration of the several packet stations at Holyhead. It may also be stated, as a further advantage to arise from the formation of a railway to Holyhead, that the American packets might land their mails there by means of a steam tender, and would reach London several hours earlier than they can do at present. The above is the general outline of a plan by means of which this great national object may be attained without the slightest loss to the Government, but there would of course be details connected with it, which it would be impracticable to condense within the short compass of this statement.

A railway has been projected on the south side of the Thames, the object of which is stated to be to extend the advantages of railways which may exist in the south of England, and to unite the Government establishments at Deptford, and ultimately those at Woolwich, Sheerness, and Chatham, with Portsmouth, by means of the South-Western Railway. It is at present in contemplation to form it upon the American plan of piling, in conjunction with and upon the bank of the Surrey Canal, which will then be completed to Vauxhall, for the transportation of heavy goods.—*Daily Papers.*

STANDING ORDERS OF PARLIAMENT.

[From the *Surveyor, Engineer, and Architect.*]

Books of Reference for Proposed Railways, Canals, Roads, and other Works requiring Parliamentary Plans to be deposited.

The following instructions, prepared by an eminent Parliamentary agent, will be found useful by surveyors and others engaged in this business:—

1. Describe very accurately and minutely the nature of the property through which the line passes, such as orchard, garden, market-garden, paddock, park, yard, court, shrubbery, plantation of forest trees or otherwise, fold, yard, arable land, pasture land, spoil, waste, uncultivated or colliery ground, arable or pasture land in the whole or in part planted round with forest or other trees or shrubs, house, cottage, barn, stable, cowhouse, shed, or other erection, everything by its proper name and appropriate description.

2. Ascertain the names of owners or reputed owners (whether freeholders or copyholders), the lessees (whether for life or years), and the terms for which they hold, where they can be ascertained, and the names of the actual occupiers or tenants; the latter (that is, the occupier or tenant) *are in all cases to be seen*, and, in particular, inquiry made of them as to the owner or reputed owner to whom they pay their rent, and all circumstances connected with the land, and in cases of doubt other parties are to be referred to. The names of the persons giving information to be set down in the columns left for that purpose, with the date when it was received.

3. In the cases of trustees of public bodies being owners, lessees, or occupiers, insert the local or customary style or name of the trust or body, as "The Trustees of —— Charity;" "The Trustees of —— School;" "The Governors of ——;" "The Churchwardens and Overseers of the Poor of ——;" "The —— Canal Company;" "The Trustees of the Turnpike Road," or "The Turnpike Road leading from A. to B.," adopting the customary or statute appellations. Observe the same rule with respect to highways, and describe them thus, "A public road or highway called —— Lane;" and insert the names of the surveyors of the roads as owners.

3. Ascertain in all such cases who is the solicitor, steward, clerk, or other agent, acting for the body. Insert occupation roads thus, as, "The Occupation Road to ——," in the column for description of property, and also the names of the owners of the lands adjoining the occupation road.

4. In the cases of private trusts, where the trustees are in possession and receipt of rents, insert their names, and the name of the party for whom they are trustees.

5. Where there are trustees, but the person entitled for life or otherwise is in possession of the receipt of the rents, insert the name of such person instead of the trustees.

6. Observe the same rule with respect to other representatives, as devisees in trust, executors, and administrators; but it should be remarked that executors cannot be inserted as owners of the fee, but merely representing lessees or personal interests.

7. Where a mortgagee is in possession and receipt of the rents, or a party is bankrupt, introduce the name of the mortgagee or assignees as the case may be, and also, in case of a mortgage, the name of the mortgager or equitable owner.

8. When there are partnerships insert the firm, and ascertain and set down who is the managing partner, or who is the clerk or other agent acting for the Company.

9. Where there is a tenant for life and reversioner, insert the name of the tenant for life and that of the person immediately entitled in reversion.

10. In case of glebe land, insert in the column of owners the names of the incumbent, and the patron; and in the column of observations the diocese in which it lies.

11. Where the land is copyhold, describe it so in the column left for that purpose, and insert the

Digitized by Google

name of the lord of the manor in the same column.

12. In case of commons, describe the common, and insert the name of the lord of the manor as owner.

13. In the case of open and common fields, insert the style of the body entitled as "The Parishioners of the Parish of ——," and the name of any party occupying any district or particular portion of the lands, and ascertain the name of the solicitor or other agent acting for the body.

14. Where there are joint tenants, or tenants in common, insert all their names.

15. In all cares ascertain and set down accurately the *christian and the surname of all persons noticed in any way in the book of reference*, their residence and address.

This is most material, and particular care must be taken to do this as minutely as possible, in order to facilitate the future applications to them.

16. Ascertain and set down all the churches and chapels of ease in each parish.

17. Ascertain whether the lord of the manor has any exclusive rights in the rivers or brooks, and whether any other right exists in them than those of the proprietors of the lands or the adjoining banks, and state the name of the lord, and the extent of his right if he have any.

If the owners of the adjoining lands state that the lord has no right in the river or brook, and if such be the general reputation, record it. Number the rivers or brooks in continuation of the series of numbers, and put the owners and occupiers of the adjoining lands as the owners or occupiers of them if the tenant or occupier have the right of fishery, and right of the water.

If the river or brook divide a parish or township, it must be so described; as the river——, dividing the parishes of—— and——, or the township of —— and ——.

18. Report to Mr. —— immediately on any objection or difficulty occurring with respect to any owner or occupier on the line, accompanied with any remarks or suggestions that present themselves.

19. Be careful in ascertaining the exact boundaries of the different parishes, townships, or hamlets.

20. When the land is copyhold, describe it so in the column for that purpose, with the name of the lord of the manor.

LONDON AND BRIGHTON RAILWAY—THE CASE OF BALL.

[From the *Brighton Guardian*.]

Brighton Police Court, June 30.—Present—Major Allen and Major Willard.—*Frederick Ball* was put to the bar this morning soon after 11 o'clock, there being no other prisoner nor business before the Bench; and as there was neither solicitor nor witness present, Mr. H. Faithfull and Mr. Bennett were ordered to be sent for. Waiting their arrival, Major Allen asked upon what charge the prisoner was apprehended, and the London officer who was in attendance replied, that the charge was embezzlement, but that there was no warrant.

Major Allen—Did you bring him here without a warrant?

The officer replied that he did.

Major Allen—Upon what authority, pray?

The Officer—On the responsibility of the Railway Company.

Mr. Bennett (who had just come into the Court, and was retained on behalf of the prisoner) said that power was given to the Directors by their Act to cause a party charged to be apprehended.

Major Allen—Not without a warrant?

The Clerk to the Justices produced the Act, and on reference being made to it, the issuing of a warrant was found to be required.

Major Allen then addressed the London officer, and asked whether the prisoner had not been before a police magistrate in London?

The officer answered in the affirmative.

"And what," said the Major, pursuing the interrogatory, "what was the charge?"

"There was no specific charge," responded the officer, "and the magistrate sent him down here, as the offence was committed within your jurisdiction."

"What offence?" rejoined the Chairman.

"We understood that it was embezzlement," continued the officer, "but there was no charge taken down."

Mr. H. Faithfull here made his appearance; and on being informed that the Bench were now waiting for him to proceed with the case against the prisoner, he said he had to apply to the magistrates to adjourn the hearing till be could get his witnesses, most of whom, being clerks at the railway and engaged in dispatching the trains, it required some little time to collect. Would the magistrate fix a time? Would one o'clock suit? By that time he could, no doubt, assemble the witnesses and secure their attendance.

Major Allen replied that he had made several engagements on magisterial business, to attend on persons who were unable to leave their homes, and that his engagements would begin at two o'clock. It would be impossible, he imagined, to get through the case against the prisoner in an hour—an adjournment in the midst of it would be most inconvenient to all parties; it would therefore be better, he considered, it being only now half-past eleven, for Mr. Faithfull to proceed at once to get his witnesses together and return to the Court with them with as little delay as possible.

Hereupon Mr. Faithfull and Mr. Bennett withdrew, and the magistrates whiled away some three-quarters of an hour in friendly conversation on very amusing and popular topics, which however we are not required to chronicle.

Twelve o'clock had struck, and the minute-hand of the dial had nearly reached the half-hour, when the gallant Major's stock of patience became exhausted, and rising from his seat he declared, that as he had remained so long for the convenience of the parties, they must now wait his return at one o'clock, should they make their re-appearance earlier.

With the justices our reporter also beat a retreat, and returning to his post at the time fixed for resuming the business, he found the justices assembled and Mr. Faithfull addressing them in an under-tone scarcely audible. He said that the Directors of the Railway Company had been in doubt how they should proceed; but after much thought they considered it safer to take the milder course. The 190th section of their Act empowered them to make a claim upon the sureties for any default on the part of their officers; and the Directors had accordingly opened a negociation with the prisoner's friends; these had stepped forward to make up his deficiency, and the Directors had therefore neither claim on the prisoner, Frederick Bail, nor prosecution to carry on against him.

Major Allen here checked the Directors' advocate, requesting him to withhold all communication as to the motives by which his clients, the Directors of the Railway, were influenced. All the Bench desired to know was the course they intended to pursue.

Mr. Faithfull rejoined, that was what he was going to do. The prisoner's friends had come forward to pay the money, and there would therefore be no prosecution. The Directors were thus relieved from their difficulty, and he, Mr. Faithfull, was glad that such was the case, though he must admit that the prisoner had grossly misconducted himself both towards his employers and his mother, whose affliction was truly great, for she had only yesterday received the news of the death of another but much worthier son.

Major Allen said, he felt it necessary on the part of his colleagues, as well as of himself, to say that they were relieved from considerable difficulty by the withdrawal of the prosecution; for if the case had been persevered in they would have felt it their duty to refuse to proceed under the Railway Act, the Directors not having complied with its provisions. It was highly necessary, he thought, that this statement should be made, because it was desirable for the character of the Bench that it should be shown that justice was administered there in a manner to deserve the approbation of the public. A young man had in this case been apprehended on the very serious charge of fraudulent embezzlement, but without a warrant, which he could but consider a very questionable mode of proceeding, the power under which they had so acted they would not have recognised or sanctioned; and if the charge had been pressed the magistrates would only have entertained it under the provisions of 7 and 8 Geo. IV., c. 29. They would not have proceeded under the 190th section of the Railway Act, as that section only authorises the magistrates to adjudicate between the parties after the defaulter has been brought before them under a warrant, which was not done in this instance. However, as no charge was now made, the prisoner must be discharged, and all the property taken from him must be returned.

Mr. Faithfull hoped he might be allowed to state, in consequence of what had fallen from the Bench, that there would have been considerable difficulty in sustaining an indictment under 7 and 8 Geo. IV. c. 29. To bring a case under that statute the money must have been received by the servant for his employer; if however the money had at any time been in that employer's constructive possession even, the felony could not be sustained, and the offence would in that case come under the term "larceny." In the present case a doubt would have arisen whether the money had not been in the constructive legal possession of the Directors; and if so they would not have been in a position to prove the larceny. These were the difficulties which the Directors laboured under; and they had therefore, as he had already stated, elected to act under the authority of the 190th clause of their Act, and had settled the matter with Mr. Ball's friends.

Major Allen observed, by way of conclusion, that as there was no warrant, the magistrates were completely in the dark as to the character of the offence with which the prisoner had been charged; and the Bench wished it to be particularly understood that they were not privy to the negociations which it appeared from Mr. Faithfull's statement the Directors of the London and Brighton Railway had entered into.

The prisoner was then discharged.

Great Western Railway.—If the excellent and able speech of Mr. Russell on the subject of locking or unlocking railway carriages should fail to convince the reader, we recommend him to take an "experimental trip" on the Great Western line, and compare it with his previous journies. The new regulations consequent on the alteration are most intolerable, causing a serious loss of time, confusion of luggage, and much personal annoyance. To compensate for this we have one door unlocked, to rush out of which would in nine cases out of ten be certain destruction. We pass over the more sentimental portion of the grievance, the cruel separation of parting relatives by the inexorable *fiat* of fate in the visible form of a fierce policeman, clothed in dingy green livery. Nor will we advert to the degrading position of expectant friends, perhaps of the fair sex, reduced to wait behind a prison-like row of insurmountable paling with all sorts of low, unfeeling, cads and omnibus men, and distorting their smiling countenances into something almost resembling the decided grin of a caged hyæna. These are incidents which philosophy *may* enable us to bear, but the loss of time, of luggage, and sometimes of tickets, is beyond mortal endurance. We do not know whether the Directors have aggravated our condition by unnecessary restrictions, that we may implore them to imprison us again, as we now do most earnestly, but we are positive that a vast majority of passengers detest the change, and will not travel so frequently as before. We would recommend a special train once a day for the accommodation of those who desire the one-sided luxury of an unlocked carriage, leaving the rest of the trains for persons whose time is really valuable, and who object to sacrifice it for a more than doubtful advantage in the way of safety.—*Berks Chronicle.*

ARBROATH AND FORFAR RAILWAY COMPANY—GENERAL MEETING.

THE following is the Report by the Committee of Management of the Arbroath and Forfar Railway Company, to the annual general meeting, held at Arbroath on the 13th day of June, 1842:—

Your Committee have already placed in the hands of the Proprietors statements of the Accounts of the Company for the past year. These statements show the receipt and expenditure underneath each head, and may be considered as in some measure superseding anything beyond a reference to them in this Report. The Company's books, containing the details of the accounts, balanced and docquetted in terms of the Act of Parliament, are now laid before the meeting.

The gross revenue from goods and passengers, during the year, ending on the 15th of April last, amounts to	£9,117	6	1½
To which add for rents	210	6	6
Making a total revenue of	£9,327	12	7½
The expenditure on the traffic is	£4,413	1	10
Duty paid on passengers	495	16	10
Annual feu-duties and interest	2,309	17	8
Gross expenditure	£7,218	16	4
Leaving a balance of profit, after adding £16 4s. 2d., brought from last year's account, of	£2,125	0	5½

Out of the above balance the guaranteed dividend of 5 per cent. on the new stock falls to be paid. According to a statement prepared by the Treasurer, the amount of this dividend is 1,288*l.* 12s. 11d. It will be for the meeting to declare this dividend, and fix the time for its payment. The net balance applicable to the original stock, after making provision for the guaranteed dividend, is 836*l.* 7s. 6d. Your Committee cannot recommend that there should be a division of this balance, and, if the meeting agree with them, they will direct any dividend on the original stock to be postponed until another year.

For some time past, the working of the line, in connection with the expenditure on the traffic, has received the most anxious attention of your Committee. Various causes have combined to occasion unavoidable expense during the past year. The direct outlay, arising from the unfortunate accident near Clocksbriggs station in February, 1841, is seen from the published statement; but there were many consequential expenses thereby occasioned, which are included in the ordinary disbursements, and increase the expenditure on the traffic. During the year, the works and machinery have undergone a revision in every part. In going over the line it was discovered that many of the stone blocks had given way, stones unfit for the purpose having to some extent been used, and these were found to have split, and otherwise become unfit for their position. The faulty blocks have been removed, and others of more durability laid in their places This has been a source of considerable expense, which will not occur again—at any rate not for a long period. The whole locomotive engines have also been improved, and your Committee can state with confidence, that they are now in such condition that much less expense will be required for repairs this year. The machinery, generally speaking, is at present in the most effective state, and it has never been so much so since the line was opened.

In regard to the expense of keeping the line and conducting the traffic, your Committee have reduced, or are now in course of reducing, every part of the establishment to the lowest rate consistent with its efficiency at this season of the year. They had it under consideration how far the expenditure might not be lessened, without materially affecting the revenue, by running a smaller number of trains. Their first inclination was to reduce the number of trains to four in summer and three in winter. Repeated interviews with the Directors of the Dundee and Arbroath Railway Company on this subject satisfied them that they could not, for this season, keep up the connection with that line, which has been found so beneficial to both Companies, unless they ran five trains as formerly; and a minute calculation of the difference of expense, as between four and five trains, made it less than doubtful that, independently of all inconvenience of disconnecting the two lines, the saving by means of four trains would, in the height of the season, be lost twice over by the diminished revenue which a curtailment of the accommodation by taking off the fifth train would occasion. It was therefore agreed between the two Companies—the Dundee Company having at first contemplated taking off a train as well as ourselves—to continue the arrangements as in the two past seasons. The proposal, however, is, after the summer months are past to make an alteration, and to reduce the number of trains on this line to three daily, by which there will, it is expected, be a material saving of expense without any considerable loss of revenue. Any such reduction must, at the same time, depend mainly upon the activity of trade when the period for making it shall arrive.

Your Committee have recently concluded an agreement for the supply of coke on more favourable terms than they have ever been able to do before. A reference to the accounts will show that this is one of the heaviest items of expenditure. Your Committee have frequently had under their consideration the question of building coke ovens, and manufacturing on the Company's premises, the coke required. Inquiries were made and information collected in order to enable the Committee to determine this question. The result was a conviction that it would be advantageous for the Company to manufacture their own coke, but, in the present state of trade, and in consequence of what was considered a favourable offer for the supply of coke having been received from the same party who has for the last three years supplied the Company so entirely to their satisfaction, the Committee have, for the present, abandoned the intention of erecting coke ovens, or making other arrangements for the manufacture, and have contracted for another year's supply as formerly, but at a reduced price. The expense of erecting coke ovens and putting them in working order is estimated at 250*l.* This matter will come under the consideration of the Committee for the ensuing year.

The Committee rejoice in being able to report, that the efforts that have been made to obtain an alteration in the mode of levying the passenger duty have at last been successful. In these efforts they from the first took an active part and the difficulties which were opposed to the alteration sought for seemed at one time almost insurmountable. The Chancellor of the Exchequer has at length yielded to the united remonstrances of every Railway Company in Scotland, and not a few of the English Companies also, and has agreed to adopt a tax of 5 per cent. on the gross revenue from passengers, in place of the duty of one-eighth of a penny per mile per passenger. When it is seen that at the last-mentioned rate the duty payable by this Company amounted to fully 14 per cent. on their whole revenue from passengers, the meeting will be sensible of the advantage conferred by the change. During the past year this Company have paid of passenger duty to Government, 495*l.* 16s. 10d. Had the new mode of taking 5 per cent. on the gross receipts been in operation, the duty would not have exceeded 180*l.* It is understood the alteration will take effect from the 5th of April last, but it cannot be acted upon with certainty until it has received the sanction of Parliament, and some time may elapse before that is obtained. When the point is settled it will be for consideration whether the passenger fares should not be reduced to the original rates of 1s., 1s. 6d. and 2s., for the different classes, in place of 1s. 3d., 1s. 9d., and 2s. 3d. The Committee are desirous to learn the sentiments of their constituents whether the Company should return to the original rates, and this meeting is invited to express their opinion thereon.

Your Committee have been prevented, by the depression in trade, and the unfavourable aspect of the times, from maturing any arrangements for the proper accommodation of the traffic at Friockheim station. That station is now one of the most important on the line, and the accommodation provided is by no means adequate. The Committee have had its improvement much at heart, and have procured plans and estimates, which the circumstances alluded to have alone prevented them from maturing for execution. At no distant period this matter will demand the attention of the Company. The turnpike to Brechin, connecting this station with the interior of the country, is now completed and opened, in excellent order, and the travelling upon it is already considerable.

The new stock is not yet all disposed of. The amount subscribed up to this time is 28,825*l.*, being 2,306 shares at 12*l.* 10s. each. There are still to allocate 254 shares, which, at 12*l.* 10s., amount to 3,175*l.* The Committee are giving off these shares to parties who may apply for them. They believe that it may be necessary to make a further creation of shares of new stock, to a limited extent; but at present this may be deferred. The erection of buildings at Friockheim station, or any expenditure in new works, is not to be thought of until some decided improvement in the trade of the district is apparent.

The British Linen Company, who have so largely and liberally accommodated this Company with a cash credit, have intimated their desire that their advances may be repaid as soon as the necessary arrangements can be made for the purpose. Your Committee are now in course of making applications, with the view of effecting loans from other quarters, in other to comply with the bank's request. They mean to endeavour to obtain loans on assignations of the mortgage, held for the cash credit, and if possible at a lower rate of interest.

In closing their Report, your Committee cannot but express their deep regret that the state of the Company's affairs is not more flourishing; yet they look to the success of the undertaking with undiminished confidence. In examining the accounts for the past year, which has been one of unexampled distress in the commercial world, it will be observed that the state of the traffic on the line is by no means unsatisfactory. Comparing the revenue for the year just ended, with that for the year ending in April 1841, there is a small decrease, 34*l.* 19s. 1d., but it ought to be kept in view that, in the year 1840-1841 there was 221*l.* 10s. 7d. of revenue from driving metal for the new turnpike to Kirriemuir, which was not an ordinary branch of traffic; and when this is deducted, the result shows a considerable increase on the general traffic of the railway.

There is one circumstance peculiar to this railway which goes deeply into this matter, and which, though plain enough, may yet be noticed. This meeting will observe that the original stock bears the proportion of less than a half to the expenditure for stock, while all the cost beyond the original stock, whether debt or new stock, has 5 per cent. secured to it. Had the whole expenditure been placed on the footing of the original stock, there would have been sufficient profits to pay a dividend on the whole at the rate of nearly 4 per cent.; but when 70,000*l.* of the expenditure has to be paid in the first instance, 5 per cent., the remainder, which has no such preference, must suffer proportionally. It is obvious, however—and this is a ground on which the prospect of better things is seen—that a small improvement in the trade of the Company would bring up the original stock to a par with the rest; for any increase of revenue would go almost entirely to profit. The expense of every kind would remain almost the same, and every shilling of increased revenue would enhance the profits to its full amount.

Three of the Directors, Mr. Lindsay Carnegie, Mr. Andson, and Mr. David Louson, retire by rotation in terms of the Act of Parliament. They may be re-elected.

(Signed) W. F. LINDSAY CARNEGIE.

Mr. David Rodger moved that the Report be not approved of. This motion was seconded by Mr. David Batchellor.

Provost Mann moved as an amendment, that the Report of the Committee of Management now read be approved of, and printed and circulated, and, in terms thereof, that a dividend of 5 per cent. on the new stock be now declared, and made payable on the 2nd of August next; and that any dividend on the original stock for this year be postponed. Mr. James Whitton seconded the amendment.

Several gentlemen addressed the meeting, and after full discussion the vote was taken, when the amendment was carried unanimously, and the meeting resolved accordingly—neither the said David Rodger nor the said David Batchellor having appeared to vote for the motion.

The meeting then proceeded to the election of three Directors in room of Messrs. William Fullarton Lindsay Carnegie, David Louson, and William Andson, going out by rotation, when the said William Fullarton Lindsay Carnegie, William Andson, and David Louson, were duly re-elected, and chosen Directors and members of the Committee of Management. The following is therefore the list of the Committee of Management, placed in the order required by the Act for the ensuing year, viz.:—Thomas Carnaby, John Lowson, William Chapel, William Potter, George Canning, Sir John Ogilvie, Bart.; David Louson, William Andson, William Fullarton Lindsay Carnegie.

In reference to that part of the Committee's Report respecting the reduction of the passengers' fares, several individuals expressed their opinion, that when the alteration of the passenger duty shall have been sanctioned by Parliament, this Company should return to the original fares of one 1s., 1s. 6d., and 2s., for the different classes. The meeting, however, left this matter in the hands of the Directors.

Mr. Charles Rodger moved the cordial thanks of the meeting to the Chairman and other members of the Committee of Management, for the zealous and honest discharge of their duties, and their valuable services to the Company. This motion was seconded by Mr. James Barry, and carried unanimously.

EDINBURGH AND GLASGOW RAILWAY—ANCIENT AND MODERN TRAVELLING.

In Cleland's Annals of Glasgow it is stated, that in 1678 a contract was entered into betwixt the Hon. James Campbell, Provost; John Johnston, John Campbell, and James Colquhoun, Bailies of Glasgow, and William Hume, merchant, Edinburgh. The contract proceeds thus:—

"At Glasgow, the saxt day of Aug., 1678, the foresaid parties finally agree that the said William Hume should, with all diligence, have in readiness ane sufficient strang coach, to be drawn by sax able horses, to leave Edinburgh ilk Monday morning, and to return again (God willing) ilk Saturday night. The passengers to have the liberty of taking a clock bag for receiving their cloths, linnen, and sic like. The burgess of Glasgow always to have a preference to the coach." The fare, from the 1st March till 1st Sept., which was considered summer weather, was 4*l.* 16s. Scots, or 8s. sterling. The other months, which were considered winter weather, the fare was to be 5*l.* 8s. Scots. As the undertaking was considered arduous, and not to be accomplished without assistance, the said magistrate engaged to give a premium to the said William Hume of 200 merks Scots a year, for five years. The latter agreeing to run the coach for that period, whether passengers appeared or not, in consideration of his having actually received two years premium in advance.

It is a singular coincidence that the first communication between Glasgow and Edinburgh, by stage-coaches, was opened under the Provostship of a James Campbell; and the first communication by steam has been opened under the Provostship of a gentleman of the same name, 164 years afterwards. *Scotch Reformers' Gazette.*

GLASGOW, PAISLEY, AND GREENOCK RAILWAY COMPANY—GENERAL MEETING.

The half-yearly general meeting of the proprietors of this railway was held on Thursday, June 30, at twelve o'clock, in the Sheriff Court Hall, Greenock; Robert Dow Ker, Esq., in the chair.

Wyndham Harding, Esq., Secretary, read the advertisement calling the meeting, after which

James Little, Esq., moved that the seal of the Company be affixed to the list of registries of proprietors for the last six months, which was agreed to, and the seal was affixed accordingly.

The Secretary then read the following Balance Sheet and accompanying Report:—

Balance Sheet, 31st May, 1842.

WYNDHAM HARDING, Secretary.

REPORT.

Greenock, July 1, 1842.

From the accounts which accompany the present and last Reports to the general meetings, the shareholders have before them the results of the first year's traffic on this railway—a period marked by an unusual depression in every branch of commerce, more especially during that portion of the year to which the present Report refers.

The receipts for the last half-year amount to	£18,085 1 6
The disbursements to	12,396 15 6
	£5,689 6 0
Leaving, after deducting interest on debentures	3,471 4 0
A balance of	£2,217 2 0
This, together with the balance brought forward from last half-year's revenue account, of	629 9 0
Affords a sum of	£2,846 11 0

which is applicable to a dividend. And your Directors re-

Digitized by Google

commend that a dividend of 2s. 6d. per share on the old and 7d. 1-5th per share on the new or half-shares, be declared, and that the balance of 606*l.* 11s. be carried to the credit of the next half year.

It will be remembered that a dividend of 10s. per share on the old, and 1s. 2d. 2-5ths on the new shares, was declared at the last half-yearly meeting. The dividends during the first year will, therefore, amount to 12s. 6d. on old, and 1s. 9d. 3-5ths on the new shares, being at the rate of 2½ per cent. per annum.

The receipts of the last half-year are 7,120*l.* 9s. less than those for the half-year ending 30th November, 1841. This deficiency is attributable to the period included in this half-year being that most unfavourable to the passenger traffic, combined with the stagnation of trade, so universally felt throughout the district.

The state of commerce having made itself felt with peculiar severity in both goods and passengers during the winter months, when the passenger traffic principally depends on the intercourse of merchants, traders, and seamen.

Your Directors deem it their duty to state to the distant shareholders, and their local experience enables them to do so with confidence, that from the above causes the results of the traffic of last half-year cannot be considered as affording any criterion of the resources of the railway, which are still unexhausted, as is indicated by the fact that during the last month, while 61,500 passengers have been conveyed by the railway, 40,000 have travelled by the steam-boats,—a number which is to be regarded as affording a probable source of future revenue to the railway.

The works of the railway remain in a secure and complete condition. The terms of the contracts for works having expired on the 31st of March, the maintenance of the way and works has been let for a term of years, at a reasonable sum to a competent and responsible party.

The traffic during the last half-year has been conducted with safety and regularity, the number of passenger trains more than a quarter of an hour after their time having been only 1 in 60.

The entire cost of locomotive power has been 483*l.* less than for the preceding half-year, the cost per mile 13.5d.

Your Directors have now to advert to several occurrences of importance to the interests of this Company, which have taken place during the last half year.

The shareholders will hear with satisfaction that the tax, as at present levied on railway passengers, is to be commuted to a charge of 5 per cent. on the passenger receipts. The tax at present levied amounts to 13 per cent. on the passenger receipts; and a better illustration of the great saving that will be effected by the change in this tax cannot be given, than by stating, that at present they pay 2½d. per passenger, whereas they will hereafter, on their third class fares, pay little more than one farthing. The modification will also free the Company from the impediments (peculiar to the present mode of taxation) which prevented them from apportioning their fares to the wants of the public, or the character of the competition to which they were exposed. The judicious exertions of Mr. P. M. Stewart, Mr. Leitch, Mr. Lang, and Mr. Errington, who formed the deputation from this Company in London, and co-operated with other Railway Companies, contributed in an important degree to procure the promise of a change thus beneficial to the interest of this Company.

On being assured that the principle of the duty would be altered, your Directors lost no time in redeeming the pledge they had given of adopting a third-class fare, which they did on 23d May last. Since this time, the numbers travelling have increased 8,123 per week; the gross receipts, 199*l.* 15s. 10d. per week, and the net receipts (after deducting the expenses, and the duty as at present levied), 86*l.* 7s. 4d.

It has been found that the increase of working expense, excluding the mileage duty, due to the conveyance of the additional number of passengers is scarcely appreciable, and with the present number of trains, 50 per cent. more passengers might be conveyed with a very trifling increase of outlay. So successful has the operation of the third-class fares been, that it enables the Directors to state to the shareholders, that had the modification of the tax been obtained before the commencement of the present year, the result of the year's traffic would have been very different from that which they now lay before them.

A connection with the Greenock Harbour was effected in the month of April, since which time parts of the cargoes of several vessels have been conveyed to and from the quay in the railway trucks; and your Directors are able to state, that the superior economy of the railway, as a mode of transmitting cargoes to and from Glasgow, when the saving of injury to the ship itself, the expense of towage and dues, and the time consumed are taken into calculation, is generally recognised by the mercantile public. There is at present accommodation for a very limited traffic; but the passing of the Greenock Harbour Bill, which took place on the 18th June last, will, it is hoped, enable the works, necessary to complete the connection in question, to be immediately executed.

The traffic in timber has commenced, but this branch of trade, since the arrangements for conveying timber were finished, has, from the proposed change of duty, and from other circumstances, been completely paralysed.

The junction with the Polloc and Govan Railway took place early in April, and the traffic in minerals also has commenced. The season of the year, combined with the incomplete arrangements for the shipping of coal, have prevented the sales from affording any indication of what may be anticipated from this source. In the meantime the principal carrier has lately placed a new locomotive on the line for his own use, together with 86 coal waggons, and is giving the best assurance of his determination to conduct a large traffic, by building an additional number of waggons.

In carrying into effect the necessary connection with the river—in constructing the Greenock goods' yard, sheds, coal arches, and depot—in connecting this railway with the Polloc and Govan—in providing engine repairing shops and machinery—and also from an increased stock of engines, carriages, and waggons, a greater amount of capital was found to be necessary than is provided for under the Act of Parliament; but relying upon the sanction of the shareholders at this meeting, the Directors considered it to be their duty to make the necessary expenditure as the demand for it arose. Either this increased accommodation must have been provided at once, or traffic lost to the railway; and, unfortunately, it is not an unusual circumstance for a railway to be in excess of capital expenditure

Your Directors certainly did hope, by carrying on the works from the commencement under a rigid system of economy, to have been exempt from this difficulty. That they have been supported, and their wishes acted upon in the most energetic manner, by the Engineer and other officers of the Company, is proved by the fact of the railway in the open country, including the heavy works at Bishopton Land, not having exceeded 20,000*l.* per mile; but circumstances have rendered it from time to time more necessary to extend, in the fullest manner, the facilities of the railway; and since the steam-boats have been brought a mile nearer to the Glasgow Exchange, and close to the Glasgow Bridge, there is reason to be convinced that the extensions made have been matters of inevitable necessity.

It is, however, evident, that while large powers are delegated by Parliament to other than the hands of the Directors, this sort of contingent expenditure can neither be accurately foreseen or guarded against. The number of bridges—the style of fences—the finishing of streets and roads, are all judged upon by the local authorities, and in passing through four towns they have been found to cause serious additions to our expenditure.

Before closing this Report, your Directors beg to lay before the meeting the result of the last year's traffic:—

The receipts have amounted to	£43,290	12	0
The expenses to.....	25,670	4	8
The balance applicable to paying interest on capital is therefore.....	£17,620	7	4

The average receipts have been 832*l.* 10s. 2d. per week. The average number of passengers 12,464 per week.

On the goods' receipts, exclusively of money received from toll, the working expenses, which include locomotive power, salaries, cartage, porterage, wear and tear of waggons, and all contingencies, amount to 56 per cent. Thus, although the rates of the carriage of goods have been reduced to the public to an extent which can only be appreciated by those who are connected with the district, those now charged allow a fair surplus of profit to the railway, while the saving which will be effected by the elevator and the connection with the quay, has not yet had time to make itself felt. It may be proper to add that the increase in the goods revenue is expected to arise principally from toll, which involves no increase of expense, and that, as before stated is the case of passengers, an increase in receipts from goods does not involve a proportionate increase in expense, as the same establishment could conduct a much larger amount of traffic.

The preceding statements afford grounds of assurance that the railway is certainly gaining in the estimation of the public; and from the following causes, the effects of which, direct and indirect, will be felt in the course of next year, the shareholders may safely anticipate an increased and remunerating revenue:—

The commutation of the passenger tax.

The completion of the works at the east quay, with the consequent development of the traffic in goods and materials.

Your Directors have gone at length into the various topics included in the Report, as they are desirous to explain to the shareholders what they conceive to be the true state and prospects of the Company.

Your Directors have to report, that Charles Cunningham Scott, Esq., of Hawkhill, has been elected a Director in place of Roger Aytoun, Esq., resigned.

WYNDHAM HARDING, Secretary.

The CHAIRMAN said, it would be in vain for him to say that last winter's traffic had answered his expectations, but no one would be surprised at the smallness of the dividend, arising from the extreme pressure of a period such as has been seldom experienced in this country, and which has been marked by diminished receipts on most of the railways in the kingdom. He then added—the commencement of summer had been attended by events of much importance to the railway. The strenuous and long continued efforts of this and other Railway Companies to obtain a more equitable mode of levying the passenger tax had been crowned with success, and although the new system had not yet come into operation, it was deemed proper to lose no time in affording to the public the benefit of the measure, by instantly running third-class carriages at low fares, of which he doubted not the shareholders would approve, seeing that the guiding principle of this line had always been to consider the interest of the railway and that of the public as one and the same, and that it is by the numbers carried, rather than by high fares, we are to look for our revenue. With a view to counteract the influence of the railway, the steamers had reduced their fares this season even lower than before, and in consequence of which had carried great numbers. It is impossible to complain of competition when it is restrained within its proper bounds, and in the case of the steamers, which had long maintained an undisturbed ascendancy on the river, it was quite fair; but the heat which the present contest had engendered had given a turn to the question which he felt called upon to notice. It was assumed by their opponents that the interest of the city of Glasgow was on the side of the river, and that the success of the railway would involve consequences the reverse, and that hence the steamers ought to be supported and the railway opposed by the citizens of Glasgow. The argument he repudiated as illiberal and unfounded. There were to be found persons who would limit the measure of scientific improvement to their own contracted views, but the citizens of Glasgow were men of far too enlightened and expanded minds to feel any such jealousy. They saw, on the contrary, in this railway an arm of strength for extending the resources and greatness of the western metropolis of Scotland, superior to any other means within the sphere of its action, and which views of the railway, he was confident, would ere long prevail over every hostile movement which interested or party feeling might urge against it. It was true the river revenue would diminish by diminished traffic on the river, but if the objects of the river could be better served by the railway, and cheaper than the river costs, it surely must follow that the public of Glasgow would be gainers and not losers by the railway. He wished he could say that the capital had been found adequate to meet all the expenditure. Had he not been a Director he had no doubt whatever, he said, he should have thought that the Directors ought to have calculated better at first, because only those in the Management could at all appreciate the difficulty, nay, the impossibility of estimating, with any degree of accuracy, the expense of a work of this magnitude. While he regretted the circumstance, he could honestly declare that, looking at the works, nothing laid out could possibly be avoided without sacrifice to the interests of the line. The vast traffic which the railway was destined to carry rendered it necessary to execute all the works on a large scale, and in the most complete and efficient manner, so as to answer its objects to the public, and secure the largest return to the shareholders; and he felt confident that the meeting would say that, acting upon these views, the Directors had done right for the benefit of all concerned in this great undertaking.

DAVID CRAWFORD, Esq., rose and was about to move the adoption of the Report, when—

THOMAS HAMLIN, Esq., inquired what was the original estimate of the cost of the railway?

A gentleman present said it was 250,000*l.*

JAMES TURNER, Esq., said, a flying survey and estimate had been made soon after the railway was projected, and the cost was then calculated to be under 300,000*l.*, but it was hurriedly done, and could not be taken as a fair estimate, and in going over the details afterwards in Liverpool it was found that the cost would considerably exceed 400,000*l.* In these circumstances, they had fixed on 400,000*l.* as the probable cost, though it was well known that that sum might not ultimately be equivalent to the actual cost.

Captain HAMLIN said it was a tolerable excess for the engineers to add 50 per cent. to their estimate.

Mr. TURNER said the 400,000*l.* was simply the estimated cost of the formation of the line. There was to be added to this, what was not then included, the cost of the engines, sheds, station buildings, and other matters which were not included in the original calculations. Besides, there had been a considerable extension of the railway beyond what was originally proposed; in Greenock they had carried the line into Cathcart-street instead of only to Bogle-street, and in Glasgow close to the bridge, while it was originally intended to stop at Kingston, neither of which extensions were originally intended. The excess, therefore, in these circumstances, could not be wondered at—indeed, it was less than what might have been imagined.

Digitized by Google

Mr. HAMLIN said, he had put the question because he had heard people out of doors making remarks on the subject; and he thought it right to put it for the benefit of the gentlemen present as well as others.

DAVID CRAWFORD, Esq., the nmoved that "the Report now read be received and adopted, and that the same be printed and circulated among the shareholders." He agreed with the Chairman in thinking that the Report would have been more satisfactory had it announced a larger dividend; but he was satisfied that under the circumstances detailed in the exposition which had been laid before them, everything had been done by the Directors which could tend to the benefit of the Company. He, therefore, in the knowledge of the facts, thought the Report was highly satisfactory.

ANDREW MUIR, Esq. seconded the motion, which was unanimously agreed to.

WM. RODGER, Esq., moved—

"That a dividend of 2s. 6d. per old share, and 7d. one-fifth per new or half-share, as recommended in the Report, be declared and paid to the proprietors on the 2nd day of August next."

WM. MARTIN, Esq., seconded the motion, which was unanimously agreed to.

Dr. BUCHANAN moved—

"That the meeting approve of the proceedings of the Directors, and return them their thanks for their attention to the business of the Company."

He was sure the meeting would give this motion their unanimous and cordial assent.

Mr. HAMLIN seconded the motion, which was unanimously approved of.

THOMAS BLAIR, Esq., moved the thanks of the meeting to the Chairman, which was carried by acclamation, and the meeting adjourned.—*Glasgow Constitutional*, July 2.

GLASGOW AND GREENOCK RAILWAY.

To the Editor of the Railway Times.

SIR,—At a meeting of the Greenock Railway Company, held on the 1st July, it appears that the following statement was made in reply to the question of a shareholder, viz. :—

"Previously to the Act of Incorporation being applied for, the estimates were examined, when it was ascertained that the cost of the railway and works would *exceed* 400,000*l*. This sum, however, with the *addition* of the sum to be borrowed on loan, it was hoped might suffice. Further, the 400,000*l*. did not embrace the extensive stock of engines, carriages, sheds, works, &c. &c."

Now this statement is very far from being correct. It is altogether at variance with the evidence of the Engineers, given before the Parliamentary Committees, and contrasts strangely enough with the Report of the Directors themselves, dated December 18, 1838, from which I take the following, viz. :—

"Every item of expenditure has been carefully and minutely considered — practical experience having taken the place of theoretical calculation"— "and allowing for cost of *works*, *stations*, land and compensation, *engines* and *carriages*, and *every contingency*, the Directors have great pleasure in stating, that they do not anticipate being obliged to call for more than 20*l*. per share, or 80 per cent. on the subscription of 400,000*l*.

"The increased accommodation for two Companies at Glasgow and Paisley will cause an extra outlay there, but this is allowed for in the estimate."

The Directors should be careful not to allow one Report to contradict the other in such essential points as the above. Such blunders can do no good to the undertaking.

I am, Sir, respectfully yours, &c.,
GREENOCKIAN.

Greenock, July 5, 1842.

MIDLAND COUNTIES' RAILWAY.

To the Editor of the Railway Times.

SIR,—In your last number but one you favoured me with a brief space in your valuable columns in the shape of a few questions to the Midland Counties' Railway Directors; and although that body have not thought well to reply to them through the same medium, I have, along with the rest of the proprietors, received an answer to the first therein put by me, in the circular issued by the Board on the 27th ult. I now beg to renew the solicitation for another portion of your journal, while I address a few words to my fellow-shareholders respecting the method proposed for raising the new capital, &c. On reading that circular I was greatly surprised to find 158,000*l*. wanted to pay off *existing liabilities*, significantly intimating that new ones may be expected to be entered into. Really this is too bad. I scarcely know how to express in words sufficiently strong my dissatisfaction. What! have we been opened throughout, and in full working order, for upwards of two years, and not yet approached the least towards solidity? Still subsiding, and requiring fresh ballast every six months? Let us go back a little, and take a review of the fine words and fair promises that have been continually held out to us. Well then, we will take the Report of February, 1838, which says, the whole 57 miles of railway are let to responsible contractors for 566,353*l*. 1s. 6d. In June the same year Mr. Woodhouse, the Resident Engineer, tells us he has no reason to apprehend the cost of the works will much exceed the estimates made by him previous to the contracts being let, and the purchase of land will not be more than estimated. The *only item* in which any considerable excess may arise is in that of the permanent way.

Again, in the following July, we are further told the entire cost of works, rails, stations, &c., will not exceed 20,000*l*. per mile.—See Mr. J. E. Hutchinson's Report (then a Director).

Now we come to the August meeting, 1839, when the Directors observe with pleasure, that as far as the works have hitherto proceeded the statements made by Mr. Woodhouse, in his Report last year, as to his estimate of expenses of works, have been so fully borne out in practice as to entitle that gentleman to the fullest confidence of the Company.

Again, in August, 1840, we are told the cost of the railway, and of the various works connected with it, has in no very material degree exceeded the estimate upon which they were undertaken, being within the amount authorised to be raised by the original Act of Parliament, and rendering the *entire cost of this railway, including a most complete and efficient carrying establishment*, one of the lowest per mile of any similar work of the same extent, and *less than one-half* that of several principal lines in this country.

Again, in August, 1841, after a careful examination of all the works (by Mr. Cubitt), the whole line is declared to be in a perfectly satisfactory state; and in point of *soundness, strength, durability, and facility in travelling, equal to any in the kingdom*; and as a proof of it the Directors have entered into contracts for keeping the line in repair, at prices amongst the very lowest yet paid. However, 110,000*l*. is wanted to pay off *small items*, &c.

Now we come to the last meeting, viz., February this year, when the 110,000*l*. is *felt to be scarcely sufficient*, so conclude to go for enough (say for two years), and think 250,000*l*., with power to borrow on that, will carry them through. And so, brother shareholders, the capital of this concern has been continually increasing, until it has nearly reached the enormous sum of two millions for a 57 miles' line of railway, on which there is no tunnel worthy the name, nor anything at all entitled to the term gigantic.

Whence is it then, that all this excess of expenditure occurs? We see nothing of the kind on any other railway; not even in the miserable Birmingham and Derby, for although they cannot increase their receipts, they do not increase their capital in the least degree approaching a comparison with ours, while we not only fall off in receipts, but are continually increasing the capital most alarmingly, and which must place us, ere long, in the same wretched condition as our neighbour. No wonder that some 10 or 12 hands only are held up for the reception of the Report in a full room of 60 or 70 persons, and no more surprising to see a motion made to get rid of the whole Board; for where are the hopes and prospects of the once fair and promising Midland Counties' Railway? They are gone —completely and irrecoverably gone.

The time has indeed fully arrived when it behoves every proprietor to give up hoping and trusting to the delusive promises of Directors' Reports, and to keep a scrutinising eye over their own concerns. Let this be the case at the ensuing meeting, with respect to the disposal of the money said to be wanted; make a determined stand against the 13,300*l*. as proposed in the circular, and not tamely look on and see the Directors give 5 per cent. on this large sum, and be gulled with 6 per cent. on a paltry 2*l*. call for two years, which is given as a sop to entice and draw us on as heretofore. No, do not let the bait take; scout it from you as an insult, and demand something like this :—Create quarter shares and make calls to the tune of two-thirds the amount which will produce the requisite sum to discharge *existing liabilities*, and be guaranteed 5 per cent. (as is done on other railways) on all that is called up. Be not satisfied with less. Besides, there can be no reason why they should not guarantee the 5 per cent., for I do not expect they are in so good repute as the Manchester and Leeds, so as to borrow at 4 or 4½; therefore, give the shareholders the right they are entitled to—the first offer of 5 per cent.—ere it is bestowed upon strangers.

I am, Sir, yours, &c.,
A MIDLAND SHAREHOLDER.

July 5, 1842.

MIDLAND COUNTIES' RAILWAY.

To the Proprietors of the Midland Counties' Railway.

GENTLEMEN,—You have no doubt, like myself, received a circular from the Secretary, explaining the way in which the Directors intend raising the additional capital required. It is to that part of the circular which states that the new shares are "to be *guaranteed* a dividend of not less than *six* per cent. per annum on the amount called up" to which I would draw your attention, and to which there appear to me to be strong objections, which I will briefly touch upon. We may, I think, safely assume that many of the proprietors will decline taking the new shares from mere inability, in consequence of the depression of trade, of paying the money; and without the remotest wish to impute improper motives to any one, I would ask, what is to prevent the Directors availing themselves of the advantages of their position, and buying all or the greater portion of the rejected shares; and if, for the argument's sake, we assume that they do become interested to a considerable extent in them, what will be their relative position to the shareholders? It appears clear to me, that in the first place they will have a powerful inducement to call in and expend the whole of the money necessary or otherwise—as who would not, with a guarantee of 6 per cent.? In the next place, it is very possible that the interest of some of them in the new may preponderate over that in the old shares, in which case they would have little inducement to manage the Company's business properly, beyond that of making sure of the interest on the preference shares being paid. I by no means wish it to be inferred that the Directors have been actuated by these motives in submitting the proposed plan to the proprietors; nor is it by any means impossible that I may be mistaken in my opinion of its tendency. There cannot, however, be any harm in pointing out its *supposed* defects, and thereby having wrong impressions corrected, if wrong they are found to be; and I trust the Directors, and the proprietary generally, will give me credit for being actuated by no other motive than that of guarding the shareholders against assisting in the creation of an influence which, to them, may become a "Frankenstein."

I am, Gentlemen, your obedient servant,
GUARDIAN.

RAILWAYS—THEIR CLAIM UPON THE SUPPORT OF THE PUBLIC.

Letter II.

To the Editor of the Railway Times.

Sir,—It is a fact no less strange than true in the history of science, that it has been the fate of all great improvements and discoveries to meet with determined opposition. The reason of this, perhaps, is because they have necessarily interfered with existing interests and opinions. To this cause we may justly refer the efforts which have been made to prejudice the minds of the public against railway communication. How often have we heard Directors branded as heartless monopolists, and railways denounced as a curse to the country; and this not only by persons whose ignorance might form some sort of apology for their abuse, but also by those whose opinions in *other* matters usually command respect. Yet surely such declamations are, to say the least, unwise; for, if they prove anything, it is that those who utter them are destitute of that laudable magnanimity of principle which leads persons to sacrifice their individual interests for the public good. No logician, however subtle, can maintain, with any show of reason or propriety, that railways have operated otherwise than benecially in any country where they have been introduced, or that they are not immeasurably superior to all prior travelling arrangements. Instead, therefore, of being set up as a mark at which every ignorant ignoramus may shoot his unmeaning abuse, or certain members of our senate, without alarm or offence to their constituents, hurl their oratorical thunder, railways ought to be considered as being amongst the greatest and most important benefits which have proceeded from the ingenuity of man, and as having a positive and undeniable claim upon the support of the public.

The correctness of these observations will, I trust, be amply confirmed by the facts and examples adduced in these letters.

Having already pointed out a few of the benefits which have arisen from the superior speed of railway conveyance, I will proceed to state a few which have resulted from,

2. *Increased Accommodation.*—One serious inconvenience attendant upon the coaching system was the limited accommodation which it afforded for travellers, especially those who wished to proceed only to short distances. During the summer months, and periods when trade was more than usually brisk, the coaches, carrying only about 14 passengers, were speedily filled, and travellers waiting at intermediate towns were often disappointed in their hope of securing a place, and were compelled either to wait until the arrival of the next coach (with the risk of being again disappointed), or to hire a vehicle purposely to convey them to their destination. Great expense, loss of time, and consequent inconvenience, were thus frequently caused to travellers, through the limited nature of coach conveyance. From these circumstances the communication between provincial towns was very imperfect and incomplete, involving considerable expense; and, as a necessary consequence, mutual intercourse was rather checked than encouraged. But, since the establishment of railways, this evil has been removed. The ample accommodation provided by Railway Companies is sufficient to meet the greatest influx of passengers, offering alike to the man of business and the traveller for pleasure, a certain and punctual means of conveyance. A natural result flowing from this is, that there are now, in many instances, far better means of communication between our smallest villages than formerly existed between our principal towns. There needs nothing more to prove the verity of these remarks than to witness the stage coach, with its scanty accommodation for about 14 passengers, and the railway train which, by the almost omnipotent power of steam, easily conveys its hundreds.

Probably one of the most gratifying effects consequent upon the increased accommodation, and which tends more than anything else to make the obloquy so unsparingly heaped upon Railway Directors recoil with tenfold force upon their assailants, is the number of *excursions* which have been got up at very low fares, in order to give persons in humble circumstances an opportunity of visiting the principal objects in nature and art with which our beautiful island abounds. On the 28th of April, 600 members and friends of the Gloucester Mechanics' Institute were conveyed by a special train, on the Birmingham and Gloucester Railway, to Birmingham, in order to view the public buildings, and the various manufactures for which that metropolis of the midland counties is so eminently distinguished. Similar trips have been concerted by the Directors of the London and Birmingham, Derby, Grand Junction, London and South-Western, and other railways. Within the last few weeks more than 2,000 persons have availed themselves of the arrangements made on the North Midland and Midland Counties' Railways, to visit Matlock, celebrated for its romantic and picturesque scenery. A special train will, I understand, leave Birmingham for London on the 18th inst., to give strangers an opportunity of visiting the "great metropolis;" and in order that all classes may be enabled to join in this delightful trip, the Directors, with their accustomed liberality, have fixed the fare thither and back at the very low rate of 1*l.* These excursions doubtless exercise a very salutary influence upon the health and habits of the millions; and in proportion as they become more general they will be an important means of enlarging the minds, and promoting the social improvement, of the industrious classes. Two things should here be borne in mind—first, that these advantages are peculiar to railways; and secondly, these excursions are, generally speaking, not concerted with a view to the acquirement of large profits, inasmuch as the fares charged are but barely sufficient to cover the expenses of the journey.

It may here be remarked, that a further advantage peculiar to railways is the convenient means they afford of conveying troops to different parts of the country. During the past spring several detachments of soldiers have thus been conveyed on the Eastern Counties' Railway. In addition to the saving of time which is hereby effected, the men are spared the fatigue of a long and toilsome march.

The attention evinced by Directors to the comfort and convenience of the public, in providing waiting-rooms for passengers, and third-class trains for working people, must not be here omitted. Under the "four-in-hand system"—so much admired by interested parties who pride themselves on being disciples of the "old school"—persons waiting for the coach were either compelled to take refuge in some adjacent inn, or else remain exposed to all the vicissitudes of the weather, however inclement it might be. It may easily be imagined that this would not have a very beneficial effect upon persons of weak or delicate constitutions, and might prove of serious consequence to invalids. Again—poor people, unable to avail themselves of coach conveyance, were obliged to resort to the less expensive but tedious means of travelling by the stage waggons. Both these evils have been avoided in railway arrangements. Spacious and comfortable waiting-rooms afford full accommodation for persons waiting for the trains, and third-class carriages offer a cheap and speedy means of transit to the poorer classes of the community.

It has been said by Sir Robert Peel, that nothing is more hurtful to the minds of public men than to be found fault with when in the right. If this be the case, the feelings of Directors—assailed as they once were on every hand—cannot have been very enviable. But if they persevere in the straightforward course they have hitherto pursued—if, while they are duly careful of the important interests committed to their charge, they promote as far as possible the comfort and convenience of the public, they will soon bear down all opposition, and will command the respect and admiration due to those who, by their talents, enterprise, and capital, carry out those great inventions which tend to promote the happiness and welfare of the human race.

I am, Sir, your obedient servant,

E. D. C.

Stratford, July 2, 1842.

BIRMINGHAM AND GLOUCESTER RAILWAY.

To the Editor of the Railway Times.

Sir,—Although hitherto a passive, still I have not been an inattentive, observer of the trade and management on this line, and the value of your columns as an impartial medium for discussing railway affairs induces me to ask to trespass upon them.

Some months since, I should more willingly have sold my shares than enter into a controversy on the Direction of our affairs, but close observation has convinced me that the resources of this line are stultified by want of a more efficient Direction and executive. With many others, I felt satisfied by our Chairman's assurance at the August meeting of 1841, that his proposed plan would in six months not only economise the expenses of working, but very much increase our traffic, and the continued disappointment at our last meeting in February, was quieted by a stronger assurance that a further six months would perfect the system, and remove the clamour and disappointment that the goods' traffic was so small—that, to use the Chairman's own words, he could have wished to avoid saying anything about it until the next meeting in August, and that if a very satisfactory increase had not then taken place, "*they would turn out.*" I cannot conceive that the Directors can possibly meet the proprietary again without on their own test showing their disqualification, and that the retirement of these gentlemen should in fairness to the proprietors, after their total failure, to determine by their own act, without forcing the shareholders to a struggle.

In addition to their own made test for disqualification, it may be as well to remind them that the present half-year's traffic will fall short of the previous one 9,500*l.*,—that that part of their traffic which was so small as "not to be worth talking about" is less than when worked with the passenger trains—that the expense of working it is quadrupled,—that expensive suits at law have been ridiculously entered into to avoid payment of 70*s.*—that absurd arrangements with carriers have been formed at Gloucester, causing serious loss to the Company—defalcations have arisen, the trade disappointed, confidence destroyed, and the shares at 50 per cent. discount.

I remain, Sir, yours, most respectfully,

A SUBSCRIBER.

Tewkesbury, June 29, 1842.

BIRMINGHAM AND GLOUCESTER RAILWAY.

To the Editor of the Railway Times.

Sir,—My table of goods' traffic on this line was compiled from your returns, and the marginal notes from authentic information, and close personal observation. Your correspondent, the Secretary of the Company, has impugned the correctness of those returns, but does so at the expense of the Company's consistency. Who would suppose that under the head of "goods' traffic" were included parcels, and tracking gentlemen's carriages? And to swell one week's receipts a sum of 206*l.* 1*s.* 3*d.* is forced in for carriage of the mails under the denomination of "goods' traffic." He declines, on behalf of the Directors, any explanation as to the professed mode adopted in carrying on this department—a very important question as connected with the profit.

Taking the Secretary's dissected statement, we get this conclusion, that a goods' traffic was on the line averaging 215*l.* 18*s.* 11*d.* per week in October, consisting of local traffic and package goods' for the west of England, averaging at least 11*s.* per ton, and averaging also a distance on the line equal to 30½ miles only. At this time communications with

Digitized by Google

the north lines were completed, when the new system of arrangements came into operation; new rates were made, prohibitory ones placed on the local traffic, and a new throughout one sought, comprising cotton, coke, grain, iron wire, and some few package goods, the whole averaging under 8s. per ton; and after eight months' management this trade is increased to 245*l.* weekly. Assuming the expense of conducting the trade at both times to be equal, and taking the Chairman's declared cost of working it at 1½d. per ton per mile, the profit upon the present throughout traffic would be 1s. 1½d. per ton; whereas on the short traffic in June it would be 4s. 1½d., although the distance carried was one-third less: but the cost and manner of working the trade are as much in favour of the June period as the rates at the time the goods were tracked by the passenger trains, although being short traffic it involved the use of more trucks and removals to and from the trains. They are now tracked by engines for that purpose at a cost of 127*l.* weekly for locomotive power only. I do not wish to detract from the value of a throughout traffic; I believe it necessary for the welfare of the line, and that it will be had to an extent few persons calculate upon, and with good management will be a very valuable auxiliary. What I think is destructive to the trade, and as much so to the Company's interest, are the frequent experimental alterations in the time of the trains and mode of conducting the business; and until the nominal executive in the Board is virtually placed on the line, the clamour of the public will not cease, nor their confidence be gained.

The Chairman at the last meeting expressed his desire to secure the throughout traffic even at the professed sacrifice of the short, not having (as he said) material for both. Supposing this to have been the case, was it policy to destroy that already obtained, paying 4s. 1½d. per ton profit, to secure a portion only of that paying 1s. 1½d.? Was it better to drive the persons who furnished that local traffic to become again their own carriers with horses and carts, and thus to create a feeling of disappointment and annoyance towards the Company very prejudicial to regaining this connection, or to have allowed this 1s. 1½d. per ton loading to have remained in abeyance a few months longer? There are two very formidable arguments against such an unfair and impolitic proceeding. First, it was contrary to the Act of Parliament; and secondly, there are waggons to carry on both trades to a great extent. I am borne out in this opinion by an authority no one can doubt, who says, "that with anything like decent management there are sufficient trucks to carry on a trade treble the amount now on the line." If so, who but must lament that so valuable a trade should be destroyed by arrangements so futile!

The one trade is a loading with little risk; the other a great portion just the reverse. The article of cotton carried by the Company at 7s. 6d. per ton, or 10½d. per ton profit above the Chairman's calculation of profit, is an article worth 60*l.* per ton, and the recent unfortunate destruction of this article on the line illustrates my argument. The carriage of coke from one terminus to another may swell the goods' traffic returns, but does it justify any real increase? The first and most desirable traffic is the package goods to and from the west of England paying high rates. This being secured, well organised, and established, then secure the heavy loading. In the autumn of last year the traffic was of this description. This trade is again lost, from weak and injudicious arrangements at Gloucester; the connection by van between that place and Bristol has ceased in a way (so far as regards the Directors) unexpected, causing much loss and confusion, and that by water must be determined by the Company themselves sooner or later. All these things produce evil, the extent of which the Company can little calculate upon.

Nothing shows so clearly the disappointment of the public, and their annoyance at the treatment extended to them by the Directors in their application for any requisite conveniences, than the circumstance of supporting four coaches running parallel to the line, viz., the *Prince Albert* and *Prince of Wales* from Cheltenham through Tewkesbury; and the *Taglioni* and *True Blue* between Worcester and Birmingham; and the effect is forcibly shown in the traffic returns—the gross receipts for the half-year just closed, June 30, being 40,866*l.* 18s. 0¼d., against the return of 50,114*l.* 5s. 10d. for the previous half-year, giving a deficiency of 9,247*l.* 7s. 9¾d.

At any of the towns on the line—Bromsgrove, Droitwich, Worcester, Tewkesbury, Cheltenham, or Gloucester—you hear expressions of the same distaste; persons volunteering their desire to avoid going upon the line if possible. This is not the feeling the body of proprietors wish continued; it is neither creditable nor profitable, and until removed will militate very much against the success of the undertaking. Amateurs are rarely proficient in anything, and particularly as servants; and until the duties of masters and servants are more defined, no good will result. The proprietors are in just this position—no profit is made upon the present working; still, if by altered and good management the receipts can be increased, the difference will be available as a divisable fund for dividends.

I remain, Sir, yours, most respectfully,
A SHAREHOLDER.

Gloucester, July 7, 1842.

RAILWAY RECEIPTS IN THE LAST SIX MONTHS.

To the Editor of the Railway Times.

SIR,—As you have given the public weekly the receipts of traffic on the various railways *now* in operation, I think the following statement may be useful to some of your readers. The table forms the gross receipt from 1st January, 1842, to 25th June, 1842, inclusive, being the first six months of this year. In some cases regular weekly returns have not been given; but, in order to make this document as complete, for general purposes, as the nature of such communications may require, I have taken the preceding and following weeks to make an average:—

Arbroath and Forfar	£4,081	14	9½
Birmingham and Derby Junction	27,719	0	1
Birmingham and Gloucester	47,702	7	9½
Brandling Junction	20,272	11	11
Chester and Birkenhead	13,617	2	7
Dundee and Arbroath	5,792	16	7
Dublin and Kingstown	19,475	1	1
Eastern Counties'	21,389	6	0
Edinburgh and Glasgow, 18 weeks	32,106	5	4
Glasgow, Paisley, and Ayr	25,345	7	3
Glasgow, Paisley, and Greenock	22,352	8	6
Grand Junction	206,723	9	0
Great North of England	31,136	2	1
Great Western	311,860	4	2

Total	£2,021,010	11	7½
Deduct 40 per cent. for working	812,404	0	0
	£1,218,606	0	0

Thus it will appear that on 38 railways now in operation, for which returns have been published, the gross receipts for six months this year is £2,031,010 0 0
From which deduct 40 per cent. for expenses 812,404 0 0
Leaving to be divided amongst the proprietors £1,218,606 0 0

Be it, however, remembered, that even in the construction of these important undertakings, every shilling has been expended in our own country and thus the wealth has been distributed amongst the working class of the community, and the 812,404*l.* deducted for one half-year's expenses has also been applied in the same useful way, in providing employment for the labourer, artificer, and mechanic, and thus rendering a great benefit to our country.

The traffic generally, for the last six months, has been affected by the deplorably depressed state of all our markets, still I look forward to a general improvement of this description of property, which will be the first to feel the influence of the revival of trade, by the necessity of internal communication for the execution of orders for goods, and the carriage of those goods, transmitted from the manufacturing districts to various shipping ports for exportation; but more particularly the increase of our own consumption on the re-establishment of confidence in all our commercial affairs.

I remain, Sir, your obedient servant,
RICHARD DAWSON,
Stock and Share Broker.

Manchester Fire and Life Assurance Office,
10, Exchange Alley, Liverpool.

NORTHERN AND EASTERN RAILWAY COMPANY.

To Wm. Crawshay, Esq.

SIR,—Holding, as I do, your general frankness in high regard, it was with much pain I noticed your conduct with respect to the sale of the shares in the line of which you were lately the Chairman. If I acquit you of any sinister intention, a wrong done is still a wrong, though not intended to injure the shareholders. You state in your reply that, you have not availed yourself of any information beyond what every other shareholder or the public possessed, and I am bound to credit the assertion; but the sale had the effect of reducing the price of the shares when it subsequently became known that the Chairman, who had stated his positive determination not to offer new shares under par, had sold his own shares at 2 discount.

It still remains to be seen why these shares were sold out of *another* name if the transaction was an open one, and, if an explanation should be given on this point also, the shareholders would not the less object to the practice of Directors buying and selling shares. It has an ugly look, and should not be allowed. You, Sir, are straightforward and decided, and will, I doubt not, feel obliged to me for affording you an opportunity of clearing up these matters.

I am, Sir, your obedient servant,
T. A.

NORTHERN AND EASTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—At a special general meeting of this Company, held on the 15th ultimo, it was resolved to invite public tenders for 3,186 forfeited shares, the tenders to be opened and considered this day.

The shares of the Company having fallen considerably since the meeting, the tenders will certainly not be accepted.* I beg therefore to suggest an expedient for the sale of these forfeited shares, which the Company may consider worthy of adoption.

At the meeting, a general wish was expressed to distribute the shares *pro rata* amongst the shareholders, a course recently adopted by the South-Eastern and other Companies, but the Solicitor, considering this would not constitute "a sale," which the law requires, opposed it.

Now, although the Company very properly refuse to sell to the public at the heavy discount tendered, there appears to be no reason why they should not sell, at the ascertained market price, to the shareholders; and being of opinion that a *pro rata* distribution amongst the shareholders at the average price tendered by the public would constitute a

Digitized by Google

bona fide sale, by which complete justice would be rendered to the parties in default of these shares, the wish of the shareholders met, and an impediment to the due course of the Company's affairs removed, I, through your medium, beg to suggest such course for adoption.

I am, Sir, your obedient servant,
A SHAREHOLDER.

London, July 6, 1842.

EVESHAM JUNCTION RAILWAY—ENGINEER'S ESTIMATE.

To the Editor of the Railway Times.

SIR,—I have to thank Mr. Addison for his courtesy in replying to my letter; I should have been more grateful if his reply had been an *answer*.

I did not of course suppose that the sum of 69,647*l.* 14s. was put down at a mere guess. I took it as the result of an estimate given in a lump, and one which I considered inadequate. I gave reasons for this opinion, which remain unanswered.

Mr. Addison volunteers the information that the published plan does not show the exact gradients. As the extreme heights and lengths are given in figures, any deviation from the inclinations marked must render portions of them steeper. I had thought 45 feet per mile quite steep enough.

I agree entirely with Mr. Addison that the crossings of roads are shown, though more are marked on the plan than on the section; what I said was, that each of these crossings appeared likely to entail much expense.

Finally, a glance at the section will show that it is the section maker, and not your humble servant, who has "wandered." From the height "73·40" at about 1¼ miles from the junction, the gradient ascends for about 68 chains (by measure) to the height "111·72;" there are then about 10 chains level, and then a descent for about 30 chains to the height "91·92." About 50 chains of these ascending and level planes are marked on the section (which I enclose) at from 5 to 8 feet embankment.

I am, Sir, your obedient servant.
COMMON SENSE.

5th July, 1842.

[We have looked at the plan and section, which certainly is drawn as our correspondent describes. —ED. R. T.]

EVESHAM JUNCTION RAILWAY.

To the Editor of the Railway Times.

SIR,—You will oblige by correcting my error in your paper of the 2nd instant. It should have appeared thus:—"Horizontal scale, 1 mile to an inch," instead of "horizontal scale, 100 feet to an inch."

I am, Sir, your obedient servant,
JOHN ADDISON.

Delahay-street, Westminster, 6th July, 1842.

YORK AND NORTH MIDLAND RAILWAY.

To the Shareholders.

GENTLEMEN.—You are doubtless anxious to know something about our forthcoming dividend. I beg to submit for your satisfaction the following gratifying statement:—

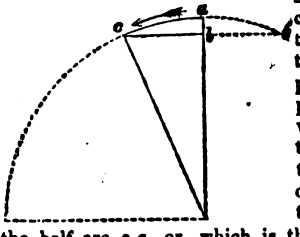
Traffic from 1st January to 25th June		£37,829
" 5 days to 30th June, say		1,250
		£39,079
Deduct 35 per cent. expenses.....	£13,683	
" Interest on debentures	4,120	
		17,803
		£21,276
Add rents, interest, &c., say	£250	
" Mails.....	500	
		750
		£22,026
Dividend, 5 per cent. on 6,700 50*l.* shares, and on 6,700 25*l.* shares 15*l.* paid		21,775
		£251
Balance from last half-year	£6,180	

I have no means of telling what the mails produce, but I believe I am within the mark. I hope, therefore, that my calculations will be considered fair, and turn out to be correct.

If we receive a dividend after the rate of 10 per cent. per annum upon the spring traffic, we shall be justified in looking forward to an increase after this half-year, especially with so large a depreciation fund already in hand.

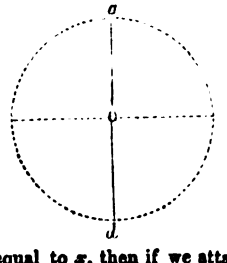
I have not taken into account any surplus that may arise from the Leeds and Selby line, which I hope will be considerable.

I am, Sir, yours, faithfully,
OBSERVER.



POWER OF THE CRANK.

To the Editor of the Railway Times.



SIR,—The omission of a monosyllable in the communication relative to "the power of the crank," inserted in your last, having rendered the substance thereof obscure and incorrect, I take the liberty of pointing out the error, and think that if you can spare room for the following figure, it will be the best method of correcting it.

In my letter to you of the 27th ultimo, I stated, that *the leverage of the crank will be equal to the chord of the* HALF-*arc described by the crank-pin, while the action of the piston will only be equal to the versed sine of that arc.*

My meaning was, that supposing the crank to be on its centre, in which position no leverage is obtained, then, if made to move a certain quantity, an arc of a circle would be described by the crank-pin; if this portion of the circle was only considered to be half an arc, the complement thereof being understood, then the chord of half the arc would represent the half chord of the whole arc, and the versed sine of the whole arc is what was meant as representing the motion of the piston. For instance, while the crank pin describes the half arc *a c*, the action of the piston will be represented by the versed sine *a b* of the arc *c c'*, and the leverage of the crank will be equal to the chord *c b* of the half arc *c a*, or, which is the same thing, to half the chord of the arc *c c'*.

Having trespassed a second time on your valuable space, will you permit me to enlarge a little on this subject, with a view of proving that this best known method of transforming rectilinear into circular motion effects its object without any other loss of power than what is due to overcome the friction of the bearings, and the power expended to work the fly-wheel up to its proper speed, when only one engine is employed. Let the crank be represented by the radius *a o*, and suppose *o d* to be a second branch of the crank, and that both branches or arms stand directly opposite to each other. Now, if the connecting rod be attached to the crank-pin *a*, and if the power of the steam communicated through the connecting rod is equal to *x*, then if we attach a weight *x* at *d*, the whole of the mechanism will evidently be in equilibration, and if the weight at *d* is reduced to *x—f* (supposing *f* to be equal to the friction of the bearings) then the power *x* will raise the weight *x—f*, from *d* to *a*; the power employed being *x* (*a.d*), and the effect produced $\overline{x-f} \times (a.d)$.

The crank is a common lever, the radius of which is constantly varying in length, but whose fulcrum is always equidistant from the power at one end, and the resistance at the other, so that the effect produced must always be equal to the power expended, as shown above.

I remain, Sir, your obedient servant,
H. H. E.

London, July 4, 1842.

LONDON AND GREENWICH RAILWAY.

To the Shareholders of the London and Greenwich Railway.

GENTLEMEN AND BROTHER SHAREHOLDERS,—The meeting of the Company will shortly take place. I hope you will consider the repeated warning that has been given that you never will realise any advantage from this short line. The public have long seen that, unless you carry on the railway to Canterbury—your line being so short, with so many paid Directors and servants—the expenditure will swallow up all what we should have. Let me then implore you, if you have any regard for yourselves, to go on immediately, or little short of ruin will and must result.

A LARGE AND UNFORTUNATE SHAREHOLDER.

July 4, 1842.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—The half-yearly meeting of the Great Western Railway proprietors will take place in the course of next month (August), on which occasion the Directors may rest assured that no communication they can make to the proprietors will be so welcome as a positive and final assurance as to the ultimate outlay on this undertaking; that is, the total cost of the construction of the line, stations, &c. &c. that is to be met by the *capital* of the Company—in a word, the final amount of *capital* required.

The line has now been open all through above twelve months, and the Directors cannot deem it unreasonable on the part of the shareholders to desire to have this point set at rest, as it has long been the cause of much anxiety and apprehension.

A SHAREHOLDER.

PROCEEDINGS IN THE HOUSE OF COMMONS ON RAILWAYS.

LIVERPOOL AND MANCHESTER RAILWAY.

July 1.—House informed, that the Liverpool and Manchester Railway Bill had been sent to the Lords without having been read the third time.

Ordered, that a message be sent to the Lords, to acquaint their Lordships therewith, and to request that the said Bill may be sent back.

Mr. Lockhart reported, that pursuant to the order of this day he had been to the Lords, to acquaint their Lordships that a Bill had been sent up to them by mistake, and to request that the same might be returned to this House; and that he had brought back the same accordingly.

July 5.—Bill read a third time and passed.

DESTRUCTIVE FIRE ON THE BIRMINGHAM AND GLOUCESTER RAILWAY.—Between eight and nine on Saturday morning, as the goods' train from Birmingham to Gloucester was passing between the Dofford and Eckington stations, the engineer perceived that a fire had broken out among the goods on one of the trucks; and instead of stopping the train and detaching the truck in question, he proceeded at a still quicker pace towards Eckington, doubtless to the great terror of the passengers, who, in first, second, and third-class carriages, were behind the burning goods. As the increased velocity of the train caused the atmosphere to act upon the fire in the manner of a blast-engine, the flames rapidly extended, and in a few minutes the train presented the appearance of a moving mountain of fire. Possibly the engineer imagined that by hastening to Eckington he should get a good supply of water, and at once extinguish the flames; but this would seem to have been an impolitic step, for soon after the arrival of the train at that station, it was found that no less than four trucks were on fire, and the trucks and their contents were consumed down to the very axles! The loss of property is very considerable, having been estimated at 600*l.* or 800*l.* The trucks belonged to the Grand Junction Company, and were laden with Manchester goods. The fire is supposed to have been caused by a spark from the chimney falling among the goods.—*Worcester Chronicle.*

NOTES TO THE TRAFFIC TABLE,

(on the opposite page.)

2. *Minus* toll to London and Birmingham 9*l.* 8s. 9d.
3. Main line, 53 miles; Tewkesbury branch, 2. — Total length, 55 miles.
4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone. The Company are now before Parliament for power to raise the capital to 500,000*l.*
5. Receipts include the Northern and Eastern toll, &c.
12. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester and Chester and Crewe lines, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 1343 (83⅓+21+31.)
14. The receipts include those derived from the Cheltenham and Exeter lines; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 169¼ (118¼+18+33.) The *rent* of the branch lines is together 90*l.* 16s. 11d. per week. There is likewise a *toll* payable to the Exeter Company, which, on the basis of the first half year's traffic, amounts to 130*l.* per week. [The returns include three day's traffic to Taunton.]
15. The dividends have been hitherto (up to 31st December, 1841) appropriated to completing the line and works.
17. The 32*l.* 1s. 3d. from goods, &c. is for toll only.
18. Ten per cent. is the maximum dividend allowed by the Company's Act.
19. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. The dividend is *nominally* at the rate of 9*l.* 10s. per cent., but to the original shareholders it is equal to 12*l.* 15s. per cent., as the dividend on the original shares is paid upon 100*l.*, although only 90*l.* has been called for; and on the quarter shares upon 25*l.*, although up to the 31st of December last only 5*l.* had been called for. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.
20. The dividend is from the opening, and on the old shares alone.
21. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table.
22. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company. The sum applicable to the purpose of the dividend declared on the 10th of March, was 11,125*l.*, of which amount 10,051*l.* 17s. 1½d. had been earned prior to July 31st, 1841.
23. Capital of 993,300*l.* includes new capital for widening the line, &c. The want of dividend does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table includes the receipts from the footpath, but is exclusive of the Brighton, Croydon, and Dover toll.
24. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount. The Gosport branch is included in the length stated.
25. Including Toll, &c., from Sheffield Company, and after deducting omnibus charges, &c.
26. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.
27. The 4,436*l.* 14s. 3d. are the receipts after deducting omnibus charges, and payments to other Companies.
28. The receipts for goods, &c., include, horses, 30*l.* 14s. 6d.; carriages, 36*l.* 14s. 0d.; dogs, 2*l.* 12s. 0d.; parcels, 256*l.* 1s. 7d.; cattle, 12*l.* 15s. 0d.; corn, 7*l.* 16s. 3d.; heavy goods, 428*l.* 1s. 11d.; coal and lime, 89*l.* 5s. 9d. —Total, 864*l.* 1s. 0d.
31. The 3,850,000*l.* is the *nominal* capital on which dividends have to be paid; the amount actually raised is 3,000,000*l.* The details of the receipts are as follows—Passengers, 2,733*l.* 10s. 0d.; carriages and horses, 145*l.* 4s. 7d.; parcels, 142*l.* 12s. 5d.; mails, 50*l.* 5s. 9d.; merchandise, 1,139*l.* 19s. 5d.; minerals, 240*l.* 17s. 10d.; cattle, 42*l.* 3s. 6d. — Total, 4,494*l.* 13s. 6d.; including North Midland proportion of Manchester and Leeds traffic, amounting to 136*l.* 5s. 3½d.
32. The receipts are after deduction of Liverpool and Manchester toll.
33. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 134*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 32¼ miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.
34. The capital of 533,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).
35. The returns are inclusive of Manchester and Birmingham toll.
38. The traffic stated does not include the Leeds and Selby.

TRAFFIC OMITTED.

Brandling Junction Railway.—*Week ending June* 18.—*Receipt from passengers (number of passengers,* 9,899), 358*l.* 14*s.* 6*d.*; *goods,* 2*l.* 12*s.* 2*d.*; *total,* 580*l.* 0*s.* 8*d.*

London and Greenwich Railway.—*Week ending June* 30.—*Receipt from passengers (number of passengers,* 30,232½), 866*l.* 13*s.* 4*d.*

Dublin and Kingstown Railway.—*Week ending June* 28.—*Receipt from passengers (number of passengers,* 40,011), 966*l.* 6*s.* 6*d.*

TO CORRESPONDENTS.

A Shareholder *(Liverpool).—The exact words of the resolution are these:—"That the holders of the new shares shall be entitled, at the balance of the Company's books in January,* 1843, *and subsequently, to receive a preferable half-yearly dividend, at the rate of 5 per cent. per annum, from the date of payment, on the amount paid by them, whether called up or voluntarily advanced; and if the profits shall in any year turn out sufficient to pay more than 5 per cent. on the whole of the then paid-up capital of the Company, the holders of the new shares shall be entitled to draw their share of such surplus fund. That the new shares shall be offered to the present registered shareholders, in the proportion of one new share for every old share held by them; and such offer shall be made by letter under the hand of the Secretary, and sent by post to each shareholder, addressed to his usual or last place of abode, or to the address contained in the last transfer of shares in his favour."*

Railway Benevolent Societies.—*In the letter which appeared last week on this subject, there was an error. Instead of "paying their [the Manchester and Leeds Company's] surgeon* 10*s.," &c., it should have been "paying their surgeon* 7*s., and proposing to pay him* 10*s," &c. We may add, that we have been informed that the statements of our last week's correspondent, so far as they relate to the Manchester and Leeds Society, are wholly unfounded. We expect to have a communication on the subject next week.*

Breaking of Railway Axles.—An Engineman on the Grand Junction Railway *begs to inform Mr. C. Hood, that the fore-axle of a four-wheel engine, made by Mather, Dixon, and Co., broke about a foot from the wheel in nearly the form described in figure* B, *in our number of June* 25, *and says, if Mr Hood doubts this statement he may refer to* Mr Middleton, *the founder, of Birmingham, who made the new axle. The engine has inside framing and bearings, and is now working on the Birmingham and Derby Railway in removing earth to the station. The engine was originally intended for* America.

A Constant Reader *(Birmingham).*—3, 9, 20, 36, *&c.*

Amicus *has a strange way of showing his friendship. We rather suspect the party whose defence he volunteers would not thank him for his advocacy.*

North Midland Railway.—T. T., *who writes relative to certain (alleged) differences among the Directors, must prove to us that he is in a position to become acquainted with the real facts.*

Great Western Railway.—*It would be premature to alter (as* A. F. *suggests) the note to the traffic-table, as the line was not opened to Taunton the whole week. Our correspondent will find the information he requires in an Editorial article.*

Inquirer.—*The gentleman referred to is not now connected with the Management, and cannot therefore be held liable for recent acts.*

P.—*We do not like to give advice in such matters, but were we in our correspondent's position we should* not *buy.*

Junior.—*We have nothing to do with mining speculations; but certainly, if the facts stated by our correspondent be correct, something very like a fraud has been committed.*

Perditus.—*The scheme bore absurdity on its face from the beginning, and our correspondent must pay the penalty of his incaution.*

Rating of Railways.—*We had intended to give the continuation of the article from the* Justice of the Peace, *but the Editors of that publication have so mixed it up with the arguments of counsel, and the decision of the Court (already fully reported in our columns), as to render it unsuitable for our purpose.*

*** Our publisher will gladly give double price for any one of the following numbers, to enable him to complete sets. For the year 1838—January 13th, 20th, and 27th; February 3rd and 10th; and October 27th. For the year 1842—February 26th.

THE RAILWAY JOURNALS.

The Stamp Returns for the nine months ending the 31st of March last (published by order of the House of Commons), show the following results:—

RAILWAY TIMES .	113,374
Railway Magazine . .	50,500

The total number of Supplement stamps (for Double Numbers) used by the *Railway Times*, during the above period, was 10,874, thus showthe ordinary circulation of the *Railway Times* to be more than double that of its contemporary.

THE RAILWAY TIMES.

SATURDAY, JULY 9, 1842.

THE following has been sent to us from official authority, and as the subject is one of very considerable importance we give it a prominent place in our columns. We need scarcely observe, that any counter-statement shall have our best attention:—

At a general meeting of the Northern and Eastern Railway Company held on the 15th of June last, Mr. CRAWSHAY, the Chairman of that Company, stated that the negociations which had been so long pending between the two Companies for a reduction of tolls payable to the Eastern Counties' Company on the short-distance passengers, and for the arrangement of some other matters of dispute between the two Companies had been broken off; and he further stated, "that during the communications on drawing up the agreement between the Companies it was all *at once* insisted on by the Eastern Counties' Company that the Northern and Eastern Company should pay the Government duty on the passengers carried by the latter Company on the Eastern Counties' line, and that the blame of delay did not rest with the Northern and Eastern Board, and that if the matter now in dispute were settled, something new would be discovered by the Eastern Counties' Company to impede the progress of the arrangements; and that the grounds on which the Eastern Counties' Directors insisted on the station to be erected by their permission at Stratford not being used for passengers going northward, were preposterous; and that in reference to the second-class fare from Edmonton, Mr. RATHBONE and his colleagues had acted arbitrarily, and had struck out 10d. and insisted on 9d."

The Directors of the Eastern Counties' Company considered it necessary to apply to Mr. CRAWSHAY individually, and also to the Board of Directors collectively, to inquire from the former whether these expressions had been correctly reported, and from the latter whether they sanctioned and adopted these statements of their Chairman. Mr. CRAWSHAY, in reply, has admitted the correctness of the report, and the Board of Directors have given an explanation substantially the same as the statements of Mr. CRAWSHAY. The Directors of the Eastern Counties' Railway Company had inserted the following document in the *Railway Times*:—

"We are requested by the Eastern Counties' Railway Company to state officially, that the assertions made by Mr. CRAWSHAY at the Northern and Eastern Company's meeting are most unfounded and erroneous, but pending a correspondence which is taking place on the subject, they deem it improper to enter upon

Digitized by Google

those details which, for the entire justification of the Eastern Counties' Board, can and must hereafter be given."

The Eastern Counties' Board had hoped to have been spared the pain of entering into further public detail, but they now feel themselves called upon to reiterate their denial of Mr. CRAWSHAY'S statements, and to give a short explanation of the real facts of the case.

Previous to April, 1841, negociations took place between the two Companies, for fixing the rates of tolls on goods, and the Boards differing in their views, the Eastern Counties' Board would have left the matter at once to arbitration, as provided for in the original agreement; but to this Mr. CRAWSHAY, as Chairman of the Northern and Eastern Board, repeatedly objected. In the month of April, however, his opinion changed to the extent of agreeing, at a meeting of deputations from the two Boards, to the appointment of Mr. ROSKELL on the part of the Northern and Eastern Company, and Mr. HALL on the part of the Eastern Counties' Company, to arrange together, if possible, the tolls on goods, for the consideration of both Boards. These tolls were, in consequence, agreed upon by them, and a preliminary memorandum signed. A resolution was then passed by the Directors of the Eastern Counties' Company confirming the arrangement, and adopting the acts of Mr. HALL, whom they had appointed, and to whom, as Mr. CRAWSHAY was made aware, they had given full powers. The Northern and Eastern Board, however, then declined to confirm the arrangement unless other matters, which had not been involved in it, were settled at the same time. A delay of some months in consequence occurred; when, in October following, deputations from the two Boards met to arrange the other points of difference which had been urged as the cause for not settling the question of tollage on goods. At this meeting the question of a joint passenger station at Stratford for the two Companies (which the agreement between the two Companies strictly precludes the Northern and Eastern Company from having, without permission of the Eastern Counties' Company), and also the questions—of a material reduction of fares by the Northern and Eastern Company, to follow a reduction of toll by the Eastern Counties' Company on the short distance passengers—of the mode of obtaining a goods' station for the Northern and Eastern Company—and of the tollage on goods, were discussed. The Northern and Eastern Company having previously disputed their liability to pay the Government duty for their passengers carried over the Eastern Counties' line, although they had in the first instance paid it, and it had been uniformly paid for years past by other Railway Companies under similar agreements in all respects, the payment of this duty without litigation by the Northern and Eastern Company was expressly stipulated by the Eastern Counties' deputation as necessary, and as what must be in the first instance insisted upon, if any reduction of toll was to be entertained by the Eastern Counties' Company, and it was admitted by Mr. CRAWSHAY himself on this occasion as apparently fair and reasonable; and certain reductions of passenger toll were then discussed, and adjourned for further consideration.

The Northern and Eastern Company being desirous of avoiding the great expense of erecting a station for their goods' traffic, proposed to rent six arches of the viaduct near Brick-lane for this purpose, which was agreed to by the Eastern Counties' Company, as well as some further slight modifications of the previously arranged tariff for goods, in order to meet the wishes of the Northern and Eastern Company. Shortly afterwards plans were prepared by the Engineer of the Northern and Eastern Company, in order to convert these arches into warehouses, with the necessary approaches thereto. Several meetings took place on the subject of these arrangements.

In November the Northern and Eastern Company, after several plans had been considered by them for converting the six arches into warehouses, for the first time formally proposed that the expense of these alterations should be borne by the Eastern Counties' Company—a proposal which was immediately rejected, as the proposed plan was entirely for the accommodation and to spare the funds of the Northern and Eastern Company, who, by the agreement between the two Companies, had to find a goods' station at their own expense, and to buy the land for the purpose. On the 22nd November Mr. ROSKELL, on the part of the Northern and Eastern Board, proposed a still further reduction of the passenger tollage to that which had been formerly suggested, in consequence of a plan of issuing season tickets (to be charged about one-third less than the regular fare) requiring a similar reduction in the toll; while Mr. CRAWSHAY a few days afterwards stated, that he entirely dissented from and repudiated this plan of season tickets. On the 14th January Mr. CRAWSHAY proposed by letter to the Deputy-Chairman, Mr. THEODORE W. RATHBONE—who had by Mr. CRAWSHAY'S particular wish and desire been invested by the Board with *full* powers to settle *every* question pending between the two Companies (and which powers he only resigned when he found all further attempts at settlement by negociation with Mr. CRAWSHAY hopeless)—that the Eastern Counties' Company should let (at a very low rent) 12 arches instead of 6 for the goods' station, and that the Eastern Counties' Company should pay all the expenses attending the alterations and approaches; and also proposed certain new rates of toll for passengers, much lower than formerly proposed. On these new propositions some interviews took place; and on the 22nd January last Mr. RATHBONE, on the part of the Eastern Counties' Company, fully replied to Mr. CRAWSHAY'S letter, and stated all the several points of difference, particularly dwelling on the fact of the clear understanding, at the conference between the two Boards, that *all* Government duties, past, present, and future, on the Northern and Eastern Company's passengers, were to be paid without demur by the Northern and Eastern Company; and that if the tolls were reduced, a low scale of fares—at least as low as had been stated by one of the members of the Northern and Eastern Board (Mr. KENNARD) to be necessary to command the increased business expected, or at all events as low as they were in October last, when they were advanced by the Northern and Eastern Company—must of course be agreed to, *as the condition* which was to justify the reduction. In Mr. KENNARD'S proposed scale of fares *the second-class fare to Edmonton was 9d.* On the 26th January the Northern and Eastern Board, in consequence of a strong representation from Mr. RATHBONE to Mr. CRAWSHAY, at length passed a resolution agreeing to the tariff on goods, which they had been repeatedly urged to settle according to the award of the preceding April, in order that the accounts between the two Companies for goods carried might be adjusted. On the 3rd March Mr. CRAWSHAY, in one of his letters, objected to the arches for warehouses, which had been previously agreed upon, and proposed building a goods' station in Shoreditch; but on the 16th March the Board of the Northern and Eastern Company again renewed the subject, and decided to rent nine of the arches for goods' warehouses. On the 13th April the correspondence respecting the toll was again renewed by Mr. CRAWSHAY, who states in his letter that he is "most decidedly for a *twelve-months* trial of the low scale of fares, provided you meet us in the toll *as proposed;*" but he states, that some of the Board of the Northern and Eastern Company much doubt the propriety of an alteration. This letter was answered by stating, that unless the Northern and Eastern Company would at once pay the Government duty (which was not mentioned in Mr. CRAWSHAY'S letter), the proposed reduction in the toll would certainly not even be entertained.

On the 13th May, Mr. CRAWSHAY for the first time proposed, that the alteration of toll should be for five years instead of one year, and this being declined by Mr. RATHBONE on the part of the Eastern Counties' Railway Company, as being totally at variance with all previous arrangements, and with the distinct understanding on which alone the reduction of toll had ever been entertained, namely, that the practical working of low tolls and low fares on the Northern and Eastern line should be tested by actual experience before entering into any long or permanent engagements, Mr. CRAWSHAY replied, by accusing the Eastern Counties' Company of "illiberality," of "making exactions" and "demands characterised as in opposition to every principle and custom." Notwithstanding this intemperate letter of Mr. CRAWSHAY, Mr. RATHBONE replied, on the part of the Directors of the Eastern Counties' Railway, still in a conciliatory spirit, and again expressed his readiness to adjust all differences on the terms which had been so repeatedly proposed and discussed. After some further correspondence these terms were considered to be agreed upon, and an agreement in conformity was at length placed in the hands of the Solicitors of both Companies to put into legal form. Several further alterations were however even now agreed upon, and especially one for changing the toll on second-class passengers to and from Edmonton, formerly fixed at 9d., to 10d.; and as this was urged by the Northern and Eastern Board, and confidently stated to be a sufficiently low charge to meet the omnibuses, it was agreed to by Mr. RATHBONE, although it was a further—concession instead of the fact being, that the Eastern Counties' Directors ever arbitrarily insisted upon or required the contrary, as most incorrectly stated by Mr. CRAWSHAY at the public meeting of the Northern and Eastern proprietors.

But, notwithstanding these alterations, it was found that the Chairman of the Northern and Eastern Company objected, after all, to the stipulations which had always been most distinctly made, viz., the voluntary payment of the Government duty, as well as the period fixed for the experimental trial of the reduced passenger tolls; and he objected likewise to another minor point, stating in his last letter to Mr. RATHBONE that, as regards *all* these points, *he "never will give way upon either, and will not allow his name to remain in the Direction of the Northern and Eastern Company if either of them are conceded." This, of*

Digitized by Google

course, put an end to the negociation, and was most entirely the act of Mr. CRAWSHAY himself, who actually, a few days afterwards, made the incorrect observations at the general meeting which have called forth these remarks, and imposed upon the Directors of the Eastern Counties' Company the disagreeable necessity of making this statement.

The facts which it contains, and which are taken as nearly as possible in the order in which they occurred from the original letters and documents filed for reference, are plainly set forth to speak for themselves, the Eastern Counties' Board merely remarking, that in making the very large and liberal experimental concessions which they have done from a rate of toll already exceedingly low, and in order to try fairly and by experience how far the views of the Northern and Eastern Company would be borne out, and in yielding in almost every instance to the continual changes of plan proposed by the Northern and Eastern Company's Chairman, they have been actuated by an earnest desire to meet all the reasonable wishes and requirements of that Company in the most fair and liberal spirit of accommodation. In no one instance have they swerved from their original position, or altered any one of their views and propositions; yielding often, but never exacting, while the result will show how unsuccessful they have been in their endeavours to agree with the Northern and Eastern Company on terms again and again repeated, and the most clearly understood as the basis of all the arrangements. From individual members of the Northern and Eastern Board, the Eastern Counties' Board have repeatedly received expressions of satisfaction at the spirit of accommodation they have displayed; and entertaining as they do much esteem for many of the Directors of the Northern and Eastern Company, they are still willing, as they always have been, to adjust all matters of difference in the most conciliatory and liberal spirit, a feeling which, they trust, will now meet with some reciprocity from the Northern and Eastern Board.

It would seem from the Directors' Report, which we publish elsewhere, that the working of the Glasgow and Greenock Railway during the last six months has unfortunately proved almost a total failure, the dividend declared being only at the rate of 1*l.* per cent. per annum. This very unsatisfactory state of things is ascribed principally to the extremely depressed condition of trade in the district, and unhappily there has been, and still is, but too much room for regret in that respect; but the grand cause of insufficient and unsatisfactory dividends in the Greenock Company, as in others, is the excess of the actual over the estimated cost of construction. The Glasgow and Greenock Railway, it was stated at the meeting, was originally estimated to cost 250,000*l.*, whereas the amount expended up to the date of the present balance-sheet is 709,116*l.* The 1*l.* per cent. payable on this latter sum would have been nearly trebled had the original estimate been adhered to. With respect to these estimates, a very singular admission was made by Mr. TURNER, Solicitor, one of the speakers at the meeting. It was true, he said, that in the "flying surveys" originally made the cost was estimated at less than 300,000*l.*, but these estimates were hastily made, "*and no reliance was* EVEN AT THAT TIME *placed in their accuracy!*" Placed by whom? Probably not by the Directors; but can Mr. TURNER answer for it that none of the public were induced to subscribe to the undertaking on the faith that these estimates were accurate, and would prove sufficient? Were pains taken at the time to caution intending investors against putting confidence in the results of these "flying surveys?" If not, great room have the parties who may, under an impression of the accuracy of the estimates, have entered into the scheme, and now find themselves disappointed with a return at the rate of 1*l.* per cent.—great ground have they, we say, to complain of the hasty, incomplete, and inaccurate statements put forth by the original promoters of the project. Mr. TURNER stated further, that subsequently, when a meeting was held in Liverpool, it was found that the line would cost upwards of 400,000*l.*; but even this large increase did not, he says, include engines, carriages, sheds, stations—in fact, was exclusive of the cost of the "plant" of the concern! This is precisely Mr. RASTRICK's mode of estimating the cost of a railway, and no one would have reason to complain, if the fact were fairly stated at the outset that these important items were altogether omitted. But in the Brighton case not a word was breathed that could possibly lead to any such conclusion; nay, many phrases bearing legitimately a very different interpretation were from time to time employed in official documents—and as in the Brighton, so was it, we suspect, in the Glasgow and Greenock Company. Once more must we protest against this keeping back of the whole truth—a course of proceeding just as morally criminal as putting forward falsehood.*

But while the original cost of the line has, of course, tended greatly to diminish the percentage of return, it would appear from the accounts that the expense of working has been very large, namely, within a fraction of 60 per cent. on the gross receipts for the year! Is there not room here for reduction? The fares, we are aware, are considerably lower than upon some of the southern railways, where the cost of working is not much above one-half that of the Greenock line, but the proportion is by no means sufficient to account for the disparity. We would earnestly recommend to the Directors a careful and minute examination into every item of their expenditure, taking, as their example, some of the lines to which we have just referred.

Much is hoped from the approaching modification of the passenger tax, and assuredly not without good reason, when, as appears from the Directors' Report, they will hereafter have to pay little more than ¼d. per third-class passenger, where now they pay 2¾d. To the northern railways generally the alteration in question is of paramount importance, and we hope and believe that the Glasgow and Greenock Company will fully participate in those benefits, to secure which more than one of their officers were very laudably active. In anticipation of the new mode of levying the duty the Directors have recently established third-class trains, and the result, as disclosed in their Report, makes us deeply regret that the experiment had not been tried at an earlier date. "On being assured [says the Report] that the principle of the duty would be altered, your Directors lost no time in redeeming the pledge they had given of adopting a third-class fare, which they did on the 23d May last. *Since that time the numbers travelling have increased* 8,123 *per week, the gross receipts,* 199*l.* 15*s.* 10*d. per week, and the net receipts (after deducting the expenses, and the duty, as* AT PRESENT *levied*), 86*l.* 7*s.* 4*d.*" Could anything demonstrate more clearly the policy of third-class trains and low fares?

In connection with this statement there is another paragraph in the Report which deserves attention. After adverting to the stagnation of trade during the winter months, the Report goes on to say:—

"Your Directors deem it their duty to state to the distant shareholders—and their local experience enables them to do so with confidence—that from these causes the results of the traffic of last half-year cannot be considered as affording any criterion of the resources of the railway, which are still unexhausted, as is indicated by the fact that during the last month, while 81,500 passengers have been conveyed by the railway, 40,000 have travelled by the steam-boats, a number which is to be regarded as affording a probable source of future revenue to the railway."

We confess we cannot discover any very close connection between the premises and the inference. If the steam-boats have contrived to keep away from the railway about one-third part of the whole number of persons travelling in the district, it must have arisen from some superiority in the passage by water with which the Directors could not, exert themselves how they might, successfully cope; or it must have been caused by neglect or want of attention to their customers on the part of the Directors. In the latter case only can the number of steam-boat passengers be "regarded as affording a probable source of future revenue to the railway." Had third-class trains been set on foot at an earlier period, it is probable that the number of steam-boat travellers would not have been nearly so large. It is to be hoped that the Directors, emboldened by the favourable issue of *that* experiment, will not fail to adopt other means of "pushing" the traffic of the line. The position of the railway is rather a peculiar one, and calls for more than ordinary zeal and energy fully to develope its resources.

We sincerely sympathise in the disappointment which the proprietors cannot but suffer from the non-fulfilment of their long-cherished expectations. We trust the failure will prove only temporary, and that with the revival of trade, and the working of the modified tax, the next and every succeeding year will exhibit a far more satisfactory result.

A SECOND Edition of Mr. PIM's Letter on the Atmospheric Railway, addressed to the Right Honourable the Earl of RIPON, President of the Board of Trade, has just been published, and as the subject is at the present time exciting very considerable attention, a slight sketch of its contents may not be without interest. Mr. PIM's pamphlet was originally written with a view of inducing the Board of Trade, in their official connection with railways, to refer the invention to competent and impartial investigation, and the result was, as our readers are aware, the appointment of Sir FREDERIC SMITH and Professor BARLOW, whose Report has already appeared in our columns—a Report of which the distinguishing feature seems to be, a dread of saying any thing definite either for or against the plan submitted to their judgment. Nothing daunted by the faint praise which Sir FREDERIC and his colleague saw fit to extend, Mr. PIM, who himself was, we believe, a scoffer in the first instance, has persevered with all the force of his acknowledged talent, and all the enthusiastic ardour of his country, in bringing

* Since the above was in type, a letter on this very point has been received, and will be found elsewhere.

Digitized by Google

and keeping, the scheme before the most influential men of the day,* till at this moment it occupies a very different position from that which it held some eighteen months ago; and hundreds of well-qualified judges who *then*, from not having personally examined into its merits, deemed the "Atmospheric Railway" a something in which fraud and folly struggled for the mastery, *now* look upon it as one of the most important inventions of the age, the future effects of which, in the improvement of internal communication, it were impossible adequately to estimate.

The Letter commences with a concise description of the means employed by Messrs. CLEGG and SAMUDA in carrying out to practical efficiency the principle of Atmospheric propulsion—a principle which the schemes of previous projectors had caused to be looked upon with ridicule or contempt. Minute details of the mechanical arrangements are purposely omitted, but they are described as being extremely simple, and very little liable to get out of order, while the parts most exposed to wear and tear can be readily and cheaply replaced, thus presenting a striking contrast with the complex and crowded parts of the locomotive engine—which, notwithstanding all the recent improvements, is, as compared with stationary power, liable to damage and derangements in the proportion of 20 to 1, besides involving the expense of extensive and costly establishments, even upon the shortest lines. Further drawbacks from the efficiency of the locomotive are enumerated; as, for example, the delays incident to the slipping of the wheels, whether from heavy loads, steep gradients, or greasy or glazed rails, or occasioned by the freezing of the pumps, which, although not common in this country, would in the depth of winter act as an almost insuperable obstacle to the extension of the railway system in many parts of northern Europe and America—the occurrence of accidents arising from the necessarily different rates at which first and second-class passengers, and third-class passengers and luggage, must be transported—the enormous expense in some districts, and in others the total impossibility, of procuring coke, whereas stationary engines can be effectively, and much more economically, worked with any species of fuel—the injury caused to the upper works of a railway by the great weight of the moving body, and the extreme loss of power which is occasioned by an increase of speed, half the effective force of a locomotive engine being, according to Mr. WOOD, a recognised authority, lost by raising the velocity of a train from 25 to 30 miles an hour—a loss which is equally occasioned by an increase of gradient.

From all these disadvantages Mr. PIM contends that the Atmospheric system will be free. No useless weights will have to be transported—no unnecessary friction to be overcome; there will not be by any means the same necessity for having what are termed "good gradients," as at whatever spot it may be requisite to adopt rather steep inclines, *there* can the additional power required be applied. As a necessary consequence, the cost of construction will be materially diminished by the abridgement of earthworks and masonry, the introduction of shorter curves, and the comparative lightness of the rails, which will not have to sustain the 15 or 20 tons weight of an engine and tender, while the circumstance of being able to dispense with water stations, repairing shops, sheds, turnplates, and other arrangements inseparable from the use of the locomotive, must, it is argued, contribute materially to the reduction of the current expenditure.

Then, proceeds the Letter to set forth, the public, although travelling at a speed of 60 miles an hour, will not be annoyed by the dust, sparks, smell or noise of an engine, while collision between trains advancing in the same or in an opposite direction, must, from the very nature of the apparatus, be physically impossible—the mode of attaching the train to the piston-rod rendering it almost equally difficult for a carriage to run off the rails. In this way, a single line may be worked with perfect safety, since trains may be despatched from each end of the line in opposite directions, as frequently as may be required, without the possibility of approaching nearer to each other than one section of the main pipe, that is, than 3 miles.

A peculiar advantage derivable from the general introduction of the Atmospheric apparatus, would, the Letter goes on to state, be secured in the employment of the spare steam power during the intervals of the trains, in various mechanical or agricultural operations; and in suitable situations, water power might easily be substituted for steam. It is added in a note that, upon the present and proposed railways throughout the United Kingdom, the steam power employed would be equal in the aggregate to about that of 100,000 horses, and might be rendered available for probably eight hours out of every twelve. The result of this alleged superiority, in the several points referred to would, it is said, be a corresponding reduction in the charges for the conveyance of passengers and goods, a considerably increased speed, much greater comfort, and above all, the removal of every apprehension of personal danger. Supposing these *desiderata* to be attained, "who is there [says Mr. PIM] bold enough to assign a limit to the advantages of railway intercourse by this means?"

A very natural question here suggests itself, and it is this:—if one-half the advantages ascribed to the Atmospheric Railway by its patrons do really exist, how happens it that the invention has hitherto made comparatively so little way? Mr. PIM attributes it principally to the prejudice excited by previous abortive attempts on the part of others, and to the variety and force of the influences opposed to a new system which might be likely to supersede that now in general use, while moreover a fair trial of it could not be made upon any railway in full work without materially interfering with the daily traffic, and doubts might exist as to the legality of applying a Railway Company's funds to the experiment upon any other line than their own.

Such is a slight summary of the contents of Mr. PIM'S communication to the Board of Trade. For further details we refer to the Letter itself, and to the numerous illustrative plates which are appended, and which, by the way, it is to be regretted were not more closely connected with the text. No doubt the author deemed it desirable, in addressing the Board of Trade, to avoid the encumbrance of frequent reference to diagrams; but now that the Letter has been made public, we should have been glad to find these plates more fully explained.

SOME further particulars relative to the case of BALL, the Brighton Railway clerk, are supplied in the police report, which we copy elsewhere from the *Brighton Guardian*, and to which we beg to call the attention of our readers. We think it will be admitted that, whether as regards the prisoner, the prosecutors, or the Bench, the matter is in every respect deserving of notice.

But the most singular part of the business is described by our contemporary in another part of his journal. We learn, says he, that the matter "*has been settled after the following extraordinary fashion. There was a deficiency of* 32*l.*; *the prisoner* BALL'S *friends pay* 22*l.*, *and the other* 10*l. has been, or is to be, made up by the other clerks. This payment of* BALL'S *alleged defalcation by the 'other clerks' opens the door to a flood of thought to which we hardly deem it safe to give utterance.*" Really, all this is to us utterly incomprehensible. Surely our contemporary must have been imposed upon. What possible motive could the "other clerks" have for this excessive kindness? Do they look to have again the companionship of BALL, now that he has escaped from the hands of the police magistrate; or are the salaries of the Brighton officials so liberal that they can afford to spare 10*l.* to retrieve the *embarrassments* (we suppose we must not use a stronger term *now*) of their *quondam* coadjutor? These and other questions which will readily suggest themselves, we leave for the consideration of the curious. Of course the "other clerks" could not think of being so particularly generous, without being at the same time quite as particularly just, and therefore it would be altogether superfluous to overhaul *their* accounts, even if they should happen to be, like the gentleman lately "in trouble," young men of "fashionable habits," with 30*s.* of weekly stipend, out of the savings of which this sum of 10*l.* is to come.

Passing, however, from the men to the masters, we are glad to learn that there is every prospect of something effective being determined on and carried out at the approaching half-yearly meeting. If the Directors have any real friends, they will urge upon them the policy of making short work of it by resigning *en masse*, and (as one of our correspondents recently remarked in another case) wait to see how many of them will be re-appointed. They may rest assured that it will not do to attempt to carry matters with a high hand, after the style of the Chairman when he held the 5*l.* call *in terrorem* over a late meeting. To the proprietors—the *bona fide* holders, who have other objects in view than to affect "the market"—we would say, "Look well to your votes—be not entrapped into parting with proxies—consult together previous to the meeting, and at the meeting *insist* upon plain answers to plain questions, even should the sitting be protracted till midnight." One vigorous and combined effort, and the Brighton Railway may yet do well.

WE copy from a provincial contemporary some interesting particulars of the further opening of the Bristol and Exeter Railway—from Bridgewater to Taunton. The facts stated in the address of the Company's excellent Secretary, Mr. BADHAM, cannot but prove eminently satisfactory to the proprietors.

We have reason to believe that very considerable misapprehension exists as to the terms upon which the Bristol and Exeter line is let to the Great Western Company. Some persons appear to suppose, that the fixed rent for

* There was a further exhibition on Tuesday at Wormwood Scrubbs. Among those present were Mr. Murchison, F.R.S.; Professor Wheatstone, F.R.S.; Marquis di Terriglani; Professor Frisiani; Colonel Du Plat, R. E. (British Consul at Warsaw); Colonel Blane; Mr. Frankel (Berlin); M. Bergeron; Count Tamoysky, and several gentlemen connected with the Croydon Railway and the Thames Tunnel.

Digitized by Google

the whole of the line to Exeter is only 30,000*l.* a year, whereas *that* was the sum payable upon the railway to Bridgewater, with the addition of a certain portion of the toll. An increase of rent takes place at each successive opening, in the ratio of the number of miles brought into use, besides a further sum by way of bonus, and the share of the toll already referred to.

The rent of the line, therefore, to Taunton is 40,000*l.* a year, besides a sum of 2,500*l.* as bonus, making together 42,500*l.* To this must be added the proportion of toll receivable by the lessors, which it is estimated will be about 13,500*l.* or 14,000*l.*, making a total income for the line, between Bristol and Exeter, of about 56,000*l.* a year.

It is confidently expected that a further opening to Bream Bridge will take place next spring, when the rent will, as already explained, be increased in proportion to the distance.

It is stated in a local journal, that the Committee appointed to inquire into the question of mail communication with the south of Ireland "have reported favourably of Brean, near Uphill, in the Bristol Channel, as a packet station. A deputation sent down to view the spot arrived [it is added] at Brean, by railway, in the short space of 5 hours, and were very favourably impressed with its advantages." Should the arrangement referred to be carried into effect, its influence upon the prosperity of the Exeter Railway will be very beneficial.

We learn, with much satisfaction, that negociations are far advanced for laying down the Electric Telegraph of Messrs. Cooke and Wheatstone on the South-Western Railway to Portsmouth. Her Majesty's Government take a very lively interest in the matter.

We understand also that the patentees are actively engaged in preparing an apparatus for one of the French railways.

We trust the time is not far distant when so valuable an invention will be applied to every principal railway in the kingdom. Upon trunk lines ought at once to be adopted.

The Railways' Regulation Bill was read a second time in the House of Lords last night. We believe it is not likely to be materially modified by their Lordships. Several Companies are looking with much anxiety for the passing of the measure, to enable them to obtain easy and speedy possession of adjoining land required for the their respective railways.

Lord Campbell gave notice that in Committee he should propose a clause prohibiting the "locking-in" of persons against their own consent.

We notice to-day two railway pleasure trips—the one upon an English, the other on a Scotch line. We regret that we have not more frequent occasion of adverting to similar interesting excursions. Quite sure we are that the infrequency of these holiday jaunts arises from no unwillingness on the part of the several Managements to afford every facility in their power to the health-seeking and pleasure-loving public. As in many other cases, the opportunity is not improved, merely because its existence is unknown. Unless one or two stirring persons take the lead in arranging such matters, it is seldom indeed that they are carried into execution. In this, as in everything else, there must be leaders, and one energetic mind can thus contribute to the benefit of hundreds.

The difficulty might nevertheless, we think, be considerably reduced, if the various Boards of Management were to make it distinctly and generally understood that upon a certain gross amount being guaranteed, a pleasure excursion might at any time be secured. It would not be requisite—it must be the very reverse—that the charge per passenger should approach to anything like the usual fare upon the line. If those who get up these trips for the benefit of charitable institutions could thereby secure some advantage to the funds of their several establishments, there would be a strong additional reason why such parties should patronise and promote them. One very formidable obstacle to the adoption of low individual fares is the amount of Government duty, which hitherto has remained unchanged whether the charge to the public were moderate or extravagant. There is no doubt that the modification of the tax (which it is understood will take effect from April last) will contribute very essentially towards the further development of the *pleasure* (as distinguished from the *business*) facilities of railway communication; but we think that with a little exertion these benefits might be still further extended, by the remission of all taxes affecting such excursions as those which have called forth these remarks. The Railway Companies, we are convinced, do not seek to make money from this source, and in no sensible degree would the public revenue suffer by foregoing all claims thence accruing. On the contrary, a vast extent of direct and indirect benefit to the State, emanating from the increase of soothing and healthful recreations of this sort, would amply make up for any temporary or apparent sacrifice which the waiving of the tax might seem to involve.

We direct attention to the judgment of the Court of Exchequer pronounced on Thursday last in the case of *Pickford* v. *The Grand Junction Railway Company*, and which, strange to say, has escaped the notice of our daily contemporaries. We had meant to give a report of the arguments used by the counsel of the contending parties, but by accident the notes of the short-hand writer did not reach us in sufficient time for our present publication. We shall return to the matter next week, the decision being of great importance to many others besides the parties immediately interested in the suit.

A case is reported among our "Railway Adjudications" which goes far to confirm the general belief that the parties who profit most by railway schemes are the lawyers. A bill of costs extending over less than two years, and amounting to upwards of 3,400*l.*, was delivered to the Thames Haven Company, "*and it was admitted that if such sum had been received, the net profit would have amounted to more than* 2,000*l.*!" Pretty pickings here! "The Company, however, insisted upon, and the defendants [the lawyers] agreed to, a reduction of 1,000*l.*, and then the defendants resigned their office of Solicitor!" We should like very much to have a look at the original bill.

—*o*—

Three "Compensation Cases," in which the Dublin and Drogheda Railway Company were concerned, will be found briefly noticed in another column. They appear to have involved the customary attempts, although on a small scale.

The first party claimed 34*l.* He had been offered 18*l.* by the Company, and the jury awarded 14*l.*

The second claimed 1,034*l.*—was offered 500*l.*—and awarded 350*l.*, just about one-third of his demand.

The third claimed 762*l.*, and received 141*l.*, or less than one-fifth, having previously been offered by the Company the sum of 258*l.*

We trust these very conscientious claimants will have to pay the costs.

—*o*—

The total number of passengers on the Greenwich Railway for the half-year up to the 30th June, 1842, was—

First-class	240,700
Second-class	583,591¼
Total	824,291¼

The total receipts for the same time, including foot-path and Creek Bridge, were 23,826*l.* 15s. 6d.

—*o*—

It is stated in one of the daily papers, that "on the 24th ult. an accident occurred on the Potsdam Railway, which had nearly proved as fatal as that on the road to Versailles. The sparks of fire from a locomotive set fire to one of the waggons. The persons inside endeavoured to open the doors, but they were locked. At length the conductors succeeded in extinguishing the fire."

—*o*—

At the Hertford Assizes yesterday, a farmer named Cook, sought to recover from the Aylesbury Railway Company the value of two cows run over by a train upon that line, in consequence, as alleged, of defective fencing. The jury found for the defendants.

—*o*—

New Railway in Fife.—We understand that a numerous and highly respectable meeting was held at Inverkeithing on the 24th ulto., the Mayor of Inverkeithing in the chair, for the purpose of making the necessary arrangements for carrying into execution the proposed extension railway from Halbeath to the collieries of Lamphinvans, Lochgelly, and others, which will give these collieries a railway communication with the sea at Inverkeithing, and open up a valuable coalfield of almost inexhaustible extent. From the deep interest and favourable views which the inhabitants of the district and the proprietors of the line generally take of this undertaking, there is every prospect of its being carried out, and from the low price of labour and iron, there certainly could not be a more favourable time for doing so. The line extends to nearly five miles, one mile of which is already contracted for, and the work commenced. From the assents already obtained, it is thought that an Act of Parliament will not be necessary, but even should it be otherwise this may be had early next spring.

THE ATMOSPHERIC RAILWAY—MR. PINKUS'S CLAIMS.

To the Editor of the Railway Times.

Sir,—Your paper of the 2nd instant contained an account of a lecture delivered by Mr. Vignoles, a railway engineer, to the British Association of Science, on the Pneumatic or Atmospheric Railway, of which I am the original inventor, and patentee of the system detailed, so ingeniously described, and amusingly commented on by that gentlemen, who has thought it becoming in him (after past conduct in respect to this subject) to make use of my name with the evident view to disparage my invention, and aid Messrs. Clegg and Samuda (men formerly in my employ) in their piracy and public imposition regarding that system of railway.

I trust, therefore, that you will think that I am entitled to a place in your valuable journal, to refute the subtle intention, and disabuse the public mind. "The object of this discourse," said Mr. Vignoles, "is to invite discussion—to court inquiry—to elucidate truth." Permit me then to inform him that

Digitized by Google

in his "pride in having been selected as the instrument to bring the system thus before the public for the first time in an official manner," he has committed one of many other errors that I shall herein exhibit. The invention in those details mentioned by him was described by me, and exemplified by diagrams and drawings, before the British Association at their meeting at Bristol in 1837.

The allegations of Mr. Vignoles in what he has said, attributing to me what he is pleased to call the rope-valve, only—and what he has attributed to Mr. Clegg (*i. e.* Clegg and Samuda) and Mr. Medhurst—are untrue. He, however, appears to be employed as well to make out a case as to carry the plan into operation, and is not nice in the manner of it. I have laboured upon this subject since the year 1825, at which period the system now carried into effect was made known, and at subsequent periods (1834-5) made experiments (which were witnessed by both Clegg and Samuda), and obtained patents. I have expended some thousand pounds in the endeavour to bring it into public use. Now my inventions, in all their details, as communicated to those confidential agents who were employed in those endeavours, have been pirated by them; yet have they been applauded by a public lecturer, who is the accredited engineer employed to carry the system into effect on the Dublin and Dalkey line. To understand the character of the proceedings of these men, and of those who aid them, it will suffice to state, that in 1837 Messrs. Samuda were the manufacturing engineers employed to construct the principal part of the works and machinery intended for demonstrating the practicability of the Atmospheric Railway, intended to be applied on the West-end Railway at Wormwood Scrubbs, and that Mr. Clegg, who was then connected in business with Messrs. Samuda, was confidentially employed by me, and consulted with in regard to this invention, and for his becoming the engineer in a public Company—and that the construction of the works and detailed experiments were during many months going on under the immediate inspection of Clegg and Samuda, with whom, and from day to day, I held confidential communication by reason of their employment, as documentary evidence under the hands of the parties will prove. To show the risk one incurs in carrying out a scientific undertaking with such agents, Mr. Clegg wrote to me from Paris in respect to the invention:—

"April 1838.

"*I must be informed of all particulars. Your first patent*, as it appears to me, is of much more consequence than your last for improvements. Your patents are of that importance that nothing must be left to conjecture.

(Signed) "SAMUEL CLEGG."

Mr. Samuda writes, amongst other things—

"It is my opinion, that the drawings of the Pneumatic would have been sufficient for execution, with such explanations as are always expected and given during the progress of such works. I make this remark because a general plan (and we seldom have anything else) never can contain the whole minutiæ—nor do we look to have that supplied us, applying to the inventor for any parts which the drawings do not sufficiently explain.

(Signed) "JACOB SAMUDA"
(*i.e.* Mr. Clegg's partner in the infringement.)

That these works were intended for the West-end Railway, the first prospectus of the Directors of that railway will show. The works were of double the extent of those exhibited at the same place as referred to by Mr. Vignoles. The first steam-engine was of 30-horse power; the Pneumatic mains were 13 inches diameter, and were well calculated to prove the combined improvements held under my patents, by means of which quadruple the force now shown could have been effected. Mr. Vignoles has endeavoured to convey to the public the belief that the system in my hands was a failure, for he declares, "that Pinkus suggested the rope-valve, which could not be made air-tight," and that "we are at length indebted to Mr. Clegg, for the practical usefulness to which this invention has arrived." So diametrically are these allegations of Mr. Vignoles opposed to truth, that whilst I admit and claim the valvular cord, which he is pleased to call a "rope," but which had neither its form nor use, I beg to inform him, what I doubt not he already knows, that the specifications of my patents cover several forms and methods of using valves designed for varied applications of the system, amongst which is the identical valve so applauded by him, and which he has seen in practice. So far from my practice having failed, the above works were at the threshold of demonstration, and solution of a philosophical problem (now admitted to be correct), and one which Mr. Vignoles declares to be *of deep interest to the public*, when they were broken up, and with violence dissevered by the Directors of a public Company, against the will of the shareholders, with a view to violate a contract and avoid the payment of the purchase money of the patents. A law-suit now pending against these Directors constrains me at present to withhold evidence that ought to cover Messrs. Clegg and Samuda, and their coadjutors, with shame and confusion.

The specifications of my patents (which are the first on record for this system of railway) show a mechanical construction and combination with a philosophical principle, without all of which it cannot be carried into effect. Mr. Vignoles has properly illustrated them. They are my mechanical arrangements, and are identical (excepting the addition of the weather board) with the plan illustrated by him, and pirated by Mr. Clegg. But the mere colourable variation of contrivances (if any had been made) would not justify the infringement of the method of working simultaneously an entire length of railway on this principle. The arrangements minutely described by Mr. Vignoles, their action for saving the "99 per cent. of the whole power which would otherwise be lost," are remarked upon and approved by him, and all of which he doubtless was aware was in the language of my specifications, from which, in fact, he was quoting. By the law of the land, I believe it is laid down as a principle that a servant shall not turn to his own account the information and secrets communicated to him by his employer. On my quoting to Mr. Godson (their legal counsel) that part of my second specification relating to the valve, he said, "If you have specified that, they cannot use this," pointing to the pirated valve. Messrs. Clegg and Samuda are welcome to the substitution of "*bees'-wax and tallow* cement" for my "*bitumen and tallow* cement," to their "heating iron" for my "heating wire." Mr. Vignoles has declared that the general adoption of the Pneumatic or Atmospheric Railway would not only be a great public convenience, but that the saving effected would be very considerable, "and also that the railways already constructed might, with very trifling expense, be adapted to the pneumatic principle." This is also a combination specified by me. Mr. Vignoles has then become a convert to the application of a philosophical principle *which he formerly condemned as impracticable*, and who I have always understood to be one of its most inveterate opponents!!

I am, Sir, your obedient servant,
H. PINKUS.

36, Madox-street, Regent-street,
July 6, 1842.

LONDON AND BRIGHTON RAILWAY.

To the Shareholders of the London and Brighton Railway.

GENTLEMEN,—Among the many suggestions which have been recommended for your adoption at the next general meeting, I am surprised to see so little notice taken of the fact that no trains are run at prices enabling the *lower classes* to avail themselves of a trip to Brighton.

I conceive that a train starting from each terminus at six o'clock a. m. and eight o'clock p. m., carrying second and third-class passengers *only*, at a fare of 7s. and 5s., or if returning same day 12s. and 9s.. would carry an immense number of passengers, without diminishing the receipts from the present trains. Some persons may hold a different opinion, but no one who for a moment considers the thousands London can send out *per diem* to a watering-place, will say it is not worth a fair trial. *A resolution to that effect* WILL *be moved at the* next general meeting. Let every shareholder therefore who approves of it, be prepared to support it with his vote and proxies.

I have no doubt there is much to blame in the management of the Brighton line *hitherto*, and I hope it will be thoroughly sifted at the meeting, but I cannot help thinking many shareholders are unsuspectingly playing into the hands of speculators, whose interest and aim is to depress the value of the shares.

The market quotation is now forced down to 30 per cent. discount! *Whoever sells at that figure sacrifices his property.* Before doing so, if he will give himself the trouble to make inquiry, he will find that the money to be paid by the South-Eastern Company, amounting to 300,000*l.* or 400,000*l.*, is not required for the purposes of the railway, and must, as the meeting may decide, be either divided among the shareholders, or go *pro tanto* to the liquidation of the loans. In either case the shares will be raised in value at least 8*l.*

If it can be done, by all means render the Directors personally liable for *past* mismanagement, but do not overlook the *future*. If the line is properly worked, *and its interests not sacrificed towards keeping Brighton exclusively aristocratic*, the weekly receipts may reach 8,000*l.* or 10,000*l.* per week—the shares reach a handsome premium.

I am Sir, yours, &c.,
A SHAREHOLDER IN THE BRIGHTON RAILWAY.

Glasgow, 6th July, 1842.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—It must be in the recollection of the original shareholders in the Brighton Railway that, in the year 1839, I gave them timely warning of the conduct to which they were then, and have been ever since, subjected. It must also be remembered, that at a general meeting of shareholders I made specific charges, in writing, against the Management; and if the shareholders had followed my advice at that period, or if one of the Directors had had sufficient confidence in his integrity to have insisted on a Committee of Investigation being appointed to give me an opportunity of proving my statements, upwards of one million sterling might have been saved.

I now give the third warning, and trust my opinions on the present occasion will induce the shareholders to protect the wreck of their property. * * * Public justice demands that examples should be made, that persons who invest their capital in future public works may have something like protection against such practices.

The Brighton Railway could have been made *in a more sound and workmanlike manner for seven hundred thousand pounds or less, including all the stations erected.* The average quality of the materials on the line is highly favourable for economy; and as to engineering difficulties, a working miner, a journeyman bricklayer, and a navigator, are quite competent to control them—in fact, there are no impediments but what could have been overcome by the most simple means. These are not random opinions, but founded on experience in similar works properly executed, and not in the slovenly railway fashion to create extra charges.

The shareholders should not suppose they can save nothing by prompt proceedings to protect their interests, because it is still in their power to save a large sum if they apply the proper remedy.

I am, Sir, yours, &c.,
A SHAREHOLDER.

P.S. I need scarcely observe, that the Committee recently appointed, with Mr. Parsons at their head, was a mere farce.

THE IRON TRADE.—Most of the Welsh works have now a sufficiency of orders, the demand for iron having become comparatively brisk during the last fortnight. We do not, however, perceive that the market has yet exhibited any improvement in prices.—*Silurian.*

BRISTOL AND EXETER RAILWAY—OPENING TO TAUNTON.

[From the *Bristol Gazette.*]

FRIDAY, July 1st, being the day appointed for the opening of that portion of the line of the Bristol and Exeter Railway which connects the towns of Bridgewater and Taunton, a considerable number of the shareholders availed themselves of the invitation politely given by the Directors to meet them in the latter town, to celebrate the event by a public breakfast.

The first train for the conveyance of passengers hence to Taunton was announced to leave the terminus at Temple Meads at 9 a.m., London time, but in consequence of the influx of visitors additional carriages had to be attached, which caused some delay. At about five minutes past nine the train took its departure; and from its unusual length, and from the engine (the *Castor*) being decorated with a profusion of colours, it excited on its way a more than ordinary degree of interest. On arriving at Bridgewater it was met by a large concourse of spectators, who lined the banks on either side of the rail; and at Taunton the whole population appeared to have come forth on the occasion. The novelty and importance of the event, and the fine state of the weather, caused the day to be kept as a general holiday, amidst the ringing of bells, the display of flags, and the strains of music.

As we have before had occasion to remark, the country through which the Bristol and Exeter Railway passes is of surpassing richness and beauty, and nowhere is this more observable than in the district between the above-mentioned towns. The character of the scenery is strictly rural—more pleasing from its association with the snug village and the comfortable homestead, than striking from the boldness of its outline. We give it on the authority of travellers on nearly all the lines of railway in England new in operation, that a more delightful railway excursion is not to be had than that afforded by a trip on the Bristol and Exeter to Bridgewater, and we may now add to Taunton.

The train arrived at Taunton about 11 o'clock, and, as we have before stated, was received by an immense concourse of spectators. On reaching the platform, and while the passengers were alighting, a band of music played the national air. The journey from Bridgewater (11¼ miles) occupied 20 minutes only; and the very perfect and complete state of the line (compared with what has been witnessed on some occasions at the period of opening) was a subject of general remark. The station and offices, too, came in for a large share of commendation, the buildings being mostly completed, and, without ostentatious display, presenting a very neat, if not beautiful, architectural appearance. Immediately adjoining the station is the Railway Hotel—which, with the other buildings, to use the terms of a Taunton man, has sprung up like magic. Thither the Directors and subscribers speedily repaired, and sat down to a very elegant cold collation, abundantly spplied with champagne and other wines, as well as with a variety of more substantial delicacies.

The Chairman of the Board of Directors, FREDERICK RICKETTS, Esq., presided; and among the company were the Rev. Proctor Thomas, of Wellington; Major Furneaux, Captain Maher, R. M. King, Esq., of Pyrland Hall; R. D. Horsey, and — Fox, Esqrs., of Wellington; J. Bobbett, Esq., of Creech; R. Turle, H. Turle, H. Stone, F. Llewellin, H. D. King, R. Reeves, W. R. Hitchcock, C. Higgins, T. Horsey, T. Gill, J. Tindell, R. Parsons, J. Henderson, W. Young, R. Hatton, W. E. Gillett, T. Mate, T. Leaker, F. Lake, J. E. White, R. Beadon, J. Brown, Esqrs., and others, of Taunton, Bridgewater, &c.; Dr. Miller, of Exeter; Joseph Parker, Esq., of Manchester; — Scott, Esq., of Bath; J. Gibbs, W. Tothill, G. Jones, W. Morgan, W. Browne, P. Maze, C. Claxton, C. E. Coote, R. Bennett, — Pike, — Powell, M. H. Castle, S. Lucas, J. Whittuck, C. B. Fripp, R. B. Ward, G. Emery, C. Savery, C. Saunders, T. Osler, F. Clarke, J. B. Badham, W. H. Townsend, S. Bromhead, W. Armstrong, — Laird, Esq., and many others, of Bristol and its neighbourhood, to the number of nearly 100.

After the attack upon the viands had somewhat subsided, the CHAIRMAN gave "The Queen," which was received with three-times-three hearty cheers. He then gave, in succession, "The Army and Navy," "The Lords Lieutenant of the Counties of Gloucester, Somerset, and Devon," "The Members of Parliament for Bristol, Bridgewater, Taunton, and Exeter." In giving the latter, he said, he held in his hand a letter from Mr. Divett (than whom, as they all knew, a more ardent friend to the undertaking could not be found), in which that gentleman regretted that he was prevented by business of a pressing nature from being among them. The Chairman then gave "The Members for the Counties of Somerset and Devon;" "The Bishop and Clergy of the Diocese."

The Rev. PROCTOR THOMAS, in the name of his venerable diocesan and of his brethren the clergy, begged to return thanks for the honour that had been done them. It might, he said, be thought by some, that the clergy were not in their sphere when attending such meetings as the present; but he apprehended that, though spiritually engaged in promoting the eternal welfare of their fellow-men, they were not temporally disconnected from such matters as involved their present interests; and he thought he was not merely giving utterance to his own feelings, but to those of the clergy in general, when he said that they ardently desired the prosperity of all useful undertakings, and therewith, in particular, the Bristol and Exeter Railway, as a measure calculated to increase the prosperity of the nation at large. (Cheers.) He was sure he would not be thought to presume too much, if, while standing, he ventured to give a toast. He would beg to propose the health of his worthy friend the Chairman of the Company. He (the Chairman) might not be so well known in Taunton as in his own neighbourhood, where his character was duly estimated, but he could say this, that the public owed him a debt of gratitude (for they were all indirectly if not directly interested in the success of the undertaking) for his indefatigable exertions in bringing about the result of that day. He, therefore, thought he was not asking too much in proposing that they should drink their worthy President's health with honours—(three times three).

The CHAIRMAN said he sincerely thanked the company for the honour they had done him. He could truly say, that when he first took the chair he did so with much hesitation; and if his efforts had not been seconded by those of his co-Directors, who had displayed the utmost possible zeal and devotion in their service, he must have shrunk from the undertaking.

R. M. KING, Esq., of Pyrland Hall, proposed the health of the Deputy-Chairman and body of Directors.

J. GIBBS, Esq., for himself and brother Directors, returned thanks. He said he must candidly confess that, on the present occasion, he derived more than ordinary gratification, because he was a party to the late arrangements with the Great Western Company, but to which, he must say, he had given his support in a confidential reliance on the opinion of Mr. Brunel.

The CHAIRMAN then gave "The Towns of Bridgewater and Taunton."

Mr. WHITE returned thanks. He said, he had the honour and privilege to be a tradesman, and in behalf of his fellow-townsmen he begged to thank the Chairman and the Committee for their unparalleled exertions in carrying out their undertaking, by means of which they trusted—taking a leaf out of the book of the people of Bristol, and, like them, keeping one eye open—(laughter)—they should be able to compete with their neighbours.

R. TURLE, Esq., proposed the health of the Secretary of the Company, J. B. Badham, Esq.—(three times three.)

Mr. BADHAM desired cordially to thank the Company for the kind manner in which his name had been received; it afforded him, he said, the greatest possible satisfaction on the present occasion, and in the present place. There was a time when the undertaking was regarded as altogether problematical; so much so that he had heard of individuals who had said that they wished their heads might not ache until the line should be opened to Taunton. (Loud laughter.) How they felt at that moment he could not tell, but perhaps those individuals would not object to his now wishing, seeing that the line *had* been opened to Taunton, that their heads may never ache after that event, which, perhaps, might answer their purpose quite as well. There was, however, a time when it was impossible to speak with certainty upon the accomplishment of what they had that day witnessed. At the period referred to, their hive was encumbered with at least 4,000 drones, who were not only unproductive themselves, but who obstructed the operations of the more industrious bees—and it was impossible that the objects proposed by the Company could be carried out without the necessary means. There were however, fortunately, many of the latter class, and to them thanks were especially due for the zeal with which they supported the unparalleled exertions of the Committee to give a more healthy tone to the Company. To them, under Divine Providence, it was due that they met that day in Taunton. There had, however, been other circumstances which, in times past, had caused the undertaking to be regarded as in the Slough of Despond, and if he (Mr. B.) had any merit it was in this, that he had lent himself to the full amount of the little modicum of energy which he possessed, to carry out those measures that, in the emergency, the Directors believed to be calculated to extricate the Company from every difficulty. One of these measures was the lease to the Great Western Railway Company. Now, it was impossible for any one, looking to the situation in which they were when that measure was under discussion, and looking to their present position and prospects, not to feel satisfied at one of the results as that day developed; and however much the lease may prove a good thing to the Great Western Company, yet still he would contend that it was so much the better that the lease had been made, as, under the present working of the line, the traffic would be fully developed, and it would be brought to its greatest amount by the time they would have to take it again into their own hands. (Cheers.) There was one other topic to which, with permission, he would allude—the allotment of forfeited shares. Now, it had been proposed that these should be disposed of, and that too at a heavy loss, which would have been so much taken from the shareholders; but instead of that, by the manner in which they had been appropriated, there had been to the several shareholders so much gain. Again, objections had been raised to the payment of interest, and some had said it was taking from one pocket to pay to the other. Now, it was by adopting these several measures that the Company had been placed upon a firm basis, and that they were enabled to pay themselves 4 per cent. at a comparatively early period of their operations, while other Companies, of far higher pretensions, had to wait for returns through a lengthened and indefinite period. (Cheers.) Mr. B. then proceeded again to congratulate the Company on their altered position, and after alluding to the degree of support the undertaking had met with in Taunton, as compared with the tardy support given to it in Exeter, said, in allusion to the doubts at one time expressed by the latter community of the line ever reaching them, that it must now do so whether they gave their assistance or not. The earnest of this was, not only that they had reached thus far, but that many shareholders had proposed to pay up the 100*l.* on each of their shares, so that there would be no want of funds to push on the works; and he might as well, perhaps, state that all such amounts as were paid in anticipation of calls would bear interest at 5 per cent. But further, it was his duty to tell them that the whole amount they were authorised to borrow, 500,000*l.*, has been raised.—

Digitized by Google

(Cheers.) It was not many months ago when it was thought problematical whether they would be able at any time to raise that sum, but he had now the pleasure to inform them that they had not only got the 500,000*l.*, but they had tenders for 50,000*l.* over and above that amount. ("Hear" and immense cheering.) The surplus, however, they could not take up except on loan notes, and if the Directors should decide on such a step, it would put off any further call for a lengthened period—(hear, hear)—but whether they did so or not, it would be satisfactory to them to know that, during the present year, at least, no further call would be made. (Tremendous cheering.) Really, the Directors were in that position—they had such ample means at their command—that they did not know what to do with the redundancy of their funds. (Cheers and laughter.) Under these circumstances the question was, whether they should trespass on the good feelings of the shareholders and venture to take up an additional 50,000*l.* on loan, and so incur the charge of a little additional interest? He hoped early next spring to have the delight of meeting them on occasion of a further opening; and in 1844 he hoped to be with them at Exeter; and, perhaps, the Directors would permit him to express his opinion that their revenue would then not be short of 120,000*l.* a year. The Directors had gone elaborately into calculations, and they believed that the total cost of construction would be under 2,000,000*l.*; and, if so, the expenditure would be kept within the limits of the Act of Parliament, while the works will have been constructed in that solid manner of which to-day they had had so much evidence; they would not only have a cheap line, but a good one. Mr. B. sat down amidst reiterated cheering.

The CHAIRMAN said, he had intended to propose their worthy Secretary's health, had not the pleasing duty been taken out of his hands. He could not, however, sit down without bearing his testimony to Mr. Badham's discretion, and to the unwearied zeal and energy with which he discharged the duties of his office. The Chairman then gave "The Bristol and Gloucester Railway Company."

G. JONES, Esq., returned thanks. The Company, he said, was yet in an incipient state, but he looked forward to the period when it would become an important link in the railway communication of Bristol, and when it would be a profitable investment. The position of the Company was a prosperous one, for though he could not but regret the depression of the times, yet it was a fact that, to a certain extent, that depression had very materially tended to diminish their outlay. They had been enabled to make contracts for rails for the whole on terms most advantageous to the interests of the shareholders, and with parties, too, in whom they could place full confidence.

Dr. MILLER begged to propose the health of the Chairman, Deputy-Chairman, and the Directors of the Great Western Railway.

G. JONES, Esq., as one of the Directors, returned thanks in an excellent speech, in which he alluded to the late regulations respecting the unlocking of the doors of the carriages, but we regret that our space does not enable us to follow him.

"The Secretaries of the Great Western Railway Company—C. A. Saunders, and Thomas Osler, Esqrs."

Mr. OSLER had hoped that the toast would have been given in the presence of his highly respected colleague, who had been called away by his duties on the line, and who, though his junior in years, was his senior in office. Mr. O. then proceeded to pass a very handsome eulogy on the abilities of Mr. Saunders, and also to touch upon several points in connection with the business of the day, which he did most ably, and concluded amidst very general applause.

The CHAIRMAN then proposed the health of the professional advisers of the Company—"Messrs. Osbornes, Ward, and Co., and Messrs. Savery, Clark, and Co."

Mr. SAVERY returned thanks, as did also Mr. R. B. WARD.

"The Engineer of the Company—I. K. Brunel, Esq." (Immense cheering.)

Mr. BRUNEL, who entered the room on the instant of his name being given, briefly acknowledged the compliment.

"The Surveyor of the Company," "The Landowners and Occupiers on the line," "The Contractors for the Works," were then severally given, and the latter toast was acknowledged by Mr. G. Hennett and Mr. S. Bromhead.

"The Ladies of Taunton" was then given, and responded to by Mr. White; after which the Chairman left his seat, and the party broke up highly delighted with the proceedings of the day, which, we are happy to say, passed off without the slightest accident.

RAILWAY ADJUDICATIONS.

PICKFORD *v.* THE GRAND JUNCTION RAILWAY COMPANY.

Court of Exchequer, July 7.—Mr. Baron PARKE gave judgment in this case as follows:—The two main questions raised in this case are first, whether the defendants were bound to carry a hamper containing several parcels, each less than 112 lbs., directed to and intended for different persons, for the sum offered to them by the plaintiffs; and secondly, whether they were bound to carry a parcel from Manchester to Camden Town for the sum offered to them by the plaintiffs. There were two hampers, each containing several small parcels, tendered at different times to the defendants, but the same question arises out of both. The sum tendered in respect of each is found to be the full amount the defendants were entitled to receive for the receipt and carriage of the hamper and its contents, and for all other charges, unless the defendants were entitled to charge for each parcel contained in the hamper separately, or to charge a penny per pound on the gross weight of the hamper and its contents. We are to determine, therefore, whether the defendants are entitled to make either charge—a mixed question of law and fact—the fact being submitted to us, by the consent of the parties, as to a jury. Under the Act of Parliament establishing the Grand Junction Railway Company, 3rd Geo. IV, cap. 34, the Company is authorised, by sec. 156, to carry on that railway all such goods, &c., as shall be offered to them, and to make such reasonable charges for such carriage and conveyance as they may from time to time determine upon, in addition to the tonnage and toll, without any other restriction, in the case of goods, than that the charge should be reasonable.

By 4th William IV, cap. 55, sec. 19, these powers are extended to the carriage of all goods that should be offered on other railways, but they are still to make reasonable charges for such carriage. By virtue of this clause, the Company in their character of common carriers are bound to carry for reasonable charges, if reasonable charges are tendered. The true question therefore is resolved into this: whether for the hamper containing small parcels it is reasonable to charge either for each parcel contained in the hamper separately, small parcels consigned to different persons, or one penny per pound on the gross weight of each hamper and its contents. The charge is no doubt to be varied according to the trouble, expense, and responsibility attending the receipt, carriage, and delivery of the different articles, and for small parcels more ought to be paid than a proportionate part, according to the weight and price of larger parcels of the same commodity, by reason of the great trouble in receiving, dispatching, and delivering, as they are exposed to a much greater risk of abstraction or loss. But if all the small parcels are united in one package, and delivered for carriage in that package, consigned to one person, the trouble and responsibility are apparently reduced precisely to the same degree as if all the articles contained in the package were the property of the same owner, and intended to be delivered to him. There would seem, therefore, to be no right to charge for such package of distinct parcels belonging to different owners, more than if they belonged to the same; but then, it is urged on the part of the defendants, that there really is an increased responsibility, arising from the simple fact that each parcel is the property of a distinct owner, because it is said that in the event of a misdelivery, the Company would be liable to several actions of trover instead of one; and even in case of loss or damage by neglect each separate owner might maintain an action, on the custom of England, with respect to his own goods. It is very doubtful at least whether on the custom of England separate actions could be maintained, as the relation of employer and carrier would not have *subsisted* between them and the Company, but between them and the plaintiffs. As the action of trover, however, could be maintained, it would not be unreasonable to allow some additional remuneration on account, not of the liability to pay greater damages, for they would be the same in both cases, but to pay the same damage by means of different suits. We are relieved, however, from the necessity of deciding what the precise amount of additional compensation should be (which at all events should be trifling), because it is admitted in the special case the sum tendered is proper, unless the defendants had a right to charge for separate parcels, which they certainly had not; because neither the trouble, expense, nor responsibility is the same as if the parcels had been separate, or unless the defendants had a right to charge a 1d. per pound. We have no difficulty in saying, that the last-mentioned remuneration is excessive, and unjustified by the increase of responsibility, from the circumstance of the properties being separate. It is impossible to support, on this ground, the charge of 4*l.* 1s. 8d. for the first package, of which, if it had consisted of parcels, one property, 1*l.* 6s. 6d. would have been the proper charge, and a charge of 3*l.* 1s. 6d. instead of 9s. for the second.

We are of opinion that the plaintiffs are entitled to our judgment on the first question raised between them, which is the subject of the two first counts. On the second question the Court have already intimated their opinion that this Company cannot support a claim for the same sum for carriage to Camden Town, and for a carriage thither and delivery at any place in London. By the provision already referred to they are to carry for reasonable charges for carriage; and by the 3rd Victoria, cap. 49, sec. 26, such charges are to be made equally; and it is clearly unreasonable and unequal to charge the same sum to a consignee who is willing to receive the goods at, Camden Town, and one who requests them to be delivered at the London Docks or elsewhere in London.

The plaintiffs are bound to pay the balance of 65s. per ton after deducting a reasonable charge for delivering in London and no more, and the defendants must carry to, and deliver at, Camden Town for that sum. The plaintiffs are therefore entitled to succeed on the second issue raised by the special case, and the verdict on all the issues is to be entered for the plaintiffs.

MISS PRICE *v.* THE EASTERN COUNTIES' RAILWAY COMPANY.

Ilford Petty Sessions, July 2.—This being the day appointed for hearing and determining the information laid against the Eastern Counties' Railway Company, by Miss Price, of Tyne Hall, for stopping up a passage across the railway, and also an application to the justices under 107th clause of the Company's Act, for their consent to have a foot passage made across the railway where the footway formerly had been. Mr. Hetherington, a solicitor, attended on the part of Miss Price and her father; and Mr. Duncan, the Solicitor, Mr. Hall, the Managing Director, and Mr. Braithwaite, the Engineer to the Eastern Counties' Company, appeared for the defence. The 107th clause, under which proceedings were taken, is as follows:—"Provided always, and be it further enacted, that if the owners or occupiers of any lands through which the said railway shall be made, shall at any time apprehend that

Digitized by Google

any of the gates, bridges, arches, hollows, culverts, fences, ditches, drains, and passages, respectively, which the said justices shall have so directed or appointed to be made or erected by the same Company, are insufficient, either in number or situation, for the commodious use and occupation of the respective lands through which the said railway shall pass, it shall be lawful for any such owner or occupier, with the consent of the said Company, upon request in writing made to them, or in case of their refusal for the space of 10 days next after such request, then with the consent of the said justices, given after summons and due hearing of their objections, to make, fix, and erect, at the costs and charges of such owner or occupier, any other gates, bridges, arches, hollows, culverts, fences, ditches, drains, or passages of the same or like construction or form, with them made and erected by the said Company in, upon, along, over, under, or near the said railway, in such places as shall be found and adjudged most necessary and convenient for the better use, cultivation, improvement, or occupation of such lands, and to repair and support the same at the costs and charges of such owners or occupiers as occasion shall require, so that the passage through or along the said railway be not prevented or obstructed thereby."

Mr. DUNCAN said, his short answer to the information, or application, was, that no footway or bridge was at all necessary.

CHAIRMAN—Then proof must be given of the necessity of a bridge or footway. We must have evidence to support the allegation that there is not sufficient access from one side to the other.

Mr. Price was then sworn and examined.—He stated that he was agent and manager to his daughter, who was the copyhold owner of Tyne Hall, and of the meadow, and grove or shrubbery, attached to the premises.

Mr. Duncan here remarked, that Miss Price had no title whatever to the grove or shrubbery mentioned.

The CHAIRMAN said, it would not be necessary for the Bench to go into the question of title.

Mr. Price said, that possession gave his daughter the right. He then proceeded with his evidence, and stated that previous to the formation of the railway, the gravel walk along the shrubbery was used for general purposes, and was the usual footway from the house for Miss Price and her servants to go to the village of Ilford to market, and also to church. The witness here went into a lengthened statement about attending before a compensation jury, at Stratford, and he should not have agreed to the compensation he received on his opposition to the railway, had he not understood that a footway or bridge would be made at the point where the original pathway was intersected. After the formation of the railway he, witness, had caused steps to be made in the slopes on either side of the ground, and by this means a foot-passage was effected across the railway itself. The officers of the Company had frequent opportunities of seeing, and must have seen those steps being made; and he, witness, frequently spoke to Mr. Braithwaite, the Company's Engineer, to have a proper footway made, and that gentleman as frequently promised to do so, but said the Company were not bound to build a bridge. The witness here went into a history of the stopping up of the temporary passage across the railway, all of which has already appeared in our paper.

Mr. Price was cross-examined by Mr. Duncan at considerable length, and, at the request of that gentleman, produced a lease which had been recently granted to his daughter by Sir C. Hulse, for Tyne Hall and the premises adjoining, in which there was no covenant for perpetual renewal, and which, like the preceding, was merely a lease for 21 years. He admitted that the lease for the meadow, which formed the land on the west side of the railway, would expire in about twelve months, and that the shrubbery through which the walk ran had formerly been a piece of waste land, that it had not been set out in either of the leases, nor had any legal conveyance of it been made to Miss Price. The passage through the shrubbery was merely a footway to the front of the house, while the carriage-way was close to Corkhouse-lane.

Mr. DUNCAN addressed the bench at some length, and directed its attention to the defendant's points of the evidence of Mr. Price. He admitted that at one time it was the intention of the Company to form a footway bridge at the point in dispute; but at this time it was contemplated to close up Corkhouse-lane, and form a way nearly half a mile further up, so that Mr. Price would have to go that distance on the one side, and nearly an equal distance on the other, to get into Ilford. According to Mr. Price's own showing, the carriage-way entrance to his daughter's house was not altered, and if any change, it was for the better; and the walk or pathway which he had mentioned running parallel with Corkhouse-lane, and only a few feet apart, he could, without any inconvenience, and at a small expense, form a way from one to the other, equally convenient to that of which so much had been said. The Company had given Miss Price 450*l.* compensation, besides a piece of freehold land for that which was represented to be copyhold property, but which now turned out to be merely leasehold, with only a few years' term to run; and if she (Miss Price) and her father were not satisfied with the liberality of the Company, he (Mr. Duncan) really knew not what would satisfy them. He (Mr. Duncan) sincerely hoped the magistrates would not, under all the circumstances, put the Company to any further expense in the matter, but leave Mr. Price to do that which he could accomplish at a trifling cost, make a footway to his house.

The Magistrates retired to a private room, but returned in a few minutes, when the Chairman observed that, after giving the case the calmest consideration, they had come to the unanimous opinion that Miss Price had not established her claim to a right of way or shown the necessity of making a crossing.—*Essex Mercury.*

BURN *v.* VAUX.

Vice-Chancellor Sir K. Bruce's Court, July 4.—In this case the plaintiff and defendants were partners, as solicitors, and the partnership was dissolved in November, 1835. One of the stipulations in the deed of dissolution was, that if the defendants should, in the space of two years, realise a net profit of 2,000*l.* transacted by them for the Thames Haven Railway Company, the plaintiff should have one-fifth of the profits. The bill of costs delivered to the Company for part of this time exceeded 3,400*l.*, *and it was admitted that if such sum had been received the net profit would have amounted to more than* 2,000*l.* The Company, however, insisted upon, and the defendants agreed to, a reduction of 1,000*l.*, and then the defendants resigned their office of solicitor. The two years had not then expired. Mr. Vaux had subsequently left the profession of the law, and was studying for the church.

Mr. ANDERDON and Mr. CRAIG, for the plaintiff, argued that the fact of a net profit having been made, although the whole sum had not been received, within the two years, rendered his title to the fifth plain. and that it could not avail the defendants that they had thought fit to make the abatement required by the Company.

Mr. COOPER and Mr. HEATHFIELD, for the defendants, submitted that if the deduction were not to be made, the plaintiff was indebted to the defendants on the general partnership account, and therefore there was a set-off to the demand.

His HONOUR did not find anything improper in the conduct of the defendants in making the deduction, however large that deduction might be, from the amount of their bills of costs. Their conduct might be actuated by motives of prudence. From one of the expressions in the correspondence of Mr. Vaux with the Directors of the Company it would appear that, being eager to leave the profession he made a sacrifice, and that a larger sum might have been insisted on than was actually paid. It was possible that the defendants might have made this deduction from motives of generosity and liberality; but still they ought to have consulted the plaintiff on the subject. His Honour would, therefore, direct an inquiry to ascertain whether the payment of a larger sum might not have been compelled; but if the plaintiff was indebted to the defendants they must have the opportunity of set off.

IN RE THE BRISTOL AND EXETER RAILWAY.—HENRY ABBOT *v.* THE PARISH OFFICERS OF LONG ASHTON.

This important case was heard at the Somerset Quarter Sessions, at Bridgewater, on Tuesday. It was an appeal against a poor-rate for the parish of Long Ashton, on the ground that the Great Western Railway Company (who are occupiers of the Bristol and Exeter Railway, which runs through that parish) were under-rated therein. The amount at which the Company were rated was 82*l.*, and the assessment thereon 4½d. in the pound, 1*l.* 10s. 9d. Mr. Kinglake and Mr. Stone appeared for the appellant, Mr. Fitzherbert for the parish officers, and Mr. Bere and Mr. Carrow for the Railway Company. The Court, after reading the lease, found that the proportion of the rates and tolls assessable to the poor-rate in the parish of Long Ashton was 3,086*l.*, deducting from which 10 per cent. for tenants' rates and taxes, tithe commutation, and other necessary expenses, there remained the net assessable value of 2,778*l.*, by the substitution of which sum for that of 82*l.*, they ordered the rate to be amended accordingly. Mr. Bere applied for a case, which was granted.—*Bath Gazette*, July 5.

DUBLIN AND DROGHEDA RAILWAY—COMPENSATION CASES.

AN inquisition was held on Thursday last, the 30th of June, at Julianstown, before the Sheriff of the county of Meath, for the valuation of the land required for the construction of this railway, from the bounds of the county of Dublin, at the river Delvin, to the bounds of the county of the town of Drogheda, a distance of about eight miles. The following jury were sworn:—Henry B. Coddington, Esq., of Oldbridge, foreman; John Metge, Thomas Mathews, Cope Garnett, Robert Skelly, Mathew Fullam, Josh. M'Cann, William Morgan, John O'Conner, Evans Kettlewell, John Wilkinson, and Wm. Walsh, Esqrs.

Richard Keatinge, Esq., Q.C., attended as Assessor; Gerald Fitzgibbon, Esq., Q.C., and Oliver Sproule, Esq., as counsel, and Mr. Richard D. Kane, as agent for the Company; as also Peter Eckersly, Esq, the Managing Director.

R. C. Bowen, Esq., attended as counsel, with Mr. B. Galvin and Mr. J. Magee, as agents for the claimants.

The Company having made arrangements with the different owners and occupiers of land on the line, with the exception of three parties, the jury proceeded to hear the first case—namely, that of John Barron, who claimed the sum of 34*l.* for two roods and 21 perches of land, the Company having offered him the sum of 18*l.*

Several witnesses were then examined for the claimant and the Company, when the jury retired, and shortly returned with an award for the sum of 14*l.*, being 4*l.* less than the sum previously offered.

The jury then proceeded to view the premises held by the remaining disputing claimants, after which they adjourned to the following day (Friday, the 1st July).

The jury assembled this morning at 10 o'clock, when the claim of John Hamill, Esq., for 8 acres, 3 roods, and 35 perches of the lands of Ninch (3 acres of which consisted of a strand) was gone into. It appeared in evidence that the total sum claimed for loss of land and severance was 1,034, and several witnesses were examined both for the claimant and the Company, which occupied the entire day; the sum offered by the Company, previous to the inquisition, to avoid litigation and expense, being 500*l.*, the jury retired for some time, and brought in a verdict for the claimant for the sum of 350*l.*

Digitized by Google

being 150*l.* less than the Company's offer, after which the Court adjourned to the following day (Saturday, the 2d July).

The jury this day assembled at the same hour, and proceeded with the claim of Jas. Josh. Taylor, Esq., and Val. Hall, Esq., for 2 acres, 2 roods, and 6 perches of the lands of Minitstown, who claimed a sum of 762*l.* for their respective interests therein. Evidence was then given by the claimant and the Company as to the value of the land taken, the Company having offered a sum of 258*l.* 8s. previous to the inquisition. The jury then retired, and after some time brought in a verdict for the sum of 141*l.* 7s. 8d., being 117*l.* 4d. less than the Company's offer.

This case having finished all disputed claims, the jury proceeded to sign the several findings agreed to, and adjourned to Tuesday next (this day) for purpose of signing the inquisition.—*Saunders' News Letter*, July 5.

RAILWAY PLEASURE EXCURSIONS.

EDINBURGH AND GLASGOW RAILWAY—MECHANICS' TRIP TO EDINBURGH.

We hail with pleasure at all times the patronage given to the arts and sciences, in whatever channel such may be conveyed, and we do so more at the present time, when we see so much rebellion, discord, bigotry, and intolerance among our non-intrusion ecclesiastics. * * * We say that, at such a time, we look with feelings of gratitude to those benefactors of mankind, who stimulate our youths to industry, and who, by rewarding, induce them to a commendable emulation in the pursuance of science.

In this spirit, therefore, we tender our thanks to the Directors of the Edinburgh and Glasgow Railway Company, for giving to the students of the Mechanics' Institution a trip at half the usual fares, to

"Edina, Scotia's darling seat"

No sooner was the kind proffer on the part of the Directors made known, than tickets were eagerly purchased, and the necessary arrangements made, for visiting the far-famed city. Thursday morning at half-past seven o'clock, a special train started with the youthful aspirants, and as the sun shone resplendently forth, all were in high spirits. The stationary engines at Cowlairs, and the various viaducts on the line, were inspected. The Company arrived at Edinburgh about half-past ten, and were by the kind permission of his Grace the Duke of Hamilton, and the Lord Provost and magistrates of Edinburgh, admitted to Holyrood Palace—the Regalia in the Castle—the University Museum—the Museum of the Royal College of Surgeons—the Museum of the Agricultural and Antiquarian Societies—School of Arts, &c., at which places the utmost attention and politeness were shown to the visitors. Many who before had never visited the capital of their own country, were astonished at its local position—the fine architectual display of its buildings—and the towering and commanding height of its fortress. On visiting Holyrood, the various associations which history has conveyed to us of the ill-fated Mary were called forth, and many inquiries were made regarding the chamber where Rizzio was stabbed in her presence, and other memorable points in the history of the unfortunate Queen.

The special train returned in the evening, and we are assured tnat never was a day spent with so much pleasure, harmony, and benefit.—*Scotch Reformers' Gazette*, July 2.

BIRMINGHAM AND DERBY AND NORTH MIDLAND RAILWAYS.

A special train of six carriages from Birmingham, arrived at Amber Gate about nine on Monday morning for Matlock, and the visitors proceeded by the Cromford Canal to their destination. The trip as regards numbers was a decided failure; and this may be chiefly ascribed to two causes. The Birmingham Railway Company had announced the Monday previous for the excursion, and subsequently announced a postponement, without however naming a day when the journey would really take place; and it was not known till last week, through the medium of the *Reporter*, that Monday was definitively fixed upon. The other cause was, doubtless, the unsettled state of the weather. Saturday was showery, and on Sunday and Sunday night, we had continuous showers, with a heavy-looking, moist, and ungenial atmosphere, putting one more in mind of "flannel night-caps and mulled port," rather than steam trips of pleasure.

The five or six score of pleasure seekers who mustered sufficient courage to face a journey of amusement of more than 100 miles in spite of the miserable appearance of the morning, had no reasons however for regret. The day proved comparatively fine, and during the sojourn at Matlock there was not a shower worth naming. Matlock appeared as Matlock always must, even under unfavourable circumstances as regards weather, the most beautiful, delightful, and enchanting spot within her Majesty's dominions. To enumerate the different objects of peculiar interest visited by the party would be to give a list of everything worth seeing; and, as the "fairy village" abounds in sights, we should by so doing far exceed the limits we can afford to the present slight notice. We may, however, mention that the well-known noble excavation known as the Royal Devonshire Cavern, was patronised by the greater number of the visitors, who thus availed themselves of a subterranean route to the extreme summit of the heights. There was on this occasion no lack of "creature comforts" provided by the spirited proprietors of the various hotels; but, with the major portion of the visitors, rambling in search of picturesque scenery appeared to be much more thought of than eating or drinking.

About six commenced the gathering for departure; and, although some disappointment was occasioned to the hotel-keepers and others on account of the smallness of the party, it is consoling to know that, to the individuals composing it, the pleasure of the trip was undoubtedly as great as if they had seen Matlock in a crowd of a thousand persons.—*Derby Mercury*, July 6.

LIVERPOOL AND MANCHESTER RAILWAY COMPANY—SPECIAL MEETING.

A special general meeting of the Liverpool and Manchester Railway Company was held at the Cotton Sales'-room, in the Exchange-buildings, Liverpool, on Tuesday, for the purpose of having the draft of a Bill now before Parliament "for better enabling the Liverpool and Manchester Railway Company to extend the line of the said railway, and for amending and enlarging the powers and provisions of the several Acts relating to such railway," submitted to the proprietors present at such meeting. Shortly after 1 o'clock the chair was taken by Charles Lawrence, Esq., the President.

The Chairman stated that the late general meeting had authority to make a junction between the Liverpool and Manchester line and the Leeds and Manchester, at Hunt's Bank, Manchester. The object of the present meeting was to state what the Act of Parliament specified, and to give the proprietors, if they thought necessary, the opportunity either of rejecting or of appoving of the Bill now before Parliament. The Chairman concluded by calling on Mr. C. W. Clay, the Clerk of the Company, to read the notice which had been given to the public concerning the holding of the present meeting, and also the clauses which had been inserted in the short Act of Parliament.

Mr. Clay read the notice and a draft of the Bill accordingly. The preamble recited the several Acts passed regarding the Liverpool and Manchester Railway, and stated the expediency of giving powers for effecting a junction between the Liverpool and Manchester and the Manchester and Leeds Railways. The Bill enacted, in the first place, that the powers of the several recited Acts should be extended to this Act. By the second section, the Company were authorised to make a junction railway at and near Hunt's Bank. The third section authorised the sale and purchase of land by this Company from other Companies, and authorised those other Companies to sell to this Company. The fourth section prescribed the mode of constructing the railway at Hunt's Bank, by means of a viaduct specifying the breadth and height. The fifth section enacted, that the Liverpool and Manchester Company should make a wall or fence to screen the intended railway from the New Bailey prison, and the view of persons using the railway. The sixth section referred to the construction of the railway at Manchester, and other particulars respecting the viaduct. The seventh section enacted that the expenses of the Act might be paid out of the general funds of the Company, and the eighth and last section stated that the present was a public Act.

The Chairman stated, that in these several sections consisted the whole of the Bill. If there was no objection to it, he called upon the proprietors to affix the seal of the Company thereto.

Mr. Rotherham proposed a resolution which had been previously prepared, and which was to the effect that the Bill be approved of, and that the Directors be authorised to affix the seal to the same, subject to such alterations and additions thereto as they might deem necessary or Parliament might approve.

Mr. Van Zeller seconded the resolution, which was unanimously adopted.

Thanks were then returned to the Chairman, and the meeting separated.—*Liverpool Standard.*

ACCIDENT ON THE EDINBURGH AND GLASGOW RAILWAY.

An accident happened on this railway yesterday, of which we find, upon inquiry, a very exaggerated report had gone forth to the public. The particulars we have ascertained are as follows:—

The eleven o'clock train from Glasgow and the nine o'clock train from Edinburgh had both reached Cowlairs, and were slowly passing, each on its proper line, when owing to the gross negligence of the pointsman, in leaving the points shut instead of open, the nine o'clock train passed over on to the other line. The engine, in consequence, came in contact with the second last carriage of the eleven o'clock train, the buffer-rod of which was driven into the last carriage, which was considerably injured by the blow, and we regret to state that a passenger inside had one of his legs much bruised or broken. A passenger in the second last carriage was also slightly hurt from being thrown forward against the opposite side of the carriage. One of the guards was thrown off the train, but was so slightly injured as to be able to proceed on to Edinburgh.

The engine of the eleven o'clock train was almost immediately stopped, but not before one or two of the carriages had had their wheels thrown off, and were thus carried along the ground for some yards, though without any injury to the passengers. One of the break-waggons was immediately sent down the incline to Glasgow for medical assistance, which was speedily at hand, but we are not aware that there was any further injury than what we have mentioned.

In order to allow the passengers from Edinburgh to proceed, some of the carriages by the nine o'clock train were detached and sent back, but as they could not get on to the proper line until they reached the points near Bishopbriggs, a pilot engine was sent forward to see that the line was clear. This, we believe, gave rise to other rumours as to the extent of the accident. At Bishopbriggs the carriages joined the rest of the train, and the whole proceeded on to Edinburgh. The nine o'clock train reached the Glasgow station before twelve o'clock.

The pointsman was taken into custody immediately after the accident, and has been handed over to the authorities that the necessary investigation may be made into the matter.—*Glasgow Constitutional*, July 6.

"ACCIDENTS ON A RAILWAY" *NOT* RAILWAY ACCIDENTS.

On Thursday, the 23rd ult., an excavator on the **Eastern Counties' Railway works at Stanway, named King, was crushed to pieces by the falling of a large quantity of earth. An inquest has been held on the body, and a verdict of "accidental death" returned.**

On Wednesday last, a young man employed in tipping on the Feering embankment, whilst in the act of unkeying a waggon, fell, and the load passing over his chest, killed him on the spot.

An accident occurred at Brentwood on Tuesday last, upon the railway works, to a man who, whilst standing on the break of one of the earth-waggons, slipped, and his head was jammed between the waggon and the break, a portion of the flesh of his face being torn away.—*Chelmsford Chronicle.*

RAILWAY BRIDGE OVER THE TEES.—A beautiful stone bridge is expected in a short time to be erected by the Stockton and Darlington Railway Company across the river Tees, a few yards south of the elegant suspension bridge, standing a short distance from the town of Stockton, the latter structure having lately given away.—*Leeds Intelligencer.*

BOLTON AND PRESTON RAILWAY COMPANY—TENDERS FOR LOANS ON MORTGAGE.—The Directors of this Company are prepared under the powers of their Acts of Parliament, to receive TENDERS for the LOAN OF MONEY, in sums of not less than £200, and for terms of 3, 5, 7, or 10 years, and to GRANT MORTGAGES of the said undertaking, and of the Rates, Tolls, or monies arising therefrom, as securities for such Loans, bearing interest at the rate of £5 per cent. per annum.

INTEREST WARRANTS, for the whole term for which the loan shall be made, will be delivered to the Lenders along with the Mortgages, and be made payable half-yearly, at the Company's Bankers in London, or Bolton, as may be preferred.

The Tenders are to express the sums, and the term of years for which the same are proposed to be lent, and to be addressed to the Secretary, at the Company's Office, Bolton.

By order of the Board of Directors,
PETER SINCLAIR, Secretary.

Bolton, 24th May, 1842.

YARMOUTH AND NORWICH RAILWAY.—NOTICE is hereby given, That the Shares to be appropriated to Landowners on the line of the Yarmouth and Norwich Railway will not be reserved after the 1st of August next.

Applications for the same to be made to Messrs. Rackham and Cooke, of Norwich; and Messrs. Reynolds and Palmer, of Yarmouth; and to the Secretary, at the office of the Company in London.

By order,
H. PATTESON, Secretary.

Warnford court, Throgmorton-street,
June 30, 1842.

THE MANCHESTER AND LIVERPOOL PLATE GLASS COMPANY have just now on Sale a large quantity of GROUND PLATE GLASS suitable for Skylights, which they can sell at 2s. 6d. per foot; also stout polished Plate for Conservatories at 3s. per foot, and a quantity of ditto, for general glazing purposes, at HALF THE TARIFF PRICES.

An extensive assortment of Dressing Glasses, with or without mahogany frames, to be sold considerably under the Tariff Prices. Every information may be obtained at their Manufactory, Sutton, St. Helen's, Lancashire; or at their London Warehouse, 26, Soho-square.

By order of the Board,
J. L. GRUNDY, Company's Agent.

London, July, 1842.

SHARES WANTED.—An ample Security for £500, yielding £30 per annum (payable punctually half-yearly,) will be exchanged for the like amount in Shares at the market price, in a Railway, Mining, or other public Company, producing at present inadequate dividends, but with such probability of improvement in value as offers sufficient inducement for the speculation.

Address, prepaid, with particulars of Shares, to D. S., at 75, Old Broad-street, London.

MANUFACTURING PREMISES on a Large Scale WANTED, in London, or the immediate neighbourhood, consisting of large and wide lofts, with ground floor. Parties having such to dispose of, to address full particulars, with lowest rent that will be taken, to A. B., *Railway Times* Office, Fleet-street, post-paid.

TO CONTRACTORS.—EXTENSION OF TIME.—The Gosport Pier Company invite the attention of Contractors to the plans and specifications of their intended works, which will be ready for inspection at the offices of Messrs. Cruickshank and Wakefield, and Mr. James Hoskins, Solicitors, at Gosport, from the 6th day of July to the 1st day of August next.

Sealed Tenders are to be delivered before 12 o'Clock at noon on the 1st day of August next, at the office of Messrs. Cruickshank and Wakefield, Gosport, addressed "To the Chairman of the Directors of the Gosport Pier Company—Tender for Works."

The works comprise a considerable quantity of excavating and dredging, as also of piling, and the construction of iron vessels as floats.

The Directors do not bind themselves to accept the lowest Tender.

Gosport, July 5, 1842.

W. HOPE, LONDON AND BRIGHTON RAILWAY CARRIER, AND CARRIER IN GENERAL, 149, North-street, Brighton, begs to return his sincere thanks to his numerous friends for their kind, constant, and continual favours for so many years, and respectfully informs them that all Goods designed for him must be at the London and Brighton Offices by Four or Five o'Clock in the afternoon at the latest, and the same will be delivered the following morning—Sundays excepted, on which day no business will be transacted.

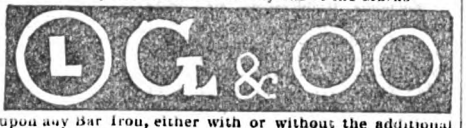
His Inns in London are—the Old White Horse Cellar, Piccadilly; Griffin's Green Man and Still, Oxford-street; the White Horse Inn, Friday-street, Cheapside; and the Nag's Head Inn, Borough.

In addition to his general business, he has opened his Office, 149, North-street, Brighton, as a

GENERAL BOOKING OFFICE,

where Goods, Luggage, and Parcels are received and forwarded to all parts of the kingdom, or warehoused as directed—W. H. being persuaded that an office of this kind was much wanted at so populous and public a place.

Please to observe, also, that Waggons, Vans and Carts, for the removal of Goods to or from any place or part of Town or Country, may be had as heretofore.



W. H. hereby informs his friends also, that he continues to warehouse Goods for any space of time, as he has done for a number of years.

N.B.—No claim for loss or damage allowed if not made within three days after delivery.

NOTICE TO THE CONSUMERS OF

MESSRS. JOS. SYKES & SONS, the Sole Contractors for, and only Importers of these descriptions of STEEL IRON, being determined to adopt every practicable expedient to protect the fair Trader in, and Consumer of these several Marks, HEREBY GIVE THIS PUBLIC NOTICE, that from the 31st March, 1835, no Iron of the above Marks has been or will be delivered by them without the additional Mark of | SYKES | being impressed thereon; such last-mentioned Mark having been adopted by Messrs. Jos. SYKES and SONS for the further protection of themselves and the Public. And all Persons who shall impress the Marks or any one of the Marks

upon any Bar Iron, either with or without the additional Mark | SYKES | will be proceeded against.

Hull, June, 1842.

SCOTTISH UNION FIRE AND LIFE INSURANCE COMPANY; instituted 1824, and incorporated by Royal Charter.

LONDON BOARD.

John Kingston, Esq.	Daniel Stoddart, Esq.

SUTHERLAND MACKENZIE, Esq., Manager.

London Offices, 449, West Strand, and 78, King William Street, City.

LIFE DEPARTMENT.

The additions made to the Life Policies granted by this Corporation for the last seven years vary from 41 to 65 per cent. on the premiums paid, and average 54 per cent. on the sums assured—a result, it is believed, far more favourable to the assured than any other Company has hitherto accomplished, when the low rates of premium charged by this Corporation are taken into consideration.

The next division of life profits will take place in December, 1846, being an interval of five years, and persons entering before the 1st of August next will enjoy one year's additional rating, and rank at next division of profits for five complete years.

Forms of proposals may be had at the offices, 449, West Strand, and 78, King William-street, City.

F. G. SMITH, Secretary.

LONDON AND GREENWICH RAILWAY—RAILWAY TRAINS RUN to and from London Bridge and Greenwich Stations direct, every quarter of an hour, from 8 in the morning till 10 at night; on Sundays from 8 till a quarter before 11 in the morning, and from 1 till 11 at night. Fares—First-class, 9d.; second ditto, 6d. The journey is performed in 12 minutes. Conveyances always in attendance at the Greenwich terminus to convey passengers to Woolwich, Charlton, Blackheath, &c. Omnibuses at the London terminus to Paddington on the arrival of the trains.

N.B.—Special extra trains may be engaged on application to the Inspectors on duty, to convey passengers from Greenwich after 10 o'clock at night, at the price of 50s. per train, all passengers above 50 to pay 1s. each.

J. Y. AKERMAN, Secretary.

Office, 37, Canterbury-square, Southwark,
June 16, 1842.

TO TOURISTS AND TRAVELLERS.—EDINBURGH AND GLASGOW RAILWAY.—The scenery on this line is of the grandest and most interesting character, and a more delightful tour cannot be planned at this season than from London by steamer to Leith, from thence by railway to Glasgow, and then through the Highlands. The trains start simultaneously from Edinburgh and Glasgow, as follows:—

Morning—7, 9, and 11. | Afternoon—3, 5, and 7.

First-class elegant coupe carriages run with the 11 and 3 o'clock trains, and with others if specially required. The coupe holds four, but is restricted to three, unless the parties engaging it choose to admit a fourth. Fares—First-class, 8s.; coupe, 9s.; fourth person, 8s; second-class, 6s.; third-class, 4s. Carriages according to size, 30s., 20s., and 15s. One horse, 12s.; three ditto, 33s.

Sunday trains from each end, half-past 7 morning; half-past 5 afternoon; carrying each class, and calling at all stations. Fares as above.

N.B. Children between 10 and 14 half fares; under 10 free, if with a person paying full fare.

Stirling.—Passengers booked to and from Edinburgh and Stirling, and to and from Glasgow and Stirling, by the 7, 11, 3, and 5 o'clock trains.

Every facility and information will be afforded on application at the termini at Edinburgh and Glasgow.

H. G. WRIGHT, Secretary.

Glasgow, 1st July, 1842.

In one handsome quarto volume, with 17 splendidly executed Engravings, including a Railway Map of the United Kingdom, price £1 11s. 6d.

THE RAILWAYS OF GREAT BRITAIN AND IRELAND practically described and illustrated. By FRANCIS WHISHAW, Civil Engineer, M. INST., C. E.

"No railway capitalist who studies his own interest will remain long without it; it is a work of immense labour and research, rich in original and authentic information, and embellished to profusion with splendid engravings."—*Railway Times.*

"This is one of the most striking and valuable works that have lately issued from the press; the author handles his subject in that masterly style which proves his perfect acquaintance with the matters upon which he treats."—*Bath Chronicle.*

"Mr. Whishaw is a discriminating statician, and has a thorough acquaintance with his subject."—*Athenæum.*

"A faithful record of the rise and progress of the greatest modern result of the genius of man."—*Polytechnic Journal.*

"The completest view of railway statistics yet produced."—*Morning Chronicle.*

"A complete history of all the railways in the United Kingdom.—*Liverpool Mercury.*

"Full of sound practical information, derived from the fountain head itself."—*Observer.*

"A more complete and satisfactory account of the railway system of Great Britain could scarcely be devised."—*Courier.*

"Here the practised engineering skill of the author manifests itself."—*Manchester Courier.*

"It may be looked upon as a rare and precious acquisition to the practically scientific literature of the country."—*Manchester Times.*

"It is not the mere opinion of a theoretic man, but the result of a practical and talented engineer."—*Plymouth Herald.*

"Such a work, the product of a practical man, is clearly entitled to the distinctive term 'national.'"—*Hereford Journal.*

"A text-book on railways for the next half century."—*Maidstone Gazette.*

"We know of no work which ought to be so favourably received in Scotland at present."—*Perth Courier.*

"Developing a depth of principle, and a breadth and variety of details of well-digested facts, which nothing in the history of railways at home or abroad can possibly rival, far less surpass."—*Dumfries Times.*

London: Simpkin, Marshall, and Co.

This day is published.

THE THEORY AND PRACTICE OF PROPELLING THROUGH WATER, with observations on the comparative Resistance offered by Water to Bodies moving through it at different velocities; comprising also, a Description of an Improved Method of applying Mechanical Power to Steam Navigation, for which her Majesty's Letters Patent have recently been granted to the Author.

By HENRY BOOTH.

Liverpool: Printed by Thomas Baines, Castle-street, and sold by him; by John Weale, High Holborn, London; and by all booksellers. Price One Shilling and Sixpence.

SOUTHAMPTON DOCKS.—To be Contracted for, the building of a Covered Shed on the Company's Dock Ground at Southampton, 360 feet in length and 50 feet in width. Plans, sections, and specifications, may be seen on application to the Engineer, 9, Adelphi Terrace; and sealed Tenders, superscribed "Tender for Shed," must be addressed to the Secretary, at this office, on or before Monday, the 18th July instant, at 12 o'clock.

GEORGE SAINTSBURY, Secretary.

Southampton Dock Office, 19, Bishopsgate Within, London, 5th July, 1842.

SHEFFIELD, ASHTON-UNDER-LYNE, AND MANCHESTER RAILWAY.—TENDERS FOR LOANS.—The Directors are prepared to grant Mortgages, under the powers of their Act of Parliament, for Loans of Money, in sums of not less than £200 each, and for periods of three, five, or seven years, at the option of the lender. Interest at the rate of 5 per cent. per annum will be paid half-yearly, for which interest warrants will be given for the period agreed on, payable at the Company's bankers in London, Manchester, or Sheffield.

Further information may be obtained at the Company's Offices in Manchester or Sheffield; at the Office of T. J. Parker, Esq., Sheffield; Messrs. Bagshaw and Stephenson, Manchester; or Messrs. Johnson, Son, and Weatherall, Temple, London.

By Order,

JOHN PLATFORD, Secretary.

Manchester, April 27, 1842.

BRISTOL AND GLOUCESTER RAILWAY.—The Directors of this undertaking will receive Proposals for LOANS of Money on Debentures, to be issued under the Provisions of the Acts of Parliament, in the month of October next, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest, at the rate of £5 per cent. per annum, payable half-yearly, at the Banks of Messrs. Miles, Harford, and Co., Corn-street, Bristol; and Messrs. Barnetts, Hoare, and Co., Lombard-street, London.

For monies immediately advanced the security of Loan Notes, under the Seal of the Company, will be given, which may be exchanged for Debentures in the said month of October.

Tenders expressing the Sums and terms of years, to be addressed to the undersigned, at the Company's Office, Exchange Buildings, Bristol.

By order of the Committee of Management,

ROBERT FLETCHER, Secretary.

Office, Exchange Buildings, Bristol, May 30, 1842.

NORTHERN AND EASTERN RAILWAY.—At a Meeting of the Directors of the Northern and Eastern Railway Company, held this day, in conjunction with a deputation of Shareholders appointed by a Special General Meeting of the Proprietors, to receive and open tenders for the purchase of 3,186 Shares in this Railway—

It was resolved—That the tenders sent in are not sufficient in amount offered and number of shares proposed to be taken to justify the acceptance of any of the said tenders, in the face of the increasing receipts of the railway, and the highly respectable requisition laid before this meeting to postpone any sale whatever until the present encouraging prospects of the railway are further developed.

By order,

WILLIAM BOURNE, Secretary.

Shoreditch, London, July 6, 1842.

OIL CLOTH MANUFACTORY.—P. MASTERS and Co. beg to inform Railway Companies, Carriers, and the Public in general, that they have commenced the Manufacturing of OIL CLOTHS, CART and HORSE CLOTHS, TARPAULINS and RICK CLOTHS, &c., at their Manufactory, No. 41, Lime-street, Liverpool, where all orders they may be favoured with will meet with prompt attention; and they beg leave to assure the Public that nothing but the best material will be issued from their Establishment.

N.B. Contracts for the supply of Cloths for Railway and Carrier Companies can be entered into if required, and Samples of the same can be forwarded to parties on addressing a line per post to P. MASTERS and Co., 41, Lime-street, Liverpool.

THE THAMES TUNNEL IS OPEN DAILY (Sunday excepted) from Nine in the morning until dark, and lighted with gas.

The present entrance is on the Surrey side of the river, close to Rotherhithe Church. The Tunnel is now completed, and is 1,200 feet in length. Admittance, 1s. each. Visitors will shortly be enabled to pass through from the Middlesex side, and of which due notice will be given.

By order of the Board of Directors,

J. CHARLIER, Clerk of the Company.

Company's Office, 2, Walbrook Buildings, City, 22nd June, 1842.

N.B. Conveyances to Rotherhithe, by Omnibus, from Piccadilly, Charing Cross, Fleet street, and Gracechurch-street; and by Steam-boats to the tunnel pier at Wapping, from Chelsea, Vauxhall, Lambeth, Hungerford, Adelphi, Old Shades Pier, and London Bridge. Books, with Plates descriptive of the works, are sold at the Tunnel, Price One Shilling.

NORTHERN AND EASTERN, BRIGHTON, CROYDON, DOVER AND SOUTH-EASTERN RAILWAYS.—Messrs. HORNE and CHAPLIN having effected the necessary arrangements for the conveyance of passengers and parcels by railway, and thence by coaches to the following places, beg to state, that places can be secured, and parcels booked at and forwarded from their several offices, where every information may be obtained as to the Hours of Departure, Rates of Fares, &c. &c., to

Norwich	Huntingdon
Cambridge	St. Neots
Wells	Biggleswade
Holt	Bury St. Edmunds
Dereham	Bishop Stortford
Fakenham	Hockerill
Newmarket	Harlow
Holbeach	Hertford
Wisbeach	Hoddesdon
Chatteris	Waltham Cross
St. Ives	

Also to

St. Leonards	Maidstone

The Train heretofore leaving London at 2 p.m. is now discontinued.

The Train leaving London at 6 a m. is a quick Train throughout, and is the only Day Train by which Passengers can reach Darlington and Newcastle in the same day.

Coaches leave Newcastle for Morpeth, Berwick, Dunbar, Hoddington, and Edinburgh, early in the morning, and during the day.

Time is allowed for refreshments at Wolverton, Derby, York, and Darlington.

TO RAILWAY CARRIAGE BUILDERS, or DIRECTORS who keep their own workmen, or intend to do so.—WANTED, by a respectable person, a situation as Foreman. He has been in that capacity from the commencement of Railways in one of the first Firms in the kingdom, and can have an undeniable character from his last situation. Letters addressed to M. P., 172, Bermondsey-street, Southwark, will be immediately attended to. No objection to the country.

TO BE SOLD, BY PRIVATE CONTRACT, A FREEHOLD BRICKFIELD—Land-Tax Redeemed and Tythe Free—consisting of nearly Six Acres, eligibly situated on a public road within three miles of London, and now in full operation. There is an inexhaustible supply of water, and no uncallow earth. The plant is in excellent condition and the field in first-rate order. For further particulars apply to Mr. Thomas Pryer, Solicitor, 29, Austin-friars, London.

TO ENGINEERS.—A young Gentleman who has been about twelve months in a Surveyor's office, and subsequently served two years with an Engineer in general practice, is desirous of engaging himself to an Engineer with whom he may obtain additional practical experience for two years. No salary is required for that term. The Advertiser is a good Draftsman, and has had some experience in directing workmen and in field works. Respectable references will be given and required.

Address A. B., care of Leyland and Son, booksellers, Halifax, Yorkshire.

NEW EDITIONS of the following useful Works are just published at the *Railway Times* Office, 122, Fleet-street:

I.

TUCK'S MAP OF THE RAILWAYS for 1842 throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

II.

ROBINSON'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Map, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Corrected to June. Price 1s., in cloth.

III.

ROBINSON'S RAILWAY DIRECTORY FOR 1842, containing the Names of the Directors and principal Officers of the Railways in Great Britain, derived from authentic sources, price 1s.

IV.

TABLES OF HACKNEY CARRIAGE FARES from the BIRMINGHAM RAILWAY to all parts of the METROPOLIS, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

V.

TABLES OF HACKNEY CARRIAGE FARES from the GREAT WESTERN RAILWAY to all parts of the Metropolis, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

THE TENTH THOUSAND.

Just published, *in a Sealed Envelope*, price 3s., and sent free, on receipt of a Post office Order, for 3s. 6d.,

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection; followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases, &c.

By J. L. CURTIS and Co., Consulting Surgeons, London.

TENTH EDITION—Published by the Authors, and sold by Balliere, Medical Bookseller to the Royal College of Surgeons, 219, Regent-street; Strange, 21, Paternoster-row, London; Guest, 51, Bull-street, Birmingham; T. Sowler, No. 4, St. Ann's-square, Manchester; G. Philip, South Castle-street, Liverpool; Fannin and Co., 41, Grafton street, Dublin; Drummond, 114, High street, Edinburgh; and sold in a *sealed envelope*, by all Booksellers.

OPINIONS OF THE PRESS.

"This work, *a tenth edition* of which is now presented to the public, *ten thousand copies having been exhausted since its first appearance*, has been very much improved and enlarged by the addition of a more extended and clear detail of general principles, as also by the insertion of several new highly interesting cases We feel no hesitation in saying that there is no member of society by whom the book will not be found useful, whether such person hold the relation of a *parent*, a *preceptor*, or a *clergyman*."—SUN, evening paper.

"This is a work that we fear there exists too much need for to cause us to hesitate to recommend it for general perusal. Every branch of those frightful maladies, whether the result of immoral habits or secret vices, is here succinctly treated, and divested of all medical technicality, plain and easy directions are given for the best mode to be pursued in all cases, however complicated or apparently hopeless. To the married, as well as the unmarried, this little work alike affords consolation and cure in peculiar cases, and we are doing a service to society in recommending it to general notice."—*Essex and Herts Mercury*.

"Messrs Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable."—*Magnet*.

Messrs. Curtis and Company are to be consulted daily at their residence, No. 7, Frith-street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. The communication must be accompanied by the usual consultation fee of £1, and in all cases the most inviolable secrecy may be relied on.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate-street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Brides, Fleet-street, Middlesex.—Saturday, July 9, 1842.

The Railway Times.

" Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 237. Vol. V.—No. 29.] SATURDAY, JULY 16, 1842. [Price 6d.

LONDON AND DOVER (SOUTH-EASTERN) RAILWAY.—The Public are respectfully informed that the TRAINS now RUN for the conveyance of passengers, parcels, horses, and carriages from the London Bridge Station as under:—

To Tunbridge, stopping at New Cross, Croydon, Reigate, Godstone, Edenbridge, and Penshurst—9 30, a.m.; 11 30 a.m.; 2 30 p.m; and 5 30 p.m. SUNDAYS—8 30 a.m.; 6 30 p.m.

From Tunbridge, stopping at Penshurst, Edenbridge, Godstone, Reigate, Croydon, and New Cross—7 45 a.m.; 10 30 a.m.; 3 p.m.; and 6 p.m. SUNDAYS—8 30 a.m.; 6 30 p.m.

Horses and carriages can be embarked and disembarked at the New Cross as well as at the London Bridge station, at each of which post-horses may be had to convey carriages to or from any part of London, at a charge of 10s. 6d., including post-boy. They will be in readiness also at the Tunbridge station on the arrival of every train to convey carriages to Tunbridge Wells, at 10s. 6d. each, including the driver, and to all other places at 1s. 6d. per mile.

Omnibuses ply for every train between the London Bridge station and the following coach offices, viz.:—Griffin's Green Man, Oxford-street; the Universal office, Piccadilly; the Cross Keys, Wood-street; the Swan with Two Necks, Lad-lane; and at any of Messrs. Horne and Chaplin's offices, at which, and at the London Bridge station, parcels may be booked for all places in connexion with the railway.

Full particulars and time-tables may be obtained at the London Bridge Station, and at the Offices of the Company, 10, Coleman-street.

By order,
JOHN WHITEHEAD, Secretary.

10, Coleman-street, June 1, 1842.

LONDON AND DOVER (SOUTH-EASTERN) RAILWAY.—NOTICE—Scrip Holders are reminded that the Second Instalment of £5 per Share on the new Shares created in pursuance of the Resolutions passed at a Special Meeting of the Proprietors of this Company held on the 28th of April last, will fall due on Thursday, the 21st instant, and that unless the same be paid on that day, or with interest within 14 days afterwards, to any of the undermentioned Bankers, forfeiture of every share which shall after such latter period be in default will ensue:—

London—Messrs. Glyn and Co., 67, Lombard-street.
Liverpool—Messrs. Moss and Co., Messrs. Barned and Co.
Manchester—Messrs. Jones, Loyd, and Co.
Leeds—Messrs. Beckett and Co.
York—The Union Banking Company.
Dover—Messrs. Latham and Co.; the National Provincial Bank of England.
Ashford—Messrs. Jemmett and Co.
Cranbrook—Messrs. Wilmshurst and Co.
Tunbridge and Tunbridge Wells—Messrs Beeching and Son.
The Country Branches of the London and County Banking Company.

By order,
JOHN WHITEHEAD, Secretary.

10, Coleman-street, July 9, 1842.

HAMBURGH, July, 1842.

HIS MAJESTY THE EMPEROR OF AUSTRIA,
AND
HIS MAJESTY THE EMPEROR OF RUSSIA,

HAVING authorised and GUARANTEED several DISTRIBUTIONS of MONEY DIVIDENDS, by which LARGE FORTUNES may be obtained, HEINE BROTHERS, at HAMBURGH, are now selling Genuine and

WARRANTED SELECTED

BONDS for the said Distributions. Persons desirous to purchase may receive, PREVIOUS to giving any order, the PROSPECTUS, with full PARTICULARS, upon addressing, WITHOUT DELAY, a line to

HEINE BROTHERS, at HAMBURGH.

As we receive frequently Applications for CERTIFICATES, we must beg to observe, that a CERTIFICATE is QUITE DIFFERENT from a BOND, and that there is a great difference again between BONDS and SELECTED BONDS—the SELECTED BONDS *ONLY* TAKING PART IN THE DISTRIBUTION WHICH FOLLOWS THE SELECTION, and which should never be overlooked, being of the greatest importance.

In Royal Octavo, 3s. 6d., cloth, lettered, with four Engravings.

TELEGRAPHIC RAILWAYS; OR, THE SINGLE WAY, recommended by Safety, Economy, and Efficiency, under the safeguard and control of the Electric Telegraph; with particular reference to Railway Communication with Scotland, and to Irish Railways. By WILLIAM FOTHERGILL COOKE, Esq.

Contents: Objects of the Treatise—Distinguishing Characteristics of present Railways—Evidence before Select Committee—Advantages of Telegraphic Communication—Mode of working the Blackwall Railway, by the Electric Telegraph—Description of the Electric Telegraph—Plan for a "Telegraphic" Railway—Course of an Express Train—Ballast Waggons—Permanent Obstruction—Crossing of Two Trains—Description of Signals—Concluding Remarks on Single Way—Mixed Lines—Scottish Junction Line—Irish Railways—Advantages common to Single, Mixed, and Double Lines—Public Confidence—Reduction of Stock—Income from Telegraph—Alertness—Adaptation to Wants of Country—Conclusion.

London, Simpkin, Marshall, and Co.; Liverpool, Wareing Webb, Castle-street; Manchester, Simms and Dirham; Birmingham, Wrightson and Webb; Leeds, Slocombe and Simms.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secrecy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

AN ELEGANT AND USEFUL PRESENT.

Just Published, in One Volume, price 5s. 6d., handsomely bound, with gilt leaves, sides, and back, and illustrated by

FOUR HUNDRED ENGRAVINGS,

PICTURESQUE EXCURSIONS; forming, by means of its engravings and descriptive letter-press, a complete Guide to, and Remembrancer of, all scenes of interest connected with the following places and their neighbourhoods:—Richmond, Hampton Court, the river Thames from Kingston to the Nore, Margate, Ramsgate, Dover, Hastings, St. Leonard's, Brighton, Shoreham and its Railway, Worthing, Bognor, Southampton, Netley Abbey, Lymington, and the Isle of Wight. Edited by ARTHUR FREELING.

"A work in which the elegant and the useful are eminently combined."

London: Ackerman, Strand; *Railway Times* Office, Tilt and Bogue, Fleet Street; and all Booksellers.

EVESHAM, BIRMINGHAM, AND GLOUCESTER RAILWAY.—Notice is hereby given, That it is intended forthwith to apply to Parliament for leave to bring in a Bill to extend this line of Railway to Warwick, in connection with the London and Birmingham Railway to the metropolis.

Dated this 6th day of July, 1842.

By order,
HENRY STEPHENSON, Secretary.

42, Lothbury, City.

DUKE OF CORNWALL HARBOUR, AND LAUNCESTON AND VICTORIA RAILWAY COMPANY.—Notice is hereby given, That pursuant to the Act of Parliament, the next Half-yearly General Meeting of the Proprietors of this Company will be held, at the London Tavern, Bishopsgate street, on Thursday, the 28th Instant, at One o'Clock, precisely.

(Signed) J. RAMSBOTTOM, Chairman.

3, Copthall Buildings, July 7, 1842.

SHEFFIELD, ASHTON-UNDER-LYNE, AND MANCHESTER RAILWAY.—TENDERS FOR LOANS.—The Directors are prepared to grant Mortgages, under the powers of their Act of Parliament, for Loans of Money, in sums of not less than £200 each, and for periods of three, five, or seven years, at the option of the lender. Interest at the rate of 5 per cent. per annum will be paid half-yearly, for which interest warrants will be given for the period agreed on, payable at the Company's bankers in London, Manchester, or Sheffield.

Further information may be obtained at the Company's Offices in Manchester or Sheffield; at the Office of T. J. Parker, Esq., Sheffield; Messrs. Bagshaw and Stephenson, Manchester; or Messrs. Johnson, Son, and Weatherall, Temple, London.

By Order,
JOHN PLATFORD, Secretary.

Manchester, April 27, 1842.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. ALLSOP will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

CEMENT.—To ARCHITECTS, BUILDERS, and Others.—The PATENT STUCCO PAINT CEMENT.—Its extraordinary qualities are rapidly becoming well know and appreciated. It will adhere to any substance or surface—no wet, or damp, or frost, can have any effect on it—time hardens and improves it—a house covered with it becomes encased in stone—the cost is trifling. The invention is a fortune to Builders, and to all who are interested in house property, old or new. The sole agents for the Patentees are Messrs. MANN & Co., 5, Maiden-lane, Queen-street, Cheapside.

FORTY-ONE USEFUL SEASONED CART HORSES, BRICK and RUBBISH CARTS, LIGHT FORAGE CART, HARNESS, &c.—To be Sold by AUCTION, by Mr. DIXON, at his Repository, Barbican, on Friday, July 22, 1842, commencing at One o'Clock precisely, 25 powerful, active, firm, useful, seasoned Cart Horses; 14 capital Brick and Rubbish Carts, light Forage Cart, with several Sets of Thill and Chain Harness, being the genuine excellent stock of Messrs. F. and H. Flower, that have been employed on the Orphan Asylum Works, from the Abbey Mills to Snaresbrook, sold in consequence of having completed their Contract. 16 remarkably firm, powerful, young Cart Horses, that have been employed on the No. 6 Contract of the Eastern Counties' Railway, sold in consequence of having completed it.

☞ The above Stocks are worthy the attention of Contractors, Brickmakers, Builders, Corn and Coal Merchants, Brewers, Distillers, Farmers, and others, being well known in their work, positively without exchange or addition, and for sale without reserve.

On view and catalogues had two days before the sale.

CARRIAGE OF GOODS ON RAILWAYS.

IN THE EXCHEQUER.

PICKFORD *v.* THE GRAND JUNCTION RAILWAY COMPANY.

Before Mr. Baron Parke, Mr. Baron Alderson, and Mr. Baron Gurney.

Westminster Hall, 2nd July, 1842.

After the Special Case had been read—

Mr. MARTIN said—The Court is to be at liberty to draw from the above facts any conclusion which in their judgment a jury ought to have drawn. The questions for the opinion of the Court are, first, whether the defendants were by law bound to carry the hamper and its contents first above mentioned, from Birmingham to Manchester, at the rate or for the sum of 14 6s. 6d. Second, whether the defendants were by law bound to carry the hamper and its contents secondly above mentioned, from Manchester to Birmingham, at the rate or for the sum of 9s. Third, whether the defendants were by law entitled to charge at the rate of 65s. per ton for the carriage of the pack of goods thirdly mentioned, from Manchester to Camden Town.

Then, my Lords, follows a statement of how the verdict is to be entered, with which I need not trouble your Lordships. The verdict is to be entered as the Court shall direct.

Now, my Lords, I appear before you as counsel on behalf of Messrs. Pickford and Company in this case, and I really feel that at present I cannot state to your Lordships too highly the amazing importance of this question.

Your Lordships will see in the course of this argument, that if the defendants are entitled to your Lordship's judgment in this case, the result will be by means of very simple machinery, to give the defendants the sole monopoly of the entire land carriage of goods between London and Lancashire. If they are entitled to your Lordship's judgment in this case, that event will inevitably happen, as your Lordships will see in the course of this discussion.

Now, my Lords, the law with respect to Companies of this kind, and Companies who have obtained the privileges which this Company has obtained from the legislature, seems to be now perfectly well understood, and the construction to be put on those Acts of Parliament has been more than once the subject of judgment by the judicial authorities of this country; and my Lords, I shall trouble your Lordships with very few authorities upon it, for your Lordships will find that Lord Eldon, in the case of Blakemoor and the Glamorganshire Canal Company, and Mr. Baron Alderson, on a review of all the cases in the case of Lee and Milner, second Young and Collier, 618, seem to lay down what is the proper construction to be put on Acts of Parliament of this kind.

Your Lordships will find the passage to which I allude in the judgment of Lord Eldon, in the first volume of Milne and Keene, page 162. My Lord Eldon says, "I follow and adopt the expressions of the Lord Chief Justice of the King's Bench, and I am glad to fasten myself in some measure on his great authority, and say, when I look upon these Acts of Parliament, I regard them all in the light of *contracts* made by the legislature on behalf of every person interested in any thing to be done under them, and I have no hesitation in asserting that unless that principle is applied in construing statutes of this description, they become instruments of greater oppression than anything in the whole system of administration under our constitution. Such Acts of Parliament have now become extremely numerous, and from their number and operation they so much affect individuals that I apprehend those who come for them to Parliament do in effect undertake that they shall do and submit to whatever the legislature empowers and compels them to do, and that they shall do nothing else, and that they shall do and forbear all that they are thereby required to do and to forbear, as well with reference to the interests of the public as with reference to the interest of individuals."

That is the judgment of Lord Eldon as to the construction to be put on Acts of Parliament of that kind. And Mr. Baron Alderson's judgment in Young and Collier seems to put it on this ground, "The stipulations contained in Acts of this sort are in the nature of *conditions*, and that the legislature confers those privileges on such Companies on the *condition* that they shall obey the different enactments contained in the different Acts with reference to them."

My Lords, these are the only cases which I feel it necessary to call your Lordships' attention to, and I shall proceed at once to argue the question before your Lordships.

Now, my Lords, the grounds upon which this and other Railway Companies obtained those powers from the legislature, was giving increased speed and increased cheapness in the conveyance of goods and passengers throughout the country, as it must be admitted that they have done—that they have given increased speed to an extent far beyond the calculations of any person very few years ago, and also that the carriage made by them is found to be a cheaper mode of carriage than any that previously existed. And the result has been that they have obtained the sole and exclusive carriage of both passengers and goods on every line of road on which they have been established.

Now, my Lords, it is quite clear, and I need not argue it before your Lordships, that a vast number of authorities and powers are given by this Act to the Company; they were given powers to take land, and various other privileges which they could not have had without the interference of the legislature, and therefore falling as well within the reasons of my Lord Eldon's judgment as within the Act of Parliament.

I need not call attention to a variety of sections in the Act conferring powers and privileges—the taking of land, making charges, getting their rates paid, and other things which cannot be disputed.

The first observation to which I would call your Lordships' attention on this Act of Parliament is this, that it was clearly not the intention of the legislature at all to confer upon this Company the exclusive carriage of either passengers or goods.

Upon looking at this Act of Parliament, as well as at the other Acts of Parliament which have passed constituting Railway Companies, your Lordships will find that what was originally contemplated *probably* by the parties themselves was, that they would afford an improved line of road to the public generally, which was to be used by them in the same manner as canals are used, and not that the Company themselves should become the exclusive carriers. That is perfectly clear from some sections of the Act to which I shall call your Lordships' attention.

But your Lordships are aware, that in consequence of the extremely dangerous *locomotive* power by which goods or passengers are conveyed on the lines of railway, the *practical consequence* has been that it has been found that the regulation of *locomotive* engines requires to be under the sole control and superintendence of one body; and that they have obtained a complete and entire monopoly, not merely of the railway itself, but of the traffic upon that railway, and the carriage of the goods and passengers upon it.

Now, my Lords, that that was not the intention of the legislature will appear from one of the sections to which I have to call your Lordships' attention with a view to this argument. Their first Act was the 3rd of William the 4th, chapter 34; and the section to which I am now about to call your attention is section 154.

This, my Lords, is the rate of tonnage which was allowed by the legislature to be taken by this Company; and your Lordships will find, that it absolutely is founded upon the idea that persons were to use their own carriages and their own locomotive power on this railway, and that the Company were to be entitled to a *tonnage* for the use of the line of road, in the same manner as Canal Companies receive a tonnage for the carriage of goods along the canal.

Mr. Baron ALDERSON—There is no doubt that that was the pretence under which these things were established.

Mr. MARTIN—Probably it was honest at first; however, your Lordship knows more about it that any person.

Mr. Baron ALDERSON—You must exercise a large portion of candour if you believe it was honest!

Mr. MARTIN—I believe your Lordship was counsel in the first—in the Manchester and Liverpool—in the original Bill, which was the first that received much consideration. I did not know whether you had been against it or for it.

Mr. Baron ALDERSON—Against it.

Mr. MARTIN—However that may be, we now deal with the Acts as we find them.

Mr. Baron ALDERSON—I prophesied it would be so, as it has turned out.

Mr. MARTIN—An Act for making a railway from the Warrington Railway to Birmingham. The original Grand Junction Railway Act.

Mr. Baron ALDERSON—6th of May, 1833.

Mr. MARTIN—That is it, my Lord. Section 154.

Mr. Baron ALDERSON—That is the tonnage rates.

Mr. MARTIN—The tonnage rates; the first question will turn on the sections in the two following pages.

Mr. Baron ALDERSON—These are only the tonnage rates.

Mr. MARTIN—You will find the others in the two next sections.

Mr. Baron ALDERSON—These are the tolls?

Mr. MARTIN—This section enacts that "it shall be lawful for the said Company to demand, receive, and recover, to and for the use and benefit of the said Company, for the tonnage of all articles, matters, and things, which shall be carried or conveyed upon or along the said railway, or any part thereof, any rates or tolls not exceeding the following, that is to say, for all limestone, any sum not exceeding one penny per ton per mile."

My Lord, this section fully bears out what I have been just stating to your Lordship, and which, as I understand your Lordship to assent to, there is no doubt whatever that what was originally held forth was, that this improved mode of conveyance would be given to the public.

Mr. Baron ALDERSON—This was what they would pay if they took their own carriage along the line; they were not bound to find power for this.

Mr. MARTIN—What I want to call attention to on this point is, that your Lordship will see what they are authorised to take is 1d. per ton per mile—a rate to be paid for the tonnage of goods, according to the length of the railway over which the goods passed. Your Lordship will find that pervading the entire of the sections to which I am about to call attention, and which will be very material in regard to the second question in this case.

What they are authorised to take is 1d. per ton per mile, clearly recognising and considering that the payments which the Company were authorised to receive were for so much per mile on the railway.

Now, then, the next section is with respect to tolls on carriages conveying passengers or cattle; and it enacts "that it shall be lawful for the Company to demand for the use of the Company for and in respect of passengers, beasts, cattle and animals, conveyed on the railway, any tolls not exceeding the following, that is to say, for every person the sum of 2d. per mile." Again, a charge or a toll given in respect of the quantity of railway passed over.

Then, my Lords, the next section is the 156th, and it enacts, "that it shall be lawful for the said Company, and they are hereby authorised (if they shall think proper to use and employ locomotive and other engines, or other moving power, and in carriages and waggons drawn or propelled thereby), to carry and convey upon the said railway, all such passengers, cattle, goods, wares, and merchandise articles, matters and things, as shall be offered to them for that purpose, and to make such *reasonable charges* for such carriage and conveyance as they may from time to time determine upon, in addition to the several tonnages and tolls hereinbefore authorised to be charged and received."

There is then a proviso "that they shall not ask, demand, or be entitled to take (both for tolls and carriage) any greater sums than the following," and that is confined, my Lords, to passengers, and there is no mention made of goods at all.

So that with respect to goods the language is a *reasonable* charge for such *carriage and conveyance*.

Again, my Lords, the same observation applies, that is, 2½d. per mile—it is so much for the carriage on the railway.

Then, there, my Lords, comes a section, whether introduced by accident or design, it has no reference whatever to the subject matter, and the 158th section is the next that has any reference to the subject.

Mr. Baron ALDERSON—That only applies to persons.

Mr. MARTIN—To persons alone, other than the *reasonable charges* is the only limit on them.

The next section, either by accident or design, has been introduced here, having no reference whatever to those clauses among which it is inserted; but the 158th 158th section is one which gives this Company certainly very great power. It enacts, "that it shall be lawful for the said Company, and they are hereby empowered to provide, *locomotive* engines or other power for the drawing or propelling of any articles, matters or things, persons, cattle or animals upon the said railway; and to receive, demand, and recover such sums of money for the use of such engines or other power, as the said Company shall think proper, in addition to the several other rates, tolls, or sums by this Act authorised to be taken."

Then comes the 159th section, which says, "It shall be lawful for the said Company at any general or special meeting, and also for the Directors thereof respectively, from time to time to make such orders for fixing, and by such orders to fix, the sums to be charged by the said Company in respect of small parcels (not exceeding 500 lbs. weight each) as to them shall seem proper."

I shall now apply myself to the first question—

Digitized by Google

Mr. Baron ALDERSON—What additional power does the 158th give—I see it extends to persons?

Mr. MARTIN—I do not know what additional power, but it has been used as a machine for an attempt to put on another rate.

Mr. Baron GURNEY—There is no mention of *small parcels* in that.

Mr. MARTIN—The 159th. It is difficult to say what is the meaning of it.

Mr. Baron ALDERSON—How can they stand together—the 156th and 158th.?

Mr. COWLING—One is for providing *locomotive* power.

Mr. Baron PARKE—If a person wants to hire locomotive power from them, they may charge what they please; if they carry goods, they must make reasonable charges.

Mr. MARTIN—I suppose, my Lord, that is so, and that is the view I mean to submit that section 158 has nothing to say to the question now before your Lordships.

Mr. Baron PARKE—That seems to provide for cases for hiring as to other carriers.

Mr. MARTIN—Like hiring a horse, that would be the subject matter of *a bargain*—the parties would take care of themselves.

Mr. Baron ALDERSON—People wanting to take a special engine.

Mr. MARTIN—The first point I shall submit is, that the first two cases stated in the special case are not within the 159th section; that is, that these goods were not "*small parcels*" within the 159th section.

Now, my Lords, there can be no doubt what that has reference to, and that it is strictly confined to parcels under 500 lbs. weight. Your Lordships are well aware that there are a great variety of parcels in this country where the value is exceedingly great, and the weight extremely small. There are bankers' parcels, solicitors' parcels, plate, watches, and a variety of articles of very small weight; but the value being very great. And it is quite obvious, that to confine a carrier to charge by weight for a parcel of that kind, ordinarily not being more than a few pounds weight, would give them no fair remuneration for their services.

And I submit to your Lordships, it being perfectly clear that this clause was inserted for the purpose of allowing this Company to make a charge for the carriage of such parcels as I have called your attention to, that when a package is delivered to them above 500 lbs. weight, which would afford to them a remuneration for the carriage upon the *weight* of the thing itself, that it does not at all fall within this section. I do not know that it is meant to be contended that that case falls within this section at all, for on looking at the note, or the point which my learned friend has submitted to your Lordships for argument, it appeared rather to me, he does not seem to lay so much stress on this as on the other part of the case.

But I apprehend it is perfectly clear that what I have now submitted to your Lordships is the true construction of this, that that was the object and intention of it.

Mr. Baron ALDERSON—Does it apply to *carriage* at all? Does it not apply to rates of tolls for the *use* of the railway, and instead of charging so much per ton, they are to charge for parcels under 500 lbs. weight, tolls for the use of the railway as much as shall be regulated by the Company themselves?

Mr. MARTIN—I did not feel myself justified in putting so limited a construction on it. I think that gives it the construction which Mr. Justice Coleridge contended for, or rather mentioned, when this case was before your Lordships on another occasion. I meant to submit to your Lordships, that giving the utmost possible latitude to this section of the Act of Parliament, it would only authorise the Company to place a charge upon goods in parcels under 500 lbs. weight, and that the moment a parcel was delivered them in a convenient and proper form for carriage *above* 500 lbs. weight, it was wholly immaterial of what contents that parcel was made up. That was nothing to them, that they should receive full remuneration for all the labour and trouble bestowed by them for the carriage. And as your Lordships know, a small parcel is of necessity much more liable to pilferage and to loss, and requires much greater care and attention than a larger one; there is infinite more facility to a dishonest person taking away a parcel of a few pounds weight, than taking away a parcel of 500 lbs. weight; and I therefore should submit to your Lordships, that this was intended to entitle the Company to make a charge upon parcels *under* a certain weight, to give them a due and proper compensation for their labour bestowed upon them.

And my Lords, if anything should be said with respect to the *value*, it is quite clear that these charges have been framed upon tests—not at all the test of *value*—and practically that is of no consequence, for your Lordships know, with respect to articles of real value, there is an Act of the 2nd Geo. IV, and 1st Wm. IV, chap. 65, which affords to carriers a most complete protection in that respect, and therefore, that no argument can arise that a number of very valuable parcels might be put up in one large one, and a vast degree of responsibility would be cast upon the Company in consequence. I would, in answer to that, state, this tariff of charges seems to have been framed, not at all on that view, but has been framed on a view of giving the parties compensation for the labour incurred in the carriage of the article itself; and that practically the Company, or any carriers, are completely protected by the Act to which I have alluded, from any risk that might be supposed to be cast on them if it was lost.

Now, my Lords, if it be so, this parcel being above 500 lbs. weight, and it be not within the 159th section, the question then will turn on the 156th section.

Your Lordships have already observed the charges to be made *there* are *such reasonable charges* as they may from time to time determine upon. And when you come to contrast that section with the 159th, where the matter is left to the Company themselves, it is perfectly obvious that the legislature intended that there should be some controlling power upon the Company in respect of those charges; in the one there is to be a *reasonable* charge, in the other they are left to their own discretion to charge such sum of money as they shall think proper.

I do not know that that would authorise them to charge an outrageous or very large sum; but be that as it may, I call your Lordships' attention to the different terms of the two sections, with a view of showing that either by means of a jury, who are to come to a judgment as a matter of fact, whether the charges are *reasonable* or *not*—or before your Lordships, who in this particular case are vested with all the powers of a jury in respect of these questions—that *you* are to exercise a controlling power, and to ascertain whether those charges are *reasonable* or not.

Now, my Lords, as to the *reasonableness*, it is only necessary to call your Lordships' attention to the second case. I need not trouble your Lordships with the first; the second case put is a parcel of cotton goods. Cotton goods are made up in parcels far under 112 lbs. weight; there is a pack of goods delivered—made up it is found in the most convenient way for the purpose of carriage—it contains seven or eight *separate parcels* of cotton goods; and there is another package of precisely the same sort, containing a number of goods of precisely the same description, the same articles in fact—two packs of goods. They are both to be delivered at some place at Manchester; but when the party to whom they are directed is to receive them, he is to open one of them, and he himself is to take the trouble of sending the different packages contained in it to *several* different individuals at Manchester; but there is not the slightest possible additional labour, additional expense, additional trouble, or additional anything, to the Company; they literally are one and the same identical parcels. For *one* of those the Company charge 3*l*. 1s. 6d., and for the other 9s.

Now can that be *reasonable*? Messrs. Pickford take two packages of goods, perfectly identical, containing, say, nine separate pieces of cotton goods; they deliver them together at the carriers' office—at the Railway Company's office, and they say, "carry those two packs to our office at Manchester; the contents are identically the same—the same article—the same value—the same size—without the slightest distinction of any sort or kind. There is no additional liability or responsibility of any kind."

Now can it be a reasonable thing, can it be a reasonable charge, to charge 3*l*. 1s. 6d. for *one*, and 9s. for the other?

And, my Lords, look at what the effect is. If this charge be held to be a legal charge, the Railway Company at once obtain a complete and entire monopoly of the entire *small parcels*' carriage of goods from Manchester to Birmingham, which is stated in the case to be of immense importance and value, producing an amazing revenue.

I therefore say, my Lords, that that charge is an unreasonable charge in itself, and in its principle conferring a monopoly which the legislature never intended—that it is unreasonable in its principle and in its effects.

Mr. Baron ALDERSON—They are both above 500 lbs?

Mr. MARTIN—Yes.

Mr. Baron ALDERSON—But one is a parcel containing goods consigned to *one* person.

Mr. MARTIN—Both consigned to one person.

Mr. Baron ALDERSON—Both consigned to Pickford and Company, but through Pickford and Company consigned to one person, for which 9s. is charged; the other, which is a *collection* of small parcels, and of the same weight, forming one large parcel, is consigned to Pickford, each parcel being intended for different people, and *that* is the difference between the two; the charge for one is 3*l*. 1s. 6d., and the charge for the other 9s.

Mr. Baron PARKE—The contents the same; one in small parcels—the other in bulk.

Mr. MARTIN—The case I put is, that small parcels are identically the same. I will put a dozen pieces of cotton goods precisely of the same character, but intended as to one of the parcels, that those goods should be delivered by Pickford and Co. to *several* individuals at Manchester; in the other to be delivered at Manchester to one person. For the one they charge 3*l*. 1s. 6d.; and 9s. for the other.

Mr. Baron ALDERSON—You happen to have eight children, and send the clothes of all in one portmanteau. There are eight parcels; it goes to that.

Mr. MARTIN—The thing is too clear, when once your attention is called to the object of it. The object is to get the complete and entire monopoly of the carriage of small parcels. There is no shutting ones eyes to the fact that that is their object; and, my Lords, are they to contend that is a reasonable charge for the carriage and conveyance of that pack? Now, how is it possible? I assume 9s., their own charge, to be a *reasonable* charge. Take their own list of rates. I allow their own charge to be reasonable which they make themselves, they give a list, which your Lordships have before you. List A. your Lordships will find there—the 4th class in the copy of the defendants' list of rates, marked A., 4th class, 25s. a ton. I have taken these for the purpose of arguing the case.

Mr. Baron ALDERSON—I suppose they have made regulations as to reasonable charges?

Mr. MARTIN—They have, and I am going to call your Lordships' attention to them. The rates are A., you have got it before you. Your Lordships will find, the first class 16s. a ton; rates by merchandise trains, first class 16s. a ton, second class 20s. a ton, third class 22s. 6d. The fourth class is that to which I have been calling your attention, which answers my purpose equally well, for the purpose of my argument, as any other. Bales, packs, and cases of cotton linen, and woollen goods. Then they have seven classes; the highest class is 60s. a ton, and the rate of carriage that was tendered for the first parcel was 60s. a ton. And then, my Lords, if you will turn to the end you will find the *smalls*—"boxes, bales, hampers, or other packages, when they contain parcels, or other packages or things, under 112 lbs. weight each, directed, consigned, or intended for different persons, or for more than one person, 1d. per lb. weight." Now I say, my Lords, that that is an unreasonable charge in itself, and I say it is utterly unreasonable and illegal in its consequences.

That it is obviously made for the purpose of doing what they have already done, except in the single instance of Messrs. Pickford, driving every single carrier concerned off the road, and if Messrs. Pickford go they will have the complete monopoly.

Mr. Baron PARKE—That is what you say is *unreasonable*.

Mr. MARTIN—The word *smalls* does not appear to be introduced into this list at all.

Mr. Baron GURNEY—Yes, there are smalls at the 6th class and the 7th class; *smalls*, in the 6th class, 14 lbs. to 84 lbs. 1s. 6d., then, in the 7th class, 1s. 6d.; and *then* per weight.

Mr. COWLING—The word *smalls* includes everything up to 112 lbs.

Mr. MARTIN—Mr. Baron Gurney has got probably a later list.

Mr. Baron PARKE—There are no *smalls here*.

Mr. MARTIN—The one before Mr. Baron Parke is the one that was in use at the time the question arose, *smalls* were not mentioned at all. There were two lists produced before Mr. Robinson, and Mr. Baron Gurney has a later one.

Mr. COWLING—There is a mistake there, *this* is the one I had at the time, which I marked at the time, the word *smalls* occurs three or four times.

Mr. MARTIN—The truth is, there is no wish on the part of Messrs. Pickfords but to have your Lordships' judgment on the *real point*. In the copy I have it is not so, and in the copy that was produced I do not think that did exist.

Mr. COWLING—*This* is the *very* copy that I had at the time. It is stated in the case what the parties understood by *smalls*.

Mr. MARTIN—I thought it was a technical term

Digitized by Google

used among themselves, but did not occur in the list of rates.

On the first part of the case, therefore, I submit to your Lordships that it can not be a *reasonable* charge to charge for a pack identically the same, and in respect of which the Company have no additional labour, trouble, inconvenience, responsibility, or anything in the world, 3*l*. 1*s*. 6d. for the one, and 9*s*. for the other.

Mr. Baron ALDERSON—You say this last class is unreasonable. Boxes, bales, hampers, or other packages when they contain parcels or other packages or things *under* 112 lbs. weight each, directed, consigned, or intended for different persons, or for more than one person, 1d. per lb. weight.

Mr. MARTIN—Yes, my Lord, and your Lordship will see to what extent this would go. I have no doubt whatever that practically in the carrying on of business in any of the large towns of this country, that parties club together and put up a number of parcels to be sent by a carrier, and that Pickford and Company do not know when a package of goods is brought to them whether everything that is contained in it is meant for the individual to whom it is *directed*. It is utterly impossible for them to know it, and they do not know it; and this mode of charging would lead to an opening of every parcel of every sort or kind that is sent, to ascertain whether or not there was any article contained there that was intended for a different individual.

I have no doubt that practically the thing takes place every day, and that two or three neighbours, having occasion to send down some goods to Manchester, for the sake of saving the trouble of extra packages and coverings, find it is more convenient for them to get one man to put them up together, and make them up in one parcel; and yet this Company contend, although no possible additional trouble or inconvenience is put on them, that they have a right to open that parcel, for it comes practically to that, to ascertain whether or not the contents are going to one individual or not; and it is quite idle for me to comment on the obvious consequences. The effect of it must of necessity be what I have stated. That if Pickford and Company are to pay to the Railway Company precisely the same price which the railway charge a private individual, they have no *margin*, as it were, to make any profit, and it is utterly impossible they can continue. If the Company charge them precisely the same price as they charge individuals to whom they deliver the goods, neither Pickford and Company, nor any other carrier, can by possibility make any profit, and the trade is gone utterly.

On this part of the question I submit the case is clearly within the 159th section, and that it is impossible to contend that this is a *reasonable* charge.

Now, my Lords, the first question is the same as the second; I need not trouble your Lordships further with it.

The several parcels of goods contained in the first hamper were of different sorts; in the second they were the *same*. The second was a parcel of goods—of woollen, linen and cotton goods—falling within that article 4, in the rates you have seen. The first parcel mentioned in the case was a number of goods, composed of tins, books, hardware, and different articles of different kinds, and the tender for that was at the highest rate of charge made by the Company, 60*s*. a ton. It is quite clear the judgment on the second case must of necessity follow the other.

I will now call your Lordships' attention to the second question—practically the second, which arises on the third case.

And, my Lords, important as the former one was, it as nothing compared with *this*—in point of fact this involves the entire land carrying trade between Lancashire and London. And if the defendants are entitled to your Lordships' judgment upon it, they have a complete monopoly of it, incapable of being touched by any person or any individual in the world, and the trade which has afforded for years employment for thousands and thousands of persons, will be got alone by this Grand Junction Railway Company, to the exclusion of everybody else. And, my Lords, the machinery whereby it is effected is the simplest probably that your Lordships ever heard of; and it is merely *this*, by making *one* charge for the *delivery* of the goods to the consignee. They make a charge for the conveyance of the goods from Manchester and the delivery to the consignee in Cheapside. And if they have a right to do *that*, your Lordships will see in one moment the same consequence will follow.

Mr. Baron PARKE—What you mean by the second case is the third case.

Mr. MARTIN—Yes; and so I have said.

Mr. Baron PARKE—The two first are the same.

Mr. MARTIN—Just the same. "The *small parcels* question" is the name by which it is known.

Mr. Baron ALDERSON—They charge for the whole, including the charge on the railway, *and* the charge for *delivery*.

Mr. Baron PARKE—Whether they have the right to charge the same for carrying goods from Manchester or Liverpool to London, *and delivering them* as for carrying them from Manchester to Camden Town, and leaving them there?

Mr. MARTIN—Your Lordship in one moment will see.

Mr. Baron ALDERSON—No objection to their making that charge for the *whole*, provided they make that charge consistent with the two portions.

Mr. MARTIN—We make no objection in the world to it; we have no objection to their making a charge.

Mr. Baron PARKE—You say they cannot charge the same thing for carrying to one station short of London, and carrying to London; nor can they charge the same thing for carrying to Camden Town as to anywhere in London.

Mr. MARTIN—Messrs. Pickford and Company have been for years large carriers from Manchester to London as I have already said.

Mr. Baron ALDERSON—It is saying, "I persist on delivering it to you at your own house." It is in fact saying *that*—that is what it is:—"I insist on being *your porter* as well as your *carrier*."

Mr. MARTIN—As I have already stated to you, these railways have already done away with all kinds of land carriage—there is not a coach from London to Lancaster, or a waggon or van. A great deal of merchandise goods must come by land carriage; the other is a great deal too slow for them. What they say is:—"We will *deliver* your goods at any place within the limits of the London Porterage Act, which includes the whole of the docks, and we will charge you 65*s*. a ton. Now, as Messrs. Pickford are *practically obliged* to bring their goods by this railway, if they be compelled to pay 65*s*. a ton at Camden Town they lose the entire of their trade, and can get no profit at all. Customers will not deal with them on dearer terms, and consequently they will deal with the Company. A man will not pay 1*s*. a ton, or 2*s*. a ton, or 5*s*. a ton to them more than they pay to the Company; and, therefore, if they do business they must do business without the smallest profit. It is clearly to be seen that this leads to a total destruction of their business, and to complete monopoly in the Company. Now, my Lords, I say in the first place, that that is an *illegal charge*, and I shall show it is an *unreasonable* one; and I shall show also that the contract between the Railway Company and Messrs. Horne and Chaplin is in contravention of one of the terms of the Act of Parliament, which compels them to deal with all persons on the *same footing*. In the first place, I say that is an illegal charge—but I shall submit to your Lordships that the charge which is authorised to be made by this Company is a charge for carriages *on the line of railway*.

Mr. Baron PARKE—They are to make reasonable charges by the Act for carrying and conveying *on the railway*.

They ought to tell you how much they charge for conveying *on the railway*, and how much they charge for *delivery*, and they are bound to make a reasonable charge for each.

Mr. Baron ALDERSON—They have a right to charge what they please for porterage.

Mr. MARTIN—That we have nothing to do with.

Mr. Baron ALDERSON—It cannot be a reasonable charge for carriage on the railway, if for that they are doing an additional expensive act for other people.

Mr. MARTIN—*That* is our case, and where the consequence is, as I trust I have pointed out clearly to your Lordships, to give to this body the absolute, complete, and entire monopoly, destructive of the rights of thousands and thousands of people. There is not a single carrier between Lancashire and London but Messrs. Pickford, and they are obliged to send their goods by land.

Mr. Baron ALDERSON—We have nothing to do with the *consequences*, *that* is for the legislature—you must petition.

Mr. MARTIN—In the consideration of whether a thing is reasonable or not, I have a right to submit what is the consequence of these charges.

Mr. COWLING—When they are proved.

Mr. MARTIN—Now my Lords, this section turns on the same construction of the Act, to which I have already called to your attention.

Mr. Baron PARKE—It turns on the 155th.

Mr. MARTIN—And also on some others, which makes it stronger in the subsequent Acts. In the first Act, the Grand Junction Railway were confined to carrying goods between Manchester and Liverpool and Birmingham; but, in an Act of Parliament which they got in 1834, they got a clause inserted, which enabled them to become carriers on other railways.

Mr. Baron GURNEY—Which Act is that?

Mr. MARTIN—That is the 4th William IV, chapter 55.

Mr. Baron ALDERSON—Carriers on other railways! What did the other railways say to that?

Mr. MARTIN—The Birmingham and London Railway have acted with perfect fairness to all parties—they let them carry or any one else, and charge a *toll* with a similar section to the first section, to which I called attention; *this* Company is the only Company that have become carriers of themselves.

Mr. Baron ALDERSON—I thought all railways were carriers.

Mr. MARTIN—The Birmingham and London, I do not think, carry goods at all—they carry passengers. Mr. Cardwell, who knows much more about these matters than I do, tells me they do not. Mr. Cowling says they do.

Mr. Baron GURNEY—What Act is this?

Mr. MARTIN—Act 4 William IV, chap. 55. 16th June, 1834.

There are three Acts which relate to the question: the others are the Birmingham and Liverpool Acts, on which, as it seems to me, nothing turns.

Your Lordships will find the 16th of June, 1834, it passed.

Mr. Baron ALDERSON—What section is it?

Mr. MARTIN—Section 19.

Mr. Baron ALDERSON—Power of carrying goods and passengers.

Mr. MARTIN—Your Lordship will find there that the section 156 in the former Act is recited. It is recited, "And whereas in the said recited Act it was enacted that, subject to the limitations and directions therein contained, it should be lawful for the Company to use and employ locomotive and other engines, or other moving power, and in carriages and waggons drawn or propelled thereby to carry and convey upon the railway, by such Act authorised to be made, all such passengers, cattle, goods, wares, and merchandise, articles, matters, and things, as should be offered to them for that purpose. And whereas, it is expedient that such powers should be extended and enlarged, be it therefore enacted that, it shall be lawful for the said Company to use and employ locomotive and other engines, or other moving power, and in carriages and waggons drawn or propelled thereby to carry and convey, as well upon and along any other railway or railways, all such passengers, cattle, goods, wares, and merchandise, matters, and things, as shall be offered to them for that purpose, and to make such reasonable charges for such carrige or conveyance (not exceeding the amount specified in the said recited Act), as they may determine on." It is perfectly clear this strictly confines them to a charge for the carriage and conveyance upon the lines of railway, and they are authorised to exercise the same rights and remedies as were given by that Act. It is, therefore, obvious from this section, as well as from the previous one, that the charge which they are authorised to make, is a charge for the conveyance of goods along the line, and they have no right to club the charges for the conveyance of the goods on the railway, and to the place of delivery in London, which is found in the case to vary from 5*s*. to 8*s*. a ton, nearly one-ninth of the entire charge altogether. Your Lordships will find the charge for conveyance of goods from the terminus at Camden Town to the place of delivery in London, varies from 5*s*. to 8*s*. a ton, and so found by the case. And, my Lords, the only other section to which I have to call your Lordships' attention is in the new Act of the 3rd of Victoria, "An Act for incorporating the Chester and Crewe Railway with the Grand Junction Railway, May 19, 1840." Now, if your Lordships would turn to the 26th section of that 3rd Victoria, chap. 49, section 26, you will find, my Lords, there it is enacted, the charges by the said recited Act (the recited Act being the Act to which your Lordships' attention has been already called), "authorised to be made for the carriage of any passengers, goods, animals, or other matters or things, to be conveyed by the said Company, or for the use of any steam power or carriage to be supplied by the said Company, shall be at all times charged *equally*, and after the same rate per mile, or per ton per mile, in respect of all passengers, and of all goods, animals, or carriages of a like description, conveyed or propelled by a like carriage or engine, passing on the same portion of the line only, and under the same circumstances; and no reduction or advance in any charge for conveyance by the said Company, or for the use of

Digitized by Google

any locomotive power to be supplied by them, shall be made, either directly or indirectly, in favour of or against any particular Company or person travelling upon or using the same portion of the said railway, under the same circumstances as aforesaid."

It is quite obvious, as I said, that the charge which the legislature authorised to be made was a charge at so much per ton *per mile on the railway*.

And therefore I say this charge, which includes a charge for conveyance of goods from Camden Town to Cheapside, is an unlawful charge.

Secondly—I say it is an unreasonable charge. My Lord, the rates of charge—the list of charges—is marked B, and if your Lordship will—

Mr. Baron ALDERSON—Is not this the conclusion to be derived from it—that all persons are to be charged *equally*? Can it be said, *Pickford* and *Horne* are charged *equally*, when they are charged the same sum in the one case for carriage, *plus* porterage, as in the other case for *carriage alone*. Can anybody doubt that?

Mr. MARTIN—The Company actually receive 55*s*. a ton for carriage of goods on the railway, which includes the trouble of collection and loading in Manchester, which Pickford and Company would save. Baxendale and Company—that is, Pickford and Company—have offered 55*s*.—the same sum, precisely, they have received from Chaplin and Horne; nay more, they save them the trouble of collecting the goods at Manchester and bringing them to the railway, and yet they will not accept that from them. They offer them, for the carriage of goods, precisely the same they receive from Chaplin and Horne, 55*s*. a ton, but they will not take it. It is impossible for any one to shut his eyes to it, when I call your Lordships' attention to this list of charges. It really is so palpable that one would be almost ashamed of the legislature if they would pass an Act of Parliament to enable such a thing to be done as this—a most barefaced attempt.

Mr. Baron ALDERSON—The legislature has done nothing of the sort.

Mr. MARTIN—The legislature never *contemplated* such a thing.

Mr. Baron ALDERSON—They have not done it, I think.

Mr. MARTIN—If you have that list of charges, B, my Lord, they inform the public that they undertake the conveyance of goods to and from the following places:—London, Liverpool, Manchester, Birmingham, Wolverhampton, Stafford, Whitmore, Warrington; and they then give the rates from Liverpool, Manchester, Birmingham, and London. And the first article—the first memorandum at the foot, is, "Goods brought to the station at Camden Town, London, without extra charge."

Therefore, *excluding* any possible profit that might be made from the conveyance of goods to the station "*Nota Bene*, no charge for porterage and delivery in London." Your Lordship sees it is confined to London. They do not make it general; it is not—"no charge for porterage or delivery anywhere"—but "no charge for porterage and delivery in *London*." That is to say, they themselves do *this*: if they have to deliver goods at Portland-place, which is within a mile or a mile and a half of Camden Town, they make the same charge as if they had to deliver the same goods at the London Docks. Now, can anything be more grossly unreasonable than that to begin with. But then, my Lords, it may be said that they have no place of business at Camden Town. Why, the case finds that actually on the very face of the document they put forth, they give as their place of business, "Chaplin and Horne, Camden Town." Your Lordships will find in London by their agents, Messrs. Chaplin and Horne, Hambro' Wharf, Thames-street, *Camden Station*, Golden Cross, Charing Cross, Swan with the Two Necks, Lad-lane, and all the other places. Now, my Lords, is it possible there can be anything more outrageously unreasonable than that to begin with. That they themselves make the same charge, or profess to make the same charge for delivering within half a mile of Camden Town, as 8 miles distance, going through the whole of London; and that that is unreasonable does not depend on the mere reason of the thing itself; but your Lordships are aware the Porterage Acts are all founded on it, and the charges are so much a mile from the coach office where the things come to. That is the construction which the legislature itself gives to this right of porterage for the conveyance of goods from one place to another; but this worthy Company do not regard anything of that kind; they make but one charge, whether taken 7 miles or half a mile, precisely the same thing. Now, look what Pickford and Company do—that letter was written which I have read, I need not refer to it again, in which they offer to go and take the goods at Camden Town, and to pay them precisely the sum of money which Chaplin and Horne pay them—that is 55*s*. a ton—to give them the same profits and the same advantages for the carriage of goods on the railway which they get; but that they won't take. No; they will make their charge to Pickford and Company, 65*s*. a ton, at Camden Town, and they will charge the man in Cheapside where the goods are going, 65*s*. a ton also. It is perfectly obvious Pickford and Company must give up their business, and cannot go on if that is a legal charge. And I apprehend, therefore, that that charge is an unreasonable charge. It is both unreasonable in itself, and it is also unreasonable in its consequences, and in the object which was intended to be promoted by it, and which it is utterly impossible to doubt.

Mr. Baron ALDERSON—The difficulty is, is it not an *unequal* charge?

Mr. MARTIN—I meant now to call your Lordships' attention to that—that it is bad on the third ground, with respect to Chaplin and Horne. I say it is also an *unequal* charge. I have already shown to your Lordships that in reality and in truth the Railway Company perform all they have to do with respect to the goods for 55*s*. a ton, for when I call your Lordships' attention to the agreement between the defendants and Chaplin and Horne, it is certainly a very extraordinarily worded one; but your Lordships will see that by this agreement Chaplin and Horne take on themselves all the liability of carriers from Camden Town—this Grand Junction Railway Company wholly free and discharge themselves from all responsibility after the goods arrive at Camden Town, and Chaplin and Horne take the whole of it on them. By the first article Chaplin and Horne undertake the agency in London, *videticet*, "the unloading and delivery at London of all goods from the Grand Junction line belonging to the Grand Junction Company; as also the collecting, loading, invoicing and porterage on as many goods as they can collect in London for the Grand Junction line, at a charge of 10*s*. per ton, which shall include compensation for all the aforesaid duties, and all the risks consequent thereupon; and also the cost of providing the necessary vans, waggons, sheets, ropes, and other stock necessary for such delivery and forwarding from Camden Town, and porterage of the goods inwards or outwards, as the case may be." In the following page, my Lords, you will find as regards the settlement for damage—"Messrs. Chaplin and Horne assume as aforesaid, all which may arise from negligence in porterage, unloading or loading at London, or from wet or damage"

Mr. Baron GURNEY—What page?

Mr. MARTIN—The first complete paragraph in the following page, page 2. It is a separate paper; the agreement between Chaplin and Horne is on a separate paper.

Mr. Baron ALDERSON—As regards the settlement of damage, the second paragraph.

Mr. MARTIN—You will thereby see that Chaplin and Horne take on them the entire responsibility from Camden Town, from the arrival at Camden Town, for any loss which may occur afterwards. And so that really and practically, and in truth, the Grand Junction Railway Company are carriers from Lancashire to Camden Town, and there the entire of their responsibility stops. And for that they get 55*s*. a ton. Now, my Lords, is *this* an equal charge? Chaplin and Horne are persons in precisely the same situation as Messrs. Pickford and Co.; they go to the railway station; they pay 55*s*. a ton for goods; they receive them; and they then have 10*s*. a ton for what they are to do with the delivery. Pickford and Co. are also carriers: they go to the Grand Junction Railway Company; save them the entire trouble of collecting the goods in Lancashire; they collect them for them, and take them to the station. *They* say, "carry those goods for us to Camden Town; we will then pay you precisely what you receive for the carriage of the goods which are given to Chaplin and Horne; we pay you the same price; give us our goods." They say, "no, we wont; we will charge you 10*s*. a ton more than we charge Chaplin and Horne." Is that dealing with these parties on *equal terms*? Your Lordships will look at the real circumstances of this case, and I apprehend this one charge for conveyance of goods, and delivery in London, is an illegal and unreasonable charge, and the Company are not dealing on the same footing with Chaplin and Horne and Messrs. Pickford and Company; and on these grounds, I submit, the plaintiffs are entitled to judgment in this case.

Mr. COWLING—My Lords, I appear on behalf of the defendants in this case, and I perfectly agree with my friend, that this case is a very important one for the public, and that it raises a great many questions of great importance both to the public and to the carriers. It is of more importance, I apprehend, to the public than to the carriers. My friend is obliged to admit, notwithstanding the strong language he has used against the defendants, and against the Railway Companies generally, that they have caused very great rapidity of conveyance, very great cheapness of conveyance, and that they have also produced other advantages to the public. The public, therefore, are very much concerned in this question, because the question really comes to this—whether those advantages which the public have received are to continue or not. Because these classes of prices which the defendants have established, are established, as your Lordships will very soon see, only for their own protection; and if they are not entitled to that protection, then certainly the other rates must be increased, and the public will be *pro tanto* injured. Now, I deny altogether that the object of the Company is either to obtain a monopoly, or that it is the tendency of this proceeding. If a monopoly will be caused, it will only be caused from this; that the Railway Company are enabled to carry for the public at a much *cheaper* rate than Messrs. Pickford. If so, of course the public will give their business to those persons who can do it the best, and the cheapest; and it is only in that view that a monopoly could at all be likely to follow. I say, the monopoly will only arise in consequence of *this*, that it happens that the Railway Company can do their business at a cheaper rate than Messrs. Pickford, that is the only tendency of it. And your Lordships will observe, although it is found in the case, the present rates are lower than those before adopted; and although this rate of 1d. per lb. has been adopted for some time, not one of the public has ever complained of it—the public never complain—the only persons who complain—

Mr. Baron ALDERSON—*That* is very true—the never do.

Mr. COWLING—They sometimes do, I think. The only persons who have complained are Messrs. Pickford. I think I may say this, that the Court know perfectly well that Messrs. Pickford and Baxendale, the present plaintiffs, were themselves a short time ago the greatest monopolists in the kingdom; and therefore the question really is *this*—whether or not the monopoly which these persons have hitherto enjoyed, and which they have enjoyed as it appears to the loss of the public, because the present Railway Company are carrying cheaper than they carried before—whether their monopoly is to continue or not? Now, I mentioned that this scale of prices is only adopted for the purpose of protection of the Company; and I think your Lordships will see at once that such a protection is necessary. Your Lordships will see at once this case will happen. Suppose the Company say we charge a certain price—

Mr. Baron PARKE—Which scale of prices?

Mr. COWLING—I am going to the first.

Mr. Baron ALDERSON—The "*small* parcels" question?

Mr. COWLING—The small parcels question. This case may easily happen. The Company say we charge a certain price—half-a-crown for the carriage of a parcel of 112 lbs. weight from London to Manchester or some other place. If my friend is right, and we have no power to put a *clog* of this sort, what is the consequence? This case may happen. A carrier says, "I will undertake to carry goods for the public at a much cheaper rate than the Railway Company can. I will carry all goods under 112 lbs. weight for 1*s*. a piece, and I will carry them *by the railway*." And he may easily do it in this way. Many of these parcels are much less than 112 lbs. weight—the great majority are much less—what course would he take? He would receive all the parcels which came to him; he might put 20 together, and the 20 together would only amount to 112 lbs. He himself would pay the Company exactly half-a-crown for the carriage of those goods; he would himself receive 2*l*., or twenty times the price he chose to charge! He would pocket all the difference, although during all that time he himself was at no trouble whatever. The Railway Company was at the whole expense, the whole trouble, and the whole risk, yet they would be in that way defrauded of what they reasonably ought to have, and the carrier would pocket all the difference. I ask the Court whether or not *that* mode of dealing would be fair; and whether or not it is not obvious, unless the Railway Company have the power of protecting themselves by a clause like that respecting the *smalls*—whether that consequence may not very easily happen? And as my friend has gone out of the case, and stated all manner of facts, I should like to know whether these very respectable gentlemen, for whom he has endeavoured to

Digitized by Google

excite the sympathy of the Court, have not been the *ringleaders* in that very course of proceeding? However, I put it as a case that may *possibly* happen; and the question then is, whether or not, under all the circumstances—whether, looking at the case which often happens, and that which easily may happen, the scale of prices is really unreasonable? Now I will take it in the first instance as if the Railway Acts were out of the question, and this were an action—not against the present defendants, who happen to be the Railway Company—but as if the present were an action by a third person against Messrs. Pickford themselves, and the question, whether or not the scale of prices marked A. would not be reasonable if Messrs. Pickford themselves had established it. And I apprehend, my Lords, it would. With regard to that it does not lie on me to show it is reasonable; it lies on my friend to show it is clearly *unreasonable*; because unless my friend can make that out, *then* I apprehend his claim must fail.

Mr. Baron PARKE—He must show that the sum which he tendered was reasonable.

Mr. COWLING—Yes, my Lord. Now with regard to that let me see, whether or not, how this applies as a general rule with respect to the prices of carriers. I refer to the case of Blank against Jackson, a case in the second Peake's *Nisi Prius* cases, page 195. I refer there merely to the general rule, there my Lord Kenyon says this, "there are Acts of Parliament which authorise Justices of the Peace to fix the rates to be taken by carriers, and I have known instances of applications to the Sessions for the purpose, but when no right is by law fixed the carrier is entitled to say on *what terms* he will carry. He is not obliged to take everything which is brought to his warehouse, unless the terms on which he chooses to undertake the risk are complied with by the person who employs him. That is the general rule." So in the recent case of Wyld and Pickford in this Court.

Mr. Baron ALDERSON—Why do you charge more for *small parcels* than for large ones?

Mr. COWLING—I will come to that in a minute.

Mr. Baron ALDERSON—I do not doubt what your answer will be; I think it is the *test* of the question.

Mr. COWLING—In Wyld and Pickford, 8th Meeson and Welsby, page 448; I am at present referring to page 458, and the judgment of the Court is this, "We agree *if* the notice furnishes a defence it must be either on the ground of fraud or of a limitation of liability by contract, which limitation it is competent for a carrier to make, because being entitled by common law to insist on the full price of carriage being paid beforehand, he may, if such price be not paid, refuse to carry on the terms imposed by the common law, and insist upon his own. I quote that to show this, that the defendants as common carriers may insist on their own prices unless my friend can show that those prices are unreasonable. It is not enough for my friend to show one price may itself be large, if the *prices generally speaking* for the carriage of goods are reasonable; then I apprehend the Court cannot enter into the question whether the price in *one* particular instance is more than it ought to be or not. Take the common case of an innkeeper or the like, every tradesman that can be mentioned almost would have some charge which other tradesmen charge less for—altogether the price may be the same. In an action on a tailor's bill what is more common than for a witness to say, "I should charge less for *this*—but taking the whole, I think the prices reasonable." That is the case here—it is found distinctly by the case, the prices the Company charge are *lower* than were charged before; that I apprehend being so, the Court cannot inquire whether under some particular circumstances one particular price might be reduced or not. Even supposing they could, I apprehend, my Lords, that these prices are reasonable. It is quite clear that a carrier is to be paid a reasonable remuneration for what he does. That remuneration depends not merely on the labour he undergoes, but also the risk incurred during the same time. So far, I apprehend, it is quite clear. Now, how is that risk to be known, unless the carrier is aware what are the goods he carries? The goods may be more or less valuable, and of course there would be a greater or less degree of risk and responsibility incurred. That being so, he certainly must have some way of ascertaining what is the proper remuneration.

Mr. Baron ALDERSON—That involves the notion of unpacking everybody's parcels.

Mr. COWLING—I apprehend it is quite clear he cannot compel the party to unpack, *that* he cannot do. What is he to do? Is he to take the word of the party that the goods are so and so? Is that a sufficient protection? I apprehend not. If he cannot compel the party to unpack, he is not to be satisfied with their words of the contents of a package. What is the course to be taken? No other, I apprehend, than the course taken now. The ordinary course between carriers and their customers, I apprehend, is *this*, that each customer sends his own goods. That was the old practice, and that is the general practice at the present day, and I apprehend the liability which carriers incur was first established by law with reference to that case, although my friend has said it is every day's occurrence, people club their goods together and send them that way. I apprehend that is not the case, nor did the law of carriers ever establish the responsibility of carriers with a view to that. The old course was that each party sent his own goods by the carrier.

Mr. Baron ALDERSON—*Who* is the *contracting* party with the Company here?

Mr. COWLING—It may be Messrs. Pickford.

Mr. Baron ALDERSON—Each *contracting party*. What have you to do with the sub-contract which I may make?

Mr. COWLING—That comes to this, to make it out that a Railway Company may be converted into the servants of other carriers, which the law has never established yet. The common case is, the carriers must carry the goods of third persons, their own goods, but if they can find that those goods are really the goods of other people, the course I apprehend would be to refuse to carry the goods, and if they may refuse to carry those goods, then they may say, "We will not carry them unless on what we consider reasonable terms." I will refer to one or two cases on this point before I go further. The question on the liability of carriers was a good deal considered in the case of Riley and Horne, in 5th Bingham's Reports, page 217, and there in delivering judgment, which seems to be a very elaborate one, in page 224, the Court say *this*, "We have established this point, that a carrier is insurer of the goods which he carries, that he is obliged for a *reasonable* reward to carry any goods to the place for which he professes to carry goods that are offered to him if his carriage will hold them, and he is informed of their quality and value, that he is not obliged to take a package the owner of which will not inform him what are the contents, and of what value they are, that if he does not ask for this information, or if when he asks and is not answered he takes the goods, he is answerable for their amount."

Mr. Baron PARKE—*That* does not apply to the present case, because he was *told* what they were, the question was asked and there was an answer, which answer does not appear to be an untrue one.

Mr. COWLING—In another part of the same judgment, your Lordships will see what was meant by the Chief Justice in that language; in another part of page 222 he says, "a carrier has a right to know the value and quality of what he is required to carry. If the owner of the goods will not tell him what his goods are, and what they are worth, the carrier may refuse to take charge of them, but if he does, he waives his right to know their contents and value." I apprehend it is quite plain from that authority a carrier has a right to know.

Mr. Baron ALDERSON—He has a right to know whether it was *cotton* goods or *glass* goods, because he would pack them in a totally different way, in one way they might be broken, the other not—the grossest injustice to a carrier if he was not to be informed of the nature of the goods. If these parcels of Messrs. Pickford contained articles which are of a particular description which are charged at a higher rate, you have a right to know what they are, in order to charge them at the proper rate, and if they are various goods, perhaps you may be entitled to charge the whole at the highest rate, which is what they have tendered you.

Mr. COWLING—They tell us the goods are so and so, you do not know that. When we know the goods belong to other persons, but do not know what the goods really are, we have a right to charge them as much as we think reasonable.

Mr. Baron ALDERSON—Can it be other than an unreasonable thing to charge for the aggregate of the goods more than you would if the whole parcel was composed of goods for which you would charge the highest rate.

Mr. COWLING—I apprehend it is because there is a great difference.

Mr. Baron PARKE—You do not refuse to receive them on that ground. That plea of yours is not maintained by the facts; you say you cannot tell without searching, and they refused.

Mr. COWLING—I am not going on the special plea.

Mr. Baron PARKE—The special plea is not maintained; on the *general* plea the question is, whether a reasonable sum was tendered or not.

Mr. Baron ALDERSON—They offered to pay you as much per ton as the highest rate of your charge.

Mr. COWLING—That question is identical with the one I first mentioned. If the charge we make is not unreasonable, then as they did not tender that charge—

Mr. Baron ALDERSON—The question is whether you can make them tender for *smalls*, that is the question when it is *large*.

Mr. Baron PARKE—It comes to that at least. Whether they have a right to charge the price as one entire packet, or whether, bound by these regulations of yours, to pay the price of smalls, or 1d. per lb.

Mr. COWLING—I was endeavouring to show they were not bound to take the word of the other party.

Mr. Baron PARKE—I do not see how that arises here. I do not see how that question arises; explain to me how it arises.

Mr. COWLING—For this reason—we establish this clause about 1d. per pound in order to protect ourselves from being defrauded by the other party. It certainly cannot be that another carrier has a right to take all the profits from us, and do none of the labour; and therefore, we have a right to protect ourselves from that course by saying, when we find you act contrary to the ordinary course, and putting together the goods of other people—of several persons for which you will charge several prices—we will find your own carriers, and we will make you a charge just on the same scale as you would make to the consignees.

Mr. Baron PARKE—The question is have you a right to do that?

Mr. COWLING—That is the question.

Mr. Baron PARKE—They do not refuse to carry, *because* they do not know what the contents of the parcels are.

Mr. Baron ALDERSON—The ground of refusal is the reverse. You refuse because *you do know* what the contents are.

Mr. COWLING—We refuse because we do not know *who* the consignees are.

Mr. Baron PARKE—You refuse because you say you have a right to be paid for each parcel, and they say you have not.

Mr. Baron ALDERSON—If the contents of the box were spread out before you, and you saw them all, and they were put into the hamper before your eyes, you would be no wiser than you are at this moment?

Mr. COWLING—The question is, whether if we saw that, we should not have a right to charge for several parcels the same rate the plaintiffs make against the consignees. I do not know what can be said to be unreasonable in that. We are not bound to take their word. I would refer to Kenrig v. Eggleston, in Aleyn's Reports, page 93, to show the loss we might sustain in consequence. However, as the Court says the question is the same as if we saw the goods, whether we could charge separately or not, I come to that question at once. I apprehend we have a right to make a difference of charge in that case. When the goods belong to various persons, we incur more responsibility than when they belong to one person only. If they belong to various persons we might have various actions brought against us, whereas if they belong to one person, only one. Suppose those goods were lost, is Mr. Pickford the only person who could bring an action against us? I apprehend it is quite plain every person who gives his goods, and whose goods Mr. Pickford has thought proper to mix up with others, that *every one* of those persons might maintain an action against us.

Mr. Baron ALDERSON—How do *they contract*?

Mr. Baron PARKE—How do any one of the persons who send parcels by that conveyance contract with *you*?

Mr. COWLING—It might be said that they are their goods.

Mr. Baron PARKE—The contract is with Pickford and Company, Pickfords are common carriers as relates to the persons who send these.

Mr. COWLING—Suppose they say that those goods ought not to have been in our possession, and they brought an action of trover for the supposed conversion of those goods while in our possession, should we not be liable?

Mr. Baron PARKE—Suppose you were to destroy them, take it into your head to destroy a part.

Mr. COWLING—I should not wish to suppose that case. An *accident* might happen by the boiler bursting.

Mr. Baron PARKE—You are not liable to any action that arises out of breach of contract, that must all be brought against Pickford.

Mr. Baron ALDERSON—This is the charge in respect of a contract you make with the person for whom you carry. Your contract is with Pickfords, and with

Digitized by Google

Pickfords alone, and if you break your contract Pickfords alone can bring the action. I think that is the *test*.

Mr. COWLING—He may be the only person to bring an action of contract. I am speaking of an action on the case for non-performance, or *non-feazance*.

Mr. Baron PARKE—If it arose out of a duty Pickford must bring it.

Mr. Baron ALDERSON—If you do a wrongful act, then you may make yourself responsible.

Mr. Baron PARKE—On the custom of the realm you might.

Mr. COWLING—If goods are packed indiscriminately, there is the chance of those goods taking fire. That might arise also. There is more danger in that way than when the goods are packed by the same person—all belonging to one.

Mr. Baron ALDERSON—It would be his carelessness. By your hypothesis he packs them in the hamper, it is his carelessness in putting improper goods together, and not you; and he would be responsible and not you.

Mr. COWLING—That would be a very good answer for us. Supposing an action brought against us by Pickford; suppose in consequence of this injury happened to other goods in the train, and we rendered liable to 50 others for various goods taking fire, what satisfaction would it be for us to say, "We are not bound to pay Messrs. Pickford for the value of the goods they consigned," should we not be liable to pay for the other goods so injured? It would be no defence to say, these goods were put on board our train by Messrs. Pickford.

Mr. Baron ALDERSON—You are, by the hypothesis, to know what the goods are you know.

Mr. COWLING—Yes.

Mr. Baron ALDERSON—You know what goods proper or improper are packed together. You exercise a judgment on that. If improper to be packed together you may refuse to carry them on that account.

Mr. COWLING—We might. The question comes to the same thing.

Mr. Baron PARKE—I want to be satisfied whether any increased responsibility is incurred by the Company from carrying a number of small parcels, addressed to different consignees, contained in a large package, or an entire package of the same commodity; if you can show there is an additional responsibility, then there is a good ground for increased charge.

Mr. COWLING—I can only mention this ground I have already mentioned.

Mr. Baron PARKE—I want you not to abandon that ground for the present.

When they belong to various persons we may be subject.

Mr. Baron PARKE—So far as arises from actions out of contract you are not, because the person who sends the goods and contracts with you is the person to bring the action.

Mr. COWLING—I am putting the case where the action is not one of contract; but where it is one of breach of duty, misfeazance, or the like. Then we might have various defences to one person, and might by chance not have a defence to various persons. We should have a defence as regards Pickfords, but not a defence as regards third persons. At all events, however that might be, supposing we had no defence—

Mr. Baron PARKE—Any action of the custom of the realm. An action on the custom of the realm is not, strictly speaking, an action of contract. You may recover against two out of three carriers. Is not that to be brought by the persons who deliver the goods?

Mr. COWLING—I do not know, I apprehend that clearly would not be so if the plaintiffs are right.

Mr. Baron PARKE—That is to say, supposing these goods were lost, would an action lie at the suit of each of the persons?

Mr. COWLING—I should say it would.

Mr. Baron PARKE—If so you might charge an increased sum.

Mr. COWLING—If they are right in saying they can compel us to act as carriers for them, suppose an accident happened to those goods, and an action was brought by third persons, would they not say at once, when Pickfords brought the goods to us, Pickfords were acting merely as *agents* for the owners of the goods, and each owner would have a right to the damage which his goods sustained. And if my friend is right in saying that Messrs. Pickford may be so, then it would come at once to a *notorious practice*, and then a jury would say the Company perfectly well knew when Messrs. Pickford brought the goods, they were acting for third persons; they might not know who the third persons were, they knew Pickfords were only agents when they received those goods, they contract duties with regard to Pickfords principals whoever they might be, and therefore that they would contract, in point of fact, as many liabilities to as many as there were persons to whom the goods belonged. I apprehend that consequence would certainly follow. Supposing a hamper full of these *smalls* was delivered to the wrong person, what would be the consequence, each consignee might bring an action against us for it.

Mr. Baron ALDERSON—Do you make that out? What authority have you for that? For the present, I think, if you make that out, you go a great way towards establishing your proposition.

Mr. COWLING—I think there was a case of Owen and Burnett. There Mr. Baron Bayley laid down in the case I have put in, the case of goods being delivered to a wrong person, that was a case not of *non-feazance* but of *misfeazance*, that in all those cases *trover* would lie, and if trover would lie what would be the consequence? Would not each owner be able to maintain *trover*? In Owen and Burnett, second Crompton and Meeson, 353; I have not read the case very recently, but it treats all those cases of misdelivery as cases not of gross negligence, so as that an action on the case would not lie against the carrier in the ordinary sense of the word, but as a case of misfeazance. "Secondly, it is said that there was gross negligence on the part of the defendant, and therefore that he is not within the protection of the Act. As for the cases of what is called gross negligence, which throws upon the carrier the responsibility, when but for that he would have been exempt, I believe that in the greater number of them it would be found the carrier was guilty of *misfeazance*. In one case the parcel was delivered to a wrong person; in another it was carried beyond the place of delivery; and in another a different mode of conveyance was substituted. In Smith and Horne the carrier's cart was left standing in the public street unprotected while the porter went to deliver another parcel. In all these cases there was misfeazance," and so on. Then, I apprehend, if there was misfeazance, an action of trover would lie. If trover would lie, then would it not lie at the suit of the various owners of the goods.

Mr. Baron PARKE—Have you Wyld and Pickford there? We had occasion to refer to that.

Mr. COWLING—The case I put of fire is a case that has occurred. It is a case that occurred with regard to packages too, between this very plaintiff and this defendant.

Mr. Baron PARKE—Fire from sparks?

Mr. COWLING—It was difficult to say how the fire arose. They found a fire in the train; that is all they could say.

Mr. Baron ALDERSON—All they *do* say.

Mr. COWLING—That fire may have arisen from the goods themselves, just as the other day a ship was burnt by a fire taking place in the cargo.

Mr. Baron ALDERSON—Very common. Spontaneous combustion. Cotton goods—the waste of cotton, is almost sure to burn if you put it together, if there is any oil.

Mr. COWLING—The Railway Company may incur greater responsibility in one case than the other. If so, what is there unreasonable in this charge. My friend's argument seems to go on the assumption, if two packages are sent, of the same size and weight in every respect, and the same convenience for carrying them, the carrier must only charge the same price for one as the other. The sum which the carrier charges depends much more on the *responsibility* he incurs, than on the mere labour he incurs. What is more unreasonable in that, than in ordinary cases? Suppose, in the ordinary case, a carrier says, I will not take charge of your goods without you pay for the booking of them. A person might say. I will not pay that extra price; I will offer a price for the carriage, and not for the booking. It has been decided the carrier may charge for booking. Suppose an action brought against the carrier, and the question was about *reasonable charge*, would the man prove he charged what was a reasonable charge when he tendered the reasonable charge for conveyance, but not an extra sum for booking. It is quite plain he would not have tendered a reasonable charge. That was decided in the case of Jackson and Blank, in Peake's *Nisi Prius* cases. It is impossible to say this charge is a more unreasonable one than in that case. Again, the judgment I referred to of Lord Chief Justice Mansfield is this, that the carrier may refuse to carry if he does not know ths goods. Well then, if so, he may refuse to carry except on his own terms; and his terms are, "that if you will not let me know who are the consignees, *how many* there are—then I shall charge you this sum."

Mr. Baron ALDERSON—But he does let you know.

Mr. COWLING—He lets me know what goods they are, what nature they are; for several consignees—how many he does not state, for *two* or *twenty*.

Mr. Baron ALDERSON—Yes, he does.

Mr. Baron GURNEY—You exact the same, whether *two* or *twenty*.

Mr. COWLING—We say we will, unless we know what the goods are. We do not make the charge absolutely on them; the party has the option either to show us what the goods are, and then we will charge them in the ordinary way as we charge separate persons, or if he will not do that, so that we cannot make our ordinary charge, then for our own protection we must charge you that more. My friend says, where is the option given?

Mr. Baron ALDERSON—There is no doubt they offered to let you see, or to let you know, what the contents were.

Mr. COWLING—They did not offer to show us. Quite the contrary; that is the very thing.

Mr. Baron ALDERSON—If we should decide the point on that question, that would raise another.

Mr. Baron PARKE—That plea is not made out.

Mr. Baron GURNEY—You claim to charge as many under the weight of 112 lbs. as there are different consignees.

Mr. COWLING—Yes.

Mr. Baron PARKE—Or at the option to take the charge at the end of your paper B., a charge of a 1d. per lb. on the whole. Suppose they were to give you a list outside of the hamper of all the parcels that had all the consignees names, it would make no real difference in your conduct towards them.

Mr. COWLING—Yes, it would; because then we should not charge 1d. per lb.

Mr. Baron ALDERSON—Yes, you would.

Mr. COWLING—Quite the contrary.

Mr. Baron ALDERSON—If they were to say, we will pay you only for the hamper with its contents, you would not be content with that.

Mr. COWLING—We say this, if these packages are for half a dozen people, then pay us the sum those half dozen people would have paid us. If not, then as we do not know how many, whether *two* or *twenty*, we say, "if you will not show us how many consignees there are, *then*, for our own protection, we must charge you *this*."

Mr. Baron ALDERSON—You charge them as if they were *smalls*.

Mr. COWLING—Yes; we give them the *option*.

Mr. Baron PARKE—You have only a right then to insist on your charge for 1d. per lb.—this is your own stipulation—if they are detached parcels, meant for different people, then they are to be charged so much for each; if they are smalls, and united together in one parcel, then 1d. per lb.

Mr. COWLING—That is not the way it is understood by the parties, or in the case. I refer to page 3 in my copy, to show that is not the meaning of the parties; the case states—"The defendants' agent and manager at Manchester, to whom the said last mentioned hamper was tendered, and who was duly authorised by the defendants as aforesaid, at the time of such tender, did not know the contents, or the value or nature of the contents, of the said last mentioned hamper, and so informed the person tendering the same as aforesaid; and the person tendering the same, on being asked the contents, said they were small parcels of cotton, and linen, and woollen goods, thereby meaning (as both parties understood) parcels each under 112 lbs. weight, consigned or intended for different persons, and within the description sought to be charged for by the defendants in the said list of charges either at 1d. per lb. weight of the gross weight of the hamper and its contents, or at the usual small parcel price for each parcel."

Mr. Baron PARKE—If you stick to your own particulars you had no right to make an alternative charge, you were bound to make one. It is quite clear, you know, smalls are detached parcels, addressed to different people, for under 112 lbs. weight they are charged 1s. 6d. each. Smalls, 14 lbs. to 56 lbs. 1s. 6d., then above that, then per weight. That is the charge you make for smalls, this comes within the category which is provided for by the list; but whether that is the boxes, bales, hampers or other packages, when they contain parcels or things under 112 lbs. weight each, directed, consigned, or intended for different persons, or for more than one person, 1d. per lb. weight, that is the rate you are to charge, if that is reasonable.

Mr. COWLING—That is reading the list in a manner different from what the parties understand.

Mr. Baron ALDERSON—There are three rates of charge—one rate of charge at so much per ton, according to weight, that is the first; then your second rate of charges, which you may call collections o

Digitized by Google

smalls—that is 1d. per lb.; then there is the item smalls themselves, 1s. 6d. each. This is at all events a collection of smalls.

Mr. COWLING—That is not the meaning of the parties. The meaning was this, if there were parcels under 112 lbs. for a separate person, then the charge is this, up to 14 lbs. a certain price.

Mr. Baron PARKE—14 to 84 lbs. 1s. 6d. The 6th class. It depends on the class to which they belong, the 6th class, smalls, 14 to 84 lbs. 1s. 6d.; the 7th class, smalls, 14 to 56 lbs., 1s. 6d.; then per weight. That is the charge for detached parcels, parcels which in themselves, as separate parcels, weigh less than 112 lbs. Now you come to this case—which is the case of one box containing other packages, each under 112 lbs. weight, that is the case you provide for.

Mr. Baron ALDERSON—You have clearly no right to charge anything but the 1d. per lb.

Mr. COWLING—The meaning was this; if the parcels of separate persons, then so long as they were not above 112 lbs., our mode of charging is this—up to 14 lbs. is one price; up to 16 lbs. it may be another; then 56 lbs. a third; then 86 lbs. another; then up to 112 lbs. another price—that is the way we charge. If the parties will not let us see, and will not assure us what they really are, *then* if we find that in point of fact there are parcels for various persons, then we charged the 1d. per lb. We give the parties the option.

Mr. Baron ALDERSON—Just suppose Messrs. Pickford had sent a hamper with a list of the parcels outside of it containing an account of each and every parcel which were within that hamper—each and every of them, say 20, being directed to different persons, and you were offered to open the hamper—you did open it, you found correct—and you found there were 20 parcels, each under 112 lbs. weight, and each directed to a different consignee, but all packed together in one hamper by Messrs. Pickford, what could you charge according to your own charges; could you charge anything more than this? Is it not "a hamper containing packages under 112 lbs. weight, each directed and intended for a different person?" If so you are to charge for that hamper 1d. *per lb.* If words can speak plain *that* is what you have done, and what you have said.

Mr. COWLING—All I know is this, however that list of rates may be *construed*, the words were meant different, and it was different according to the case.

Mr. Baron PARKE—They make an offer they might either pay that which you do charge in your list, or another which you do not charge. If either one of the two was reasonable, and was not the sum that was tendered by the plaintiff, why then *cadet questio.*

Mr. MARTIN—If you will calculate you will find the 1d. per lb. is a very heavy penalty, far above the price of the small parcels.

Mr. Baron ALDERSON—I dare say it is.

Mr. Baron GURNEY—In all probability it is.

Mr. COWLING—Then why will they not pay per parcel.

Mr. Baron ALDERSON—If they are liable to the 1d. per lb. they will; they will send you the *smalls*, no doubt about that.

Mr. Baron PARKE—Those two charges are very unreasonable compared with each other, because you ought to charge less if they are an entire parcel, because whether or no they incur the same responsibility in consequence of their being separate parcels, greater than they would have incurred if one entire parcel belonging to one person, it is certain they do not incur, by any means, the same degree of responsibility from 10 different parcels put together in one parcel, as they do if they are sent separately, and yet by your particulars you charge more for putting into a large parcel than the other way. However that question does not arise at present, unless the sum that was tendered by the plaintiffs was reasonable, he has no right to recover you know. That is the case.

Mr. MARTIN—If your Lordships will allow me to call your Lordships' attention to the concluding paragraph of the finding that the sum which was tendered was the full amount they were entitled to demand, and receive for the rate, except they were entitled to charge for each parcel separately, or to charge 1d. per lb. for the gross weight.

Mr. Baron GURNEY—You are to show you tendered a reasonable sum.

Mr. Baron ALDERSON—This question is, whether they tendered you a reasonable sum; not whether the 1d. per lb. is a reasonable sum, which it certainly is not.

Mr. COWLING—All I can say on that point is, we say, giving them the option in that sense, it is reasonable. If the Court go on the ground that they must construe that list of rates as not giving the *option*, then this case will be thrown away, because *that* is not the way the parties understood it.

Mr. Baron GURNEY—It does not at all signify, because *they* can succeed only by making out they have tendered a reasonable sum, and it is found in the case the sum they have tendered is reasonable, unless you are entitled to charge either one or the other. Make out you are entitled to charge *either* one or the other, and you negative their case.

Mr. Baron ALDERSON—Either will do for you.

Mr. Baron GURNEY—It does not embarrass your argument.

Mr. Baron PARKE—Not at all.

Mr. COWLING—It lies on my friend to show it is unreasonable, I contend it is no more unreasonable than the ordinary case of charging *booking*, than the ordinary case where the carrier says, "I won't be responsible unless you conform to my notices." In all those cases it may be said, the carrier is taking the law into his own hands, and yet the Courts have said over and over again, those notices and contract on them are reasonable.

Mr. Baron ALDERSON — The only difficulty and embarrassment that is produced in this case is *this*, it may be that neither the charge for smalls as separate parcels, nor the 1d. per lb., are reasonable charges, therefore on *this* case it would follow that they have tendered a reasonable sum. Nevertheless it may be, that if you do incur some little additional responsibility by reason of your liability to those separate persons, in respect of this aggregate collection of parcels, that there may be *something between the two* that is still more reasonable than any.

Mr. Baron PARKE—It may be.

Mr. Baron ALDERSON—It may be so, but they ought not to go beyond that.

Mr. COWLING—It would be difficult to say what that precise point is.

Mr. Baron PARKE—You do not say unless they were entitled to charge the sum specified, it is entitled to make a separate charge for each parcel.

Mr. Baron ALDERSON—The question is what your *possible* liability with respect to this action of trover for misfeazance would add to it. It would become less than any assignable quantity.

Mr. COWLING—That is by no means so I think—take this case, these goods.

Mr. Baron PARKE—This risk that you speak of, supposing that there is a liability — that they contract a liability to pay for misdelivery to the different persons who are the owners in the different goods; supposing it is so, and there is an increase of risk, they must pay precisely the same, whether they pay on the entire parcel to Pickford and Company, or each person who contributes to that entire parcel. The amount to be paid is exactly the same, it is only the possibility that those parties may not be satisfied with the amount they offer to pay, and bring separate actions. That is the only increased risk.

Mr. Baron ALDERSON—These actions would almost necessarily be *consolidated*, because it would be precisely the same question in every one. It would only be the additional costs.

Mr. MARTIN—I had occasion to argue in a case in the Queen's Bench, whether an agent who sold in one contract goods of several persons to a vendee, entitled the principal to come in and take his share of the contract, the Court thought not.

Mr. Baron PARKE—One entire price, certainly not. He cannot, because there was no contract made by the agent for his principal.

Mr. MARTIN—Apply that to this case.

Mr. Baron PARKE—When it arises on contract it would not do. There may be something arising on *misfeazance.*

Mr. MARTIN—That would be a breach of duty.

Mr. Baron GURNEY—The question is whether you can set up that your own misconduct subjects you to greater inconvenience.

Mr. MARTIN—That case of trover your Lordship is referring to is a case in Peake. It is the only case on the subject.

Mr. Baron ALDERSON—What right have you to be paid more for the will of your conducting yourselves ill? You are proposing to the Court to say you are entitled to charge more, because you intend to do something wrong.

Mr. COWLING—It is quite impossible.

Mr. Baron ALDERSON—You have a right to charge the risk arising purely out and under your contract. Why should you say, "We intend to burn these goods and to misdeliver them, and therefore we will be paid more for the carriage."

Mr. COWLING—It is impossible for the carriers to guarantee the conduct of their servants; then what *is* to become of the Carriers' Act, which does exonerate carriers from all frauds, felonies, and the like, of their servants.

Mr. Baron ALDERSON—How did they get it?

Mr. COWLING—There is a great risk run which the carriers are obliged to be responsible for, because their servants may misconduct themselves. This supposed risk is by no means so visionary as is imagined. These goods are brought to Pickford's—they do not know the goods—they have not packed them up. When the Railway Company receive the goods from Pickford, how can the Railway Company tell the danger of putting these goods near each other, if Messrs. Pickford may be allowed to throw together all manner of goods?

Mr. Baron PARKE—That remark would apply precisely the same to the contents of a miscellaneous package, all meant for one person.

Mr. COWLING—It is much more likely they will be carefully packed.

Mr. Baron GURNEY—In a separate parcel delivered to you, you do not know the contents?

Mr. Baron ALDERSON—That might happen to an order for miscellaneous articles that would not travel very well together, all coming *directed to one person.*

Mr. COWLING—When these goods are all packed up together for the same individual, it is much more likely to be well packed up; but when packed up by a third person who does not know them, he throws them in a heap.

Mr. MARTIN—If any person has been going away with the railway, if they do not see large trucks full of packages, with "Grand Junction Railway" on them—

Mr. COWLING—If this was brought against Messrs. Pickford they would have a right to have a clause of this sort to protect themselves against being defrauded by other carriers. There is no case yet laying down that a carrier is bound to become the agent of another carrier. That is all which this action is sought to produce. With regard to the Act of Parliament, I apprehend the language of one of the clauses referred to is also in favour of the Company. By the 3rd of Wm. IV, chap. 55, section 159, referred to, the original Railway Act; I am referring now to section 159, the one referred to by my friend.

Mr. Baron ALDERSON—That is the *small parcels'* one

Mr. COWLING—Yes; that gives the Company power to make such orders, and to fix such sums on small parcels not exceeding 500lb. as to them shall seem proper; it has been suggested that is confined to the case of tonnage rates, but I apprehend it is to be extended to all the former cases, and to include all cases within section 156, as well as others. [Mr. Baron ALDERSON—154, 155, and 156.] So that the Company are enabled by virtue of it, to make such rates as they think proper for all parcels not exceeding 500 lbs. Here they had made a list of rates, which includes all parcels going up to 112 lbs. My friend says that clause does not apply, because the parcels in the present case were above 500 lbs. But I apprehend, my Lords, that is really not a sound argument; because if so, then this clause may always be evaded; then a carrier has nothing to do but to take care his parcel is above 500 lbs. weight, then he gets rid of the power of the Company.

Mr. Baron ALDERSON—Then he is driven back on this 156th section.

Mr. COWLING—Then what is the use of section 159?

Mr. Baron ALDERSON—When the parcel itself is less than 500 lbs. weight, the question is then, is this hamper one parcel or many parcels, it is under 500 lbs. weight?

Mr. COWLING—I say it is many parcels, and to allow otherwise would be to allow an evasion of this clause. My friend says it has always been the habit, and the case states it, to charge *small parcels* a particular price; the case also states the Railway Company, and all Companies with rapid conveyance, have always considered *small parcels* matters from which they derive great emolument; the object of this clause was to enable the Railway Company to have the advantage which other carriers by rapid conveyance enjoyed. The question is whether a carrier by lumping together various parcels, each under 500 lbs., can get rid of this clause. I apprehend he cannot. It would be a great mischief if he could; because, if so, then a considerable part of the object which the Railway Company had in getting this clause would be entirely frustrated. My Lords, I really will not trouble the Court any further with regard to the first part of the case, I have said all I can on that point. I will trouble the Court a little with regard to that which relates to the second part of the case. That applies to the third count. With regard to the third count, which my friend says

Digitized by Google

raises a much more important question than even the other two counts. My friend says the conduct of the Railway Company here has nothing but a tendency to create a monopoly, and their conduct is both illegal and unreasonable. If so, it is very extraordinary that in this respect we are only following the conduct of Messrs. Pickford, because the case distinctly states that in like manner the plaintiffs and several other carriers have adopted the plan of charging one undivided gross sum only for carriage from Manchester and delivery at the place in London to which the goods are consigned, without making any separate claim for porterage or delivery. In point of fact, we are only guilty it appears now of imitating the plaintiffs.

Mr. Baron PARKE—Your duty arises under the *Act of Parliament* to charge in proportion to the length of *railway* on which the articles are carried. *They* may make what reasonable contract they please with their customers you know.

Mr. Baron GURNEY—They carry the whole way.

Mr. Baron ALDERSON—If anybody deliver goods to be carried by you, you may make what bargain you please for carrying and delivering them, provided you state the different charges if you acquiesce, in the gross sum, *cadet questio*. If they require to have a certain amount charged for the *railway conveyance*, and a certain amount for *porterage*, you ought to do so.

Mr. Baron PARKE—There are persons who are willing to carry their own goods themselves from Camden Town.

Mr. Baron ALDERSON—Surely there can be no question about that.

Mr. COWLING—I will mention the reason why. The Railway Company proceeds in the way all carriers in modern times have.

Mr. Baron ALDERSON—Very convenient as between *you* and *me*, the Railway Company very reasonable.

Mr. COWLING—And any other course exceedingly inconvenient. The reason why they adopt that plan is this, everybody knows to allow porterages to be charged variably according to the distance from the point where the stage-coach arrives, very often tends to produce a most extraordinary discrepancy in the price. A peer is charged more than a commoner, a gentleman of fortune more than a tradesman, a tradesman more than persons in an humble walk of life, even the same distance. How is it possible to charge for the distance from where the coach puts up, whether it goes to the Strand or Fleet-street.

Mr. Baron PARKE—There is no reason why they should not charge the common charge for carrying to Camden Town.

Mr. Baron ALDERSON—No objection to that; if I choose to take my own goods away why should I pay porterage at all?

Mr. Baron PARKE—That is the objection on this part of the case. If there was a man at Camden Town willing to receive his own goods you have no right to make a charge to him except for the carriage *on the railway*.

Mr. Baron ALDERSON—Surely that can hardly be argued.

Mr. Baron PARKE—You must say *what* that charge is.

Mr. Baron ALDERSON—If you separate the charge into two you may make it, still I have a right to take my goods away without paying for porterage.

Mr. COWLING—Your Lordships will see the charges in this respect are found to be cheaper than they have ever been found before, whether inclusive or exclusive of delivery. I was going to mention the language of their list of rates in this respect. The language is this, "Goods brought to the station at Camden Town, London, without extra charge. N.B. No charge for porterage and delivery in London." The meaning of the parties is this, "we charge for our conveyance to London so much, and for *that* we will also deliver the goods," so that the charge in point of fact for the delivery of the goods is not a separate charge; we charge for *conveyance*; it is only really a portion of it. We say "in addition to our charge for conveyance we deliver our goods also; but we will not have any deductions made from that charge."

Mr. Baron PARKE—That is not a reasonable charge, it is an unreasonable thing to charge the same thing for carrying and delivering, as for carrying only.

Mr. Baron GURNEY—And your bargain with Horne shows you so consider.

Mr. Baron ALDERSON—You give him a profit of ten shillings for doing that which you give Pickford nothing for. That is not equal.

Mr. Baron PARKE—It cannot be a reasonable thing to charge a man who is willing to take the trouble of delivering, at the same price for carriage on the railway as you charge another person for whom you take that trouble on yourself—quite beyond all doubt.

Mr. Baron ALDERSON—You do two things—you collect the parcels at Manchester and deliver them in London; you make a bargain with Chaplin and Horne for 10s.; you charge them in truth only 55s. for the carriage on the railway. Is it when you are bound to charge all people *equally*—is it equal to charge Pickford 65s. for that which you charge other people 55s.? It requires nothing but to be stated.

Mr. Baron PARKE—It does not admit of any doubt.

Mr. COWLING—We charge all persons the same price, 65s.

Mr. Baron PARKE—You ought to have a separate charge for those persons who are willing to take their goods at the end of the line, and who do not give you the trouble of taking them to the different places of destination. You are to charge for carrying along that line of *railway*—you do not fix that charge, but you blend it with another—that is unequal; and you charge the same to a person who is willing to receive his goods at Camden Town as for the delivery of them at the London Docks. The very statement of that thing shows it is grossly unequal.

Mr. Baron ALDERSON—You are bound to charge every one equally; I do not think that is an arguable point.

Mr. Baron GURNEY—For the carriage of goods from the station to Cheapside you may charge 55s. more if the people are fools enough to pay; *there* you are under no restraint at all.

Mr. Baron PARKE—What the Act requires is, you shall make reasonable charges for carrying and conveying *on the railway*, cattle, goods, wares, and merchandise.

Mr. Baron ALDERSON—From the railway what you like, the public at large will protect themselves by taking away the goods from the railway if you make an improper charge; if you make a reasonable charge they will take your conveyance if more convenient for them to do.

Mr. COWLING—If the Court are of so strong an opinion.

Mr. Baron PARKE—That point of the case is untenable.

Mr. COWLING—The Court are going a long way, and it will produce great injury. Take the common case of a coach from Manchester to London—a coach may put up at the White Horse Cellar—the parcel is charged the same price to London; everybody knew it is charged the same price whether delivered by the porter or not. Is a person to come to the White Horse Cellar, and say, "you must strike out half-a-crown for this, because I will carry it from the coach-office myself?"

Mr. Baron GURNEY—You omit that to the White Horse Cellar you are under the particular restraint of the Act, and from the White Horse Cellar to my house you are not.

Mr. Baron PARKE—Besides, you should specify for how much you carry to Camden Town, and how much you charge to the residence of the consignee—then the thing will be clear—then on anybody coming to Camden Town ready to receive the goods, they will have the right to have them on paying a reasonable sum for that.

Mr. COWLING—If that Act gives them the power to carry along the railway, it gives them power to deliver also; there is an *implied* duty to deliver—the case shows there is a duty to deliver as well as to convey. I think your Lordships will find in this a great mischief.

Mr. Baron PARKE—You cannot charge the same sum when a person is ready to receive his goods at the inn, as to another for whom you are to carry them out at a distance.

Mr. Baron ALDERSON—You forget you are under regulations of an Act which requires you to charge fair and reasonably, and then an equal sum. You do not charge a *reasonable*, and you do not charge an *equal*, sum.

Mr. COWLING—In point of fact we do charge an equal sum, as I think I can show.

Mr. Baron PARKE—You do not charge an equal sum on the person ready to receive his goods at Camden Town, and another who has them delivered at a distance. You make a different charge. That is, you make the same charge on both, so that that is unequal.

Mr. Baron ALDERSON—Charge an equal sum for a different thing. *That* is an unequal sum for the same thing.

Mr. COWLING—Supposing for a moment that these charges are unreasonable, the Court seems to have formed a strong opinion on that point. At all events, if they tendered us too small a sum, I apprehend, because we observed—

Mr. MARTIN—That is not the question raised. If you look to the third question raised, the question for the opinion of the Court is—

Mr. Baron GURNEY—Whether the defendants are by law entitled to charge at the rate of 65s. per ton for the carriage of the pack of goods thirdly above mentioned, from Manchester to Camden Town?

Mr. Baron ALDERSON—In truth it would be a very shabby objection.

Mr. Baron GURNEY—And when you carry for the other at 55s.

Mr. Baron PARKE—The offer by the latter is not confined to the 55s., but for any other sum that you charge others on the railway. You claim to take at 65s., and nothing short.

Mr. COWLING—As the Court has such a strong impression against me, it would not be proper in me to attempt urging it any further.

Mr. MARTIN—I will trouble your Lordships with a very few observations—

Mr. COWLING—I do not know why my friend need reply. I have given up.

Mr. Baron PARKE—As to the last point only. We have expressed our opinion you cannot charge 65s. a ton to the person who is willing to take his goods at *Camden Town*, that being the sum you charge for carrying and distributing; at least you must charge less to a person who is willing to ease you of the trouble of distributing, or else the charge is unequal. That disposes of the *third* question.

Mr. Baron ALDERSON—We do not say 55s. is a reasonable sum; we only say 65s. is an unreasonable sum.

Mr. Baron PARKE—That is all.

Mr. MARTIN—Your Lordships will find it is found in the case in respect of the sum of 9s. which was tendered, that was the full amount the defendants were entitled to demand and receive for the receipt and carriage of the goods, unless they were entitled to charge for each parcel contained in the said hamper separately, or to charge 1d. per lb. upon the said gross weight. It seems to me, therefore, the question that I have to contend before your Lordships is this, not so much to make out that 9s. was reasonable, as to make out the other was not the legal charge; and the *onus*, which was supposed to have fallen on the plaintiffs, does not arise.

Mr. Baron PARKE—You are on the second parcel?

Mr. MARTIN—The first and second are precisely the same. In respect of the first parcel the same words are made use of, varying the sum. The question I have to submit to your Lordships is this:—that they had no right to charge for each parcel separately, nor have they a right to charge 1d. per lb.; and when I make out that proposition, I am entitled to your judgment. With respect to the charge, your Lordships will see in one moment what is the meaning of this. In the rates themselves there is nothing said about charging for each parcel contained in a lot. Nothing of the kind. There is one provision, and one only, that 1d. per lb. shall be charged when a hamper contains a number of packages amounting to 112 lbs. weight. The least calculation in the world will show your Lourships, if you take any number of small parcels you please, you will find that that 1d. per lb. will be nearly from three to four times the amount of the price of the small parcels separately. So that this is obviously on the face of it a penalty imposed on the parties who put up small parcels together for the purpose of compelling them to pay an extra price; and as this is before your Lordships, not in the shape of a special verdict, but of a special case, I may mention, in truth, your Lordships are as much exercising the functions of a jury as the Court sitting in *Banc*; for those were the express terms on which the matter was turned into a special case by the Chief Baron's direction when the case came on for trial, that your Lordships are to look at the case as persons of sense and intelligence, like the jury in the box would look at it.

Mr. Baron ALDERSON—Where are the small parcels?

Mr. MARTIN—I have not got it in my copy at all.

Mr. Baron ALDERSON—Small parcels.

Mr. MARTIN—If you just make the calculation, 1d. per lb. is a very heavy penalty indeed.

Mr. Baron ALDERSON—"Small parcels under 15 lbs., 15 lbs. to 112 lbs., as 1 cwt."

Mr. MARTIN—They say no single article separately charged for less than a cwt.

Mr. Baron ALDERSON—Only 2s.

Mr. MARTIN—Take ten parcels—ten two's are 20s. It is really what it was meant to be. It is a means for preventing parties sending their goods in this way. Undoubtedly, if my learned friend contends the case falls within the 159th section, there is an end of the

Digitized by Google

case. If this be a small parcel within the true intent and meaning of the 159th section, my learned friend is correct.

Mr. Baron ALDERSON—If all the small parcels were under 15 lbs. weight, then it would be more; they would be charged more as small parcels than 1d. per lb.

Mr. MARTIN— That I suppose they would be. Take a common average. The truth is, we had a calculation, and it formed originally part of the case. It was stated in the case originally, by Mr. Robinson, what was the amount that would have been paid for these parcels. We had a list of the parcels, and had the entire description, and we know what the price was; and that the price of the parcels calculated as separate small parcels in this case, would not have paid the amount charged at 1d. per lb. Mr. Robinson struck it out of the case, with a view not to embarrass your Lordships.

Mr. Baron PARKE—It *might* be less, and it might be more.

Mr. MARTIN—In this case it was a great deal less; I do not enter into the case other than upon the fair remarks arising on the facts found. In truth and in fact the amount, charging these as separate parcels, would be something less than half the amount which was required to be paid here at 1d. per lb. I apprehend it is perfectly clear. It is idle to talk of common law, or questions arising on the common law. These persons are acting with the privilege of an Act of Parliament, and as the case I have read decided you must take those Acts altogether, they have got the *privilege*, and they must take the burthen. The Act of Parliament is obtained by them, and, I apprehend, therefore, your Lordships will say they bring that particular case fairly within the words of it. I do not want your Lordships to strain the Act one way or the other, but to look at it and give a fair and reasonable construction to it, and as has already fallen from the Court, the fair and obvious meaning of this is, as small parcels are more liable to be lost and pilfered—more valuable and more difficult to be carried—it was provided when parcels were brought which the legislature considered small parcels, that they were entitled to make that charge as for *small parcels*, but what they were to look at was the article brought to them. In regard to what my friend has said with respect to danger, it is quite clear that is one of the things carriers must put up with. No danger did arise here; that is an abstract question. Practically, such question does not arise. I do not know whether any of your Lordships have ever happened to be at the Railway station when a train has been going away, if so, you will have seen the Company themselves follow precisely the same course which they are now setting up as one of extraordinary danger. You will see large bags put into a van, and taken down. All that about clubbing the parcels together is merely imaginary. I apprehend the 159th section contemplates the case I have put to your Lordships. If that be so, the case then comes to the 156th; and the question is, is this a reasonable charge? Now, my Lords, as far as I could collect from my learned friend's argument, the only point of distinction he could put to the case which I had the honour of submitting when I originally began was this, that the Company might be responsible to the several different owners of the different parcels, and they might therefore be liable to have several actions brought against them in the place of one. I attended as accurately as I could to all the objections which my learned friend urged to the view, I have been submitting to your Lordships, and as far as I could collect, *that* was the only one in which he stated there was any difference of responsibility whatever, as to any danger arising from combustion, or anything of that sort.

Mr. Baron GURNEY—When there is a mixed cargo they charge the highest rate.

Mr. MARTIN—The very highest rate.

Mr. Baron ALDERSON—It is clear they are entitled to do that, and they are entitled to charge a quarter of a ton for everything less than a quarter of a ton.

Mr. MARTIN—So we tender it.

Mr. Baron ALDERSON—Supposing silk was the highest thing, and there was only 1 lb. of silk in it, they would be entitled to charge a quarter of a ton of silk.

Mr. MARTIN—They would.

Mr. Baron ALDERSON—When you have a collection of small parcels there is the *advantage per contra*, to be set against that additional note Mr. Cowling puts.

Mr. MARTIN—What I was submitting was this, if your Lordships are sitting here as a jury—as persons [illegible] knowing how business is carried on in the [illegible] way; and your Lordships know it is idle to [illegible] that; for, practically, the goods are all put up together precisely in the same way. If they went in small parcels they would be put up precisely in the manner Pickfords put them up.

Mr. Baron PARKE—The clause relating to a fractional part of a ton applies to tolls and rates.

Mr. MARTIN—We have tendered to them, with respect to the first parcel, the largest price.

Mr. Baron PARKE—We were only considering whether there was anything to set off against the increased risk by being liable for misdelivery to the owners of the different parcels. Whether there was any advantage to be set off. It arose from the 161st section. When we look at the 161st section, I doubt whether that applies to anything but tonnage tolls or rates.

Mr. MARTIN—I was stating practically.

Mr. Baron ALDERSON—They charge them in addition to the rates. Part of this charge is a charge for rates.

Mr. MARTIN—Yes.

Mr. Baron ALDERSON—The entire thing includes tonnages, tolls, and the charge for carriage.

Mr. MARTIN—It does, my Lord. I was just making the observation to your Lordships. All that was said by my learned friend with respect to the danger of combustion is perfectly idle, and has really practically nothing to do with the question. Your Lordships know, if these goods were delivered in separate parcels to the Railway Company, they would be all put together, and placed together in a confined place; and if there be danger by combustion, there would be quite as great danger arising from being placed together there as being placed in a hamper by Messrs. Pickford. Precisely the same thing would be done with them. It does not signify whether the goods are put in a hamper together, or in a railway carriage together. Look at the consequence my friend would draw from it. That because in a certain state of things a number of packages would be packed together from which danger would arise.

Mr. Baron ALDERSON—I do not think the Court feel pressed about *that*, that would apply, Mr. Martin, equally to goods belonging to the same persons.

Mr. MARTIN—Because danger might arise to one or two articles you would justify the Railway Company setting up a charge to affect thousands of other articles from which no danger would arise. To some extent your Lordships are exercising the same control a jury would exercise; it would be absurd to speak of questions that *might* arise once in 10,000, in regulating the precise necessary charge to be made in 9,999 charges that might occur. Carriers must take the good with the bad; there is a *possible* risk; but in such a large class of cases as one out of 10,000, what is the use of it. It is utterly impossible for reasonable men to take that case as a rule for the case occurring every day. When the goods are of the same kind, a pack of woollen goods, no such difficulty could arise, and my friend would have your Lordships say, because he can suggest a danger in respect of a parcel of *gunpowder*, that *that* is to give the rule for a charge of a number of cotton and woollen goods sent down, the great objects of traffic between London and Manchester. It at perfectly absurd. With respect to the point this seemed somewhat to press—that is the responsibility—I submit there is no extra responsibility. I should say my Lords, that in respect of everything.

Mr. Baron ALDERSON—Suppose the other case of misdelivery.

Mr. Baron PARKE—I do not see how any difference as to the mode of packing arises. If there is improper packing it is the fault of the owner. You may say there is some little chance of a package being less safe when the articles are sent to the carrier to be packed, because he cannot look at the contents of the parcel—he may put things together that ought not, whereas if the owner sends his own goods, separate portions of his own goods by the same parcel, he knows what they are, and he would not pack things that would be likely to cause mischief together.

Mr. MARTIN—Consider the boot of a coach.

Mr. Baron PARKE—There may be risk from fire communicating to other things.

Mr. MARTIN—Consider the boot of the old mail coaches. The packages are put in there as close as they can without reference to what they are; they are put as tight and as close as hand and foot can pack them, which is really causing much greater danger than practically would be caused by Picktords putting up the goods in one parcel. As to defrauding the Company it is absurd; it is clear that no persons but one or two persons in a very large way of business could do otherwise, 5 cwt. of small parcels is not a very common thing. It does not often occur, but the Company have an immense advantage by this. A word on the responsibility. I submit to your Lordships that so far as regards the duties of a carrier, properly so called, that they are responsible but to one—Picktords alone—and that they would not be liable for anything properly arising from the duty of the carrier to the several owners of those goods. It is true that an action on the case may be maintained—that is, an action in the form of *tort* may be maintained against a carrier; but I apprehend it is perfectly clear—in reality and in truth it is founded on the *contract*, and on the contract alone. And that it would not be competent for the owner of one of these single parcels of goods to maintain an action against the Railway Company for the non-conveyance of those goods, nor for anything short of something that amounted to an improper dealing with the article itself, and which would subject any man to an action of trespass, or to an action as for a *tort*, if he did so with his neighbour's goods. What your Lordship is to look to, is to giving a protection to the carrier as a carrier, and for anything that is done in respect of the non-conveyance of the goods or negligence of the goods, properly arising from the duty of a carrier, it would be of necessity founded on *contract*, which was a single contract. I mentioned to your Lordships the case that occurred in the Queen's Bench a short time ago, where a man acting as an agent for two persons, sold two lots of goods, and in one contract. The Court held that was a case where the principal could not adopt the contract. Because that rule which enables a principal to adopt a contract made by his agent, shall be where the contracting party on the other side is put on the same footing, and inasmuch as the contracting party on one side made but one contract, he was not to have *two* imposed upon him, contrary to his will. It is obvious justice and sense if an agent makes a contract that the principal can step in and take possession of the contract, so as to impose no additional hardship on the contracting party, then he may do so. But then he must adopt the entire contract, he cannot take one part. Accordingly it was held in that case, the result was that the principal could not maintain any action. Now look at this case—Messrs. Pickford receive a quantity of goods; by the receipt of those goods they incur a certain responsibility to the person placing the goods in their hands—they then employ the Railway Company to convey those goods. Could any action, properly speaking, for breach of their duty, as carriers, be brought by the owners of those goods against the Grand Junction Railway? I apprehend clearly not. Because they never entered into separate contracts in respect of each parcel of goods. They did enter into a contract with respect to the entire bulk of goods, *that* they did with one individual—with one set of individuals, and are liable but to one action in respect of it. But my friend says it is true, it is possible they may have a right of action against them and *another*; and so they may—if they take those goods and cut them to pieces with a knife; no doubt they would be liable to dealing improperly to my goods, supposing me to be the owner of them. How can that be set up as a ground for making out the charge *reasonable* which otherwise would be unreasonable? It seems, as Mr. Baron Alderson stated, to make their case out, that they are to do something that is wrong—something positively and *affirmatively* wrong. Wylde and Pickford went on that, Mr. Justice Bayley's judgment, where he says, if a person deals with goods in a manner no man has a right to deal with another's goods, he must answer for the consequences, not as a carrier, but as a wrong doer, dealing with his neighbour's goods in a manner he has no right to do. What I submit is, so far as regards the duty of a carrier, the course of action is vested in Pickford alone, and not in the several persons depositing the goods with them, and they have no right to say "because we or our servants may possibly do something to these goods, which, wholly and entirely independent of our duty as carriers, would cast the responsibility on us by law, that therefore they are entitled to the charge—a double rate of charge." I apprehend, my Lords, there is no principle and no good sense in that; and as for authority for any such doctrine, I am sure, there is none in reality; and in truth, so far as is concerned with the *duty* of carriers, there would be but the same responsibility and liability upon the Railway Company, in the one case as in the other. That they would be responsible to one individual, or one set of individuals alone, and in respect of any right of action that might possibly accrue by reason of any act done by them *dehors* (the *duty* of carriers (a misfeasance), they have no right to introduce that as authorising a different rate of charge, from what, as carriers, they otherwise would be entitled to charge.

Mr. Baron PARKE—Suppose this case; that a person sends by a carrier a parcel of goods to a vendee, which the vendee has ordered, and which are delivered

Digitized by Google

to the carrier by his direction, and on his account, he is the person to maintain the action. Suppose in the same parcel, and for the same price to be conveyed by the carrier, he sends a quantity of goods, on *sale or return*, to be paid for by the vendee, and the goods are lost, what is the remedy against the carrier?

Mr. MARTIN—I should say *one* remedy, by the person sending the goods.

Mr. Baron PARKE—As to one person contracting on the part of the vendee.

Mr. MARTIN—That would fall within the same case I have been suggesting before.

Mr. Baron PARKE—Whether an action on the case would not be in such a case on the custom of England. One half was to be delivered for the vendee, and the other half to be carried to be delivered for the vendor; and both delivered, to be carried at a reasonable price.

Mr. MARTIN—I should say the law would not imply two contracts arising out of a transaction of that kind. It would fall within the rule I have laid down. The law would not follow the property of the goods to the extent of giving two rights of action arising out of one and the same thing. But, my Lords, look what that would come to? Why, it would give a scale of charges for a carrier that would be utterly impracticable to be maintained in any shape or way. A carrier, as we all know; and that is one of the benefits that I have in this case, that your Lordships are sitting as reasonable men, applying your minds to the real and practical state of things throughout the country, as well as judges. And, my Lords, it is not because there there *may* be some such cases put, that the general rule would differ. I should, in the case put, say there is but one contract, and that the law would not follow the property in the goods to the extent of giving to every individual owner of the goods contained in that package a right of action in respect of the loss of it.

Mr. Baron PARKE—It differs from that case in the King's Bench. In regard to the case I put with respect to goods that are sent to the vendee—ordered by him, the vendor is authorised to enter into a contract with the carrier on behalf of the vendee, with regard to the remainder he enters into a contract on his own account; does it deprive each of their remedy against the carrier that it is to be paid for by one common firm—by both?

Mr. MARTIN—Is not the true principle of that, this—in whom is the property of the goods? According to our law, a delivery to a carrier is a delivery to the vendee, and the property vests in the vendee. An action for goods sold and delivered may be maintained, if the statute of frauds does not intervene. It is from that, the law implies the contract as between the carrier and the third party, it is with the owner of the goods; that then being so, it is merely an implication of law, and I should submit to your Lordships, that in a case where a party delivers goods contained in one parcel, partly the owners, his own, and partly anothers, that the law would not imply a contract in that case. That it would be decidedly unreasonable to attach two contracts on one party totally ignorant of the contents of the parcel; that it would be unreasonable, and that the law would not therefore imply the contract which it usually does, when the entire property in the entire parcel vested in one individual.

Mr. Baron ALDERSON—That is a question of law.

Mr. MARTIN—As a question of fact to the jury, such a parcel would clearly not be charged more than a common parcel.

Mr. Baron PARKE—I am inquiring for the present whether different actions could have been maintained by the different owners of the different parcels.

Mr. MARTIN—What Mr. Baron Alderson says is that practically—as your Lordships are sitting as a jury of practical men—no question would ever arise; because the consignee was the vendee of one, and it is his option whether he would be of the other.

Mr. Baron PARKE—That is an illustration to show the consequence of such a contract with the carrier.

Mr. MARTIN—I should submit under such a state of things, the law would not possibly imply a contract arising simply out of ownership.

Mr. Baron PARKE—I do not think it is anything arising out of an implication law. If the goods are ordered by the vendee when the goods are specified, the goods pass by bargain and sale. If the goods correspond with the order, and there is a note in writing, and they are looked out and selected, they become the property of the vendee. When either by express order, or by usage of trade, there is an order sent to the vendor to send the goods by the carriers, he really makes the agent of the vendee for the purpose of making the contract with the carrier.

Mr. MARTIN—I was in the habit of considering it in the other way—that it was a contract implied by law, from the ownership. It appears to me practically that does not come to much. More than that, just observe the nature of it. What is practically the important thing is that it arises from the costs. If there were no costs on either side, whether the carrier was to pay one person or several would be immaterial. He cannot be responsible to a greater extent than the value of the goods. Practically and in truth the fact of a man being liable to several actions does not become a very serious matter.

Mr. Baron ALDERSON—Several actions arising out of different circumstances might be; these are several actions arising out of the same, proved by the same witnesses, and ending in the same result.

Mr. MARTIN—Really and in truth, the only responsibility which the law looks to as responsibility for a carrier, is that he clearly cannot be liable beyond the value of the articles. It is one and the same whether one person receives it, or whether several persons are to receive it. I submit, looking at the question as your Lordships will do (you, I may say, compound the character of a court of law and as a jury adjudicating on it), your Lordships will be of opinion that in this case that what the defendants have done is not justifiable, and that the Messrs. Pickford and Co. are entitled to have small parcels made up into one large one on reasonable terms. The reasonable terms are the terms which the Company themselves lay down. They say, we require remuneration at a certain rate per ton for the carriage of goods. We say, we will give it to you, there are the goods for you; we offer you two parcels of goods precisely of the same character—the same size, the same weight, the same quality, the same value; we offer to you what you yourselves say is the full remuneration for the carriage of one. We say also, that is the full remuneration for the carriage of the other, and that you have no right to require more. I trust I have already satisfied your Lordships, in the event of the defendants being found entitled to your Lordships' judgment, an effect will be produced which will give to these defendants that which I do not believe the legislature ever contemplated, and which certainly, according to the policy of our law, is an event not to be produced except for some very strong case—that is, giving those persons the complete and entire monopoly of these two branches of trade. It is all very well for my friend to say the charges are lower than they were, it is true. It was the plea on which these Companies got these powers. But look what the effect will be if every competitor is driven out of the field. We all know from history the course of monopolies. The moment all competition is destroyed, and they have the thing completely in their own hands, then it is the public begin to suffer, and then it is the public would lose infinitely more than that supposed additional price which, as my learned friend says, would be imposed on them now by allowing Messrs. Pickford and Co. to carry goods and to to enter into fair competition. The Company may always contest with them on better terms than they can possibly do. I submit the public are extremely interested in the decision of this question, and I trust it will be for the plaintiffs on all parts of the case. On one of them your Lordships have already determined, and I trust you will be of opinion equally clearly on the other, the plaintiffs are entitled to your Lordships' judgment. My Lords, I trust I may say that the parties whom I represent are extremely obliged to your Lordships for giving them an opportunity of having the point argued to-day, the matter is one of immense consequence to them and to the public also.

Mr. Baron PARKE—We will give judgment next Thursday morning. We have not authority to give it to-day.

Mr. MARTIN—If your Lordships are prepared there will be consent.

Mr. COWLING—We shall raise no such point as that.

Mr. Baron ALDERSON—However it is more regular to do it; we shall have time to consider.

Mr. Baron PARKE—We will deliver it on Thursday morning.

July 7.—Mr. Baron PARKE gave judgment in this case as follows:—The two main questions raised in this case are first, whether the defendants were bound to carry a hamper containing several parcels, each less than 112 lbs., directed to and intended for different persons, for the sum offered to them by the plaintiffs; and secondly, whether they were bound to carry a parcel from Manchester to Camden Town for the sum offered to them by the plaintiffs. There were two hampers, each containing several small parcels, tendered at different times to the defendants, but the same question arises out of both. The sum tendered in respect of each is found to be the full amount the defendants were entitled to receive for the re[illegible] and carriage of the hamper and its contents, and for all other charges, unless the defendants were entitled to charge for each parcel contained in the hamper separately, or to charge 1d. per lb. on the gross weight of the hamper and its contents. We are to determine, therefore, whether the defendants are entitled to make either charge—a mixed question of law and fact—the fact being submitted to us, by the consent of the parties, as to a jury. Under the Act of Parliament establishing the Grand Junction Railway Company, 3rd Geo. IV., cap. 34, the Company is authorised, by sec. 156, to carry on that railway all such goods, &c., as shall be offered to them, and to make such reasonable charges for such carriage and conveyance as they may from time to time determine upon, in addition to the tonnage and toll, without any other restriction, in the case of goods, than that the charge should be reasonable. By 4th William IV., cap. 55, sec. 19, these powers are extended to the carriage of all goods that should be offered on other railways, but they are still to make reasonable charges for such carriage. By virtue of this clause, the Company in their character of common carriers are bound to carry for reasonable charges, if reasonable charges are tendered. The true question therefore is resolved into this: whether for the hamper containing small parcels it it reasonable to charge either for each parcel contained in the hamper separately, small parcels consigned to different persons, or 1d. per lb. on the gross weight of each hamper and its contents. The charge is no doubt to be varied according to the trouble, expense, and responsibility attending the receipt, carriage, and delivery of the different articles, and for small articles more ought to be paid than a proportionate part, according to the weight and price of larger parcels of the same commodity, by reason of the great trouble in receiving, dispatching, and delivering, as they are exposed to a much greater risk of abstraction or loss. But if all the small parcels are united in one package, and delivered for carriage in that package, consigned to one person, the trouble and responsibility are apparently reduced precisely to the same degree as if all the articles contained in the package were the property of the same owner, and intended to be delivered to him. There would seem, therefore, to be no right to charge for such package of distinct parcels belonging to different owners, more than if they belonged to the same; but then, it is urged on the part of the defendants, that there really is an increased responsibility, arising from the simple fact that each parcel is the property of a distinct owner, because it is said that in the event of a misdelivery the Company would be liable to several actions of trover instead of one; and even in case of loss or damage by neglect each separate owner might maintain an action, on the custom of England, with respect to his own goods. It is very doubtful at least whether on the custom of England separate actions could be maintained, as the relation of employer and carrier would not have *subsisted* between them and the Company, but between them and the plaintiffs. As the action of trover, however, could be maintained, it would not be unreasonable to allow some additional remuneration, on account, not of the liability to pay greater damages, for they would be the same in both cases, but to pay the same damage by means of different suits. We are relieved, however, from the necessity of deciding what the precise amount of additional compensation should be (which at all events should be trifling), because it is admitted in the special case the sum tendered is proper, unless the defendants had a right to charge for separate parcels, which they certainly had not; because neither the trouble, expense, nor responsibility is the same as if the parcels had been separate, or unless the defendants had a right to charge 1d. per lb. We have no difficulty in saying, that the last-mentioned remuneration is excessive, and unjustified by the increase of responsibility, from the circumstance of the properties being separate. It is impossible to support, on this ground, the charge of 4*l.* 1s. 8d. for the first package, of which, if it had consisted of parcels, one property, 1*l.* 6s. 6d. would have been the proper charge, and a charge of 3*l.* 1s. 6d. instead of 9s. for the second. We are of opinion that the plaintiffs are entitled to our judgment on the first question raised between them, which is the subject of the two first counts. On the second question the Court have already intimated their opinion that this Company cannot support a claim for the same sum for carriage to Camden Town, and for a carriage thither and delivery at any place in London. By the provision already referred to they are to carry for reasonable charges for carriage; and by the 3rd Victoria, cap. 49, sec. 26, such charges are to be made equally; and it is clearly unreasonable and unequal to charge the same sum to a consignee who is willing to receive the goods at Camden Town, and one who requests them to be delivered at the London Docks or elsewhere in London. The plaintiffs are bound to pay the balance of 60s. per ton after deducting a reasonable charge for delivering in London, and no more, and the defendants must carry to, and deliver at, Camden Town for that sum. The plaintiffs are therefore entitled to succeed on the second issue raised by the special case, and the verdict on all the issues is to be entered for the plaintiffs.

NOTES TO THE TRAFFIC TABLE,
(on the opposite page.)

2. *Minus* toll to London and Birmingham 3*l.* 15s. 2d.

3. Main line, 53 miles; Tewkesbury branch, 2. — Total length, 55 miles.

4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone. The Company are now before Parliament for power to raise the capital to 500,000*l.*

8. Receipts include the Northern and Eastern toll, &c.

12. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester and Chester and Crewe lines, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 134½ (83½+21+31.)

14. The receipts include those derived from the Cheltenham and Exeter lines: the former opened for 18 miles, and the latter for 45. The divisor employed to ascertain the daily receipts per mile is therefore 181¼ (118½+18+45.) The *rent* of the branch lines is together about 1,163*l.* per week. There is likewise a *toll* payable to the Exeter Company of a farthing per passenger and per ton of goods per mile travelled.

15. The dividends have been hitherto (up to 31st December, 1841) appropriated to completing the line and works.

17. The 29*l.* 17s. 6d. from goods, &c. is for toll only.

18. Ten per cent. is the maximum dividend allowed by the Company's Act.

19. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. The dividend is *nominally* at the rate of 9*l.* 10s. per cent., but to the original shareholders it is equal to 12*l.* 15s. per cent., as the dividend on the original shares is paid upon 100*l.*, although only 90*l.* has been called for; and on the quarter shares upon 25*l.*, although up to the 31st of December last only 5*l.* had been called for. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

20. The dividend is from the opening, and on the old shares alone.

21. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table.

22. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company. The sum applicable to the purpose of the dividend declared on the 10th of March, was 11,125*l.*, of which amount 10,051*l.* 17s. 1½d. had been earned prior to July 31st, 1841.

23. Capital of 993,300*l* includes new capital for widening the line, &c. The want of dividend does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table includes the receipts from the footpath, but is exclusive of the Brighton, Croydon, and Dover toll.

24. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount. The Gosport branch is included in the length stated.

25. Including Toll, &c., from Sheffield Company, and after deducting omnibus charges, &c.

26. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

27. The 4,445*l.* 0s. 1d. are the receipts after deducting omnibus charges, and payments to other Companies.

28. The receipts for goods, &c., include, horses, 43*l.* 17s. 6d.; carriages, 42*l.* 13s. 0d.; dogs, 1*l.* 9s. 6d.; parcels, 230*l.* 1s. 9d.; cattle, 24*l.* 17s. 6d.; corn, 11*l.* 19s. 2d.; heavy goods, 302*l.* 18s. 1d.; coal and lime, 89*l.* 16s. 11d.—Total, 837*l.* 13s. 5d.

31. The 3,850,000*l.* is the *nominal* capital on which dividends have to be paid; the amount actually raised is 3,000,000*l.* The details of the receipts are as follows—Passengers, 2,810*l.* 3s. 8d.; carriages and horses, 142*l.* 19s. 11d.; parcels, 196*l.* 11s. 3d.; mails, 50*l.* 5s. 9d.; merchandise, 1,042*l.* 3s. 5d.; minerals, 230*l.* 4s. 6d.; cattle, 28*l.* 14s. 4d. — Total, 4,501*l.* 2s. 4d.; including amount to be paid by Manchester and Leeds, and receipts for the Sheffield and Rotherham.

32. The receipts are after deduction of Liverpool and Manchester toll.

33. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 13*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 32¼ miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

34. The capital of 533,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).

35. The returns are inclusive of Manchester and Birmingham toll.

36. The traffic stated does not include the Leeds and Selby.

TRAFFIC OMITTED.

Brandling Junction Railway. — *Week ending July 2. — Receipt from passengers (number of passengers,* 10,623), 379*l.* 15*s.* 3*d.*; *goods, &c.,* 428*l.* 4*s.* 3*d.*; *total,* 807*l.* 19*s.* 6*d.*

TO CORRESPONDENTS.

Railway Traffic Returns.—*A Liverpool correspondent says, "it would be gratifying to some, perhaps all, of your readers, if you were to publish a table showing the weekly traffic, with the number of miles open, of every railway in the kingdom since the period of opening up to the present date, to which might be added the half-yearly receipts, the expense of working, and the dividends declared. Such a document would form an interesting history of the working of every railway, and would show in a few years how far the fluctuations of trade affect the traffic." We should have great pleasure in publishing such a table, if the Companies would supply us with the requisite particulars.*

Great Western Railway.—*A correspondent, who says he was a passenger by the 2 o'clock down train on the Great Western Railway, on Friday, the 8th instant, complains that from Reading to within a few miles of Steventon, an engine was placed behind the train, with only an empty carriage truck between it and the passenger carriage in which he was placed.*

London and Brighton Railway.—A Late Proprietor *says, he has no doubt the Directors fixed upon* Friday *as the day for holding the general meeting, in order to prevent the* Railway Times *from fully reporting the proceedings. The day is certainly unusual* for the Brighton Company *(and to us inconvenient), but our correspondent need not fear that we shall neglect our duty.*

A Shareholder in the National Pneumatic Railway Association *is referred to letters which appear in another page.*

Bristol and Exeter Railway.—*There was a very serious error in our last week's notice of this line. The total income was stated "for the line between Bristol and* Exeter," *instead of "Bristol and* Taunton." *The rent, toll, &c., to Exeter, will, it is believed, exceed* 100,000*l.*

Manchester and Leeds Railway Benevolent Institution.—*Mr. W. Robinson's letter cannot possibly be published, while it abounds so much in personalities. The publication in its present state would subject us (and very properly) to an action for libel.*

Atmospheric Railway.—*We have received a second long communication from Mr. Pinkus; but really, until he can disprove (by the production of the original letters) the serious charge of garbling brought against him in our columns of this day, we must decline giving publicity to any further statement of his.*

Mercury.—*We cannot notice a matter so entirely personal, except as an advertisement.*

Proxies.—*In reply to an Exmouth correspondent, we cannot do better than publish the following form, which is, we believe, much the same in all Companies:—"* [*A. B.*] *of* [*London*] *one of the proprietors of the ——— Railway Company, doth hereby appoint* [*C. D.*] *of* [*Liverpool*] *to be the proxy of the said* [*A. B*] *to vote or give* [*his*] *assent to, or dissent from, any business, matter, or thing relating to the said undertaking, which shall be proposed at the general, or special general meeting of the said Company, to be holden on the* [*first*] *day of* [*August*] 1842, *in such manner as the said* [*C. D.*] *shall think proper. In witness whereof the said* [*A. B.*] *hath hereunto set* [*his*] *hand, the* [*16th*] *day of* [*July*] 1842.—[*A. B.*] *Proprietor. N. B.—This proxy must be forwarded to the Secretary of the Company, five days at least before the holding of the meeting at which it is intended to be used, or it will be void."*

Chester and Birkenhead Railway.—*We are compelled to leave over till next week the report of the proceedings at the adjourned meeting. The discussion turned principally on the expediency of constructing a tunnel from Monk's Ferry to Grange lane. This matter is to be again considered.*

Glasgow and Greenock Railway.—*In the report of the meeting of proprietors inserted in our last from the* Glasgow Constitutional, *we find there were various inaccuracies. The receipts for goods should have been* 3,756*l.* 5*s.* 3*d.*, *not* 2,756*l.* 5*s.* 3*d. The name "Thomas Blair, Esq." in the last paragraph, should have been "George Blair, Esq.," and the signature attached to the Report, "Robert D. Ker, Chairman," instead of "Wyndham Harding, Secretary."*

Railway and Steam boat Travelling.—*A notice of Mr. Lang's excellent "Letter to Lord Ripon" is in type, and shall appear next week.*

*** The great length of the important case of "Pickford *v.* The Grand Junction Railway Company," compels us to postpone the publication of a large number of letters. Among these are several communications on the *Midland Counties', Brighton, Greenock, Northern and Eastern, Manchester and Leeds,* and other railways. We shall endeavour to publish many of them next week. We trust our correspondents will excuse a more particular reference.

THE RAILWAY JOURNALS.

The Stamp Returns for the nine months ending the 31st of March last (published by order of the House of Commons), show the following results:—

RAILWAY TIMES	.	**113,374**
Railway Magazine	.	50,500

The total number of Supplement stamps (for Double Numbers) used by the *Railway Times*, during the above period, was 10,874, thus showthe ordinary circulation of the *Railway Times* to be more than double that of its contemporary.

THE RAILWAY TIMES.

SATURDAY, JULY 16, 1842.

In a previous number of the *Railway Times** we gave a somewhat detailed account of the contest then in progress between Messrs. PICKFORD, the eminent carriers, and the Grand Junction Railway Company. The objects of the respective parties were fully explained, and a general business statement made of the affairs in issue between them. We stated that legal proceedings had been taken, and observed that of those proceedings we did not profess to be competently informed, and must defer any communication of their nature until the judgment should come before the public in the usual way. To state that an action had been commenced of course proved nothing, because unrighteous actions are commenced; and it does not follow that the plaintiff is right and the defendant wrong.

In our journal, however, of last Saturday, we gave a short note of Mr. Baron PARKE'S judgment, and to-day we insert at some length the arguments of counsel, and, to render the subject complete, repeat the decision of the Court. A brief summary of the facts of the case may nevertheless be of use.

It appears that Messrs. PICKFORD & Co. having been refused by the Grand Junction Railway Company the free use of their line in the same manner as they and other carriers use the London and Birmingham line, and having also been obliged to pay separately for every separate parcel of a consignment at an increased rate of charge, while on the London and Birmingham Railway no such increased charge is made, resolved in October or November, 1840, to try the legality of the claims advanced by the Grand Junction Company. With this view, Messrs. PICKFORD & Co. wrote a letter to the Grand Junction Company, requesting them to facilitate the legal arbitrament of their differences by instructing their law-clerk so far to co-operate with Messrs. PICKFORDS' Solicitors as to bring the question before the Courts in the readiest and fairest manner. The Company, however, had the heavier end of the staff—control over the railway, its trucks, its locomotive power, its stations, and its capital. They had an object in view, which, to say the least, it must have been very doubtful how far the law would sanction and sustain. They declined the offer. Accordingly a hostile action was commenced by Messrs. PICKFORD & Co. under the following circumstances:—

A clause in the Railway Act having authorised the Company to charge after a certain

* See *Railway Times*, February 13, 1841.

Digitized by Google

specified rate for *small* parcels, and having fixed 500 lbs. as the limit of a small parcel, Messrs. PICKFORD packed together in a hamper the small parcels collected by them in the way of their business, and then tendered the hamper (exceeding in weight 500 lbs.) to the Grand Junction Company at Birmingham, offering at the same time the highest amount which the Company were entitled to ask for any goods in bulk. The hamper was described as containing "*smalls*," and was refused by the Company unless upon payment of the increased rate. The sum tendered was 1*l.* 6s. 6d., the sum demanded 4*l.* 1s. 8d. Messrs. PICKFORD repeated the tender, and gave notice to the Company that their refusal to carry the hamper would be made the ground of an action at law.

Another cause of complaint between the same parties (of which the particulars will be found in our previous numbers) was the practical exclusion of Messrs. PICKFORD from the Grand Junction Railway, by an agreement between the Company and Messrs. CHAPLIN & HORNE, in virtue of which the cartage, collection, and delivery at the termini was to be allowed to CHAPLIN & HORNE, while no such allowance was made to Messrs. PICKFORD. It had been stated by Mr. Moss in his evidence before the House of Commons, that this allowance was 10s. per ton. Accordingly Messrs. PICKFORD & Co. tendered to the Company at Manchester a ton of goods to be carried to London, and with them the following letter:—

"London, February 16, 1841.

"GENTLEMEN,—Our agent, Mr. Robert Moseley, has our instructions to tender to you the goods sent herewith, and specified below, for conveyance by you as common carriers. They are intended for our London house, and are to be delivered to them at their place of business at the terminus in Camden Town. Mr. Robert Moseley has instructions to offer you at the same time the highest price for the carriage thereof which you are in the habit of charging to all persons for the carriage of similar goods, deducting therefrom the allowance which you are in the habit of making under similar circumstances to Messrs. Horne and Chaplin, or to any other persons. Believing that 65s. per ton is the sum charged by you for similar goods when delivered to the consignee within the city of London or elsewhere, and 10s. to be the allowance made thereout to Messrs. Horne and Chaplin, or to other persons, when the same are delivered at the terminus in Camden Town, we have instructed Mr. Robert Moseley to offer you the sum of 55s. per ton for the carriage of the goods sent herewith. Our intention, however, is, to offer you precisely the same sum which you receive from Messrs. Horne and Chaplin, or from other persons, for the conveyance of the same weight of similar goods under the same circumstances, and, if we are under any misapprehension as to the amount, we request your correction in this respect, to which Mr. Robert Moseley has our instructions to attend, and will pay you the right amount according to the same. And in order to prevent any possibility of misconstruction, we beg to say that we are willing to consign these goods as Messrs. Horne and Chaplin, or other persons, consign theirs, and to deal with the same in all respects as Messrs. Horne and Chaplin, or other persons, deal with theirs, when the same are intended to be delivered at the terminus in Camden Town; and to afford you, as carriers over the lines of railway between this place and Camden Town, every facility or advantage which Messrs. Horne and Chaplin, or other persons, afford you in that behalf; and in short, we are willing, and we hereby require, to be placed from time to time, and in all respects, under similar circumstances with them, and that you shall carry our goods at the same reasonable charge as you carry theirs.

"We are, Gentlemen, your obedient servants,
(Signed) "PICKFORD AND CO.

"To the Grand Junction Railway Company,
"Manchester.
"Per Robert Moseley."

This tender being refused, notice was given to the Company that this refusal would also be made the ground of an action.

Our readers are probably aware that by the custom of England a common carrier is bound, on tender of his reasonable hire, to carry the goods of any person who claims to have his goods carried between the places of the carrier's ordinary trade, such goods being reasonably convenient to be carried. In other words, the law regards the carrier as a servant of the public, obliged to serve the whole public on reasonable terms, according to the circumstances of each particular case. It is obvious that if this law were politic on common roads where competition was open, the exclusive powers conferred by nature and Parliament on Railway Companies do not confine or restrict this policy.

An action was therefore brought by Messrs. PICKFORD against the Company, for having refused to carry goods tendered for carriage on tender of the reasonable hire. Two substantial questions were raised for the decision of the Court; namely, 1st, whether the charge for the hamper of small parcels was reasonable; or whether, on the other hand, it was reasonable to offer, as Messrs. PICKFORD did, payment as for bulk for an article which was intended to be carried in bulk; and 2ndly, whether it was reasonable to charge PICKFORD 65s., while they charged CHAPLIN & HORNE 55s. for the same service.

Common sense would lead to the conclusion that the risk of plunder, the labour, the expenses of delivery and collection, upon the small parcels being with Messrs. PICKFORD, the remuneration should be theirs. No argument can be brought on the other side, unless it be contended that Parliament intended the Railway Company to be the only carriers, collectors, and deliverers of parcels under 500 lbs. The second point seems clear enough; equal payments are equal when the things paid for are equal; equality of payment for inequality of value is unreasonable and unjust. So says common sense; and judging from the delays which the Company endeavoured to interpose in the settlement of the question, we cannot help suspecting that common sense cast for once its unwelcome shadow across the table of the Grand Junction Board at Liverpool.

The action commenced in 1840, came on for trial before Lord ABINGER, on July 3, 1841, and by his Lordship's advice, and the consent of parties, was withdrawn from the jury (there being no dispute upon the facts), and turned into a special case for the opinion of the Court. The special case came on for argument on the 3rd instant, and on the 7th, judgment was delivered in Messrs. PICKFORD's favour on both the foregoing questions. On this head we refer to our Report in to-day's paper.

This question has always appeared to us to deserve the attention of the public, and particularly that portion of the public whose capital is invested in railways. The traffic between London and Lancashire is the most extensive and most important part of the inland trade of England. The powers which (as we have said) nature and Parliament have conferred on railways, have thrown a great portion of it under the control of the London and Birmingham and the Grand Junction Railways. The London and Birmingham, we have reason to know, contemplated at one time making an arrangement with Messrs. PICKFORD & Co., which would have been very valuable to that firm, and would probably have contributed, in the first instance, to swell the traffic returns of the Company. Before, however, the line was open—*not* before legal rights had accrued to Messrs. PICKFORD and Co. under the agreement—a better judgment was formed by the Directors of what was fair to the public, and therefore wise for the Company. This change of sentiment having been communicated to Messrs. PICKFORD & Co., they at once resigned the expected advantage, and undertook to carry over the line (provided it were free to all parties upon equal terms), just as they would if no agreement whatever had been in contemplation, and just as they had before upon the canals and common roads, namely, using each mode of transit with a view only to the convenience, cheapness, and dispatch of business. These were terms creditable to the leading railway, and to the first commercial house engaged in the carrying trade.

The Grand Junction Company pursued a different system, and admitted the carriers upon the line only under the terms of certain very stringent agreements. The effect of this was not only to impede the fair course of business between Birmingham and Lancashire; it extended to the London and Birmingham line, and to every line of railway connected, however remotely, with the Grand Junction—for of what practical benefit was it to have goods intended for Manchester properly treated until they arrived at Birmingham? A detention at Birmingham prevented their getting to Manchester as effectually as if it had occurred at Rugby or Camden Town. The Grand Junction Company openly avowed their intention of *forcing* the London and Birmingham into the same pernicious system with themselves, and doubtless they were rightly advised in supposing that their system gave them great power over the sister Company; for, as matters stood, the London and Birmingham Company were denying themselves the immediate advantage which might be derived from the restricted system, while the adoption of that system by a connecting line, deprived both the public and the more liberal Company of the benefits that liberality was designed to secure. The London and Birmingham Company did not give way. They acted as became the leading body in this great improvement of the present age, and steadily adhered to the plan which sense and justice had induced them to adopt. Meanwhile the Grand Junction Company, having failed in procuring the assistance of Messrs. PICKFORD & Co., made an arrangement with Messrs. CHAPLIN and HORNE, the terms of which are before our readers in the former statements of this journal, having in view the avowed object of "securing a well-regulated monopoly" to themselves.

Fortunately, as we think, for the public and for the railways generally, the same reliance on their own pre-eminence in the trade which had induced PICKFORD and Co. to forego the benefits of a private arrangement with the Birmingham Company, and prefer an open competition with all parties upon equal terms—the same reliance, we say, made it worth their while to engage in a contest so arduous as that with the Grand Junction Company. Fortunately, too, their skill and experience enabled them to meet and defeat the obstacles which the in-

Digitized by Google

penalty of the Grand Junction Company threw in their way, while the dispute was pending. By vans, by canal, and last not least, by the aid of the Yorkshire railways, they kept their business on its legs, and frustrated (with great labour and probably with great expense) the unworthy endeavours of their rivals to destroy them. Their legal advisers, too, have triumphed at last over a not dissimilar system of check and manœuvre (which has given rise to a correspondence we shall probably hereafter notice), and have brought to a close in two long years the two very simple questions to which we have above referred.

This judgment is decisive, and should the Company venture to continue the same course in future, a speedier and more efficacious remedy can now be enforced against them.

We rejoice that good sense and justice have prevailed, and we believe that in spite of the popular and not unnatural prejudice against the law, few men have reason to complain of its decisions where their own conduct and that of their legal advisers has been wise and fair. But as journalists of the progress made in railway prosperity, we rejoice in an especial manner that the great line of communication between London and Lancashire has at length been opened to the public. No one can have observed without great surprise the disproportion which returns of goods' traffic exhibit to those of passenger traffic. We are persuaded that between London and Lancashire this disproportion has been owing in a great measure to the contracted system pursued by the Grand Junction Company, and sincerely believe that the issue of these proceedings must be highly beneficial to the public at large, to those useful servants of the public, the common carriers, and (what, as railway journalists, it is our more especial province to observe) particularly to the London and Birmingham and other railways—not least to the Grand Junction Railway itself in point of dividend, however unpalatable to the *amour propre* of the Board of Directors at Liverpool.

The Brighton Board have at length condescended to take *some* notice of the charges which have been brought against them in this journal, but they have not adopted the most direct course, even in such a matter as this. It appears that last week they issued a circular to their constituents, which is thus given in the *Times* of Tuesday last:—

"*To the Shareholders of the London and Brighton Railway Company.*

"10, Angel-court, Throgmorton-street, July 8, 1842.

"Gentlemen,—My attention having been called to the City article in the *Times* newspaper of Monday, the 4th instant, I feel it my duty to remain no longer silent, but to contradict, in the most unqualified manner, the various reflections which have from time to time been cast on the general management of this concern, and more particularly on me personally. Our next general meeting will be held on the 5th day of August, when I trust that there will be a full attendance of proprietors, and I feel convinced I shall be able to give such answers to any questions which may be put to me as will be perfectly satisfactory; and I beg to remark, that I have considered the meetings of proprietors the proper place for explanations between the Directors and the shareholders; at which meetings I have always courted inquiry, and I have ever abstained from noticing in the interval anonymous communications.

"The Report of the Directors, to be submitted, will be circulated prior to the meeting.

"I have the honour to be, Gentlemen,

"Your very obedient servant,

"JOHN HARMAN, Chairman."

To comprehend fully the force of the circumstances which would not suffer the honourable Chairman to remain longer silent, we reprint the paragraph from the City article of the *Times*, alluded to in the opening sentence of the circular. It was as follows:—

"As the meeting of the Brighton Company approaches the shareholders are making strenuous endeavours to organise a party, and to make, through a leading person, those inquiries of the Directors which the general body appear so much to desire. The alleged loose conduct of the affairs of this Company certainly requires that some explanation should then be given, either in the shape of a refutation of the many charges levelled against it, or by affording satisfactory evidence to show that the many defaults occurring, both in the progress and the working of the line, as well as by its officers, have arisen from accidental or unavoidable circumstances. The little pains which the Directors have taken to disabuse the public mind respecting these charges would lead to the belief that there must at least be some foundation for all that is said against the management of this concern. A full attendance is expected at the meeting, and no doubt the debate at it will be a stormy one."

Was there ever a more harmless paragraph than this? And yet, says Mr. JOHN HARMAN, seeing such a statement, "I feel it my duty to remain no longer silent, but to contradict in the most unqualified manner, the various reflections which have from time to time been cast on the general management of this concern, *and more particularly on me personally.*" Had the *Times* cast any reflections upon Mr. JOHN HARMAN personally? No; but Mr. HARMAN knew right well that various "reflections," by no means complimentary to the Directors collectively, or to himself individually, were daily and hourly "cast" upon them in the railway world, and that enough has been stated, and that much more might be stated, in the *Railway Times* to justify such reflections, and accordingly he found it necessary to step forward with this "unqualified contradiction." He is writing *at* the *Railway Times*, which journal alone has had the courage to expose one of the most flagrant cases of official mismanagement (to adopt the mildest language) that the joint-stock system has ever witnessed. If he had written *to* us, and had deemed it befitting his official dignity to go into particulars, it would probably have been more satisfactory to the parties immediately interested—we mean the proprietors.

But it seems, that at the general meeting, "perfectly satisfactory" explanations are to be forthcoming. So be it; we shall be glad to hear them. But Mr. HARMAN, "in noticing in the interval an "*anonymous communication*," ought to have shown cause why he thus departed from what, according to own showing, is his usual practice. He has "*ever* abstained" from honouring authors of anonymous communications with official notice—he has remained unmoved, while, week after week, specific charges of the most serious character have been brought against the Board of which he is the representative and organ, and yet the appearance of a general statement like that contained in the City article of our contemporary must needs set "JOHN HARMAN, Chairman," circularising!

And after all, to what does the promise put forth in the circular amount? "I feel convinced [writes Mr. HARMAN] I shall be able to give such answers to any questions which may be put to me, as will be perfectly satisfactory." We would earnestly urge upon the proprietors—and, indeed, this is our principal reason for noticing Mr. HARMAN'S circular—not to be thus put off. Answering questions at a public meeting will not do. *There must be a searching investigation by properly-qualified parties, with sufficient time to enter fully into the whole business of the Company, from its first commencement up to the present time.* It is quite impossible that one-fiftieth part of the necessary "questions" can be put at a general meeting; and with all deference be it said, we would not put much trust in any answers that might then be returned. When a Committee of Inquiry, sitting for weeks, and entering but into one department of the management, find it impossible to get through more than a month's proceedings, surely there is *prima facie* evidence of a necessity for further examination! There must, however, be no more nibbling at petty details. The root of the evil must be searched out; and the truth, *the whole truth, told without fear or favour.* There must be no sealing of lips upon matters which may be supposed likely to tell to the injury of the undertaking. Such injury, as we have repeatedly remarked, could only be temporary: while the cause of the mischief remains, there is no hope.

Mr. JOHN HARMAN'S circular is, no doubt, a very "ingenious device," but let the proprietors take care that they are not thereby induced to give up organising an united opposition without which all their murmurings and menaces are perfectly useless. Let them be prepared to take decisive steps should Mr. HARMAN'S answers prove *not* "perfectly satisfactory"—should that worthy gentleman not succeed in persuading them that a railway which might have been made for about a million has been economically constructed at treble that cost. So deeply are the *personal* characters of the Directors involved in the result, that the proprietors may rest assured they will not stick at trifles to secure the seeming countenance of their constituents. A determination on the part of the shareholders to have the entire matter cleared up can alone counteract the efforts which are even now being made to secure to Mr. HARMAN and his coadjutors a majority of votes. A public meeting, we repeat, is not the fit place for investigating the points that have been mooted. There must be calm and minute inquiry, such as none but a Committee of impartial proprietors can undertake.

Nevertheless, as Mr. HARMAN appears to be enamoured of question-asking, we shall probably take the liberty of offering, previous to the meeting, a few suggestions which may assist in obtaining *satisfactory* "explanations between the Directors and the shareholders." Meanwhile we reiterate our former counsel to the proprietors, "Look well to your proxies." We have received several letters, inquiring to whom the proxies of parties dissatisfied with the present Management ought to be entrusted. We hope that in our next number one or more of the London proprietors will announce their readiness to undertake that duty. There is no time to be lost. In our opinion, the proprietors should direct all their efforts for the present to the appointment of a Committee of Inquiry, upon the most extensive scale; and if the Directors are conscious of their own integrity, they cannot object to such a course.

We had looked forward with very considerable interest to the special meeting of the Manchester and Birmingham Railway proprietors, held yesterday week, as likely to afford some explanation of the real state of matters, as between that Company and their neighbours of the Grand Junction—for really

Digitized by Google

we had heard so many and such conflicting accounts of the causes of "the delay which had taken place in opening the line throughout," that we had begun to despair of coming to a satisfactory conclusion. It will be seen, however, from a short notice of the proceedings which appears elsewhere, that the affair is left nearly as mysterious as ever, but with this important difference, that the disagreements between the two bodies are in a fair way of being amicably arranged.

Under these circumstances, we gladly escape the necessity of giving an opinion on either side, but we cannot allow the occasion to pass without protesting most strongly and emphatically against these quarrels between Companies who ought to be allied in a friendly spirit. Faults there may have been—we believe there were—on both sides, and both parties have we imagine suffered not a little therefrom, but unfortunately the injurious effects are still more comprehensive, and these squabbles (originating in what motive it is needless to inquire) are turned into weapons of offence against the railway system generally, every well-wisher to which ought to do all in his power to discourage them. There is a very simple rule of conduct which, with Companies as individuals, would if duly attended to prevent much bad feeling, and no little public scandal—"Do unto others as you would that others should do unto you."

The meeting of the Manchester and Birmingham Company is adjourned till Monday next, and we trust that in the interim such arrangements will have been concluded between the two Companies as may render it superfluous for us again to advert to the subject or circumstances of the dispute.

We direct attention to a letter in next page from William Crawshay, Esq., late Chairman of the Northern and Eastern Railway Company, in reply to the official statement put forth last week in our columns by the Eastern Counties' Railway Board.

An esteemed correspondent sends us the folfowing statement of "Comparative Receipts on Railways," based on the calculations of Mr. Richard Dawson, which appeared in our last number:—

Name.	Half-year ending Dec. 31, 1841.	Half-year ending June 30, 1842.	Decrease per cent. June 30, 1842.
	£	£	
Grand Junction	241,816	206,723	14¼
Great Western	337,352	311,860	7½
Liverpool & Manchester.	137,530	107,768	21½
London and Birmingham	429,000	390,780	9
London and S.-Western .	153,162	137,100	10½
Manchester and Leeds ..	116,200	109,000	6¼
Midland Counties'	73,456	63,556	13½
North Midland	115,481	100,136	13¼
York and North Midland	44,000	39,186	11

On Thursday, in the House of Lords, the Railways' Regulation Bill passed through Committee, the clause proposed by Lord Campbell to prevent the doors of carriages being locked, except by consent of the passengers, having been negatived upon a division, by a majority of 4 (35 to 31).

—o—

In the House of Commons, on Wednesday, a Select Committee was appointed, "to consider the propriety of making such alterations in the Standing Orders as may be conducive to the improved conduct of the private business of this House."—Lord Granville Somerset, Mr. Estcourt, Sir Geo. Grey, Mr. Greene, Mr. Strutt, Sir John Yarde Buller, Mr. Loch, Mr. Labouchere, Mr. Pendarves, Mr. Wilson Patten, Mr. Aglionby, Sir Robert Ferguson, Sir William Heathcote, Mr. Ewart, and Mr. William Miles. Power to send for persons, papers, and records. Five to be the quorum. It is scarcely possible that any alteration can be effected during the present session.

—o—

On Thursday the House of Lords notified to the Commons that they had agreed to the London and Greenwich Railway (No. 3) Bill, with amendments.

—o—

Edwin Bates, described as an artist, was yesterday held to bail by the Worship-street police magistrates for using threatening language towards Mr. Marshall, M.P., Deputy-Chairman of the Northern and Eastern Railway. The defendant had deemed himself ill-treated in the matter of some forfeited shares, but apparently without any good reason. Indeed, it would seem doubtful whether his pecuniary misfortunes had not in some degree deranged his intellect.

—o—

In the House of Commons on Thursday, on the consideration in Committee of the "Stamps and Assessed Taxes," the following, among other resolutions, were passed. It will be seen that the modification of the railway passenger tax has at last been effected:—

"1. Resolved—That the duties of assessed taxes, chargeable in Great Britain under Schedule (C), No. 4, of the Acts 48 Geo. III, c. 55, and 52 Geo. III, c. 93, for coachmen kept for the purpose of driving public stage-coaches or carriages, and for persons employed as guards to such stage-coaches or carriages, shall cease and determine; and that the duties chargeable under Schedule (D), No. 1, of the said Acts, so far as the same relate to carriages kept and used solely for the purpose of being let for hire, where more than one such carriage are kept, shall also cease and determine; and that in lieu of such last-mentioned duties there shall be charged and paid for every such carriage the annual sum of 6*l*.

"2. Resolved—That the several stamp duties now payable in Great Britain on stage carriages, and on licences to keep the same, and on passengers conveyed for hire by carriages travelling upon railways, shall cease and determine; and that in lieu thereof there shall be raised, levied, collected, and paid, the several duties following, (that is to say):—

"For and in respect of every original licence to be taken out yearly by the person who shall keep, use, or employ, any stage carriage in great Britain (that is to say), for every such carriage the sum of 3*l*. 3*s*.

"And for and in respect of every supplementary licence for the same carriage for which any such original licence shall have been granted, which shall be taken out in any case allowed by law during the period for which such original licence was granted, the sum of 5*s*.

"And for and in respect of every mile which any such stage carriage shall be licensed to travel, the sum of 1½d.

"*And for and in respect of all passengers conveyed for hire upon or along any railway, a duty at and after the rate of 5l. for every 100l. of all sums received or charged for the hire, fare, or conveyance of such passengers.*"

—o—

It is stated in a local journal, that the four-horse mail from London to Worcester performed its last journey on Thursday week, after running uninterruptedly for more than half a century.

—o—

It is stated in the *Morning Post* that the Directors of the Great Western Railway have issued instructions, relaxing the restrictions placed upon the friends of passengers since the unlocking of the carriage doors was determined on. The departure and arrival platforms are henceforth to be open, as on other lines. The alteration is very judicious.

—o—

A correspondent says, the Manchester and Leeds Company will save from 3,000*l*. to 4,000*l*. a year by the modification of the Government duty on passengers.

RAILWAY OFFENCES AND OFFENDERS.

We have been favoured with a copy of (apparently) part of a correspondence between the authorities of the London and Birmingham Railway and the Secretary of State, with respect to the conduct of a person named Williams, an inspector of the rural police for Herts. From what has been sent to us, we cannot exactly make out what the offence was, but no doubt the charge made by the railway authorities was well-founded, seeing that Williams has been "dismissed from his situation as inspector, on account of his behaviour on the occasion referred to."

Two of the clerks on the Manchester and Leeds Railway, named Sloane, aged 19, and Lloyd, aged 22, have been sentenced to six months' imprisonment in York Castle, for embezzlement. Mr. Wilkins, who appeared for the prosecution, observed that it was with painful feelings that the prosecutors felt it to be their duty to institute the present proceedings, as the prisoners, up to the period of the guilty transaction, had stood high in their esteem; indeed, the nature of their office would indicate the trust reposed in them. It appeared that six weeks previous to the discovery of the offence the prisoners had indulged in expensive habits. One of them was stationed at Normanton, and the other at Manchester. The clerk at Manchester received the tickets from the passengers from Normanton, and then sent them back to the Normanton clerk, who re-issued them from the machine, and the two clerks pocketed the money between them. Mr. Hall, on behalf of the prisoners, said that in consequence of their expensive habits, they had been induced to commit the crime to which they had pleaded guilty.

Last week (as we learn from the *Halifax Guardian*) a middle-aged man got upon the third-class carriage of the Leeds and Manchester Railway at Normanton, without a ticket, and rode thereon undiscovered till he arrived at the Sowerby Bridge station, where he could neither produce ticket nor money. In fact, he had not a farthing about him. He was, of course, taken before the local magistrates, when he gave his name George Austwick, and said he was on his way to Manchester. He was fined 5*s*., which with 15*s*. expenses made up 1*l*., instead of half-a-crown which would have been his fare had he purchased a ticket. He seemed very sorry for having made a fool of himself, and offered to pledge the clothes he had on to save himself from being committed to prison, but could not raise enough money.

Recently, Benjamin Heard, flagman at the junction of the Manchester and Leeds and North Midland Railways, was taken before S. Holdsworth Esq., at the Court-house of Wakefield, and fined in the mitigated penalty of 10*s*. and costs, for having been found asleep in his box by the superintendent of the line.

THE EASTERN COUNTIES' AND NORTHERN AND EASTERN RAILWAYS.

To the Editor of the Railway Times.

SIR,—Although I do not consider the columns of a public paper the most proper place for the discussion of differences, even between public bodies, I feel called upon to notice the leading article of your paper of the 9th instant, which you stated had been "sent you from official authority."

I have neither time nor inclination to enter into controversy with the Eastern Counties' Board, and shall therefore at once come to the present situation of the Northern and Eastern Railway Company with that Company, as the public cannot possibly feel interested in an historical account of the exact dates, causes, or particulars of the differences existing between them; suffice it for the public, I think, to know, that between these two Companies a treaty has been long going on for certain arrangements, and that this treaty has now gone off upon three grounds of difference only; and these are:—

1st. Whether the second-class fare on the Northern and Eastern Railway from and to Edmonton shall be 10d., as fixed by the Northern and Eastern Company, or 9d., as insisted upon by the Eastern Counties' Company.

2nd. Whether a passenger station, mutually agreed to be erected at Stratford for the booking and accommodation of passengers going to London, shall also be used for passengers going other ways, as naturally expected for the public convenience by the Northern and Eastern Railway Company, or not so used, as insisted on by the Eastern Counties' Railway Company. And,

3rd. Whether a proposition for a prospective reduction of toll to be made by the Eastern Counties' Company, and a reduction of fares by the Northern and Eastern Company, upon all passengers going to and from Ponder's End, and all intermediate stations, in which case the Northern and Eastern Company agreed to take upon themselves the payment of the Government duty upon all passengers conveyed over the Eastern Counties' Railway by them, shall be simultaneous with the payment of the duty, as always contemplated by the Northern and Eastern Board; or, retrospective on the duty, though only prospective on the reduction of tolls and fares, as now insisted upon by the Eastern Counties' Company.

These are the only points of difference upon which the treaty between the two Companies has gone off, and I leave the public to judge (as they have been appealed to) from these facts, to which of the Boards is due the greater credit for liberality, or other good feeling, in breaking off the treaty upon these grounds of difference, and these only.

With respect to myself individually, I shall not canvas the taste displayed by the Eastern Counties' Board in holding me up for public animadversion, simply because I have done what I thought my duty to my shareholders, in making a second agreement with that Company; and anxious as I shall be at all times for, and proud as I have been always in, the "*laus a laudato viro*," I cannot but feel quite content with the spleen of the Eastern Counties' Board; and I would caution some of my brother Directors (if such caution were necessary), who are so fortunate as to be said to enjoy the "esteem" of that Board, to bear in mind the "*Timeo Danaos*," &c.

The conclusion of the statement, that "the Eastern Counties' Directors are still willing, as they always have been, to adjust all matters of difference in the most conciliatory and liberal spirit, a feeling which, they trust, will *now* meet with some reciprocity from the Northern and Eastern Board," is very gratifying to me, as holding out the hope—

1st. That they will abandon their interference in requiring a reduction of one penny in the second-class fare from Edmonton to London—leaving it to the Northern and Eastern Railway Company to adjust their own fares for general advantage!

2nd. That they will allow the public going one way to avail themselves of the shelter of a station agreed to be built for their convenience when going another way! And,

3rd. That they will agree to make the reduction of toll upon short passengers retrospective, if they require the payment of the duty to be retrospective; or let both be prospective and simultaneous—to either of which the Northern and Eastern Board are agreeable; and let a friendly appeal (as before proposed by the Northern and Eastern Railway Company but declined by the Eastern Counties' Railway Company) be made to the Queen's Bench, or other legal tribunal, to ascertain which of the two Companies is liable to the duty, hitherto not paid by either party, under the circumstance of not one word respecting it ever having been entered in the agreement, and that agreement having been always considered by the Northern and Eastern Railway Company as covering everything to be paid by them, in the heavy charge of 7,000*l.* per annum, and 4d. per head for each passenger conveyed over the Eastern Counties' line, no matter from or to where, or how short the distance, or how small the fare!

I am, Sir, your very obedient servant,
WILLIAM CRAWSHAY.

EVESHAM JUNCTION RAILWAY.

To the Editor of the Railway Times.

SIR,—"Common Sense" is informed that the total cost of the Tewkesbury branch of the Birmingham and Gloucester Railway was under 7,000*l.* per mile. The Evesham line being nearly of the same character as the Tewkesbury branch, it is but "common sense" to presume that that line should not exceed the estimate of 8,250*l.* per mile, but it is not "common sense" to class the cost per mile of branches with the cost per mile of main lines.

With respect to the gradients, they consist chiefly of those usually denominated second class, the merits or demerits of which "Common Sense" appears to be so well acquainted with that it would not be "common sense" on my part were I to attempt to relieve him of his present opinion.

I am Sir, your obedient servant,
JOHN ADDISON.

6, Delahay-street, Westminster, 14th July, 1842.

EDINBURGH AND GLASGOW RAILWAY.

To the Editor of the Railway Times.

SIR,—Knowing your readiness at all times to put the public in possession of facts which will lead to their ultimate benefit, allow me to place before you a short statement of the prospects of the Edinburgh and Glasgow Railway Company. The fluctuation having been very great in this property, the following may furnish a guide for future investors:—

Receipts per week, £2,000			£104,000 per annum.
Expenses, at the lowest, (the fares being extremely small) 50 per cent.			52,000
			£52,000 net.
Debentures	£375,000	5 per cent.	£18,750
Shares	1,125,000	3 per cent.	33,750
			£52,500

I am, Sir, your obedient servant,
INVESTIGATOR.

THE ATMOSPHERIC RAILWAY.

To the Editor of the Railway Times.

SIR,—Although I have no interest either in the patent or in the invention of the Atmospheric Railway, it is a duty I probably owe to the British Association, certainly to myself, that I should notice the letter of Mr. Pinkus, published in your last number, where, in coarse terms, he attributes motives to me of the basest kind.

It will be for the public to judge between us after my reply, and that of Mr. Clegg and Mr. Samunda, have been laid before them; but as this is neither the first nor the second time that Mr. Pinkus has brought his case, in a similar style of language and almost in the same words, before the scientific world, to be as often effectually met, no further attention will be hereafter paid to his observations.

Mr. Pinkus claims to be "the inventor and patentee of the system detailed by me before the British Association at Manchester in June last:—that he had at the Bristol meeting in 1837 described the invention, *in those details mentioned by me*, and had exemplified them by drawings and diagrams: that my allegations in attributing the rope-valve (or valvular cord) only to him (Mr. Pinkus), and what I had attributed to Mr. Clegg and Mr. Medhurst, are untrue; that the specifications for his patent covered the identical valve so applauded by me, that his mechanical arrangements are indentical (with the exception of the weather board) with the plan illustrated by me, and that Mr. Clegg had pirated them from him (Mr. Pinkus) by mere colourable variation of contrivances."

This is the substance of Mr. Pinkus's claim, omitting reference to his strong charge against Messrs. Clegg and Samuda, as betrayers of their trust as confidential agents, to whom, he asserts, all these details had been communicated.

I pass by altogether his insinuations against myself, as I hope my professional and personal character require no justification against such sort of attacks.

Allow me to quote briefly *what I did state* on the subject, and I will do so from the notes of the short-hand writer, who took down *verbatim* what I said, and which, as far as Mr. Pinkus is concerned, was substantially correctly reported in one of the late numbers of the *Railway Times*. My words were—

"Vallance proposed to put the passengers in the inside of his tube; but Medhurst went a step further, by keeping the locomotive power within the tube, and putting his passengers on the outside, and contriving what was called the water-valve. An American gentleman of great ingenuity and infinite perseverance, of the name of Pinkus, afterwards suggested the rope-valve, which did not keep the tube air-tight; and we are at length indebted to Mr. Clegg *for the practical usefulness* to which this invention has at length arrived. But though Mr. Clegg has discovered *the most practicable method* of bringing this invention into operation, it was Medhurst who took the first step which led to the inquiry as to the effective valve, through which should pass some description of connection, by which the moving power in the pipe could be connected to the vehicle outside, or on the rails, to which should be attached the carriages wherein the passengers were to be conveyed."

First let me dispose of Mr. Pinkus's assertion that he had described the details of the invention before the British Association at their meeting in Bristol in 1837. I believe it will be found that the Bristol meeting took place in 1836; but there is no record in the Transactions of the British Association of any such paper by Mr. Pinkus in the volume for that or any other year, not even its title, or the mention of his name; neither is there any allusion to the paper or to him in any of the Bristol newspapers I have seen, of the time when the meeting took place, which recorded not only the matters brought officially before the British Association, but the incidental occurrences.

The matter is not of any material consequence,

Digitized by Google

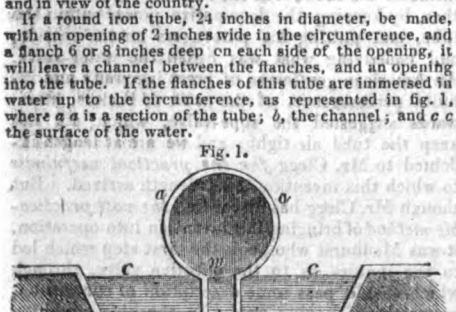
but the assertion of Mr. Pinkus appears strange.

To proceed :—it is only by date of publication that the world can judge of the relative claims of parties to priority of invention. The *principle* of applying the pressure of the atmosphere to produce locomotion is nearly two centuries old; it is the reduction of this principle *to economical and practical utility* that is the desideratum, and for which alone, I as an engineer, or the public, feel any interest, and I join issue with Mr. Pinkus as to his right to any merit *as an inventor* in this respect, whatever claim he may have to that title in any other way, of which the public will be able to judge when the replies to his allegations are fully laid before them.

Mr. Vallance's patent was sealed 19th February, 1824, and the principle of creating a partial vacuum in a tube or tunnel by means of stationary engines working air-pumps placed at several miles apart, to drive a carriage on a railway, laid in a large tube, was there propounded. The first idea I believe originated with the celebrated Papin; was followed very long after by a Mr. Lewis, in 1817; by Vallance as above in 1824; touched on by Medhurst, in 1810 or 1812, but who abandoned it as impracticable, and in 1827 published a pamphlet, wherein we first find the idea and detailed suggestion of employing atmospheric pressure against a vacuum inside a pipe, and of communicating that power to carriages moving on it. In pages 15, 16, 20, 24, &c., of that book, there is a clear and full explanation of the proposed mechanical arrangements, and I append the extracts and diagrams, which I hope you will find room for, and at the same time I send you a copy of Medhurst's original book, which is now very scarce.*

* The following are extracts from Medhurst's pamphlet, published in 1827 :—

In page 15, this passage occurs—



When the carriage is to go through the canal, from the engine, the air must be forced into the canal behind it; but, when it is to go the contrary way, the same engine is to draw the air out of the canal, and rarify the air before the air before the carriage, that the atmospheric air may press into the canal behind the carriage, and drive it the contrary way.

In the following page 16, he says—

It is practicable, upon the same principle, to form a tube so as to leave a continual communication between the inside and outside of it, without suffering any part of the impelling air to escape; and, by this means, to impel a carriage along upon an iron road, in the open air, with equal velocity, and, in a great degree, possessing the same advantages as in passing withinside of the tube, with the additional satisfaction to passengers of being unconfined, and in view of the country.

If a round iron tube, 24 inches in diameter, be made, with an opening of 2 inches wide in the circumference, and a flanch 6 or 8 inches deep on each side of the opening, it will leave a channel between the flanches, and an opening into the tube. If the flanches of this tube are immersed in water up to the circumference, as represented in fig. 1, where *a a* is a section of the tube; *b*, the channel; and *c c* the surface of the water.

Fig. 1.

If such a tube is laid all along upon the ground, with the iron channel immersed in a channel of water, up to *m*, and a piston or box made to fit it loosely, and pass through it upon wheels or rollers, this box, driven through the tube by the air forced into it, may give motion to a carriage without, by a communication through the channel and the water.

Again in page 20, he describes—

A plan to combine the two modes together, that the goods may be conveyed within the canal, and a communication made from the inside to the outside of it, so that a carriage may be impelled in the open air, to carry passengers, would be an improvement desirable and practicable. It must be effected without the aid of water, that it may rise and fall as the land lies; and it must give a continual impulse to the outside carriage, without suffering the impelling air to escape.

And aware that his only difficulty was in constructing a means of confining the power in the tube by using a valve in lieu of the water-joint, he remarks, that—

For this purpose, there must be some machinery which will diminish the simplicity, make it more expensive, and more liable to be disordered, unless executed in the most substantial and perfect manner; but, by skill, by experience, and sound workmanship, it may be accomplished in various ways, one of which I will describe, which, I presume, will evince the practicability of it.

In order to make this in the best manner, the top of the canal should be made of wrought-iron (or copper) plates, rivetted together, and rivetted all along, on one side to a cast-iron rail securely laid upon the top of one of the side walls, and made to shut down close, and air-tight, upon a cast-iron rail laid firmly down upon the other side wall.

In order to make the plate shut down air-tight upon the cast iron rail, without being rivetted to it, there should be a groove all along, upon the top and inner edge of the cast-iron rail, and a thin edge of iron rivetted to the plates all along, to fall into the groove; then, if the groove is partially filled with some soft and yielding substance, as cork, wood, leather, hemp, &c., the thin iron edge will bed itself into it, and shut so close that the air will not escape, with so light a pressure as one pound per square inch.

The plate that is to form the top of the canal being thus prepared, may be lifted up out of the groove 2 or 3 inches high, in any particular place of the side that is not rivetted; and, when let down again, the edge will fall into the groove, by the spring and weight of the plate, and stop close as before.

Therefore, if there is a large and light iron wheel fixed in the front of the interior carriage, and close to the side wall on which the plate shuts into the groove; and if this wheel is planted to stand 2 inches higher than the under side of the covering plate, this wheel as it passes along, will constantly lift up the plates, and make an opening of 2 inches wide, or more, and 8 or 10 feet long; and, when the wheel has passed, the plate will fall down into the groove, and close the joint, as before.

Through this opening a bar of iron may pass, that is fixed to the interior carriage, may project over the side wall, and the outer end may be attached to the exterior carriage by a chain or strap, and pull it along upon its own wheels and wheel track, which should lie along by the side of the wall of the canal.

The iron bar will not touch anything as it passes through the opening, for the iron covering may be lifted up 2 or 3 inches high; but the bar need not be more than 1 inch in thickness.

In page 24, he says—

The same principle, and the same form, may be advantageously applied to convey goods and passengers in the open air, upon a common road, at the same rate of a mile in a minute, or 60 miles per hour; and without any obstruction, except at times contrary winds, which may retard its progress, and heavy snow, which may obstruct it.

If a square iron tube be formed, 2 feet on each side, 4 feet in area, with three sides, and one-half of the top of cast iron, and the other half of the top made of plate iron or copper, to lift up and shut down in a groove in the cast iron semi-top plate, as before described; and if a strong and light box or frame be made to run upon wheels, within the tube, and an iron arm made to pass out through the opening made by lifting up the plate, as before described, this arm may give motion to a carriage in the open air, and upon the common road, without any railway, if the pressure within the tube is made strong enough for the purpose.

The opening of the iron plate should be made in the middle of the top, so that the iron arm may pass out, and stand upright a few inches above the top, to which the strap should be attached, to communicate motion to the carriage.

The frame or box, within the tube, should be 10 or 12 feet long, and must be guided by wheels, on all sides, as large as can be admitted, and as truly formed and planted as possible; the number will be 14 or 16.

A piston, or vane, must be formed near the middle of the frame, to intercept the air, and must be leathered all round, so as lightly or barely to touch the sides of the tube.

The inside, or middle, of this vane should be open, and the opening filled up and closed by a valve, suspended by an axis across the middle of the opening, so that this valve, by turning on its axis, may open the vane, and suffer the air to pass through, and prevent its impulse upon the vane and carriage, or, by closing the valve, intercept the air, and give it motion.

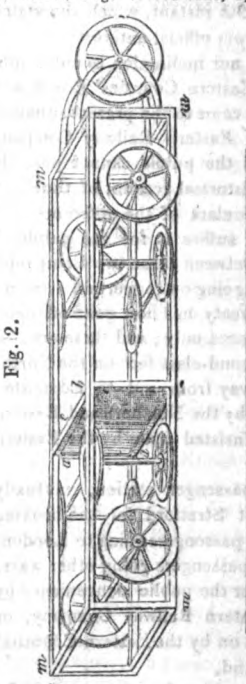
By this means the conductor of the carriage may restrain and limit the velocity, and stop the carriage at any time and at any place, by a communication from the valve, through the opening, to the conductor on the outside; and this will be done without the least violence, shock, or chance of disordering anything, either within or without.

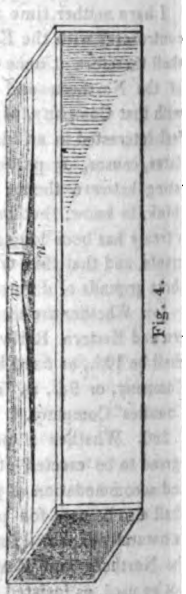
No impartial person can read these passages without fully acknowledging that I had good grounds in attributing to Mr. Medhurst the original merit, and that what I stated was strictly true, although stigmatised as false by Mr. Pinkus.

That gentleman in the month of June, 1840, made a similar attack, in the colums of the *Sun* newspaper, on Messrs. Clegg and Samuda, as he has now done, and which was successfully refuted. He attempted in August of that year to do the same in the pages of the *Times*, but the editor declined inserting it, observing, that "with respect

Fig. 2 represents the vane within its frame *m, m, m, m*; the outside edge of the vane, *a, b, c, d*, is leathered all round, and the middle part, *o, p, q, r*, is open, and is to be closed by the double valve, that is to turn upon its vertical axis *e, e*. The valve will shut, half on one side of the vane *a, b, c, d*, and half on the other; when it is shut, the air will be intercepted, and the impulse of the air will be given to the carriage; but, when the valve is turned a quarter of a circle, it presents its edge to the air, and leaves the interior of the vane open for the air to pass by unobstructed, when the carriage will be gradually stopped by the friction of the road and the resistance of the outward air. It may be put in motion again, as soon and as gradually, by closing the valve.

Fig. 2.





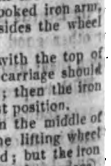


Fig. 4.

m, m, m, m, is the box, or open frame, that is to pass through the tube, on the wheels *n, n, n, n, n, n*, to support the vane, and the iron arm, and to be impelled by the air in the tube.

Fig. 3 is a section of the iron tube, with the wrought iron semi-top, *a, b*, rivetted to the flanch, and represented as lifted up by the projection of the wheel under it; and of the crooked iron arm *n*, as it is to come out through the opening, and to stand up for the carriage to be attached to it.

Fig. 3.

The semi-top of cast-iron, *o, p*, is to be screwed upon the tube by the flanch *p*, and, at the edge *o*, is a small projection, which the edge of the wrought iron is to cover, to prevent the rain or dust from entering into the tube.

Fig. 4 represents a part of the tube, with the semi-top as lifted up at *m*, and the section of the crooked iron arm, *n*, as it is to pass out of the opening, besides the wheel that lifts it.

The iron tube should lie in the ground, with the top of it a few inches above the surface; and the carriage should run over it, with the wheels on each side; then the iron arm *n*, would draw the carriage in the fairest position.

The opening being, in this plan, made in the middle of the top of the tube, instead of the side, the lifting wheel will act either way, without being removed; but the iron arm that passes through the opening (to draw the carriage, as well as the arm that is to pass through (to open and shut the valve), must be changed to the other side, when the motion is changed to a contrary direction.

If the carriage is attached to the regulating arm that is to pass through the opening, and that arm is supported by the main bar, the effect will be, that, if by any accident the chain should let go its hold of the arm, the inside valve would instantly fly open; and the vane, being no longer impelled, would soon stop of itself, and the chain might be replaced.

In summing up this invention, he remarks—

Although the perfection of this work is not to be obtained but by time, skill, experience, and the wealth of a nation, yet, upon a smaller scale, and less rapidity, the expense will be moderate, and within reach; and the value of it, compared with the present mode of conveyance, would be abundantly advantageous and desirable.

Digitized by Google

to any charge he might have against them, his redress was in a court of law, and not in the columns of a newspaper."

Nothing daunted, he repeated the attack in the November (1840) number of the *Civil Engineer and Architects' Journal*, which was conclusively replied to in an able article from the editorial pen, and as I have satisfied myself (by examining all the drawings and documents, and reading all the specifications) of the accuracy of that reply, I shall incorporate its substance in my own answer. Referring to the extracts from Mr. Medhurst's pamphlet, I repeat that they prove indisputably that this most ingenious though unfortunate inventor had, in 1827, brought the atmospheric system up to a certain point, but that he failed in making a continuous communication from the inside of the pipe to the carriage, *in connection with the means of making his valve sufficiently air-tight*, upon which the entire success of the system depends.

Now what has Mr. Pinkus done? His first patent we find dated 1st March, 1834; he says he began in 1825, but there is no evidence extant, nothing but his own assertion; but in 1834, he sets forward a combination precisely similar to that published by Medhurst seven years previously, only proposing to use a rope for his continuous valve, which he describes thus:—

A flexible cord E lies in the groove at the top of the cylinder, for the purpose of closing the longitudinal aperture; this cord is to be of the same length as the pneumatic railway, and to fit tightly into the groove or channel. The cord is passed under the wheel e, and over the wheel P; and its purpose being to close the opening in the cylinder, it is required to yield freely when acted upon by the apparatus, and it should be made heavy, and it may be pressed down into the grove by the wheel W, which passes over it.

Now if Mr. Pinkus can prove any better result to arise from this rope (or from any other of his various crude suggestions) than from the valve suggested by Medhurst, he has a perfect right to it. He says that success attended his experiments made in 1835 on a model; it was this model I was invited to inspect about that time; and on the occasion of my seeing it, I certainly did condemn it as impracticable, an opinion in which I was joined by Mr. George Stephenson who was there at the same time, and who, in my presence, emphatically told Mr. Pinkus "*It won't do.*" Since when I have never heard anything of the matter.

I apprehend the success of these experiments was not very flattering to Mr. Pinkus, as I find he took out another patent in 1836, "for improvements in inland transit," in which he says, "the method of carrying it into practice consists in a method or in methods of constructing the pneumatic valve and the valvular cord, and in the manner of using the same, one of which methods hereinafter described I design *to substitute for and in lieu of the valve and cord described in the specification of my said former patent.*" He then goes on to describe a valve formed of iron plates secured to felt, to lay against pieces of wood, which he proposes to fix to the inner sides of the trough, as presenting a smoother surface than cast iron. He next describes a spring copper valve fastened at its foot to the pipe, and meeting at the top in the shape of an inverted V; and lastly, a combination of the two, viz., using half the spring copper valve against the up-raised side of the trough, and pressing it against its surface with the valve with iron plates, as before described, which in this case acts as a wedge pressing against the side.

It was not until long after he had taken out both these patents, that he had any communication with Mr. Clegg and Mr. Samuda, and for their triumphant refutation of his assertions I refer you to their letters, which they have requested me to forward to you.

It is sufficient here to observe, that garbled extracts of letters written in May 1837 and April 1838, can have no relation to, or be any proof of, a breach of confidence respecting secrets of patents whose specifications must have been enrolled in 1834, 1835, and 1836.

On the 3rd January, 1839, Clegg and Samuda obtained a patent "for a new improvement in valves, and the combination of them with machinery." This valve, says the inventor, "works in a hinge of leather, (or other flexible material which is practically air tight), similar to the valves commonly used in air-pumps. The extremity or edge of these valves is caused to fall into a trough containing a composition of bees' wax and tallow, or bees' wax and oil, or any substance or composition of substances which is solid at the temperature of the atmosphere, and becomes fluid when heated a few degrees above it; after the valve is closed, and its extremity is laying in the trough, the tallow is heated sufficiently to seal up or cement together, the fracture round the edge or edges of the valve which the previous opening of it had caused, and the heat being removed the tallow again becomes hard, and forms an air-tight joint or cement between the extremity of the valve and the trough. When it is requisite to open the valve, it is done by lifting it out of the tallow with or without the application of heat, and the before named process of sealing it or rendering it air-tight is repeated every time it is closed."

The inventor then goes on to describe how, by means of this valve in combination with a line of partially exhausted tubes, it may be rendered useful to move weights on railways. The combination employed is described being essentially similar to that invented and published by Medhurst. The only claim set up in Clegg's patent being "the method of constructing and using valves as above described." The success of this valve has been demonstrated by upwards of two years' experience on the Thames Junction (West London) Railway, and as the whole combination there employed, *except the valve and mode of sealing it*, is substantially that invented and published by Medhurst, it follows that to Clegg is due the credit of perfecting what he began. Thus rendering the original idea of Medhurst *practicable and useful* by the simple and ingenious contrivance of constructing a continuous valve capable of being easily opened, and as quickly hermetically sealed up again, every time the train passes, and as it passes.

On 3rd August, 1839, Mr. Pinkus finding that his numerous valves of 1834, 5, and 6, his *pneumatic locomotive engine*, &c. &c., did not please him, takes out his third patent, in which he not only describes a valve similar in every respect to that of Messrs. Clegg and Samuda, but also proposes to seal it with a composition to be rendered fluid and solid, as described by them; with the sole exception of using a galvanic wire instead of a heater to melt the cement. As this patent was enrolled eight months *after* the publication of Clegg and Samuda's specification, I cannot but think that their invention was instrumental in leading Mr. Pinkus's ideas to this valve, *as nothing of the sort is discoverable in either of his previous patents*, and I consider Messrs. Clegg and Samuda have every right to retort the charge of "colourable variations of contrivances" on this *unscrupulous inventor*.

Mr. Pinkus will find that his "*bitumen*" as a substitute for "*bees'-wax*," and his "*galvanic wire*" for a "*copper heater*," are as inefficient, for practical purposes, as his "*valvular cord*," which he will not allow to be called a rope.

The specification of Mr. Pinkus's first patent of 1834, with engraved drawings, is to be found in the *London Journal of Arts and Repertory of Patent Inventions* for June, 1835, vol. vi. page 158, and a long communication, explanatory of his patent, from Mr. Pinkus himself, in page 177, dated the 26th May, 1835; and in the *Railway Magazine*, new series, No. 10, for December, 1836, vol. i. page 432, there is a long article from Mr. Pinkus on his second patent of that year, with some large plates; and it is this latter patent which was the subject of the correspondence with Mr. Clegg and Mr. Samuda *in the two following years*, and on the extracts from which Mr. Pinkus founds his charges of breach of confidence and piracy against those gentlemen. I refer to their letters,

And am, Sir, your obedient servant,

CHARLES VIGNOLES.

4, Trafalgar-square, July 12, 1842.

THE ATMOSPHERIC RAILWAY.

To the Editor of the Railway Times.

SIR,—I see by an article in your valuable paper of the 8th that Mr. Pinkus states, that I was a confidential agent of his, and that during that time I pirated his invention of a Pneumatic Railway.

I never was employed by Mr. Pinkus in any way whatever; I never knew him, even by sight, until he had taken out his two first patents, and to the best of my belief I never was altogether three hours in his company.

While I was a resident of Paris, in 1838, Mr. Pinkus wrote to ask me as a favour to call at the patent office and inquire whether his two French patents were valid, and my letter from which the extract is given, was written in reply.

I have not been as fortunate as Mr. Samuda in having kept a copy of my letter, but I would beg Mr. Pinkus to give it *in full*. Beyond this, I never had any transaction with that gentleman.

Respecting his valve for closing the longitudinal apertures in the pipes, his specification and mine will decide that point. Had he found it answering the purpose he would not have required a pipe 40 inches in diameter (the size stated in his description of his first patent), nor would he have abandoned it for a metallic valve combined with a pneumatic locomotive engine, which forms the subject of his second patent.

I would merely ask, if Mr. Pinkus's patents were all-sufficient, as he states, why should he take out another and a third patent eight months after mine, merely deviating therefrom by a change of composition, and substituting a wire to be heated by electricity, instead of the mode proposed by me. I have not the least objection that Mr. Pinkus should have all the advantages to be derived from these somewhat amusing improvements.

I have the honour to be, Sir, your very obedient servant,

SAMUEL CLEGG.

16, Sidmouth-street, Regent-square, July 11, 1842.

THE ATMOSPERIC RAILWAY—MR. PINKUS'S CLAIMS.

To the Editor of the Railway Times.

SIR,—In your last number Mr. Pinkus has brought a very serious charge against me and my friend, Mr. Clegg. He asserts that we were "in his employ;" and in another place, that we were his "confidential agents;" and that the result of this misplaced confidence was our pirating of his invention of the Pneumatic or Atmospheric Railway, and that we have been thus imposing on the public.

I need not add, that to have such a charge made, *and through such a channel*, requires to be met, and we therefore confidently hope that, with your uniform impartiality, you will grant us the means of fully informing you and the public on this case.

I beg to say that we never knew Mr. Pinkus until he had taken out his two patents; and that, consequently, we could not have had any confidential communications with him as regards his invention.

Our indignant denial of the truth of any part of this statement, might, however we felt ourselves right, only place us in a position to have our veracity weighed against that of Mr. Pinkus. It is, however, fortunate for us that in this instance Mr. Pinkus has condescended to give something like evidence; and he has printed an extract from one of my letters to him to sustain his case.

You will no doubt be surprised to learn, that the term "the Pneumatic," referred to in that letter, had reference to a then favourite project of Mr. Pinkus for a *Pneumatic Locomotive Engine*, which was in course of construction by Mr. Hague. A difference of opinion having arisen between the parties as to the sufficiency of the drawings furnished to Mr. Hague, an application was made to us, and the letter in question was the result; most fortunately, we happen to have kept a copy of it—and which we beg to subjoin, merely premising, that the words in *Italics*, and included between brackets, *have been omitted* by Mr. Pinkus:—

Digitized by Google

"Bridge-street, Southwark, May 8, 1837.

"DEAR SIR,—[*In reply to your letter of the 5th instant*] it is my opinion that the drawings of the Pneumatic [*Engine which you showed me, and informed me were copies of those furnished to Mr. Hague*] would have been sufficient for [*the*] execution [*of it, coupled*] with such explanations as are always expected and given during the progress of such works. I make this remark, because a general plan (and we seldom have anything else) never can contain the whole minutiæ. [*of a machine*], nor do we [*in general*] look to have that supplied to us, [*but extract our own working drawings*], applying to the inventor [*or civil engineer*] for any parts which the drawing [*from the smallness of the scale, or from other causes*] does not sufficiently explain. [*The drawing in the* Railway Magazine *which you subsequently sent me, was, I think, as explicit as a drawing on that scale could be made.*]

"I remain, dear Sir, yours, respectfully,

"(Signed) JACOB SAMUDA."

After this exposition of Mr. Pinkus's talents *as an inventor*, we trust we shall not be wanting in any due respect to you or the public if we decline any further controversy with that gentleman.

A reference to the drawings in the *Railway Magazine* (New Series, No. 10), for December, 1836, coupled with Mr. Pinkus's *own description*, will furnish the best refutation to his assertions, and will at once show the utter dissimilarity between his invention and the Atmospheric apparatus at Wormwood Scrubbs, invented and patented by Mr. Clegg, and to the successful operation of which I am proud to imagine I have in some degree contributed.

The insinuation, that I have at any time been either in the service or confidence of Mr. Pinkus, is equally untrue with the rest of his letter. I should add, that the experiment which Mr. Pinkus complains of as having been broken up on the threshold of demonstration, and pirated by us, was the pneumatic locomotive engine, &c., as described in the above-named number of the *Railway Magazine*, and which was actually completed for him, on a small scale, by Messrs. Johnston, of Cursitor-street, and tried at Lord's Cricket-ground, when it utterly failed.

I have the honour to be, Sir,
Your very obedient servant,
JACOB SAMUDA.

Southwark Iron-Works, July 11, 1842.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—As the Directors have at last promised to give a full and satisfactory explanation, I trust it will be in plain and direct terms, to meet the following cases.

Mr. Driver, the Government Surveyor, having valued the 500 acres of land, and all contingencies, at 70,000*l.*, and Mr. Harman having stated to a Committee of the House of Commons that the estimate was very little exceeded, Mr. Harman has to give a *true* and *particular* account of the extra land, and payment for compensation, to the amount of 300,000*l.* extra.

The Engineers, Messrs. Rastrick and Locke, having estimated the works, at liberal prices, to cost between 700,000*l.* and 800,000*l.* (which I know to be a larger sum than that for which the same quantity could be executed in a more sound manner), and Mr. Harman having stated to a Committee of the House of Commons that the estimates were very little exceeded, the Directors have to account for the difference between the above sum and 2,000,000*l.*, particularly as the value of the extra works described by Mr. Rastrick, in his explanation, are amply covered by the 10 per cent. reserved for contingencies.

I am, Sir, your obedient servant,
J. TROUP.

MIDLAND COUNTIES' RAILWAY.

To the Editor of the Railway Times.

SIR,—I beg leave to submit to you, a short statement of the circumstances in which the shareholders of the Midland Counties' Railway now find themselves placed, hoping, with your valuable assistance, we may be able to bring about a better state of things, as this line and its management are beginning to attract some share of public notice.

I will briefly mention, that the Midland Counties' Railway first originated as a single line for conveying coals from the mines at Pinxton, which is the terminus of the Mansfield Railway, to the market at Leicester. But when it was brought before the public a wider view was taken; it was determined to carry it forward to Rugby, to join the London and Birmingham line, and to have stations also at Derby and Nottingham, as well as at the first proposed terminus at Pinxton. Thus the railway would form a large cross, with its arms reaching the four places before mentioned.

This being a work of much importance, Mr. George Renuie was called in. He made a survey and an estimate; a prospectus was issued, and shares taken. The capital was stated to be 600,000*l.*; a sum beyond the estimate of Mr. Rennie, but the Directors thought it right to have funds sufficient; at least, so they told the shareholders.

Now on this line there was a tunnel, and in those days a tunnel was thought a very frightful thing, so Mr. Vignoles was called in. He said he would avoid the tunnel on the Rugby branch; but the line must on that account be somewhat longer, and the works on it more costly. It would, in fact, amount to 1,000,000*l.* sterling, namely, 850,000*l.* for the Nottingham, Derby, and Rugby ends of the cross, and 150,000*l.* for the "Pinxton branch."

I pray you, Sir, to bear in mind that this Pinxton branch was originally part of the main line, and probably the best part of it. An Act of Parliament was obtained; the capital 1,000,000*l.*, with power to borrow 330,000*l.* more. But the line to Pinxton was cut off in the House of Lords, and the railway is now like the letter T; the upper point or branch of the cross was taken away, but the money to make it was retained.

Mr. Woodhouse was next appointed. He reported the capital to be ample; he let the works to various contractors, and the Directors congratulated the shareholders that everything would be done within "the Parliamentary capital." Mark this, Sir, I pray you; they spend the 1,000,000*l.*, and borrow the 330,000*l.* as allowed by the Act. But as the traffic was likely to be very great, much greater than had been at first expected, they wanted locomotive engines, waggons, &c., to meet it, and they called on the shareholders to take "quarter shares," in addition to their former subscriptions; but as the public had begun to look coldly at the undertaking, and shares were at a sad discount, as well they might, they would issue the "quarters" to the present holders at 15*l.* instead of 25*l.*, which was reluctantly agreed to. We now expected to reap some profit, and at the ensuing half-yearly meeting a dividend of 2½ per cent. on the six months was declared; making, as the Directors said, 5 per cent. per annum. And the shareholders dined together on the occasion, as shareholders and Englishmen ought (August 14, 1841).

Even at that meeting, after declaring the 2½ per cent. for the half-year "out of the clear profits of the undertaking," it creeps out that the Directors now find it will require a further addition of 110,000*l.* to meet the extra demands on the Company.

So matters went on until the next meeting, February 18, 1842, when the Directors stated, that they purposed applying to Parliament for another Act empowering them to raise an additional sum of 250,000*l.*, and the further sum of one-third of that amount by loans; but that the balance in favour of the Company on the revenue account was 30,084*l.* 18s. 7d., which would enable the Directors to declare a dividend, *out of the clear profits of the undertaking*, of 2*l.* for every 100*l.* stock for the half-year.

The shareholders drew a long breath, and after a solemn pause, a worthy Quaker from Leicester asked who audited the accounts. The Directors had done it themselves to save expense; one of their number, Mr. Joseph Cripps, had undertaken it, and he was an excellent accountant. Our Leicester friend thought Joseph Cripps an upright man and a good accountant, but he thought we had better appoint an auditor and pay him.

Another shareholder ventured to ask if they really wanted this large sum? Oh, no! said the Chairman, 133,000*l.* is the full extent of all our liabilities, but you see the cost of obtaining an Act of Parliament will be just the same, and we had better take powers to raise the larger sum. I fear, said the Quaker, thou wilt find occasion for all thou cans't raise; and the shareholders again submitted, but not so quietly as before.

Time rolls on like a locomotive engine. The Act is now obtained, and a circular dated June 27, 1842, is sent to each shareholder, saying that the existing liabilities of the Company amount to 158,000*l.*, and the Directors propose to issue "new fifths," that is to say, 12,500 20*l.* shares, each shareholder to take a fifth for every 100*l.* he holds, and to pay 2*l.* as a first call on every fifth on the 1st September, 1842; so that the scheme stands thus—

Already raised on debentures.....	£83,000
To be borrowed on loan notes for three years..	50,000
Call of 2*l.* per share on 12,500 shares..... ...	25,000
Total.....	£158,000

and no further call to be made for the next two years. But where will this end? Where is the estimate of Mr. Rennie, 600,000*l.*? Where is the amended estimate of Mr. Vignoles, 850,000*l.*? Where is the Parliamentary capital 1,330,000*l.* for the curtailed line, minus the leg to the Pinxton coal mines? Where are the quarter shares? Where are our dividends?

Now, Mr. Editor, you will say, why do you call on me for assistance? Why do you not stand up in your place at the next meeting and call the Directors to account? Why do you not move for a Committee of Inquiry? Sir, I will explain. I am a person of no weight or influence, and although my stake in the Midland Counties' Railway is to me a very important one, yet it is not so great as to carry many votes at a general meeting. The meetings are seldom very numerously attended. The Directors are set in array at a long green table, backed by their friends, and those friends have their pockets full of "proxies." The Chairman is a gentleman in every sense of the word (I wish he were a man of business also), and in any skirmish that may take place he parries the shafts aimed at the Directors, and they glance harmless from the polished shield which he constantly extends over the Board. But when some blunt fellow, smarting under the repeated attacks upon his pocket, makes a direct charge upon the said Board, up starts the phalanx of friends armed with proxies. They repel with indignation any imputation upon those gentlemen whose zeal in the discharge of their duties they cannot too highly praise; and they tell the individual who has thus dared to make such an attempt, that they represent so much capital as will turn the scale against all the shareholders present, if they presume to divide on the question.

This is the way the thing is done, and the question arises, what is the remedy?

Sir, your journal is widely circulated and much read. If you insert this letter, I will ask the absentees either to attend in person or to recall their proxies, which, once given, are used for good or for mischief, until they are present themselves, or until they revoke them.

If the most active Director at the Board be also the contractor for the coke, which, in the face of the last meeting, was offered for 20 per cent. less than it now costs the Company, you will hardly be surprised that, on his part at least, a vigorous defence should be made.

The railway is about 57 miles in length, and the land taken for the purposes of the railway is

Digitized by Google

about 570 acres, scarcely any of which was of great value, the Derby station not being included; yet the sum paid for land and compensation amounts to 228,342*l.* 11s. 5½d. How beautifully exact this is!

The items in the capital account for law charges, conveyancing, Parliamentary expenses, and "charges previous to the general opening," viz., obtaining Act of Parliament, interest on debentures, Direction, rates and taxes, &c., amount to 78,770*l.* Surely this wants sifting.

The current expenses of the railway are quite in keeping with the "capital account," but I will not now enter into details; I will only state, that we have a large and superb engine factory and repairing establishment at Derby, yet at the time I am writing several of our locomotive engines are under repair at or near Manchester.

Allow me to conclude by saying, that the Midland Counties' Railway is one of those which promised the best investment for capital. The line is easy; it runs for the most part over a level country, and has no "engineering difficulties" whatever.

It has all the traffic of Nottingham, Derby, Loughborough, Leicester, and a large manufacturing and mining country besides. It has the transit from Leeds, York, Hull, Darlington, Newcastle-on-Tyne, and the east of Scotland, to London. It only requires to be well and economically managed in order to make it yield an ample revenue, and pay a satisfactory dividend.

I am, Sir, your most obedient servant,
A SHAREHOLDER.

Derby, July 11, 1842.

GLASGOW, PAISLEY, AND GREENOCK RAILWAY.

To the Editor of the Railway Times.

Sir,—In consequence of the depression of trade in this part of the country, our Directors have resolved on accepting for the present only one-half of their allowance of 400*l.* per annum, and have reduced the salaries and wages of their whole establishment, from the highest to the lowest, 10 per cent.

I am, Sir, your obedient servant,
WYNDHAM HARDING.

Secretary's Office, Greenock, July 9, 1842.

THE LATE ACCIDENT ON THE EDINBURGH AND GLASGOW RAILWAY.

FURTHER PARTICULARS.

The points or switches, which are in use at Cowlairs and the other stations, are those worked on the self-acting principle known by the name of Fox's patent. On the main lines of rails these switches remain always *open*, or in a condition to permit the regular trains to pass; but when a shift from one line of rails to the other is to be made by an engine or carriage, it requires the aid of an attendant to *shut* them, and on his letting go his hold of the handle it *ought* to open of itself. The pointsman had neglected to see that it had recovered its usual position after the passing of an engine a few minutes before, and from some cause it had not done so; and immediately on the engine from Edinburgh reaching that point, the train was thrown across towards the other or *up* line. The rail connecting the two lines is about 180 or 200 feet in length; and, as both trains were in motion, the contact was in an oblique direction. The first carriage with which the engine from Edinburgh came in contact was the fourth from the end of the train from Glasgow, a first-class carriage, from which the footboards were carried away, and the hind wheels thrown off the rails. The next carriage, also a first-class, not only received the shock of the one before it, but also came in contact with the engine, and was driven completely off the rails, breaking its axles and shattering it considerably. Behind this last carriage was a second-class one, which was struck by the engine on the corner and shattered slightly; but being also thrown off the rails, the buffers at the back were raised above those of the front of the coupee which followed, the front compartment of which was thus carried away diagonally, driving the passenger inside through the separating partition in the next division, but injuring no other portion of the carriage. We regret to state, that the gentleman referred to above as having his leg hurt, is our respected townsman, Mr. John M'Lead, bookseller, and lately one of the magistrates of Gorbals. He was seated in the coupee, in front of the last first-class carriage, and by the concussion, we are sorry to say, his leg has been broken in two places. The other gentleman referred to is one very generally known by his public spirit, and his desire to add to the enjoyment and amusement of his countrymen—we refer to Dr. Cairnie of Largs. This gentleman has been rather severely, but not seriously, injured in the face. Both these gentlemen, while suffering from their injuries, manifested the greatest coolness and self-possession. We understand that on the main line the switches are so placed that no such accident can by any possibility occur, the entrances to the crossings being the reverse of the direction in which the carriages run; but at the stations, where people are in constant attendance, it is necessary for particular purposes that they shall be placed in the opposite direction.—*Glasgow Courier.*

EASTERN COUNTIES' RAILWAY.

An interesting ceremony took place on Saturday last in the Brentwood cutting, on the Eastern Counties' Railway, the first stone of the new bridge intended to be erected for the Warley-road, having been laid on that occasion by Mr. Braithwaite. The bridge will cross this stupendous cutting at a level of more than 60 feet above the rails, and will be, when completed, upwards of 250 feet in length, forming one of the most ornamental structures on the line. The stone bore the following inscription:—

"This stone
was laid by
John Braithwaite, Esq.
Engineer-in-Chief E. C. R.
July 9th, 1842.
E. W.
T. & T. H."

A bottle containing most of the coins of the present reign was deposited in a cavity prepared for its reception. The gentlemen present, who were interested in the undertaking, afterwards adjourned to the White Hart, where a sumptuous entertainment (given by the contractors, Messrs. Hill) had been provided by Mr. Moull. The chair was taken by E. Walcott, Esq., Resident Engineer, and the evening was passed with the utmost conviviality. We understand that the splendid silver trowel used on the occasion was afterwards presented by Messrs. Hill to Mr. Braithwaite.—*Chelmsford Chronicle.*

Mails on Railways.—The London mail, which runs through Worcester to Ludlow, will shortly be taken off the road, and the letter bags for this town, Ludlow, and the intermediate towns, will be sent on the Great Western and Birmingham Railways, and conveyed to such towns from the nearest stations by mail carts. Lord Lowther has determined to abolish mail coaches where it is practicable to do so, and he has also intimated his intention to dispense with mail guards on railways. This plan, considering that guards are paid now by the Post Office, and not by fees from the public, will save a great expense. On some of the northern railways the railway guards have already been sworn to enable them to take charge of the letter bags. The Earl of Lichfield first introduced the payments of guards by the Post Office, and prohibited them from taking fees from coach passengers, but this plan was introduced gradually on account of the expense. The payment of the Post Office of the staff of mail guards that was necessary before railways were completed would have increased the expenses of the department by an item of 70,000*l.*

MANCHESTER AND BIRMINGHAM RAILWAY COMPANY—SPECIAL MEETING.

[From the *Manchester Chronicle*, July 9.]

A special general meeting of the shareholders in this railway, convened by the Directors, was held at the Company's new station, London-road, yesterday, for the purpose of making known the cause of the delay which has taken place in opening the line throughout. There was a large attendance. Thomas Ashton, Esq., of Hyde, Chairman of the Board of Directors, presided.

Captain Cleather read the advertisement calling the meeting, after which he read the following Report:—

Gentlemen,—The Directors convened the present meeting for the purpose of submitting to the shareholders an explanation of the present position of the Company, in reference to their agreement with the Grand Junction Company, including an account of the correspondence and proceedings of the two Companies, and the causes which have hitherto prevented this Company from opening the line to Crewe; and they had prepared a Report for the meeting, which contains explanations on these points. But, since convening the meeting and preparing the Report, a communication has been made to one of the Directors, from authority, to the effect that the Grand Junction Board were now really desirous of effecting a friendly arrangement with this Company, for working the Manchester traffic on terms to be arranged in a manner satisfactory to both Companies, and suggesting that, on this proposal being agreed to, no further delay should ensue in opening the line. The same individual informed the Board yesterday, that the Grand Junction Board had on Wednesday last appointed a Committee with full powers to meet and arrange the disputes between the two Companies. Under these circumstances, it appears to the Board to be extremely desirable to avoid any discussion at this meeting, which might tend to prevent a friendly settlement of the disputes between the two Companies; we have, therefore, come to the conclusion to recommend to the shareholders to allow the Directors to postpone the reading the general Report, and to consent to an adjournment of this meeting to Monday, the 18th instant.

Mr. Henry Newbery stated, that a preliminary meeting had been held on the previous day, before which all that had taken place was laid; that meeting consisted principally of shareholders holding more than 100 shares. A considerable discussion took place on the matter contained in the Report, and the whole of the particulars, were gone into, and the meeting unanimously concurred in the recommendation of the Directors, that in consequence of the apparent wish of the Grand Junction Company to come to an amicable arrangement, it would be desirable at all events to adjourn this meeting for one week. The Directors, therefore, now asked for that adjournment, desirous to prevent any angry discussion which might throw obstacles in the way of a friendly arrangement. He said, the Board had been anxiously desirous that an arrangement should take place between the two Companies, and throughout, he hoped, they had acted in a way which would not only meet the approbation of the shareholders, but of the town itself, as well as of the country at large.

The latter portion of Mr. Newbery's observations called forth some remarks from Mr. David Price, in which he charged the Directors with having violated the pledge which they gave to the shareholders at the half-yearly meeting on the 24th of February last, with reference to calling a special general meeting before they gave in their sanction to the scheme of forming a junction with the Leeds Railway, by means of a tunnel, at Hunt's Bank. Mr. Price also censured the Board on some other grounds, but as the Directors did not reply to his remarks, nor allow the general Report to be read for the reasons above stated, we have thought it right, on the principle of fairness, to withhold his speech which, under the circumstances, could appear in no other light than as an *ex parte* statement. The general feeling of the shareholders present seemed to be that the discussion should be postponed till the adjourned meeting.

On the motion of Mr. William Neild, seconded by Mr. Atkinson, the meeting was ultimately adjourned, agreeably to the wish of the Directors, to the 18th instant.

RAILWAY ADJUDICATION.

COOK v. THE AYLESBURY RAILWAY COMPANY.*

Hertford Assizes, July 8.—This was an action to recover the amount of damage sustained by the plaintiff in consequence of some of his cows having been run over by a train upon the railway.

Serjeant Shee and Mr. Wordsworth were for the plaintiff; Mr. Montagu Chambers, Mr. Peacock, and Mr. Rose, for the defendants.

Serjeant SHEE said, this was an action brought by the plaintiff to obtain recompense at the hands of the defendants for the injury he had sustained in consequence of their having neglected to provide a proper gate or fence to prevent his cattle from straying upon their railway. Great powers were given to the proprietors of works of this description: they were enabled to cut through the property of any person, and to carry their line just where they pleased; but the legislature, foreseeing what would be the effect of a farm or other property being divided by a railway, had enacted that, where this was the case, the Company should make all necessary gates and feaces to keep cattle from straying upon the railway, and that they should also take care to keep them in proper repair. The plaintiff was a farmer at Tring, and the defendants having carried their railway through his property, they erected a gate to enable him to pass from one side of the railway to the other, and to keep his cattle from straying upon the line. They had, however, neglected to keep this gate in proper order, and the consequence was, that on the night of the 27th of September several of his cows got upon the railway, and a train coming up at the time, ran over the cows and killed two of them, and injured several others. He contended that this accident was entirely owing to the negligence of the defendants, and to their not having complied with the provisions of the Act of Parliament, and that therefore they were liable to make good the damage.

Several witnesses were called who bore out the statement of the learned counsel, so far as the injury done to the cows, and they also said that the latch of the gate was much worn, and that the gate would not keep shut. One witness who had passed through the gate a short time before the accident happened, said that he pulled the gate close, and it blew open again, and that he tried to shut it a second time; but a very short time afterwards the cattle, it appeared, got upon the line, and were run over by the train.

The defence set up was, that the Directors had done all that the law required of them, and that the gate in question was properly erected, and in good condition at the time of the accident; and witnesses were called who swore positively that they examined the gate both before and after the accident, and that it was perfectly secure; and it was alleged that the accident must have occurred through some person opening the gate.

Lord ABINGER said, there was no doubt that the Railway Company were bound in law, not only to erect proper gates and fences in such situations, but also to take care afterwards that they were kept in proper repair. If the jury believed that from any circumstance, even from the ordinary wear and tear of such an article, the fastenings were defective and that the gate might have blown open, and so allowed the cattle to get upon the line, the defendants were liable, because they were bound by their Act of Parliament to keep the gates and fences in proper repair. If, on the contrary, they believed the witnesses for the defence, when they declared the gate to be in a proper and secure state, then they would return a verdict in their favour.

The jury, after deliberating for some time, retired, and were absent about an hour, when they returned with a verdict for the defendants. The jury at the same time handed in a resolution they had come to, recommending the Directors to take care and see that all the gates and fences upon the line were properly secured at all times, in order that the public might be protected from the chance of injury through such accidents as the one in question.

* A short notice of this case appeared last week.—Ed. R. T.

GREAT NORTH OF ENGLAND RAILWAY.—SERIOUS ACCIDENT.—On Wednesday evening last, the 13th instant, great alarm was caused by the non-arrival of the through train from London, which was due at 7 o'clock at the station at Darlington, and at half-past 7 an engine was dispatched, when it was ascertained that a sad accident had happened at Aine station. It appears, from the best information we can gain, that the policeman at the above station had incautiously lent the key to a man to open the switches at the entrance to the depots, and which were not properly adjusted when the passenger train arrived; consequently the engine and coaches, instead of keeping the main line of railway, took the branch leading to the depots, which are about 12 feet above the level of the coal-yard, and the engine forced two trucks in the line into the coal depots, and the engine and the next coach attached went down as far as they could, which caused a severe shock through the whole train. The passengers in the first coach were dreadfully injured. One gentleman had three of his ribs broken, and a little boy, it was feared, had sustained a concussion of the brain. However, we are glad to say that no lives were lost, and the passengers were able to proceed on their journey, with the exception of five or six. The train arrived at the Darlington station about 10 o'clock, and on Thursday the Directors, Secretary, and Superintendent, went down to investigate the case. The train was a very large one, and two gentlemen's carriages were attached, one belonging to Mr. Ogle, the member for Northumberland.

LONDON AND BRIGHTON RAILWAY.—The new pier constructed by the London and Brighton Railway Company, in Shoreham Harbour, is rapidly approaching completion, and will be ready in a few days for the embarkation of passengers. We are happy to state that the *Lord Melville* steam-packet, belonging to the General Steam Navigation Company, will arrive here about Friday or Saturday se'nnight, and make her first voyage from Shoreham to Havre on the 26th instant.—*Brighton Gazette.*

MARYPORT AND CARLISLE RAILWAY.—The contractors for executing that portion of the Maryport and Carlisle Railway extending from Wigton to Carlisle are making excellent progress in the various departments of their undertaking. On Saturday week a locomotive engine was placed upon the Wigton extremity of the line, from the works of Messrs. Hawthorn and Co., of Newcastle. The new engine is named the *Ballantyne*, and being the first ever seen in that locality, "puffing billy," as the mail guards call them, has attracted vast crowds of spectators, who gaze upon its movements with evident astonishment.—*Cumberland Pacquet.*

INCOME TAX ON PUBLIC COMPANIES.—The subject of the income tax was introduced into discussion at the annual meeting of the shareholders of the South Australian Bank, which was held in the city of London on Wednesday week, when one of the Directors (Mr. Divett, M.P.), who has been in communication with the Chancellor of the Exchequer, stated that Mr. Goulburn had intimated to him that the Government would look to the Company itself as the source from which to receive its impost, without any reference whatever to individuals. The amount paid would, therefore, have to be deducted from the *pro rata* dividend paid to the shareholders, but in this the Chancellor said nothing, leaving them to arrange that matter as best suited their own convenience. Another Director said it might happen that parties were not beneficially interested in business to the amount which brought them within the operation of this tax; in that case he supposed that such persons would have, as in former times, to get a certificate from Government, and come back to the Bank and get the amount deducted from their dividend remitted. The principle as to the imposition of the income tax set forth at this meeting of course applies to all public Companies, which, it is understood, will have to make a return of their gross profits, irrespective of the appropriation of any monies for a reserved fund, or other contingencies, and will on that return be taxed.

RAILWAY TRAVELLING IN AMERICA.—It is a common fact enough, that half the railway routes that are travelled in America are either temporary or unfinished—one reason, among several, for the multitudinous accidents which befal wayfarers. At the very out-set of our journey, and within scarce a mile of Philadelphia, we crossed the Schuylkill over a bridge, one of the principal piers of which is yet incomplete, and the whole building (a covered wooden one of handsome dimensions) filled with workmen yet occupied in its construction. But the Americans are impetuous in the way of improvement, and have all the impatience of children about the trying of a new thing; often greatly retarding their own progress by hurrying unduly the completion of their works, or using them in a perilous state of incompleteness. We crossed one or two inlets from the Chesapeake of considerable width, upon bridges of a most perilous construction; and indeed, which have given way once or twice in various parts already. They consist merely of wooden piles driven into the water, across which the iron rails are laid, only just raising the cars above the level of the water. To traverse with an immense train at full steam speed one of these creeks, nearly a mile in width, is far from agreeable, let one be never so little nervous; and it was with infinite cordiality each time that I greeted the first bush that hung over the water, indicating our approach to *terra firma*.—*Mrs. Butler, in Bentley's Miscellany.*

TO RAILWAY DIRECTORS, AND OTHERS INTERESTED IN THE BURNING OF COKE.—A Gentleman of many years' experience in the making of Coke has succeeded in inventing an oven very superior to those in common use, and is in want of the assistance of some influential gentleman to bring it before the public.

Its advantages consists in the rapidity with which it does its work (being capable of burning 4 tons of coal every 24 hours) and the superiority of the article it turns out, connected with great strength and durability.

Particulars may be known on application to Mr. Henry Taylor, Broker, Grove Avenue, Queen-square, Bristol.

WANTED, in a Stock and Sharebroker's Office, an EXPERIENCED CLERK, well acquainted with the routine of business, and known to some of the principal dealers in the London market. Apply by letter, post-paid, to X. Y. Z, care of Mr. W. H. Roberts, 1, Dean-street, Finsbury-square, stating qualifications and salary expected. Respectable references will be required.

THE RAILWAYS OF GREAT BRITAIN AND IRELAND practically described and illustrated. By FRANCIS WHISHAW, Civil Engineer, M. INST., C. E.

"No railway capitalist who studies his own interest will remain long without it; it is a work of immense labour and research, rich in original and authentic information, and embellished to profusion with splendid engravings."—*Railway Times.*

"This is one of the most striking and valuable works that have lately issued from the press; the author handles his subject in that masterly style which proves his perfect acquaintance with the matters upon which he treats."—*Bath Chronicle.*

"Mr. Whishaw is a discriminating statician, and has a thorough acquaintance with his subject."—*Athenæum.*

"A faithful record of the rise and progress of the greatest modern result of the genius of man."—*Polytechnic Journal.*

"The completest view of railway statistics yet produced."—*Morning Chronicle.*

"A complete history of all the railways in the United Kingdom.—*Liverpool Mercury.*

"Full of sound practical information, derived from the fountain head itself."—*Observer.*

"A more complete and satisfactory account of the railway system of Great Britain could scarcely be devised."—*Courier.*

"Here the practised engineering skill of the author manifests itself."—*Manchester Courier.*

"It may be looked upon as a rare and precious acquisition to the practically scientific literature of the country."—*Manchester Times.*

"It is not the mere opinion of a theoretic man, but the result of a practical and talented engineer."—*Plymouth Herald.*

"Such a work, the product of a practical man, is clearly entitled to the distinctive term 'national.'"—*Hereford Journal.*

"A text-book on railways for the next half century."—*Maidstone Gazette.*

"We know of no work which ought to be so favorably received in Scotland at present."—*Perth Courier.*

"Developing a depth of principle, and a breadth and variety of details of well-digested facts, which nothing in the history of railways at home or abroad can possibly rival, or less surpass."—*Dumfries Times.*

GREAT WESTERN RAILWAY.—NOTICE is hereby given, That the next Half-yearly General Meeting of the Proprietors of this Company will be held, pursuant to the Act of Parliament, in Bristol, at the Bristol Station, on Thursday, the 18th of August next, at Twelve o'Clock, for the general purposes of business. The Chair will be taken at One o'Clock, precisely.

CHARLES RUSSELL, Chairman.
ROBERT BRIGHT, Deputy-Chairman.

The Transfer Books will be Closed on the 8th August; and will not be opened until after the said Half-yearly General Meeting on the 18th.

Clause 123 provides, that no person shall be entitled to vote as a proxy unless the instrument appointing him shall have been transmitted to one of the Secretaries of the Company at least 5 days before the meeting.

By order,
CHARLES A. SAUNDERS, } Secretaries.
THOMAS OSLER, }
Dated 7th July, 1842.

Railway Offices—2, Princes street, Bank, London; Railway Station, Bristol.

LONDON AND GREENWICH RAILWAY COMPANY.—NOTICE is hereby given, That a Half-yearly General Meeting of the Proprietors of this Company will be held at the London Tavern, Bishopsgate-street, on Thursday, the 28th of July instant, at Twelve for One o'Clock precisely.

The Transfer Books will shut on Monday, the 18th instant, and re-open on Monday, the 1st August.

By order of the Board,
J. Y. AKERMAN, Secretary.

Offices, 37, Canterbury-square, Southwark,
July 12, 1842.

LONDON AND BRIGHTON RAILWAY COMPANY.—NOTICE is hereby given, That the next Half-yearly Meeting of the Proprietors of this Company will be held, pursuant to the Act of Incorporation, on Friday, the 5th of August, 1842, at the London Tavern, Bishopsgate-street, in the City of London, at One o'Clock precisely. The Transfer Books of this Company will be closed on the 21st instant, and remain shut until after the meeting.

JOHN HARMAN, Chairman.
C. R. MACKENZIE, Secretary.

London and Brighton Railway Office, 10, Angel-court, Throgmorton-street, July 8, 1842.

LONDON AND BRIGHTON RAILWAY—THIRD-CLASS PASSENGERS.—On and after this day (Saturday the 16th July), Third Class Passengers will be conveyed from London at a Quarter to Eight in the morning, and from Brighton at Eight in the evening.

ON SUNDAYS.

From London at a Quarter to Eight in the morning.
From Brighton at Seven in the evening.
FARE 6s. each way.

ADDITIONAL TRAINS.—On and after Saturday the 16th instant, a Train will leave London at Three in the afternoon, and Brighton at Seven in the evening, daily, except Sundays.

N.B.—Second-Class Carriages will be attached to the Nine o'Clock "Up Train," in the morning from Brighton.

By Order,
CHARLES R. MACKENZIE, Sec.

10, Angel-court, Throgmorton-street, July 16, 1842.

YORK AND NORTH MIDLAND RAILWAY.—NOTICE is hereby given, That the Half-yearly General Meeting of Proprietors of Shares in the York and North Midland Railway Company will be held in pursuance of the provisions of the Act of Incorporation, in the Offices of the said Company, Tanner-row, in the City of York, on Tuesday, the 2nd day of August next, at Twelve o'Clock at Noon precisely.

The Report of the Directors, and a Statement of the Accounts, will be ready for the inspection of the Shareholders, on Monday, the 1st day of August.

GEORGE HUDSON,
Chairman of the Board of Directors.
GEORGE BAKER,
Clerk to the Company.

Railway Office, York, July 13, 1842.

YARMOUTH AND NORWICH RAILWAY.—NOTICE is hereby given, That the Shares to be appropriated to Landowners on the line of the Yarmouth and Norwich Railway will not be reserved after the 1st of August next.

Applications for the same to be made to Messrs. Rackham and Cooke, of Norwich, and Messrs. Reynolds and Palmer, of Yarmouth, and to the Secretary, at the office of the Company, in London.

By order,
H. PATTESON, Secretary.

Warnford-court, Throgmorton-street,
June 30, 1842.

CRANES, ROPE BLOCKS, AND SCREW JACKS, manufactured by ELLIS AND NOTON, Salford, Manchester.—Fixed and Travelling Cranes, for Railways, Wharfs, and Warehouses, to lift from 5 cwt. to 20 tons and upwards, either by hand or steam power; Patent Direct Switches for Railways; Travelling and Fixed Crabs for Quarries, and Hoisting Tackle of every description, on the most improved principle.

Drawings of the above may be seen, and particulars obtained, at the works in Manchester, and at the office of C. F. Cheffins, 9, Southampton Buildings, Holborn, London.

BRISTOL AND GLOUCESTER RAILWAY.—The Directors of this undertaking will receive Proposals for LOANS of Money on Debentures, to be issued under the Provisions of the Acts of Parliament, in the month of October next, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest, at the rate of £5 per cent. per annum, payable half-yearly, at the Banks of Messrs. Miles, Harford, and Co., Corn-street, Bristol; and Messrs. Barnetts, Hoare, and Co., Lombard-street, London.

For monies immediately advanced the security of Loan Notes, under the Seal of the Company, will be given, which may be exchanged for Debentures in the said month of October.

Tenders expressing the Sums and terms of years, to be addressed to the undersigned, at the Company's Office, Exchange Buildings, Bristol.

By order of the Committee of Management,
ROBERT FLETCHER, Secretary.

Office, Exchange Buildings, Bristol, May 30, 1842.

MANCHESTER and BIRMINGHAM RAILWAY.—The Directors hereby give NOTICE, That the General Meeting of the Shareholders, which was adjourned on Friday last, will be held at the Manchester Station, in London-road, on Monday, the 18th of July, at Twelve o'Clock.

THOMAS ASHTON, Chairman.

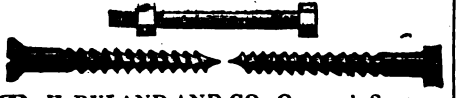
Manchester, July 13, 1842.

THE YORKSHIRE FIRE AND LIFE INSURANCE COMPANY, Established at York, 1824, and empowered by Act of Parliament.—CAPITAL, £500,000.

PATRONS.

The Archbishop of York	Sir G. Strickland, Bart., M.P.
The Marquis of Londonderry	Sir Francis Lawley, Bart.
The Earl Fitzwilliam	Sir W. B. Cooke, Bart.
The Earl of Tyrconnel	Sir W. A. Ingilby, Bart.
The Earl of Zetland	Sir Tatton Sykes, Bart.
The Earl of Yarborough	Sir E. M. Vavasour, Bart.
The Bishop of Ripon	Sir S. Crompton, Bart., M.P.
Viscount Morpeth, M.P.	The Archdeacon of York
Lord Wharncliffe	Archd. of the East-Riding
Lord Feversham	The Archd. of Cleveland
Lord Hotham, M.P.	J. Hen. Lowther, Esq., M.P.
Lord Rowden, K.C.S.K.L.H. &c.	G. F. Barlow, Esq.,
Lord Wenlock	Robert Cracroft, Esq.
Lord Worsley, M.P.	Robert Denison, Esq.
Hon. E. R. Petre	P. Saltmarshe, Esq.
	Marmaduke Wyvill, Esq.

Actuary and Secretary—Mr. W. L. NEWMAN, York.



London Agent for the Life Department—Mr. EDWARD HENWOOD, 46, Watling-street.

The attention of the public is requested to the terms of this Company for LIFE INSURANCES, and especially for FEMALE LIVES.

FIRE INSURANCES are also effected by this Company, on the most moderate terms.

FARMING STOCK Insured without the Average Clause.

Prospectuses, with the Rates of Premium, and every information, may be had at the Head Office in York, or of any of the Agents.

T. H. RYLAND AND CO., OOZELL'S STREET, BROAD STREET, BIRMINGHAM, Patentees and Manufacturers of Wood Screws, Screw Bolts, Spikes, &c. for Railway and other purposes, also Boiler Rivets, &c.

BOLTON AND PRESTON RAILWAY COMPANY—TENDERS FOR LOANS ON MORTGAGE.—The Directors of this Company are prepared under the powers of their Acts of Parliament, to receive TENDERS for the LOAN OF MONEY, in sums of not less than £200, and for terms of 3, 5, 7, or 10 years, and to GRANT MORTGAGES of the said undertaking, and of the Rates, Tolls, or monies arising therefrom, as securities for such Loans, bearing interest at the rate of £5 per cent. per annum.

INTEREST WARRANTS, for the whole term for which the loan shall be made, will be delivered to the Lenders along with the Mortgages, and be made payable half-yearly, at the Company's Bankers in London, or Bolton, as may be preferred.

The Tenders are to express the sums, and the term of years for which the same are proposed to be lent, and to be addressed to the Secretary, at the Company's Office, Bolton.

By order of the Board of Directors,
PETER SINCLAIR, Secretary.

Bolton, 24th May, 1842.

LONDON AND BIRMINGHAM RAILWAY.—NOTICE is hereby given, That the Books in which Transfers of Shares of this Company are registered will be Closed from THURSDAY, the 28th of July, to SATURDAY the 13th of August, 1842, inclusive, and that all Transfer Deeds for Registration must be deposited in this office on or before the 28th July, to entitle Proprietors to the forthcoming Dividend.

By order,
R. CREED, Secretary.

Office, Euston Station, 8th July, 1842.

LONDON AND BIRMINGHAM RAILWAY.—NOTICE is hereby given, That the AUGUST HALF-YEARLY GENERAL MEETING of the Court of PROPRIETORS of the LONDON and BIRMINGHAM RAILWAY COMPANY will be held in London, at the Euston Station, on FRIDAY, the 12th of August next, at 11 o'Clock in the forenoon. The Chair to be taken at 12 o'Clock precisely.

GEORGE CARR GLYN, Chairman } of the Board
JOSEPH F. LEDSAM, Dep.-Chairman } of Directors.

By order,
R. CREED, Secretary.

GARNKIRK AND GLASGOW RAILWAY.—ALTERATION OF HOURS AND FARES.—On and after Monday, the 11th July current, the Trains for Passengers will run at the following hours:—

From Glasgow.	From Airdrie.
Half-past 7 morning	8 quarters-past 8 morn.
Half past 10 do.	3 quarters-past 11 do.
Half-past 1 afternoon.	3 quarters-past 2 after.
Half-past 4 do.	3 quarters-past 5 do.
Half-past 7 evening.	3 quarters-past 7 even.

INTERMEDIATE STATIONS.

Coatbridge to Glasgow, at 9, 12, 3, 6, and 8 o'clock.

Gartsherrie to Glasgow, at 10 minutes past 9, 12, 3, 6, and 8 o'clock.

Gartcosh to Glasgow, at 15 minutes past 9, 12, 3, 6, and 8 o'clock.

Garnkirk Works to Glasgow, at 20 minutes past 9, 12, 3, 6, and 8 o'clock.

Stepps to Glasgow, at 25 minutes past 9, 12, 3, 6, and 8 o'clock.

The Wishaw and Coltness Railway coach, from Holytown and Newarthill, joins the morning train from Gartsherrie to Glasgow, and returns with the half-past 4 train.

FARES.

The alteration of the passenger tax, expected to come into operation this month, enables the Railway Company to reduce the fares, after the 10th current, as follows:—

Glasgow and Airdrie, First-class, 1s.; Second-class, 8d.
Glasgow and Coatbridge, First-class, 10d.; Second-class, 7d.
Glasgow and Gartsherrie, and intermediate Stations, First-class, 8d.; Second-class, 6d.

An omnibus from Brunswick-place, Trongate, 15 minutes before the departure of the trains from the depot.

Garnkirk and Glasgow Railway Office, St. Rollox,
Glasgow, 2nd July, 1842.

PARISIAN BITUMEN COMPANY.—The Directors of the PARISIAN BITUMEN COMPANY beg to call the attention of Engineers, Architects, Surveyors, Builders, and the Public, to the price at which they will undertake to lay down their Bitumen, and to its applicability for pavements, roofs, lining tanks, &c.—also to the successful use of it as a cement in the Weirs on the Upper Medway, whereby great economy in the primary construction and future repairs are attained. The prices are as follows:—

Bitumen prepared for cement, per ton	£3	0	0
Covering viaducts or arches of bridges, catacombs, vaults, terraces, &c., to exclude damp, 1½ inch thick, per superficial yard	0	4	6
Paving pathways, granaries, warehouses, &c., 1½ inch thick, per square yard	0	4	6
Paving barns, court yards, tun rooms, wharfs, stables, &c., 2 inches thick, per ditto	0	5	6

The above charges do not include the cost of carriage, which must be borne by the parties by whom the work is required.

Mill Wall, Poplar, April, 1842.

SURREY.—To be LET, a genteel Cottage Residence, suited to a respectable family, and containing dining room, drawing room, and study, five bed rooms, kitchen, pantry, and other usual domestic offices; with stable, coach-house, productive garden, and about 10 acres of excellent meadow land immediately adjoining thereto. This residence is very pleasantly situated at Brockham Green, near Dorking, and within five miles of the South-Eastern and Brighton Railway Stations. For terms and further particulars, apply to Messrs. Clutton, Surveyors, Hartswood, Reigate, and 8, Parliament-street, Westminster.

Lately published, price 2s. 6d.,

THE HYDRAULIC RAILWAY; being a carefully digested but plain Statement of the advantages to be derived, and the impediments removed, in establishing Hydraulic Propulsion on Railways; with a wide frontispiece of the Hydraulic Railway in operation, and a large drawing of its machinery. By J. G. SHUTTLEWORTH, the Patentee.

Sold by J. and J. Thomson, Market-street, and Simms and Dinham, Exchange-street, Manchester; J. Weale, High Holborn, London; and by all booksellers.

LONDON AND GREENWICH RAILWAY.—RAILWAY TRAINS RUN to and from London Bridge and Greenwich Stations direct, every quarter of an hour, from 8 in the morning till 10 at night; on Sundays from 8 till a quarter-before 11 in the morning, and from 1 till 11 at night Fares—First-class, 9d.; second ditto, 6d. The journey is performed in 12 minutes. Conveyances always in attendance at the Greenwich terminus to convey passengers to Woolwich, Charlton, Blackheath, &c. Omnibuses at the London terminus to Paddington on the arrival of the trains.

N.B.—Special extra trains may be engaged on application to the Inspectors on duty, to convey passengers from Greenwich after 10 o'clock at night, at the price of 50s. per train, all passengers above 50 to pay 1s. each.

J. Y. AKERMAN, Secretary.

Office, 37, Canterbury-square, Southwark,
June 16, 1842.

W. HOPE, LONDON AND BRIGHTON RAILWAY CARRIER, AND CARRIER IN GENERAL, 149, North-street, Brighton, begs to return his sincere thanks to his numerous friends for their kind, constant, and continual favours for so many years, and respectfully informs them that all Goods designed for him must be at the London and Brighton Offices by Four or Five o'Clock in the afternoon at the latest, and the same will be delivered the following morning—Sundays excepted, on which day no business will be transacted.

His Inns in London are—the Old White Horse Cellar, Piccadilly; Griffin's Green Man and Still, Oxford-street; the White Horse Inn, Friday-street, Cheapside; and the Nag's Head Inn, Borough.

In addition to his general business, he has opened his Office, 149, North-street, Brighton, as a

GENERAL BOOKING OFFICE,

where Goods, Luggage, and Parcels are received and forwarded to all parts of the kingdom, or warehoused as directed—W. H. being persuaded that an office of this kind was much wanted at so populous and public a place.

Please to observe, also, that Waggons, Vans and Carts, for the removal of Goods to or from any place or part of Town or Country, may be had as heretofore.

W. H. hereby informs his friends also, that he continues to warehouse Goods for any space of time, as he has done for a number of years.

N.B.—No claim for loss or damage allowed if not made within three days after delivery.

SCOTTISH UNION FIRE AND LIFE INSURANCE COMPANY; instituted 1824, and incorporated by Royal Charter.

LONDON BOARD.

Charles Balfour, Esq.	Robert Murray, Esq.
J. Deans Campbell, Esq.	R. Oliverson, Esq.
J. Gordon Duff, Esq.	Divie Robertson, Esq.
Robt. Gillespie, Esq.	H. F. Sandeman, Esq.
James Gooden, Esq.	John Small, Esq.
John Kingston, Esq.	Daniel Stoddart, Esq.

SUTHERLAND MACKENZIE, Esq., Manager.

London Offices, 449, West Strand, and 78, King William Street, City.

LIFE DEPARTMENT.

The additions made to the Life Policies granted by this Corporation for the last seven years vary from 41 to 65 per cent. on the premiums paid, and average 54 per cent. on the sums assured—a result, it is believed, far more favourable to the assured than any other Company has hitherto accomplished, when the low rates of premium charged by this Corporation are taken into consideration.

The next division of life profits will take place in December, 1846, being an interval of five years, and persons entering before the 1st of August next will enjoy one year's additional rating, and rank at next division of profits for five complete years.

Forms of proposals may be had at the offices, 449, West Strand, and 78, King William street, City.

F. G. SMITH, Secretary.

UNITED KINGDOM LIFE ASSURANCE COMPANY, 8, Waterloo-place, Pall Mall, London, Established by Act of Parliament in 1834.

DIVISION OF PROFITS AMONG THE ASSURED.

This Company, established by Act of Parliament, affords the most perfect security in an ample paid-up Capital, and in the great success which has attended it since its commencement in 1834.

In 1841 the Company declared an addition to the Shareholders of one-half of their Stock, and also added £2 per cent. per annum, from the date of the policies, to those parties who had insured with profits.

The Premiums nevertheless are on the most moderate scale, and only a moiety need be paid for the first five years when the Insurance is for Life.

The amount of bonus added to policies since the commencement of the Company in March 1834, to the 31st December 1840, is as follows:

Sum Assured.	Time Assured.	Sum added to Policy.
£1000	6 Years 10 Months	£136 13s. 4d.
1000	4 Years	80 0 0
1000	1 Year	20 0 0

Every information will be afforded on application to the Resident Directors, Edward Boyd, Esq., and E. Lennox Boyd, Esq., of No. 8, Waterloo-place, Pall Mall, London.

Frederick Hale Thomson, Esq., *Surgeon*, 48, Berners-street, attends at the Office daily, about half-past Two o'Clock.

NORTHERN AND EASTERN, BRIGHTON, CROYDON, DOVER AND SOUTH-EASTERN RAILWAYS.—Messrs. HORNE and CHAPLIN having effected the necessary arrangements for the conveyance of passengers and parcels by railway, and thence by coaches to the following places, beg to state, that places can be secured, and parcels booked at and forwarded from their several offices, where every information may be obtained as to the Hours of Departure, Rates of Fares, &c. &c., to

The Train heretofore leaving London at 2 p.m. is now discontinued.

The Train leaving London at 6 a.m. is a quick Train throughout, and is the only Day Train by which Passengers can reach Darlington and Newcastle in the same day.

Coaches leave Newcastle for Morpeth, Berwick, Dunbar, Hoddington, and Edinburgh, early in the morning, and during the day.

Time is allowed for refreshments at Wolverton, Derby, York, and Darlington.

TO CONTRACTORS.—EXTENSION OF TIME.—The Gosport Pier Company invite the attention of Contractors to the plans and specifications of their intended works, which will be ready for inspection at the offices of Messrs. Cruickshank and Wakefield, and Mr. James Hoskins, Solicitors, at Gosport, from the 6th day of July to the 1st day of August next.

Sealed Tenders are to be delivered before 12 o'Clock at noon on the 1st day of August next, at the office of Messrs. Cruickshank and Wakefield, Gosport, addressed "To the Chairman of the Directors of the Gosport Pier Company—Tender for Works."

The works comprise a considerable quantity of excavating and dredging, as also of piling, and the construction of iron vessels as floats.

The Directors do not bind themselves to accept the lowest Tender.

Gosport, July 5, 1842.

TO ENGINEERS.—A young Gentleman who has been about twelve months in a Surveyor's office, and subsequently served two years with an Engineer in general practice, is desirous of engaging himself to an Engineer with whom he may obtain additional practical experience for two years. No salary is required for that term. The Advertiser is a good Draftsman, and has had some experience in directing workmen and in field works. Respectable references will be given and required.

Address A. B., care of Leyland and Son, booksellers, Halifax, Yorkshire.

NEW EDITIONS of the following useful Works are just published at the *Railway Times* Office, 122, Fleet-street:

I.

TUCK'S MAP OF THE RAILWAYS for 1842 throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

II.

ROBINSON'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Map, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Corrected to July. Price 1s., in cloth.

III.

ROBINSON'S RAILWAY DIRECTORY FOR 1842, containing the Names of the Directors and principal Officers of the Railways in Great Britain, derived from authentic sources, price 1s.

IV.

TABLES OF HACKNEY CARRIAGE FARES from the BIRMINGHAM RAILWAY to all parts of the METROPOLIS, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

V.

TABLES OF HACKNEY CARRIAGE FARES from the GREAT WESTERN RAILWAY to all parts of the Metropolis, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

THE TENTH THOUSAND.

Just published, *in a Sealed Envelope*, price 3s., and sent free, on receipt of a Post office Order, for 3s. 6d.,

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection; followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases, &c.

By J. L. CURTIS and Co., Consulting Surgeons, London.

TENTH EDITION—Published by the Authors, and sold by Balliere, Medical Bookseller to the Royal College of Surgeons, 219, Regent-street; Strange, 21, Paternoster-row, London; Guest, 51, Bull-street, Birmingham; T. Sowler, No. 4, St. Ann's-square, Manchester; G. Philip, South Castle-street, Liverpool; Fannin and Co., 41, Grafton street, Dublin; Drummond, 114, High-street, Edinburgh; and sold in a *sealed envelope*, by all Booksellers.

OPINIONS OF THE PRESS.

"This work, *a tenth edition* of which is now presented to the public, *ten thousand copies having been exhausted since its first appearance*, has been very much improved and enlarged by the addition of a more extended and clear detail of general principles, as also by the insertion of several new highly interesting cases We feel no hesitation in saying that there is no member of society by whom the book will not be found useful, whether such person hold the relation of a *parent*, a *preceptor*, or a *clergyman*."—*Sun*, evening paper.

"This is a work that we fear there exists too much need for to cause us to hesitate to recommennd it for general perusal. Every branch of those frightful maladies, whether the result of immoral habits or secret vices, is here succinctly treated, and divested of all medical technicality, plain and easy directions are given for the best mode to be pursued in all cases, however complicated or apparently hopeless. To the married, as well as the unmarried, this little work alike affords consolation and cure in peculiar cases, and we are doing a service to society in recommending it to general notice."—*Essex and Herts Mercury*.

"Messrs. Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable."—*Magnet*.

Messrs. Curtis and Company are to be consulted daily at their residence, No. 7, Frith-street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. The communication must be accompanied by the usual consultation fee of £1, and in all cases the most inviolable secrecy may be relied on.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate-street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Brides, Fleet-street, Middlesex,—Saturday, July 16, 1842.

TELEGRAPHIC RAILWAYS; OR, THE SINGLE WAY, recommended by Safety, Economy, and Efficiency, under the safeguard and control of the Electric Telegraph; with particular reference to Railway Communication with Scotland, and to Irish Railways. By WILLIAM FOTHERGILL COOKE, Esq.

Contents: Objects of the Treatise—Distinguishing Characteristics of present Railways—Evidence before Select Committee—Advantages of Telegraphic Communication—Mode of working the Blackwall Railway, by the Electric Telegraph—Description of the Electric Telegraph—Plan for a "Telegraphic" Railway—Course of an Express Train—Ballast Waggons—Permanent Obstruction—Crossing of Two Trains—Description of Signals—Concluding Remarks on Single Way—Mixed Lines—Scottish Junction Line—Irish Railways—Advantages common to Single, Mixed, and Double Lines—Public Confidence—Reduction of Stock—Income from Telegraph—Alertness—Adaptation to Wants of Country—Conclusion.

London, Simpkin, Marshall, and Co.; Liverpool, Wareing Webb, Castle-street; Manchester, Simms and Dinham; Birmingham, Wrightson and Webb; Leeds, Slocombe and Simms.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secresy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For farther Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

MARYPORT AND CARLISLE RAILWAY COMPANY.—Notice is hereby given, That a Half-yearly General Meeting of this Company will be held at John Gloag's, Aspatria, on Wednesday the 10th August, at Twelve o'Clock.

F. L. B. DYKES, Deputy-Chairman.
WILLIAM MITCHELL, Secretary.

Railway Office, Maryport, 20th July, 1842.

BRISTOL AND EXETER RAILWAY.—CONTRACT FOR WORKS.—Notice is hereby given, That the Directors of this Company will be ready to receive at their Office, No. 30, Broad street, Bristol, on Friday, the 12th of August next, at or before Twelve o'Clock, Tenders for the following Contracts:—

Tunnel Contracts, Nos. 1, 2, 3, and 4.—Consisting of the sinking of shafts, and completion of the respective portions of the tunnel at White Ball-hill.

Contract No. 1, E.—The excavation and formation of the earthwork, and construction of all bridges, culverts, and other masonry, the ballasting, and the entire completion (except the formation of the permanent way) of that portion of the railway extending from the north end of the parish of Burlescombe to the road No. 60, near Pugham Mill, in the same parish; being a distance of about two miles.

Contract No. 2, E.—The execution of similar works on the portion of the railway extending from lane No. 38, in the parish of Halberton, to the Honiton turnpike-road, in the parish of Cullompton; being a distance of about two miles and three-quarters.

Drawings and specifications will be exhibited at the Engineer's Offices; in Temple Meads, on and after Monday, the 25th of July.

Printed forms of Tender may be obtained at the same place, and at the office in Broad-street.

The Directors will not consider themselves bound to accept the lowest Tender. They expect the several parties to attend in Broad-street, at Twelve o'Clock, on the 12th of August.

The Company having on hand a certain quantity of rails and waggons, the Directors are willing to receive, at the same time, Tenders for them from the parties who may undertake any of the above works.

By order of the Directors,
J. B. BADHAM, Secretary.

Bristol and Exeter Railway Office, 30, Broad-street,
Bristol, 15th July, 1842.

EASTERN COUNTIES' RAILWAY.—The Directors of the Eastern Counties' Railway Company are receiving Loans of Money, in sums of not less than £500 each, on bond, for periods of three, five, or seven years. Interest at the rate of 5 per cent. per annum will be paid half-yearly on amounts so advanced.

By order of the Board,
A. BULKELEY, Secretary.

Eastern Counties' Railway Offices, High-street,
Shoreditch, July 22, 1842

AN ELEGANT AND USEFUL PRESENT.

SOUTHERN COMMUNICATION WITH IRELAND.

We have been urgently requested to publish the following letter addressed by Earl Cawdor to Sir Robert Peel. It is longer than we could have wished, but as we have given publicity to several paragraphs on the other side, we cannot refuse to insert it:—

Dear Sir Robert,—The question as to the maintenance or abandonment of a communication between South Wales and the south of Ireland is one, not only of such importance to the parties immediately concerned, but one of so much interest, as connected with the general policy of the Government in matters of this sort, that either of these considerations might be a sufficient cause for addressing you as a Minister of the Crown with reference to it; but having, from a very early period of my life, taken an active interest in the establishment and maintenance of this line of communication, believing it to be of vital importance to the improvement and extension both of the agriculture and commerce of Wales, I am induced to do so at the present moment, because I view with great anxiety the proceedings of various parties both in and out of Parliament, who seem with very opposite interests to agree only upon one thing, that this line must be abandoned, and that go where you will, north or south, to Holyhead or to Brean Down, Milford Haven is by all means to be avoided. The reasons for this, as they are to be found, or rather searched for and not found, in petitions and memorials, I have never been able clearly to discover.

Milford Haven has, to be sure, one disadvantage very displeasing to a large class of the community, that with the small outlay already made, it is now so admirably adapted for the purposes of steam communication with the south of Ireland, that no projector has been able to point out how any further sums of money can possibly be laid out there with any presumed advantage to the public or more certain profit to the contractor.

The harbour is the finest in England. The pier, or rather landing-place, at Hobb's Point—for both Mr. Telford, and the engineer subsequently employed, were of opinion that no pier was required there—is more than sufficient for every purpose, having from 10 to 12 feet water alongside of it at low water spring tides. The harbour is amply lighted, and from St. Ann's Head to the Irish coast the navigation is unincumbered with shoals and banks such as embarrass the approaches to Bristol and Liverpool; in addition to which it is in the immediate neighbourhood of the Royal Dock Yard, affording facilities for repairs which do not exist in any other place which has been suggested. If, however, the reasons of this antipathy to Milford cannot be discovered; it may be useful to trace what has been done upon this line, to see what the position of the Government is with regard to the question, and to consider what is to be gained or lost by the proposed abolition of the passage. It has been a question much discussed both in and out of Parliament at former periods—in 1827 by a Committee of the House of Commons—by the Commissioners of Revenue Inquiry in the year 1830—by a Committee of the House of Commons in the year 1832 on the Post Office communication with Ireland; all of whom concurred in the recommendation of a southern Irish communication, and that it should be by way of Milford.

In the year 1825, in consequence of application to the Government by persons interested in South Wales and its communication with Ireland, a Report ordered by the Treasury on the mail-roads through that district was made by Mr. Telford, detailing the existing state of the roads, and containing suggestions for their improvement. The Committee of 1827 was appointed to consider the state of the communication between England and the south and south-west of Ireland by way of Milford Haven. Mr. Telford's Report was laid before them; and the course of proceeding recommended in that Report has been the one (partially and imperfectly as I show in some respects) acted upon since that time. They stated in their first Report that the result of their examinations had been to establish a well-grounded conviction, that the extent and importance of those commercial interests with which this line of communication between England and Ireland is immediately connected, is infinitely greater than has been commonly supposed; that even under all its present disadvantages the progress of that intercourse has been continually advancing, and that by the removal of existing impediments, and affording to it at very moderate expense some of those facilities which have been largely extended to other lines of communication, the most beneficial results to the commercial interests of the two islands, and a considerable improvement of the postage duties and other branches of revenue, might be securely anticipated. They stated the incompetency of the packet establishment then existing to the regular discharge of its duties—the want of accommodation at Dunmore for passengers, and the want of a landing place in Milford Haven. They recommended Hobb's Point as a site for a pier, and that the new road from St. Clears to Hobb's Point, recommended by Mr. Telford, should be placed under a commission, and should not interfere with the other turnpike trusts of the country.

The Committee of 1832 concurred with and enforced the recommendation of the former Committee. The Government adopted in a great degree their suggestions, and as far as the Treasury was concerned they were fairly enough carried out.

A landing place was constructed at Hobb's Point at an expense of 22,000*l.*, and at a subsequent period an inn erected in its immediate neighbourhood. The establishment on the Irish side was transferred to Waterford, which rendered any accommodation at Dunmore unnecessary. The packets also, the inefficiency and mismanagement of which under the Post Office had been the subject of complaint, were transferred to the Admiralty, a measure which had been recommended by the Revenue Inquiry Commission. It was naturally expected that the service which had been so ill conducted by the Post Office, and which for that reason had been taken out of their hands, would have been carried on with more vigour by the Admiralty; that the old packets would at once have been sold out of the service, or applied to some other purpose, and vessels fit for the duties of the station placed upon it. Nothing, however, of this sort was done, the condemned vessels remained upon the station—receiving however new names, in hopes, I suppose, that the public would be gulled by this shallow artifice, and believe that the Admiralty had done that which they were bound by duty and in justice to other parties concerned to do. The public however, knew better, the prejudices against the passage were in no degree lessened by this proceeding, and the number of passengers was not increased. I do not mean to say that some of the vessels have not been since improved, but the establishment is still inefficient, and one packet, the *Advice*, quite inadequate to the service. One suggestion of the Committee, however, the Government did not adopt, that the new road from St. Clears should be made by and placed under the control of a Parliamentary Commission. It became necessary therefore for the trustees of the roads in those counties through which the line of Mr. Telford's survey passed to see what could be done to carry out, not an object of local interest, or one the cost of which could ever be repaid by the ordinary traffic of the country, but a great line of communication between the south of England and Wales on the one hand, and on the south of Ireland on the other, with especial reference to the ports of Cork and Waterford. They never would have involved the affairs of their trusts by borrowing for this purpose, except they had imagined that they were engaged with the Government of this country in an undertaking which after full investigation had been finally settled, and which the Government stood pledged to carry out.

Upon the faith of this arrangement large sums of money were laid out on various parts of the line. In the counties of Brecon, Carmarthen, and Pembroke, more than 30,000*l.* have been expended. The road and the landing-place are and have been for some time completed. The expectations they had entertained of a proportionate increase of the tolls has been disappointed, and the trusts are most seriously embarrassed in consequence.

This, in my opinion, proceeds from the manner in which the Post Office and the Admiralty have failed to carry out the expressed intentions of the Government. The Post Office, in justification of their mode of proceeding, say that the packets do not pay, and that few letters go by that route to Ireland. To the first objection I should answer, first, that the Post Office has nothing to do with the expense of the packets; and secondly, that if they had been differently managed that they would have paid far better. The second objection is a more curious one, the perverse ingenuity of the Post Office first contrives that a letter from Cornwall to Cork shall take as much time in going by Milford and Waterford as by Liverpool and Dublin, which, taking a geographical view of the performance, is really very remarkable, and must have required much thought and combination to accomplish; and they then complain that no letters go that way, it being entirely in their power to send them which they please. The packets, if they pay, must pay by means of passengers and letters, but letters have no independence of action in this respect, and passengers will not go unless you give them such facilities as they have a right to expect. But let us see a little how they are treated by the Post Office regulations on this road.

You set out from London in the Bristol mail to go to Waterford, and being once fairly locked in on the Great Western Railway, you get in five hours to Bristol, congratulating yourself on the superiority of steam travelling, and the number of hours you have saved in your journey towards Ireland. But here the Post Office steps in; you find, though travelling is improved, the Post Office is not, and you have to wait nearly six hours in Bristol before you are allowed to resume your journey towards Waterford. These six hours thus wasted are in the middle of the night, and patient as passengers generally are, no man will willingly endure this twice. If you come from Ireland to England your case is no better, and arriving at Bristol at half-past five in the evening, you remain—that is to say, the mail with the letters (for in that case the passengers may get on by other conveyances) remains there till one o'clock in the morning before it is suffered to depart. If you wish to go to London by Gloucester your delays are not less, but are arranged in a different manner. You arrive at Carmarthen at half-past four in the morning, and though the mail for Bristol sets out immediately, the Gloucester passengers are kept from half-past four in the morning till ten minutes after eight, for some reasons which I suppose the Post Office can explain, but which, if they are not impossible to be amended, should be altered; as independent of what appears a wanton waste of time, the present arrangement is one productive of the greatest inconvenience and discomfort to persons who travel by the mail. When the letters arrive at Gloucester, which is at half-past seven, they remain there till half-past ten, and are then, I believe, without any further delay transmitted to London.

All this, as I have said before, is very ingenious on the part of the Post Office, but is hardly fair to the Treasury and to the parties who have laid out their money in the improvement of this communication. One effect of this ingenuity is to get rid of Irish travellers by this route, another is to enable the Post Office to say of what value is this passage? A letter from Penzance will get to Cork as fast as by way of Dublin, and so we send all letters by that route, and then complain that we get no postage by way of Milford; but comparing, as I said before, the geographical position of the two places, and considering the studied delays of the Post Office, is it not clear that this ought not to be the case either from Penzance or London, and that from any part

Digitized by Google

of South Wales the delay and grievance occasioned by an abolition of the southern line must be grievous and intolerable? If you abandon the Milford line what are you to substitute? Fishguard will hardly do, in spite of the recommendation that there both road and harbour are to be made, and that great sums of public money may be laid out upon it. Nobody but an inhabitant of Bristol, who has ever looked at the chart of the Bristol Channel, will talk of Portishead, and floating breakwaters upon which you are to embark before you can embark on a steamer. Brean Down is certainly a place where much money may be employed, but then it cuts out the whole of South Wales, for I will not waste time in discussing the possibility of picking up mails at sea, or making long detours in search of them. In addition to which the distance from thence to Waterford is double what it is from Milford, and if there is one point on which all parties are agreed, it is that the shortest sea passage is the best. Swansea, or the Mumbles, with whatever outlay you can make, offers no advantage which does not already exist in a tenfold degree in Milford Haven. And the remaining project, as far as I have heard, is the one of a northern passage by Liverpool or Holyhead only. With respect to time, as far as regards South Wales, in which I am principally concerned, with proper Post Office arrangements, there can be no question; and I will only say a few words with regard to the general policy of the Government. Is it a desirable thing to contract, and narrow, and confine to one channel your Irish communications?

Is this the policy you have pursued in Scotland, and are pursuing in Ireland, of opening up the country by roads and bridges, and by turning to account the natural advantages of those countries? Has it not succeeded in the Highlands, is it not in active operation in Ireland, and is not South Wales exactly in that state in which it is likely to improve materially by such a course of policy? And here is no endeavour to force nature, to make harbours at an immense cost which it may be impossible to maintain. The natural advantages of Milford Haven require only to be accessible, with every prospect of great improvement to the traffic and intercourse of the country.

To show that the anticipation of increasing trade between South Wales and Ireland have been fully realised, I subjoin the number of colliers from Swansea, Newport, and Cardiff to Ireland, in the

Three years ending January, 1827, which amount to ..	5,248
And the number for the three years ending December, 1841, which amount to	8,265
Being an increase of.....	3,017
Inwards from Ireland in the three years ending January, 1827.....	324
Three years to December, 1841.....	2,163
Being an increase of.....	1,839

Is this, or is it not, a trade which deserves to have every facility and encouragement given to it? And yet, if you adopt any of the courses which have been suggested, you subject their correspondence to the most grievous delay, and actually make the letters from Milford go back to Bristol, on (what the Post Office would by rather an Irish figure of speech call) their way to Ireland. At present a letter written at Llanelly on Monday afternoon is in Waterford on Tuesday morning, and the answer would be received on Wednesday, or at the latest on Thursday morning; whereas if it were sent by way of Bristol, it would not be in Ireland until Wednesday evening at too late an hour to be answered on that day, and the reply would not be received till Saturday evening.

I am really unable to see the justice, the wisdom, or even the prudence, of any of the schemes suggested; and cannot but hope that the Committee now sitting will agree with every other Committee and Commision who have ever examined the question, and say that a southern communication with Ireland ought to be maintained, that Milford Haven is the proper place of departure for the packets, and that great injustice to individuals and detriment to the public interest would be the inevitable effect of any other decision. There can be no doubt that South Wales will be extensively injured by the abandonment of the present route. On the other hand, what is to be gained by it? The cost of the packet establishment at Milford is all that it is pretended by any one can be economised, and that only by sending every letter from South Wales to the south of Ireland by Holyhead or Liverpool to Cork and Waterford; every other project involves additional outlay—piers, breakwaters, and roads to be constructed at the public expense; and though to some few parties in every case a change will be acceptable, Wales will, according to every scheme which has been suggested, be sacrificed to a great extent, and impediments thrown in the way of her rising commerce. The only reason alleged for these changes being, that the packets do not pay. I have shown how ingeniously the Post Office has contrived that they should not pay; and I take this opportunity of protesting against the doctrine, that the Post Office is to be considered as an office of revenue only, and that every establishment belonging to it which does not pay should be abolished. How many of the Post Offices in Ireland would stand this test? I doubt whether the General Irish Post Office pays its expenses; but no one has yet proposed on that account to abolish it. Would it not be a wiser policy, instead of restricting and cramping the communications between the two countries, to endeavour to improve them, and to carry out and complete the wise and prudent measures of former Governments, who have considered this important question? If, after what we in South Wales have done to forward them, we are deserted by her Majesty's Government, you will hardly expect us to be satisfied with such a course.

The anxiety I feel for the welfare of South Wales, and a keen sense of the injustice which would be inflicted on her commercial and manufacturing interests if the southern line of communication with Ireland be abandoned, will, I trust, plead my excuse for troubling you at such a length.

I have the honour to be, dear Sir Robert,
Yours, very truly,
CAWDOR.

RAILWAY PLEASURE EXCURSIONS.

GLASGOW AND AYR AND EDINBURGH AND GLASGOW RAILWAYS.

Yesterday the Odd Fellows of this city and their friends left the depot of the Glasgow and Ayr Railway in first-class and second-class carriages, accompanied by an instrumental band, to visit the delightful scenery of the "Banks of Doon," and the environs of Ayr. The train started yesterday morning with sixteen first-class and sixteen second-class carriages, besides an open carriage with the band. There were three engines in front, the *Garnock*, the *Claremont*, and the *Arran*, and having left Glasgow at 20 minutes before 9, reached Ayr all safe at 20 minutes past 10. The engines were decorated with evergreens and branches of trees; the carriages which followed had flags of various descriptions flying from them, and as the train emerged from the city it was saluted with several rounds from cannon stationed at one of the public works. The number of passengers, male and female, was nearly 800, and they returned about 8 o'clock in the evening. To-day the teetotallers take the same trip by a special train; and on the Edinburgh and Glasgow Railway the Directors are to start a special train at 6 o'clock in the evening from Edinburgh, to bring back those passengers who may avail themselves of the 6 o'clock morning train from Glasgow. Pleasure steamboat trips took place yesterday to several of the most interesting portions of our coast scenery, and others are to take place to-day.—*Glasgow Constitutional*, July 16.

We mentioned that on Friday the Odd Fellows and their friends, to the number of nearly 800, visited the land of Burns, by the Glasgow and Ayr Railway, and spent a most pleasant day. On Saturday the teetotalers, male and female, to the number of about 1,000, went over the same ground, and the scene is stated to have been gay and gladsome in the extreme. At Ayr the party were addressed by Mr. Grubb, Mr. Greig, and other gentlemen, and all returned to Glasgow in high spirits. Although the fair has been marked by cases of drunkenness, it is satisfactory to remark that those of rioting, assaults on the police, and savage fighting, which were formerly wont to wind up the week's hilarity, have been on this occasion entirely unknown. In addition to the organised bands of holiday travellers noticed above, immense numbers left the city in all directions, but particularly by the several steamboat and railway conveyances, the lowness of the fares and the extent of the accommodation afforded by each of these modes of transit enabling many to take a trip who would otherwise have been obliged to remain at home. That a great number of people, too, had sojourned at different parts on the coast from the end of the week till yesterday morning was evident from the fact, that the crowd of persons at the Greenock Railway station, anxious to get to Glasgow by the half-past 8 o'clock train was never, we believe, equalled on any former occasion. The result of this was, that the train which should have started at that hour was detained till 10 minutes to 9, when thirty-two carriages were sent off propelled by three locomotives. As the train approached Paisley, however, it was found that there was a want of power in the engines to bring up with the usual speed the great number of carriages, and one or two short stoppages was the consequence. The result was, that the train did not reach Glasgow till 35 minutes past 10 o'clock, to the great dissatisfaction of many of the passengers.—*Glasgow Courier*, July 19.

The Greenwich Railway.—The train which leaves Greenwich at a quarter before 10 o'clock stopped yesterday as usual at Deptford to take up passengers, and when on its way to London, and about midway between Deptford and the Croydon junction, was overtaken by another engine from Greenwich carrying a servant of the Company (the Secretary), and travelling at a very rapid rate on purpose to overtake the train. The people attached to the train, seeing the second engine with the Secretary coming after them, slackened its speed, and when it was evidently inevitable that a concussion must take place between the engine with the Secretary and the train, the last carriage was detached from the train, and sustained in consequence a most violent shock, causing not only fright to the passengers, but bruising some of them, and also endangering their lives. On the arrival of the train in London, the Secretary left the engine without considering it at all necessary to make any apology whatever to the passengers for the fright his conduct had given them.—*Daily Papers* of Saturday, June 16.

Accident on the Birmingham Railway.—An accident, but fortunately involving no other inconvenience than delay to the passengers, occurred on the Birmingham Railway yesterday afternoon. Shortly after the 4 o'clock train from Birmingham left Coventry the axletree of the truck suddenly broke, and was dragged for a considerable distance on the line, displacing several of the carriages from the rails. When the engine was stopped it was necessary to keep the train in the position into which it had been thrown till the next down train had passed by; and this, together with the time it took to procure a fresh truck, &c., from Coventry, caused a delay on the line of nearly two hours.—*Globe*, July 15.

Great North of England Railway.—The Secretaryship of the Great North of England Railway, at Darlington, has become vacant, Captain O'Brien (half-pay Royal Staff Corps) having accepted the appointment of Private Secretary to Sir James Graham, Bart., Secretary of State for the Home Department.—*Leeds Mercury*.

Premiums for Essays on Railways.—The French Academy of Sciences have, on the suggestion of M. Blanqui, offered a prize for the best essay sent in before the 30th September, "on the influence of the establishment of great lines of railway and steam navigation on the development of public riches and civilization."—*Mechanics' Magazine*.

CHESTER AND BIRKENHEAD RAILWAY COMPANY—GENERAL MEETING.

THE adjourned half-yearly meeting of the shareholders in the Chester and Birkenhead Railway Company was held in the Clarendon Rooms, South John-street, Liverpool, on the 14th instant, for the purpose of receiving the Report of the Directors, which they, at the last meeting, requested time to prepare. There was a very large attendance of proprietors. Shortly after 12 o'clock the chair was taken by WM. DIXON, Esq., Chairman of the Board of Directors.

The CHAIRMAN commenced the proceedings by stating that the Report of the Directors, which had already been laid before the proprietors, would be read by the Law-clerk.

Mr. MALLABY, the Law-clerk, then read the following

REPORT.

At a meeting held in October, 1841, the Directors laid before the proprietors statements of the Company's transactions, which they had every reason to believe were correct, having given instructions to the late Treasurer to prepare them in as detailed and complete a manner as possible; the accounts, when prepared and their correctness certified by a professional accountant, they laid before the meeting with the most undoubting confidence.

The resignation of the late Treasurer, and the consequent appointment of his successor, having lead to a re-examination of the accounts, they were found ill-arranged, inaccurate, and in many respects deficient and incomplete—so much so that it has required the utmost efforts of Mr. Wilcox, the present Treasurer, aided by the occasional assistance of Mr. Joseph Fry, an able accountant, and frequent explanations from the late Treasurer, before the accounts could be brought into an intelligible shape, and rendered worthy of the confidence of the proprietors.

The Directors have reason to believe that the accounts about to be laid before this meeting are correct. They are made up to the 30th of June last, showing the state of the affairs of the Company, both as to its capital and traffic, and will be read in detail to the meeting. The following abstract will show, in the meantime, the results of the working of the line.

The total amount received for the carriage of 317,789 passengers, from the 30th day of June, 1841, to the 30th June, 1842, is		£25,924	15 5
For parcels and merchandise		2 038	14 0
For rents		647	10 10
Claim outstanding against the Post-office ..		2,173	6 0
		£30,784	6 8
Expended during the same period in working the line....	£18,543 4 9		
Interest paid on loans.....	£6,842 2 4		
Deduct interest received	138 2 4		
	£6,704 0 0		
		£25,247	4 9
		£5,537	1 6
Balance in hand in June, 1841.....		3,314	19 8
Surplus on traffic account		£8 852	1 2

The expenditure on the gross receipts (upwards of 60 per cent.) will no doubt appear to the proprietors, as it has done to the Directors, much too great; and as it has been apparent for many months that a considerable portion of this evil arose from the fares being too low and the trains too numerous, an improved arrangement of both fares and trains has been adopted with signal success—the expenditure has been diminished to the extent of 1,650*l.* per annum—the receipts of the railway, in proportion to the number of passengers, have increased—the accommodation for the public has proved amply sufficient—few persons have gone by any other route in preference to the railway, whilst the number of passengers has not diminished to the extent which the admitted depression of trade during the last year might have led the Directors to expect.

In addition to the above sources of increased income, the sum of 1,500*l.* per annum has been saved by causing the passengers to pay their own ferry rates. First class passengers alone are now conveyed from the ferry to the railway station in omnibuses, by which 730*l.* per annum has been saved to the Company; indeed it is from these changes alone that the Directors have been able to create the surplus now placed at the command of the proprietors. Had the trade of the country been in a prosperous state, it is obvious that an extended traffic, unattended with additional expenditure, would have arisen, which, under the present arrangements, would have enabled the Directors to have laid a statement before this meeting more satisfactory to themselves and to the proprietors.

It is a well ascertained fact, that short lines cost much more in proportion than long lines, and the expense of working them is also proportionally greater; this line endures the pressure of both these evils in no ordinary degree, a much greater sum having been expended on the line than was ever contemplated by its projectors, which must continue a drawback upon the returns which the railway would otherwise have produced.

The Directors have devoted much of their attention to the introduction of economy in the expenditure into every department of the establishment; they have, to a certain extent, succeeded, and they have in contemplation various plans, which, when matured, will lead to still further reductions. Much has already been done, but it is apparent that still more must be done, and they pledge themselves to the proprietors to carry into effect all practicable and rational plans for reducing the expenditure, consistent with a due regard to the accommodation and safety of passengers, and the efficiency and permanence of the line.

The Directors have completed the arrangements for the sale of the Woodside Ferry, on the terms already sanctioned by the proprietors. By its sale the right of ferryage to and from Liverpool has been secured in perpetuity to the Monk's Ferry, as far as regards railway purposes; the interest on capital expended in its purchase, or engaged in working it, has been saved by the Company, and in the event of the proprietors thinking it expedient to construct a tunnel from Monk's Ferry to Grange-lane, they have secured to them the right to do so, and for that purpose to break the surface, and pass under the streets of Birkenhead.

With the exception of having the plans and estimates prepared by the Company's Engineer, the Directors have not taken any step towards the formation of the tunnel, and they now desire to have the sentiments of the proprietors fully expressed relative to so great and expensive an undertaking before they venture to engage in it. The Company have land, which, if sold, would furnish a considerable portion of the funds needful for that purpose. Some of the Directors consider that much of the ultimate welfare and success of the railway depend upon the construction of the tunnel *forthwith*, whilst others think, however desirable the measure, it is worthy of grave consideration, whether the advantages which may be gained by the construction of a tunnel would compensate for the great expenditure, and the sacrifice of valuable property in land which is daily increasing in value, and which must be sold for less than even its present value if forced upon the market without reserve.

The Directors have pleasure in stating that the line has not suffered any injury from the late severe winter; it is in good order in every respect.

The Directors recommend that a dividend of 20s. per whole share be paid to the shareholders, on and after Monday, the 1st of August; and they have only to add, that the retiring Directors are Mr. Wardell, Mr. Booth, and Mr. Hamilton, who are all eligible for re-election.

WILLIAM DIXON, Chairman.

Appended to the Report was a statement of the receipts and disbursements on the traffic account from the 30th of June, 1841, to the 30th of June, 1842. It appeared that, including a balance in hand on the 30th of June, 1841, the receipts from passengers, parcels, merchandise, rents, interest, and the ferry, amounted to 32,064*l.* 2s. 3d. The disbursements for coaches, locomotive power, police, omnibus and ferry, rates, maintenance of way, direction, law charges, &c. &c., to 25,385*l.* 7s. 1d., leaving a balance in hand of 6,678*l.* 15s. 2d. The receipts and disbursements on capital account, from the 31st August, 1841, to the 30th June, 1842, showed a balance against the Company of 29,776*l.* 8s. 9d.; against which was 28,257*l.* 4s., mortgages of the Commissioners of Birkenhead for Woodside Ferry. The accounts were signed by Mr. John B. Wilcox, Treasurer, and by the Auditor, Mr. Joseph Fry, accountant.

Mr. JAMES MULLENEUX said, that in order to bring the business fairly before the meeting, he had no objection to move the adoption of the Report just read; but before doing so, he would allude to one item which demanded serious consideration upon the part of the Directors—he meant the immense charge of working the line. It was worked at an expenditure of between 60 and 70 per cent. upon the gross receipts, which was far greater than on any other line in the kingdom, and he thought it might be very materially diminished. If the working of the line was let upon contract, he thought that object would be obtained. He was aware that this plan had been brought before the Directors, and he certainly felt some surprise that it had not been adopted. He saw that the Directors wished to have the opinion of the proprietors upon the propriety of making the tunnel. He was of opinion that it would be most impolitic and injudicious to do so; that they must either sell their land at an improper time, or incur a debt with the prospect of a very doubtful advantage. He did not think the advantage to be gained by it would compensate for the expense it would entail upon the Company. He thought it was the duty of the Directors to employ their money upon the improvement of the line, and leave to other and more prosperous times the construction of the tunnel. He moved the adoption of the Report.

Mr. SEAGAR seconded the motion.

Mr. PETER SOWERBY said, that portion of the Directors' Report which contained a eulogy upon the present system of fares, was incorrect and not founded in fact. He would not enter into the discussion of the fares then, because it would be a waste of time; but he would give a sketch of the traffic since the opening of the line. From the 23rd September to the 14th December, 1840—eleven weeks and six days—21,811 passengers were conveyed; the amount received for passengers and parcels was 2,857*l.* 16s. 9d.; the average number of passengers per week was 1,817, and the average receipts per week 239*l.* The fares were then 4s the first class. and 2s. 6d. the second; upon market days a third class carriage was provided, with seats and 1s. only was charged. From the 15th December, 1840, to the date of the commencement of low fares, the 30th September, 1841—forty-one weeks and two days—281,402 passengers were conveyed the amount received for passengers and parcels was 21,566*l.* 15s 7d.; the average number of passengers per week was 6,863, and the weekly receipts for passengers and parcels was 530*l.* During the whole of that time the Chester and Birkenhead Railway Company had to contend with a most powerful opposition. Three coaches left Eastham for Chester, and two left Eastham for Wales, which made ten coaches a day. Early in September, 1841, the proprietors of those opposition coaches ceased to run in opposition to the railway, having entered into an agreement with the Chester and Birkenhead Railway Company. From the 30th September 1841, to the 30th June, 1842—thirty-nine weeks—205,928 passengers were conveyed; the amount received for passengers and parcels was 21,050*l.*; the average weekly number of passengers was 5,280 and the average weekly receipts were 539*l.* They must, however, bear in mind, that the receipts of those 39 weeks contained an item of 40*l.* per week derived from her Majesty's mails, which was not the case in 1841. They must also bear in mind that the last 39 weeks included a considerable amount—upwards of 80*l.* per week—received from the traffic that used to go by Eastham. Now, deducting the 40*l.* and the 80*l.*, which made 120*l.* from the average sum of 539*l.* received per week in that period from passengers and parcels, it would leave only 419*l.* Now, considering that there was a large number of villages on each side of the line—that the population of Liverpool was 200,000—that the railway was contiguous to Shropshire and the whole kingdom of North Wales—would they tell him that the line would only produce 419*l.* per week? He laid these facts before the meeting, but he should not make any motion upon them.

The CHAIRMAN begged to make one remark in reply to the observations of Mr. Sowerby; it would be merely to state the working of the road from January, 1841, to January, 1842. They carried from January 22 to June 30, 1841, 148,554 passengers, and they received 10,162*l.* 16s. From the 22nd January to the 30th June, 1842, they carried 119,743 passengers, and realised 11,465*l.*; thus showing that though they had carried 28,811 passengers less in the former than in the last year, they had received a larger sum.

Mr. UNIACKE said he agreed, in a great measure with the remarks made by Mr. Mulleneux; the only point in them to which he objected was his opinion as to the formation of the tunnel. He (Mr. Uniacke) thought there were such grounds for the immediate construction of the tunnel that he should take the sense of the meeting upon it after he had submitted a few remarks. He had a large stake in the undertaking; and having been for some years (indeed from the first) closely connected with it, had watched its interests as narrowly as he could. The honourable gentleman who had moved the adoption of the Report had very fairly and justly complained of the great expense of working the line; but whence did that expense arise? A saving of 1,650*l.* a year would only make a difference of 4½ per cent. upon the cost of working the line; consequently, suppose that reduction was made, the expenses would still be more than 50 per cent. of the gross receipts. What caused this line, then, to cost more in working than any other? It occurred between the station and the river. (Hear, hear.) The sooner that nuisance was put an end to

Digitized by Google

better; and he was willing to submit with others to a temporary sacrifice in order to do so. The Directors had very judiciously, he thought, left the question open for the consideration of the proprietors, they being themselves divided upon the subject. He thought, then, he was justified in expressing his individual opinion, and, perhaps, the opinion of some others upon the subject. This railway was peculiarly circumstanced, and its advantages could never be developed, or it could never be better than it was till that had taken place. If the proprietors were willing to make a temporary sacrifice, he was quite sure the work would be completed in a very short period, and that they would soon reap an ample reward upon it. He had been for some time a Director of the Grand Junction Railway, but he begged not to be understood as in any way speaking from anything which had occurred in his hearing with regard to Grand Junction affairs. The remarks he was inclined to make had arisen entirely from his own conviction of what must necessarily take place under certain circumstances. He considered that when the communication between the Manchester and Leeds line and the Liverpool and Manchester line was completed, there would be a great rush of goods' traffic from the Manchester and Leeds line, and that the Grand Junction Company would find greater difficulty than they found now in carrying their goods' traffic along the Liverpool and Manchester line. (Hear.) The difficulty was so great even now that it was perfectly notorious that a plan had been carried out, or was in contemplation, for them to take their goods by water to Preston Brook.

A PROPRIETOR—Only to a certain extent.

Mr. UNIACKE said, that might be so. When they were last before Parliament, however, he knew it was a subject of observation that iron was not brought down the line, in consequence of the distance, and other inconveniences attending its being conveyed round Warrington, which would cease, as he understood, when the communication was complete through Chester. He knew no body of men more fully alive to their own interests than the Grand Junction Directors, and he did not expect them to show any favour or affection where they found it would tend to the disparagement of their own interests; but when it was their interest to adopt a particular line of conduct, they would do it; and a railway communication from the shores of the Mersey, by which they should be enabled to put their goods from the river upon the railway, would be such an improved communication between the Mersey and Birmingham and London, and all the intermediate places right and left, that in spite of any other interest and of whatever might occur, their interest would be in favour of adopting this line for their goods traffic. They would be sure to come to this line if they could get up to the river side. Without meaning this Company any service, if this Company would serve them so much, they would come to it; and therefore, the sooner this Company set about to receive their traffic the better for themselves. (Hear.) The increased traffic, by such facilities being given, would amount between Birmingham and Liverpool to 1,500*l.* per week. He did not think he was saying at all too much, considering the great communication with Ireland; and as the Chester and Birkenhead line constituted about one-sixth of the whole distance, he thought they might calculate one-sixth of the traffic paying the expenses of working the line. If any difference arose in doing it, he was sure the proprietors would be willing to waive for six months, or even twelve months, any chance of profit from the line. In the meantime they need not be in a hurry to sell the land. In a year or more it might be sold, and if there were then any surplus it might be divided amongst the shareholders; but the railway would be of such little value to them as it was, and of such very great value to them when it was altered, that he did not think any time ought to be lost now in securing the thing—or, at all events, in securing the right to make it. He did not know what the agreement might be with the Commissioners of Birkenhead, but he supposed that what one body of Commissioners had ordered another might rescind.

The CHAIRMAN—They cannot.

Mr. UNIACKE concluded by expressing his opinion that it was expedient to make the tunnel; and said, he should move that the Directors be authorised to proceed with its construction.

Mr. THOMAS WHEELER, of Manchester, apprehended that Mr. Uniacke's motion would follow Mr. Mulleneux's, and that the proper time to offer any remarks upon it would not be till after the reception of the Report.

Mr. MOZLEY did not think it necessary to move it by way of amendment.

The CHAIRMAN said, he should consider it merely as an instruction to the Directors.

Mr. UNIACKE observed, that the Directors called upon the proprietors for their opinion upon the subject.

Mr. EDWARDS, of Chester, said the account given in September last, of the preceding three months' traffic, set forth that there was as much in stock then as there was now. He wanted to know why Mr. Mallaby had avoided that matter, and what he had to say upon the subject?

Mr. MALLABY said, he had nothing more to say upon the subject than what the Directors' Report to the proprietors contained.

Mr. EDWARDS—That is nothing.

Mr. MALLABY read the first paragraph of the Report, and said it was sufficiently indicative, on the face of that Report, that the former accounts were not correct.

Mr. EDWARDS—Were they not examined by the Directors?

Mr. MALLABY said, that the Report showed that the former accounts were not correct. The Directors had given particular instructions to the Treasurer, who prepared them, to employ a professional accountant of the highest eminence, to undertake the auditing of the accounts, and until those accounts had been audited, the Directors did not lay them before the proprietors. The audit, however, seemed to be quite as incorrect as the accounts themselves.

Mr. MAY inquired whether the auditor had been paid for his trouble?

The CHAIRMAN replied in the affimative.

Mr. EDWARDS asked who had audited the accounts?

Mr. MALLABY—The signature of Mr. Stanway appeared to the accounts themselves. It was Mr. Stanway of Manchester.

Mr. EDWARDS—Has his account been paid?

Mr. MALLABY—It has been paid a long time ago.

Mr. EDWARDS asked whether the errors had arisen from any particular mystification in the accounts. He could not otherwise understand how Mr. Stanway, a man of character, could be wrong.

Mr. MALLABY said, the result was, as appeared by subsequent inquiry, that all the accounts were found ill arranged. The system itself was bad.

Mr. EDWARDS wanted to know how all these errors had arisen—in what particular way they had occurred. There was a mistake as to more than 5,000*l.*, and he wanted to know the particulars. These were point-blank questions, and he wished to hear them answered.

Mr. MALLABY said, he was not the accountant, and consequently could give no information.

Mr. MAY—Who are we to apply to then?

The CHAIRMAN said, to the Treasurer.

Mr. EDWARDS said, that from the 30th June to the 28th September, last year, there appeared to have been 5,000*l.* gone away and lost sight of; and he wished to know what had become of it?

The TREASURER (Mr. Wilcox) said, that if the gentleman would look at the receipts of the Directors he would see that the accounts professed to be made up half-yearly; and as a matter of course they were bound by that regulation. The 5,000*l.* referred to by Mr. Edwards was false, because the outstanding bills were not charged. That, indeed, was a three months' statement, without any of the bills for that period appearing in it.

Mr. EDWARDS asked whether the Treasurer knew of that?

Mr. WILCOX could not tell what the Treasurer knew.

Mr. EDWARDS—Was it not his duty to know of those accounts?

Mr. WILCOX—Certainly it was.

The CHAIRMAN said, the Directors admitted that the late Treasurer did not attend to his duty, and they had requested a general statement might be gone through, which had been done by Mr. Wilcox. The Directors, however, had every reason to believe that the accounts now submitted showed the exact position of the Company.

Mr. MAY inquired to what period the investigation had extended.

The CHAIRMAN replied, that the accounts had been examined from the commencement.

Mr. JAMES LAWRENCE said, they must not allow it to go forth that these errors had all taken place within the last 12 months. The proprietors were told that the accounts were now correct, but he himself thought the Directors knew very little about them.

Mr. MOZLEY said, there seemed to have been no adequate responsibility upon the part of those who had the direction of the accounts. Instead of being submitted to a distinct Committee of Directors to audit them from time to time, they were left to a paid servant of the Company, and the *ipse dixit* of that servant was taken for their correctness. If he was told that there had been a bad system, but it was now corrected, and the proprietors had the voucher for that of those persons in whom, *par excellence*, they confided, he should be contented for the future; but if they had not that voucher, then it was time for the proprietors to call upon the Directors to adopt such a code of regulations as would secure confidence in the accuracy of the accounts.

The CHAIRMAN, in reply, said, the accounts were audited weekly by the Finance Committee, and no money whatever was paid but under the direction of that Committee. The Treasurer had no power to pay money without their order. The accounts laid before that Committee were placed before the general Board every Monday, and every account was again gone through before the general body of Directors. He might add, that the Finance Committee went weekly to the station at Grange-lane, and there superintended the whole arrangements for payments.

Mr. MOZLEY—Then I take it for granted that the errors which have previously occurred have been errors from the bad keeping of the accounts, and are not abstractions of money?

The CHAIRMAN—Certainly.

Mr. MOZLEY said, the proprietors might then be satisfied that the errors had arisen not from any loss of money, but from mere clerical errors in the system of keeping the accounts; and a bad system it was. Without meaning to cast any reflection upon the gentleman who had had the management of this matter, he could not but say that there appeared to have been some deficiency as to the auditing by the Committee, as they had not detected the error of the Treasurer in not placing the bills which had come in against the earnings during that period. But as they had nothing to answer for as to the abstraction of money, it was plain that all that was required was a better system; and now the question was, whether the system was such an one as could be depended upon for the future. If he understood the Directors to vouch for the accuracy, then he did not think the proprietors need dwell upon errors which had not led them into loss. But if, upon the contrary, when inquiry was made of their accuracy, they contented themselves with referring to Mr. Wilcox, he must say that more was required from them.

Mr. MULLENEUX—I wish to ask a question—whether the late Treasurer has made up his accounts and handed over the balance?

Mr. MOZLEY—I take that for granted.

Mr. MULLENEUX—I put the question distinctly—has the late Treasurer made up his accounts, and paid over the balance due from him?

Digitized by Google

The CHAIRMAN—His accounts are made up, but he has not paid over the amount due. We are, however, to receive the principal part of the amount this week, and the remainder we shall have ample security for.

Mr. MULLENEUX—What is the amount?

The CHAIRMAN—It is about 2,300*l.*

Mr. EDWARDS—Have you got the security for it?

The CHAIRMAN—We have.

Mr. MOZLEY—You have no reason to doubt but you will receive the money?

The CHAIRMAN—Not the least.

After considerable discussion, a resolution was passed that the Report be received and entered upon the minutes. Another was carried to the effect that it was the opinion of the meeting that, with a view to ascertain the desirableness of making the tunnel, the Directors be requested to obtain an estimate of the expense of the same, with the advantages likely to arise from the construction of it, and the means proposed to raise the necessary funds; and that they report to a special general meeting as soon as practicable.

Mr. MAY then moved that the declaration of a dividend be deferred till after the Report of the Directors to the special meeting.

Mr. MULLENEUX seconded the motion.

Mr. WHEELER opposed it, and asked the Law-clerk whether the Directors could legally capitalise any part of the dividends.

Mr. MALLABY—In my opinion they cannot.

Mr. MAXWELL, seconded by Mr. James Lawrence, moved as an amendment that the dividend be paid on the 1st of August.

The amendment was carried, only two hands being against it.

Mr. MAXWELL then made an attempt to reduce the number of Directors, but it was unsuccessful.

Five gentlemen were next put in nomination as eligible to be elected Directors in place of the three who retired by rotation. The following is the list:—Mr. James Mulleneux, Mr. Booth, Mr. Hamilton, Mr. Abbott, and Mr. Folliot.

A division took place, when the numbers were declared to be—

For Mr. Mulleneux	42
Mr. Booth	30
Mr. Hamilton	28
Mr. Abbott	24
Mr. Folliot	15

A PROPRIETOR required that the votes should be taken in strict conformity with the Act by each proprietor, according to the number of his shares.

This demand caused considerable trouble; and in the course of about two hours the following was declared to be the result:—

	Votes.
For Mr. Mulleneux	1249
Mr. Booth	811
Mr. Hamilton	756
Mr. Abbott	620
Mr. Folliot	619

The three gentlemen first on the list were consequently declared elected Directors; and Mr. Dixon having been thanked for his conduct in the chair, the proceedings terminated.—*Liverpool Standard.*

MANCHESTER AND BIRMINGHAM RAILWAY COMPANY—SPECIAL MEETING.

THE special general meeting of proprietors of this Company, which was adjourned from Friday week, was held in Manchester on Monday last, and was very numerously attended; HENRY NEWBERY, Esq., Deputy-Chairman of the Board of Directors, presided.

The CHAIRMAN said, he had been requested by the Directors to state, in reference to the Leeds question, that the arrangements which they had entered into with the latter Company, with respect to the Hunt's Bank station, were in accordance with the pledge given to the shareholders in their Report of the 24th of February last; and that as soon as the necessary estimates were ready, a meeting of the shareholders would be called to submit those estimates for their approval.

Captain CLEATHER then read the following

REPORT.

GENTLEMEN,—The Directors regret to have to inform the shareholders, that the negociation to which they alluded in their Report to the last general meeting of the 8th instant, and which induced the Board to recommend the adjournment of that meeting to this day, has not terminated in any decisive result. There are, however, other circumstances which occasion an anxiety on the part of the Board to avoid any angry discussion or expression of feeling against the Grand Junction Company; and under this impression, the Directors would be glad, if it should meet the approbation of the proprietors, that, instead of now reading the general report, containing an historical statement of the correspondence and proceedings of the two Companies, a number of twenty or thirty proprietors should be selected by the shareholders at the present meeting, before whom the Report and every other information in the power of the Directors, should be laid, and with whom the Directors might from time to time communicate on important points connected with the pending negociations. This step would be satisfactory to the Directors, as the Board hope it also would be to the shareholders generally; whilst it would avoid all angry discussion, and ensure a free communication of facts, the publication of which might, in the present stage of proceedings, be injurious to the interests of the Company.

In reference to the consideration of this part of the subject, the Directors may state, that they, as well as the Grand Junction Board, have, for some time past, been in communication with the Board of Trade, on the subject of the disputes between the two Companies, in which that branch of her Majesty's Government have taken a lively interest, under the hope of bringing about an amicable arrangement; and, on the 28th June last, in consequence of a strong expression of regret on the part of the Lords of the Committee of Privy Council for Trade that the two Companies had failed in arriving at an amicable arrangement for conducting the traffic over the joint line with the same locomotive power, and also an expression of hope that it might soon be practicable to come to such an arrangement, the Directors proposed, through the Board of Trade, to concede for a term (say one or two years) the right of supplying locomotive power on the Grand Junction line between Crewe and Birmingham, leaving it to any impartial arbitrator whom their Lordships might appoint, to fix the terms upon which the Grand Junction Company should provide locomotive power for the trains of the Manchester and Birmingham Company; and also to entrust, subject to due inspection, the management of this Company's business between Crewe and Birmingham to the Grand Junction Company, either party being at liberty, on or after the expiration of twelve months, to terminate the arrangement, on giving to the other six months notice of their intention to do so, it being agreed that this Company should forthwith present an offer, through the Board of Trade, together with a statement of the calculations on which it is founded, of the terms which they are willing to pay to the Grand Junction Company for the management of such business; and that the Grand Junction Company shall, in like manner, forthwith present a proposal, together with the data on which it is based, of the terms upon which they are willing to undertake the management of such business for the Manchester and Birmingham Company: it being left to the Lords of the Committe of Privy Council for Trade, or to any arbitrator whom they may appoint, to examine the statements furnished by the respective Companies, and to decide and fix the terms to be paid by the Manchester and Birmingham Company, on account of the management of such business, to the Grand Junction Company, and generally to determine all questions arising out of this arrangement; it being, however, understood, that the inquiry shall not prevent the Manchester and Birmingham Company from conveying their traffic to and from Birmingham so soon as their preparations are complete for transferring the same to the care of the Grand Junction Company, at Crewe; the Manchester and Birmingham Company engaging to pay such sums for the locomotive power, and other accommodation, as may be decided upon by the referee.

To this proposal from the Manchester and Birmingham Board, we were favoured with a reply, expressing the satisfaction of their Lorpships with the decision of the Manchester and Birmingham Company, and intimating that they had lost no time in communicating the proposal to the Directors of the Grand Junction Company, who, on their part, had professed themselves most anxious to effect an accommodation. And further stating, that their Lordships would prefer, if the two Companies could arrange between themselves the details of management, and the pecuniary questions in dispute; but that they would be willing, if it were found better calculated to lead to a settlement, to undertake the nomination of an arbitrator to decide upon points which the two Companies may agree in referring.

A further letter, dated on the 8th of July, was duly received from the Board of Trade, intimating that their Lordships had received a letter from the Grand Junction Company, in which the Directors expressed a doubt whether the offer of the Manchester and Birmingham Company was intended to include the management *at* Crewe and Birmingham, as well as *between* those places, and stating that their Lordships wished to be informed whether they were correct in understanding that it was the intention of the Manchester and Birmingham Company to make a definite and explicit offer of intrusting to the Grand Junction Company, for a limited time, the whole working of their traffic over the Grand Junction line in the fullest sense of the word, provided the Grand Junction Company would agree to *refer* to arbitration the question of the amount of remuneration to be paid by the Manchester and Birmingham Company, and also any minor points of difference that might arise in settling the details of the arrangements, and that their Lordships thought it would be advisable if the Manchester and Birmingham Company were to prepare a statement of the points which they think it would be necessary to include in the arbitration.

To this letter the Manchester and Birmingham Board replied on the 9th of July, by stating that the proposal was intended in the terms of the inquiry by their Lordships, but that the Directors hesitated to prepare such a statement of the points necessary to be included in the arbitration as was recommended, *solely* from an apprehension that something requisite to the proper carrying on of their traffic *might* be omitted: but they trusted that the object of their Lordships, on this part of the question, would be fully attained by the distinct expression of the wish of the Directors that the arbitration may include all those points which are embraced in the stipulation of the Grand Junction Company, as conveyed to the Manchester and Birmingham Company on the 10th of January last, viz., the "doing as at present every thing that has to be done with the trains between Crewe and Birmingham and at those places." In reference to this letter, the Directors may state, that an intimation has been received to the effect, that the Board of Trade considered the proposal fair and reasonable.

And, connecting this intimation with the declarations made by the noble President of the Board of Trade, and by the Right Honourable the Vice-President of the same Board, in their respective places in Parliament during the present session, to the effect that Railway Companies had always been found ready to adopt any recommendation emanating from the Board of Trade—and thus to render Parliamentary interference unnecessary—we trust we are fully justified in the hope, that any recommendation on the subject which the Board of Trade may have offered, will be readily acceded to by the Grand Junction Company.

We therefore are desirous that nothing should now be stated by the Directors or the proprietors at large which may prevent the Grand Junction Company consenting to the proposal made by us through the Board of Trade; and that the shareholders will agree with us in considering it the more prudent course not even to read the general Report, which contains a full account of the proceedings of the two Boards, lest it might interfere with the acceptance of the proposal.

A discussion ensued as to whether the detailed Report of the Directors should be read. It was, however, ultimately resolved, "that the Report of of the Directors be approved, and that in pursuance of the recommendation it contains, the detailed Report be not read to the present meeting."

The CHAIRMAN then suggested that thirty or forty influential shareholders should be appointed, to whom the Directors might refer, in case of need, in the negociations with the Grand Junction Company, without again bringing the matter under the consideration of a general meeting of proprietors. It was the anxious wish of the Directors that such a body should be appointed. The Chairman concluded by reading the names of forty-two gentlemen, in order to show the impartial selection which he had been made.

Mr. HUDSON, Chairman of the York and North Midland Railway Company, was in favour of leaving the matter in the hands of the Directors, in preference to so large a body, with a request that they would take the necessary legal and vigorous measures for opening the line, either amicably, or by asserting the reasonable and legal rights of the Company. The general feeling of the meeting being in favour of this course, Mr. Hudson begged to submit the following resolution:—"That in the opinion of this meeting, it is unnecessary to act upon the suggestion of the Directors, to appoint a Committee of shareholders in aid of the negociation with the Grand Junction Company; this meeting having the fullest confidence in the disposition and ability of the Directors to carry the negociations with that Company to a satisfactory conclusion."

The motion was seconded by Mr. Greig, and carried with only one dissentient.

Thanks were then voted to the Chairman, and the meeting separated.

[The meeting was a somewhat stormy one. The proceedings occupy several columns of the *Manchester Guardian* of Wednesday, but for various reasons we content ourselves for the present with the above sketch, for which we are indebted to the *Midland Counties' Herald.*]

SOUTH-EASTERN RAILWAY.—The works of this railway continue to be prosecuted with much vigour. There are not fewer than 4,000 men employed on the line between here and Ashford; and, in addition to giving employment to the labourer, the money spent in the district must be sensibly felt by our shopkeepers. But the grand advantage to the public, the completion of this high road to the Continent, we rejoice to perceive is so rapidly approaching that we may contemplate the opportunity of travelling from Dover to London in a third of the time now occupied in the journey.—*Dover Chronicle.*

NORTH UNION RAILWAY COMPANY—GENERAL MEETING.

THE general meeting of the proprietors of this Company was held on Thursday last, but the particulars did not reach us in time for our present number. We shall notice them next week. The following is a copy of the Directors' Report:—

REPORT.

The continued general depression of all branches of the commercial and manufacturing interests of the country will have prepared the proprietors of the North Union Railway for the falling off in their receipts in the passenger department during the last six months, as compared with the corresponding period of 1841, exhibited by the annexed statement. The Directors, however, call attention to the gratifying circumstance that the income from tolls on merchandize has, notwithstanding, been fully maintained on this line; and that on coals, of which upwards of 60,000 tons have passed over the railway in the past half year, the tolls continue to exhibit that important and rapid increase which they did not hesitate to lead the proprietors to anticipate. The most vigilant and anxious attention has also been given to the accomplishment of every practicable further economy in the expenses, consistent with maintaining the road and the working stock in a state of perfect efficiency and repair, and with so great a degree of success (in the important item of coke) that the net income of the half year still amounts to 16,588*l.* 10s. 7d.

The Directors therefore propose the continuance of the usual half-yearly dividend, viz., 2*l.* 10s. per share, amounting to 15,847*l.* 10s. leaving a balance of 741*l.* 7d. to the credit of the new profit and loss account.

The Directors have, as they engaged to do in their last Report, availed themselves of every opportunity that has offered to expend, as far as consistent with the interests of the concern, portions of the depreciation fund on new stock, and thus to keep up as nearly as possible the undiminished value and amount, as well as the efficiency, of the original working stock. The amount thus expended in the engine and carriage department this last half year is 1,269*l.*, reducing this fund to 5,808*l.* 18s. 6d.; and the Directors are glad to find that every part of the undertaking, but particularly the locomotive machinery, is in the highest order, and in a peculiarly satisfactory and efficient state. With the concurrence of the proprietors, the Directors propose in future to spare the concern the expense and trouble of two valuations in the year, and to continue as hitherto to take a minute and accurate valuation of all the machinery, tools, and other perishable stock, founded upon a careful examination of the whole by disinterested and competent parties, at Christmas only; when, if any further addition to the depreciation fund should, at any time, be found requisite, the amount would fall upon the half year in which the largest receipts uniformly take place, and thus tend to equalise the dividends of the two half years; and a general Report at Midsummer, on the condition of the Company's stock, from their own officers, is all that would in that case be hereafter requisite.

Your Directors regret to say that, after a protracted discussion as to the amount to be paid by the Post-office for the conveyance of the mails over the North Union line (which that department compelled them to submit to a second reference), a very unfavourable award for the Company was at length obtained by the Government, and they have been compelled to accept for this responsible and troublesome service, which they have spared no pains and expense to perform satisfactorily, and with acknowledged success, 2,151*l.* 17s. 6d. less than would been received under the original award. Credit having been taken for this sum in the last half-year's account, it follows that the balance of 1,988*l.* 6d. then left in favour of profit and loss has been absorbed, and the further sum of 163*l.* 17s. appears in the current expenses of this half year.

The proprietors will expect some explanatory notice from the Board of the public being still subjected to the inconvenience of a double stoppage of the Lancaster trains and extra payment in Preston, instead of these trains proceeding, as formerly, directly to and from the North Union station, the origin of which was very fully explained in the last Report. From what took place at the last general meeting of this Company, and the statements of the acting Chairman of the Lancaster Company on that occasion, fully confirmed by him at an interview which took place expressly for the discussion of this question, it appeared to be admitted and certain that the Lancaster Board were prepared to enter into an arrangement with the North Union Company for the renewed use of their station and connecting line in Preston; and the Chairman of this Company having repeated to him at that interview that the North Union Board were still ready, as they ever had been, to agree to such an arrangement, and would, if the terms of payment could not otherwise be agreed upon, refer them for settlement, even, if it were wished, to their own Engineer, Mr. Locke, no doubt was entertained by your Directors that this arrangement would long since have been carried into operation. The Lancaster Board, however, then proposed to postpone this comparatively minor point, until a suggestion of theirs that the North Union Company should rent their line, and become the tenants of their whole concern, had been considered. When, however, the rent demanded was found to be so entirely beyond your Directors' estimate of the real value of the property, they did not think it consistent with a due regard to your interests to entertain the proposal; but they offered to rent the Lancaster Railway for a term, guaranteeing to the proprietors of that Company a return equal to what they are now realising, and a liberal participation in any further return which might result from the consolidation of the two establishments, or any other circumstances. This negociation having terminated fruitlessly, there seems no good reason why the public should not now have the benefit of the original station arrangement between the two Companies, nor be longer subjected to the inconvenience of being stopped, and to having often to leave the train at the admittedly inconvenient station north of Fishergate. The North Union proprietors will, however, probably be of opinion that their Directors have done all they can and ought to promote this object, and every other arrangement likely to be mutually beneficial to the two Companies that has been suggested; and they will be glad to learn that in the absence of some such arrangement, their interests are fully protected by the addition made to the original fares, on account of the extra duty now thrown on this Company.

THEODORE W. RATHBONE, Chairman.

Preston, 7th July, 1842.

P. S. Since the above was adopted by the Board of Directors, I am instructed by a deputation, appointed at the request of the Lancaster Board to confer with a deputation on their part, to state that negotiations have commenced which they hope may end in a satisfactory settlement between the two Companies.

J. CHAPMAN, Secretary.

WHAT RAILWAYS CAN DO.—A remarkable proof of the wonders of steam travelling occurred last week. Lord Palmerston's mare *Iliona* ran third for the Northumberland Plate at the Newcastle races on Wednesday, starting per van at 4 o'clock on the following morning for Darlington, was put on the Great North of England Railway, and reached the Euston station, London, at half-past 11 the same night; slept in town, left the Nine Elms station of the South-Western Railway at 9 on Friday morning, posted from the Winchester terminus, and was on the Winchester race-course by half-past 12, ready to start for any race in which she might have been engaged. Howlett and Day, the jockies, were with her, and the former rode in two races. The distance thus traversed was nearly 400 miles, and was done in 32¼ hours, of which between 9 and 10 were spent in London.—*Newcastle Courant.*

RAILWAY ADJUDICATIONS.

BELL *v.* HULL AND SELBY RAILWAY COMPANY.

Vice-Chancellor Wigram's Court, July 19.—His HONOUR disposed of this case. He directed that the defendants should pay the costs of the first trial, in which they had contended that the wharf they then proposed to build would be a sufficient compliance with the terms of the Act. On the second trial they had put themselves right by offering to build the present wharf, which the plaintiff, instead of accepting, went to trial for the purpose of proving to be insufficient. The jury by their verdict found that this wharf would be a compliance with the statute. The Company must, therefore, have the costs of that trial, except of the issue on the plaintiff's title, which has been found for him. It clearly appeared from the bill, and from the affidavits, that the plaintiff throughout the suit insisted on his right to have another wharf on the Humber, of the same extent as the wharf which was on the north side of the railway. To this he was not entitled, as the subsequent proceedings had determined. The motion by the defendants to dissolve the injunction, however, failed, and they must therefore pay the cost of that proceeding, but each party would bear their own costs of the suit in equity generally.

THE QUEEN *v.* THE BIRMINGHAM AND GLOUCESTER RAILWAY COMPANY.

Worcester Summer Assizes, July 19.—This was an indictment brought at the instance of a gentleman, named Pountney, owning land on the line of railway, against the Birmingham and Gloucester Railway Company, for neglecting to obey the order of two magistrates (Messrs. Taylor and Lawrence), to erect and maintain a bridge under the railway, to connect some portions of his land which had been severed.

Mr. Serjeant Talfourd and Mr. Alexander appeared for the prosecution (attornies, Spurrier and Co.), and Messrs. Whateley and Selfe for the defendants; but the former could only watch the proceedings, because, though the standing counsel of the Company, as Queen's Counsel he could not defend a prosecution brought by the Crown, (attorney, — Whateley). It appeared that the land in question was situated on the line of the railway at Balsall Heath, in the parish of King's Norton, and that the plaintiff had endeavoured to persuade the Company to make the erection in question without resorting to litigation. The Company offered to build the archway if the plaintiff would contribute 100*l.* towards the expense, but which he refused. The magistrates before named were then applied to, who made an order upon the Company to erect the archway. The Company appealed against this order, which however was confirmed by the Court of Quarter Sessions. This decision was rendered invalid by an informality, and proceedings were then taken in the superior courts, and after the case had gone through various stages, the present indictment was laid. After Mr. Serjeant Talfourd had stated the case in a very eloquent speech, several documents were put in, and while they were in course of reading, his Lordship suggested that no advantage could be gained by allowing the case to go on, for it appeared that the archway had not been built within the time specified by the order, and consequently that the jury must return a verdict of guilty. After a consultation between the counsel the case was stopped, and the jury returned a verdict of guilty. It was stated in the course of the proceedings, that the bridge in question had been erected, but the parties denied that it had been finished in a proper manner.

EXTRAORDINARY RAILWAY TRAIN.—On Thursday the 6 o'clock train, a.m., from Paddington to Taunton, carried the immense and unprecedented number of 2,115 passengers! the great attraction being the agricultural meeting at Bristol.—*Berkshire Chronicle*, July 16.

LONDON AND BRIGHTON RAILWAY.

To the Shareholders.

GENTLEMEN,—The half-yearly general meeting of the proprietors being about to take place, I am anxious that, ere this event, you should turn your attention seriously towards those points which more nearly involve the future welfare of this great concern. The object of my addressing you in the character of a shareholder is not for the expression only of my dissent, as a Director, to the present arrangements of that portion of the Board to which I belong, who are entitled "the Management Committee," whom any one must justly hold responsible for such arrangements, nor have I any desire to excite, at the approaching meeting, towards those gentlemen an unkind feeling for their adoption of such a course as to them, doubtless, appears the wisest they can follow; but as I cannot admit that any portion of a Board is endowed with a mysterious power of deciding what is, or what is not, the true policy in matters of the nature of those I am about to treat on, beyond what every intelligent proprietor shares in common with them, I do contend, that I should not be doing my duty, as an independent-minded Director highly solicitous for the real welfare of this great undertaking, if I were to remain silent, when I have reason to believe that the Direction are *not* wisely pursuing that course which it appears to me is best adapted to the full development of our traffic; and, as I wholly deprecate all endeavours of Boards to suppress the individual opinions of its members, by *hashing up*, if I may use the term, a medley of conflicting opinions into one *olla podrida*, but too often designated *unanimous*, I have no hesitation in coming freely forward to submit to your notice such plans as I stand in the minority in entertaining.

Now, to the point. Owing to the vicinity of my family's property to the neighbourhood of Brighton, that place has from the hour of my childhood been familiar to me. I have seen it gradually grow in strength and power, from a mere fishing village, dependent on the partiality of royalty, and the visits of a few aristocratic bathers, or followers of the Court, to a magnificent town, containing, as I believe it now does, nearly 60,000 regular inhabitants. Like all such places, which are on the rise, it has had its successive stages of increase, and has now passed through the two first of them. From an insignificant village it grew to be a fashionable, and almost exclusive, resort of the aristocracy during the winter season; and again, from that second stage it has passed into another of an entirely different character, and is fast becoming the most popular resort of several distinct classes of people, whose various duties enable them, at different seasons, to repair to this most salubrious place of relaxation at least once a year. Every one must remember when, owing to the disinclination of her present Majesty to follow the example of her two late predecessors, respecting their annual sojourn at this watering-place, the most gloomy anticipations were currently rife in regard to the desertion of Brighton by the higher classes. This probably might have been its fate, had the Royal dislike visited it during the early stages of its growth; but it had already passed from infancy to full maturity, and had learned, like other hobble-de-hoys, to know its own strength, and to go alone. The wise prophets, to whom the savoury incense of royalty's feasts was as the breath of their nostrils, shook their ominous heads at the bare mention of cheap coaches and the great unwashed, and the glory of Brighton was declared to have departed in the last royal sumpter van that turned its back upon the Pavilion. It must be admitted that just at this apparently critical period of its transition state, Brighton did seem to be in a somewhat declining condition of health, in spite of its many doctors, with their fast-trotting bits of blood.

"The well-appointed *Pill Box*," however, still flew from cliff to cliff—though after the unprofitable fashion of the "King of France," I fear, and his "thirty-thousand men." The Butcher, whose delight was to "*ride at*" the Doctor (regardless, as they are well known to be there, of the safety of the quiet wayfarer on foot), pricked on his gunpowder hack with the same impetuous gait as his adversary in the race; but the cynical folks were heard to declare, that he seemed to lack the "balance true" of a well-filled basket. The riding-master ambled gracefully up and down the town, unattended by the usual flying squadrons of equestrian damsels, thumping on *bone-setters*, as they were wont to do in the days when *diaculum* applications were in high demand, and the mermaids in blue flannel had learned to forego their morning's libation to the sotty god, and sat on the steps of their untenanted machines, wondering where all the sickly and dirty children could have departed to. But

> "A change came o'er the spirit of my dream;
> Brighton had sprung to manhood——"

Asthmatic London cast its hazy eye upon those cheerful shores whose sunny cliffs had first suggested the name of Brighthelmstone; and the great unwashed, hurrying on their Benjamins or blouses, flew thither in eagerness to shake off the fogs and blue devils of the smoky metropolis. From that moment Brighton again grew glad; for the world had learned the lesson that "*high prices and a few*" was *not* the system which enriches—that "*low prices and a ready return*" *was* the true road to prosperity. When Brighton owned 10 high-priced coaches, it was but an inconsiderable place: but since it has supported from 30 to 40 cheap ones, it has become an enormous town. The advantage of all kinds of roads is the facility they afford in their various degrees of transit from town to town; and if the times of 40 cheap coaches were more prosperous than those of the 10 high-priced ones, by a parity of reasoning, the more facility that is offered of still lower prices, by a railway, the more populous and the more prosperous must become the place to which it conveys these additional thousands. It is *this truth* which I have long unsuccessfully endeavoured to inculcate. The present prices or fares are *far too high* to suit the purposes of the public generally; and I likewise contend, that no fallacy is more palpable than that of expecting to prosper by maintaining them. If ever the enormous outlay on this very naturally expensive line *is* to be repaid to the proprietors, I forewarn you, brother-shareholders, that *such* can only be accomplished through the *one grand end* of making Brighton *easy of access to every holiday-taker in London*, be he of *whatever class he may*. The object of railways is but half understood if it be supposed, as it is *by but too many*, that their prosperity is to be worked out by any system which savours of high fares and exclusiveness; and it is owing to a mistaken view on this most essential point, though one which every shareholder at a meeting may be just as good a judge of as the Directors themselves, that the Management Committee of our Board continue to uphold an error fatal, I fear, to our traffic, and that the Brighton Railway has *not* answered the expectations justly entertained of an augmentation of its passengers, arising from those facilities of transit which all railways should, in my humble opinion, offer to every class of persons in her Majesty's dominions. It has always been my belief, that at the first opening of our entire line had the fares been set exceedingly *low*, though even at a *loss* for a certain time, the greatest possible benefit would thereby have accrued. In the first place, it is evident that by such a measure we must have cut down every coach on the road; and thus, by at once annihilating this hostile interest, have saved ourselves from those attacks on all sides which so long assailed us—and whose fabrication might naturally be imputed to an expiring but not conquered party—and which so long oppressed our shares, and added to the difficulty of obtaining money at a period of unexampled gloominess in the market; while the consequences of our *not* having done so is, that even at this very moment five coaches daily continue to ply at low fares each way, besides vans, and other descriptions of carriages conveying third-class passengers, to the manifest injury of our traffic. In the next place, it appears to me that no temporary sacrifice on the part of the Company would have been too great to have rendered "a trip to Brighton," while it was yet a novelty, the popular amusement of the day; yea, even if we had carried *gratis* for a week, I contend that the result would have been ultimately to our advantage.

There are few persons so insensible to the lively elastic sensations produced by the brisk sea air of Brighton, or few Englishmen, proud as we are of our ocean girdle, who, going *once* to this favourite place, with its open coast and its clear water, would not heartily desire to *go again*; and *this* is the real "*open sesame*" of our treasure vaults. Until a taste for Brighton be given to the tens of thousands of London idlers who never yet have even *visited* the place, and until the cost of transit be adapted to their finances, so as to *entice* them to try this new pleasure, the much boasted traffic, which was expected to make the Brighton Railway *pay*, will never be fully developed.

I am aware that there are but too many who, like the gentlemen of our Management Committee, are impressed with the same vague ill-defined notion respecting the policy of keeping up the fares, as well as with the belief that serious injury may be done to Brighton, generally, by making it the rendezvous for a class of people whose visits may drive away the aristocratic portion of society. With regard to the first of these excuses for maintaining high fares, as I really have never heard anything like a *logical* argument put forth in its defence, I feel myself puzzled to answer their objections; and I only regret to find that any one should be so blind to the many wholesome lessons, of every day occurrence, which teach us the *folly of high prices*, as well as the *advantage of low ones* and a *ready return*. It has indeed been said in defence of the former system, that the expenses of the Brighton line have been *such* that we cannot *afford* to lower the prices, but I contend that this is precisely the reason *why* no time should be lost in adopting a line of policy the best calculated to repay this great outlay, founded as such a course is upon those well-accepted theories respecting the advantage of low prices which are being universally brought into practice. As regards the *sickly* apprehension that the higher classes would be driven from Brighton by the contact of the great unwashed, I can only answer, that a pretty extensive practical knowledge of the habits of the aristocracy has taught *me*, *that* their thin-skinned horror of the *vulgar many* is apt to be highly overrated, and that the *love of display*, the leading feature of those who enjoy great wealth (and I presume it is that class of the aristocracy whose presence is desired and whose desertion of Brighton would be felt), lacks its chief charm without its attendant *starers*. Brighton is essentially a place of relaxation and pleasure, as well as the resort of the weak and sickly. The railway runs not through a single town, and is mainly dependant, therefore, on that species of traffic which those most conversant with such affairs have always declared to be that which *best pays*; yet, strange to say, men *are* found who can advocate a system entirely opposed to the means most calculated to induce the greatest possible number of persons travelling on the road, instead of making *that aim* the *north star* of their guidance. Why, is it not as obvious, gentlemen, as that two and two make four, that it is impossible for any one individual to pass between London and Brighton, without being, directly or indirectly, the means of bringing thither, or inducing to go there, some one or two, or in many cases five or six more friends or dependants, as well as that the greater is the *gross amount* of passengers, the *greater* must be that species of traffic arising out of a relation to their affairs, their comforts, and their pleasures?

This subject brings me to the second point of my letter, and one that, from the very first, has always been a favourite theory of mine. Whether or not it can be beneficially carried into effect remains to be proved; but, as I cannot myself conceive any plan more practicable, or so well adapted to increase the receipts of the Brighton Company, I

Digitized by Google

therefore deem it my duty to submit it to you for your consideration, that you may deal with it as it seems meet—though, I am sorry to say, I stand quite alone in the Direction in my opinion respecting its advantages, which I do not (though nearly so) as regards the reduction of our fares. The plan I would propose for future adoption, is as follows:—

There cannot be a doubt but that of late years Brighton has become a place of constant residence to a vast number of highly respectable families, so that it now has a very large population of its own, independent of external visitors. The peculiarly bracing healthfulness of the air, the advantage of sea bathing, the facility of obtaining horse and foot exercise on the open downs, are all so many benefits for the promotion of the health and strength of young persons, and, accordingly, Brighton contains more good schools than any other place in England of the same size. As the habit of residing near their children while at school is generally becoming, and most properly so, the custom in this country, and as the females of families have here, likewise, a greater facility than elsewhere of obtaining, unattended by ceremony or by the males or the servants of their establishments, that regular exercise so beneficial to health, I am fully impressed with the belief that Brighton *may* be rendered, by the plan I am about to propose, a place of most extraordinary resort to many classes of people engaged in business elsewhere, particularly in London; that great numbers of merchants now residing in small confined suburban villas, would, if every facility were afforded them of transit to and from their business, at any hour, be induced thereby to settle permanently at Brighton, not only for the benefit of their families, but for that of the health they would themselves gather by passing their nights and week holidays by the sea side. With men, however, who have been accustomed to look upon coach hire and travelling as a sort of indulgence, it is difficult to conquer at once their prejudices, or to induce them, even though manifestly for the good of their health, to surrender those prejudices; and the mode by which I propose to induce this large and wealthy class to make Brighton their permanent residence is, to grant to the head of every family who, in future, will offer to settle there under certain conditions of establishment, a free pass upon payment of a very moderate sum annually. This, if it enabled him at any hour to repair to London on his business with as much facility, and nearly as little loss of time as he can now do per omnibus to and from his suburban villa at Clapham or Richmond, would, undoubtedly, induce great numbers of merchants to reside at Brighton; while it must be obvious to any one who can draw an inference, and who will reflect on his own family applications as well as those of friendship, how, for this one cheap ticket, the Company would gain an immense accession of passengers, parcels, and business of all sorts; for it is not the gain of an individual fare that should be prized, but the great increase of traffic which such an individual must necessarily be the promoter of; besides which, it is evident that with the largest possible amount of passengers, however low the classes which swell that amount, there must ever be a proportionate increase of heavy goods, luggage, parcels, and food to be transported thither for their consumption—since even the day-ticket passenger consumes something, and parts with a portion of his holiday finances in recreations. It really is impossible to estimate the prodigious increase of actual Brighton residents if this liberal plan were adopted, and judiciously carried out. I would suggest that a regular book, open to the inspection of the shareholders, be kept of the names of such persons, together with the number of years thus contracted for, and the number of each person's establishment, so that the Directors might have the power of breaking the engagement at any time that it was found that the establishment of the ticket-holder decreased below a fixed number, say, five in family, including servants. My intention is not now to enter into the working details of the plan, after arrangements can settle them, but I sincerely trust that the suggestions I have here made will tend to arouse the shareholders to think for themselves on the points I have here reviewed, and on which no one can doubt their equal capability of deciding on the practicability or advantage of with the members of their Direction, and whose duty I hold it to be to bend to the sound and firmly-expressed suggestions of the proprietors in matters so nearly touching their interests.

There is yet one more point which I would recommend to their notice, and which I have vainly endeavoured to show the advantage of, and that is the adoption of fast integral trains, stopping at *no* stations for passengers. With all the present facilities of reaching his destination, it is evident that the traveller rarely now can do so under 3½ or 4 hours from his own abode, and as a very large proportion of the short visitors have only a very limited time to spare towards pleasure, no pains should be left untried to render their transit to Brighton both agreeable and short; and I am persuaded that for the purpose of effectually carrying out my views, of rendering Brighton a place of resort for an immense concourse of all classes, it is absolutely necessary that the impression to be given to every one, as well as that to be left on their minds after one journey, should be, that the going to Brighton is *little more* than the going to Richmond or Clapham by the omnibus—that, in fact, it is not to be accounted a *journey*. Now, though 3½ or 4 hours is certainly a great saving on the old coach time of 7 hours, still 4 hours make a greater hole in an office-clerk's half-holiday than he likes; and what is more, it robs him of more time than is really necessary. If the fastest train now takes 2 hours to do the distance in, and stops, as it does, at 3 stations, nearly 4 minutes at each place, besides the time lost in checking the train and in getting up the speed again, it is obvious that integral trains would need but 1½ hours to execute the distance in, without proceeding at an increased mean speed. The general complaint now most common from persons travelling the whole distance is (and I think it is a fair one), that they cannot reach Brighton without being subject to many tedious stoppages, and this is apparently more grievous from the extremely limited number of those whom they are called on to pick up, often not more than one or two at many of the intermediate stations. The interest perhaps, and certainly the convenience, of the mass going to Brighton from London, should *not* be sacrificed to the few station passengers; and I am convinced that nothing would give more general satisfaction than the adoption, twice every day either way, of integral trains reaching Brighton in 1½ hours.

Gentlemen, I have the honour to be,
Your obedient servant,
G. BEAUCLERC.

A 23, Grosvenor-street, West,
July 18, 1842.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—As the approaching meeting is of great importance to a large number of persons who have been induced to invest capital in the undertaking, I consider the protection of their interests should be the first object; I therefore deem it desirable to caution all shareholders against parting with their shares at the present price, from the least apprehension that reforming the abuses in management can or will have any other effect than restoring confidence, and improving a concern which has hitherto been so much prejudiced by the proceedings of the present Directors and Engineers.

The shareholders are certain to be gainers by a change of all persons in the Management who attempt to justify the accounts—for whoever will stand forward for that purpose must be ignorant of the affairs of the Company, the value of the works and land, or have a private interest in opposition to the shareholders.

Notwithstanding the railway has been open a considerable time, not a shilling of profit has been divided, and it is only now when the accounts are undergoing public investigation, and the Directors likely to feel the consequences of their neglect of the shareholders' interests (if nothing worse), that they intimate their intention of paying a dividend.

Having said thus much to caution the shareholders against being misled by groundless fears on one side, and the dividend-bait on the other, I am sure that all interested, who desire neither more nor less than a fair, open, and impartial investigation, will support the appointment of a competent Committee to investigate the affairs of the Company—I mean one competent to report on the value of the works in the absence of the particular information withheld from the Committee recently appointed; because it is manifest that not a single member of it was competent to form a sound opinion on charges for railway works.

I remain, Sir, yours, &c.
J. TROUP.

RAILWAY MANAGEMENTS—THE BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—In one of my former letters upon the state of affairs in the Brighton Railway Company, I pointed out how it was evident that, whatever has been the mistake of that Direction, the blame must justly attach to the conduct chiefly of the Chairman, and I then promised to submit to your notice a *remedy*.

Every one, I repeat, who understands the constitution of a Railway Board, will readily admit that a variety of circumstances tend to throw into the hands of the Chairman a degree of influence and of power which enables him, with facility, to sway the councils of the Direction. That this influence is as dangerous as it is disproportioned to his station there cannot be a doubt, more particularly when the Chairman prefers his own interests to those of the Company, and is ever on the watch to strengthen *his party*, which usually is found to consist of the following characters:—1st. Of his own personal adherents—*thick-and-thin* gentlemen, who do little more than write private letters at the Board, and who never utter but to open out, like a pack of hounds, with their "*hear, hear!*" and their "*oh! oh's!*" whenever their whipper-in—the Deputy-Chairman—gives them the *view holloa*. 2ndly. Of that '*cute* set who have made up their minds to profit by the good things afloat, and whose motto is, "You scratch me and I'll scratch you." 3rdly. Of the ignorant. 4thly. Of the waverers. The *ignorant* Director, of course, has no opinion of his own; the *waverer* dares express none, and may be known, on a motion being put, by a certain vacillating watchfulness of the eye, which denotes a hurried survey of the hands held up, with the view of siding with the majority. Every one who has sat much at a Board of any kind, must have witnessed some few amusing scenes of the *despair* of such men upon finding that they had voted by *mistake* in the minority. I do not pretend that a good Chairman should not have his backers; but they should be adherents from an honest conviction of his uprightness of character, not as his tools for jobbing purposes. The next act of a crafty bad man in the Chair is, to use his utmost influence in the election to vacant seats in the Direction, of some one of the above-named classes of persons; or sometimes to propose, as a sop to the men of the north, the election of a magnate of cotton-twist from Manchester, or a Lancashire lord of trade from Liverpool, whose names have weight, but whose frequent attendance at the Board is impossible; and who, therefore, can never be properly acquainted with the real state of affairs, nor are alive, when they do attend, to the bye-play of the different parties. Previous to a meeting of the shareholders such gentlemen are written to, and requested to bring with them their friends' proxies; and being closetted for a day with the Chairman, who readily persuades them that the concern is in a thriving condition, they are ready at any moment, at a pinch, to start up and pronounce a long showy eulogium on the unimpeachable honour of the

Digitized by Google

Chairman and the Directors—making the proprietors believe that everything has been done with the entire concurrence of the whole Direction; while it often happens that a steady but fruitless opposition has been offered by a large section of the Board, consisting of the most intelligent and upright characters in it, who by this ill-managed system are most frequently found in the minority. Thus the single vote of a "*thick-and-thin*," an ignoramus, or a waverer, will frequently decide questions of the utmost importance, and a fool or a rogue may thus turn at once the scale of prosperity of a great undertaking, and make or mar the noblest undertaking. The practice of allowing a mere majority of *one* to carry points of great moment, when the Board is thus divided in opinion, is evidently a most *iniquitous* course, and one that *must* ever throw the power into the hands of the *worst portion* (always the largest in all societies) of a body of Directors.

The half-yearly general meeting of the Brighton shareholders is about to take place, and charges of a very serious nature have been anonymously cast against the Chairman of the Directors, who has lately put forth an indignant reply, declaring his readiness to answer all accusations brought against him. Be it so; I trust he may keep his pledge. But what I would here warn the proprietors of, is the danger of lulling themselves into *repose* with this offer of *fancied redress*. It often happens with men who feel conscious of the impossibility of meeting the charges about to be preferred, that they will affect a seeming candour of conduct, and indignantly court an attack. This deceives many. Let it not mislead them, for on such occasions it as often happens that the over-hasty zeal of some three or four speakers in the good cause is a bad Chairman's best shield; and the more fierce and the more personal and violent is the outburst of honest indignation, the easier the Chairman comes out of the scrape. He bends humbly to the meeting—preserves his temper—administers honied words in return for hard blows; and finally, leads the compassionate feelings of the meeting to contrast his bland manner with the cutting personalities which are thus injudiciously used by the opposite party. He then adroitly throws himself upon the *generosity* of the shareholders to protect him from so *unfair* an attack; and nobly offers to allow the speaker the opportunity, at any time, of convincing himself of his error, by the permission to wade through about a ton weight of ill-kept ledgers and papers at the office. The well-primed friends of the Chairman then rise, and commence an attack on his opponents; and thus the attention of the meeting is drawn off from the main question, which on this particular occasion should be, *beyond all doubt*, whether or not the Chairman should be requested to resign his situation, if not to vacate his seat in the Direction, to enable them both to be filled by some one more capable of conducting, or helping to conduct, the affairs of the concern he has so lamentably failed in his superintendance of. Let the shareholders remember, Sir, that it is vain to throw away their time in vituperation and abuse of the Direction at large, or in bitter invectives against the Chief Engineer. One half of the Board, perchance, are really of their way of thinking, but lack the power to rid themselves of their head. The Engineer we have now no hold over. He "*has done our business*," and is about to leave us with well-filled pockets. Let them remember, that it is our Chairman who has at least had the power of checking him. It is all very fine for the latter to exclaim, "What do I know of engineering? how could I restrain him from exceeding his estimates?" Let not the shareholders be blinded by such excuses. "A man may be a judge of a good pair of shoes," said Dr. Johnson, "though he be not a shoemaker," and I am prepared to prove that a Chairman must be a shallow-pated fellow (and this is not the sort of man we want in the chair) who, with all his practice, and opportunities of learning his duties, cannot distinguish *when* an Engineer is leading him along by the nose.

Let it be remembered that it has been through our Chairman's blind support of our Engineer, that the latter has been permitted to plunge the otherwise prosperous concerns of this great Company into a "*slough of despond*," out of which nothing but a *long course of the most zealous, economical, and wisely ordered management in future, can ever hope to extricate them.* Let them bear in mind, I say, that the Chairman's *incapacity* is the safest count on which to indite him. If we suffer ourselves to be led away into charges of a different nature, and endeavour to stigmatise him as something *worse* than *inefficient*, we may fail in bringing home the proofs, and the failure will be deemed an acquittal, and the attack designated *malice prepense*. * * * But more certain by far is the *fact*, that this gentleman *is* connected with, or Managing Director of, some half-a-dozen other Companies, at whose Boards his time it spent, instead of adapting his whole attention to his duties as Chairman of the Brighton Company, which (were he the ablest man of business in England) would occupy *every hour* of the day, from sunrise to sunset, to enable him to fulfil with advantage to the shareholders. Until the Brighton Company possess a Chairman who is THEIRS, and THEIRS only, it *will not, cannot, prosper*. * * *

If, Sir, after all I have said, the shareholders do not know how to act, I will tell them. Let the Chairman's *incapacity* form the groundwork of their attack; let them move a vote of want of confidence in his efficiency, and let their reasons be stated with *temper, firmness*, and *truth*. It is true, I believe, that they have it not in their power to move this gentleman out of the Direction until the January meeting, when I am informed that *his turn* will arrive, as one of a portion annually retiring by rotation, to be re-elected; but, if he have the slightest delicacy he cannot but retire upon such an expression of distrust in his capacity as Chairman. I entreat the proprietors, at this *most critical juncture*, when the whole prosperity of the Brighton Railway will entirely depend on the arrangements for the future, not to suffer themselves to be *foiled*: to gird up their loins for the good fight; and if the Chairman hesitate to retire, to *insist* upon the appointment of a Committee of Investigation far more searching and determined than the late one, and *adjourn from day to day*, until the business be got over. Let them not be impatient. Let them speak, and the *truth will out*, and let them be not satisfied until our affairs have passed into the guidance of abler hands. Let it be in future considered the rule of the Brighton Company that no one connected with any other joint-stock Company whatever shall be their Chairman. Let the conduct of their affairs pass from the present hands, and I will stake all I am worth that the shares will reach par before Christmas; but let things remain in their present state, and the shares will fall to 20 discount, before the same period. Bid them look to it, Sir; you have been their truest friend, and you will long be entitled to the warm thanks of the proprietors of this Company, of whom I am one, as well as

Your obedient servant,

H.

RATING OF RAILWAYS—MIDLAND COUNTIES' RAILWAY.

To the Editor of the Railway Times.

SIR,—As the evidence in the appeal of the Midland Counties' Railway Company against the rate laid in the parish of St. Mary, Leicester, contains information of some interest to the public, and may be useful and instructive, I beg to ask attention to some of its statements, and to the inferences from them.

The history of the rate is, briefly, that the Company were assessed, in February, 1841, upon the railway lying in the parish, at an annual rateable value of 400*l.*—the length of the road being nearly one mile. The Company instantly objected to the amount, and offered to the parish to submit to a rate of 200*l.*, or the alternative of encountering their utmost legal resistance. But the parish, being advised by me that the rate was a fair and honest one, persevered in supporting it. The Company, subsequently, paid the amount for the two first quarters of 1841, and appealed against the July and following rates. The trial was respited over several sessions, chiefly to wait the judgment of the Court of Queen's Bench as to the principle on which railways should be rated—the question being before that Court in the case of the South-Western Railway and the parish of Mitcheldever. To the time of this judgment, the quantum of the rates was founded on the tollage received by the Companies, subject to deductions for the maintenance of way, and other expenses and considerations—such tollage being supposed to represent the rent derivable from the railway itself, irrespective of the profits of the carriers upon the line. But the decision referred to, of the Court of Queen's Bench, enlarged the basis of the rating, by making it "such an amount as a lessee would pay, he being supposed capable of deriving from the use of the railway all the profits which accrue to the Company from the conveyance of passengers, cattle, and goods, under the powers of their Acts; such lessee finding locomotive power, carriages, &c. &c." The rate appealed against in the parish of St. Mary was calculated on the tollage; and taking the Company's statement of deductions would, undoubtedly, have been sustained and augmented on that principle; but at the trial the parish was obliged to comply with the rule directed by the Court of Queen's Bench, and test the propriety of the rate by the sum a tenant would give for the profits obtainable from the portion of the railway lying in the parish. At the hearing of the appeal on the 11th instant, before the Recorder as the Court, the appellants began; and having finished their case in opposition to the rate, the parish, on the emphatic suggestion of the Court, consented to amend the rate, and it was reduced to 300*l.*

The Company set out by stating, that in respect to traffic the mile in St. Mary's parish averaged fairly per mile with the 20 miles south of Leicester; that the expenses and a proper sum for depreciation exceeded the rent the Company would obtain for those 20 miles; and that they were not, therefore, rateable in respect to that part of the line; and that the receipts on the road north of Leicester exceeded those on the south by 135*l.* per mile per annum. To show that there were no rateable profits in the parish, they ingeniously took, on the one hand, the receipts from October, 1840, to October, 1841—including a time when the traffic was undeveloped and checked by competition; and, on the other, the expenditure from January to December, 1841; and exhibited the following account:—

TOTAL RECEIPTS

In St. Mary's parish, from 1st October, 1840, to 1st October, 1841, assuming the length of railway in the parish to be a mile.....		£1,966 17 0
DEDUCTIONS.		
1. Maintenance of way..... £240		
Depreciation of rails, chairs, and sleepers..... 182		
Police, switchmen, and gatekeepers 70		
Engineering establishment 20		
Parochial rates, tithes, &c..... 50		
	£562 0 0	
2. Government duty on the passengers	71 11 7	
3. Locomotive power, coaching charges, and other working expenses.....	712 13 0	
4. Interest on capital invested in the engines, carriages, and other stock of the carrying trade (143,000*l.*) at 5 per cent.	119 0 0	
5. Fund for replacement of the same stock, at the following per-centages on their original cost, viz.:— Engines, tenders, tools, and implements (87,000*l.*), at 5 per cent. Carriages, trucks, horse-boxes, and cattle-waggons (42,000*l.*), at 12½ per cent. Waggons for goods and minerals, cranes, &c. (14,000*l.*), at 10 per cent.	169 1	
6. Fund for repairs, restoration, and insurance of stations and buildings, at 2 per cent. on 140,000*l.*—the original cost ..	43 1 6	
7. Tenants' profit, at 10 per cent. on the carrying capital	198 12 2	
Total of deductions.....	£1,866 19 9	

From the case of the Company, as stated by themselves, I find by calculation there flow the following results: and the involving of the parish and

Digitized by Google

the Company in the great expense of trying the rate of 400*l.* has, I apprehend, been an act on the part of the latter of very questionable fairness or prudence. There was nothing in the publication of the tolls to indicate the unequal receipts of the line; but looking at the locality of the part [in question, there were many apparent reasons for concluding it to be an average one. The results from the Company's statements at the trial are these :—

For the year 1841, in the middle of which the rate appealed against was laid, and before which the Company was not rated—applied to the 20 miles south of Leicester :—		
Receipts per mile per annum on the whole line, from Jan. 1 to Dec. 31, 1841		£2,267 0 0
But abate the sum per mile, which will give to the Company an excess in receipts of 135*l.* per mile for the 37 miles north of Leicester		88 0 0
Receipts per mile on the 20 miles south of Leicester.....		£2,179 0 0
Deductions as before stated..	£1,866 19 9	
Less excess in depreciation, as admitted, Mr. Woodhouse, the Engineer, having calculated it on the extreme cost price of iron, instead of an average value	20 0 0	
		1,846 19 9
Rateable value per mile per annum for the year 1841, on the 20 miles south of Leicester.....		£332 0 3

But it is not probable that such extravagant deductions for depreciation of the rails, &c., on the engines and carriages, and on the stations, and for tenants' profits, can be maintained; and it was an anomaly in the Company's case that the parish was damaged by taking against it the inferior receipts and superior cost of its particular portion of the line, and then an average on a mileage of the whole line, for the locomotive power, police, carriages, &c., and general expenses.

Again, the rateability of the Company for the current year, 1842, will be—

Amount, as for 1841		£332 0 0
The evidence stated, that the receipts for the present year will exceed those of the last by about 5,000*l.*; and assuming that the expenses will not be increased, and there is no doubt they are less, this increase supplies to the 20 miles south of Leicester, per mile per annum.....		83 0 0
Rateable value per mile of the southern 20 miles for the current year, 1842.....		£415 0 0
Applying this evidence to the 37 miles north of Leicester, receipts per mile per annum on the whole line from January 1st to December 31st, 1841.....		2,267 0 0
Add for the excess of receipts on the portion as deducted from the southern one		47 0 0
Receipts per mile on the 37 miles north of Leicester.....		£2,314 0 0
Then deduct as before.....	£1,846 19 9	
Less on maintenance of way for this portion, probably	40 0 0	
		1,806 19 9
Rateable value per mile of the portion north of Leicester for the year 1841.....		£507 0 3
And add for the year 1842 the proportion of the increased receipts		88 0 0
Rateable value per mile for the year 1842..		£595 0 0
The rate per mile per annum, taking the receipts at an average on the whole line, would be for 1841, per mile.....		£446 0 0
Ditto ditto for 1842		533 0 0

The practical application of the principle of rating established by the Court of Queen's Bench will produce some curious results. In the trial of this appeal the Company attempted to show there were no rateable profits derived from the railway in the parish. If they had succeeded in this effort the parish could not have rated them, although they were the occupiers of land the annual value of which, at the time it was taken by the Company, was nearly 200*l.*

I abstain from any reference to the facts relating to the general position of this railway which were elicited by the trial.

I am, Sir, your obedient servant,
WILLIAM FLINTS.

Leicester, July 13, 1842.

BIRMINGHAM AND GLOUCESTER RAILWAY.

To the Editor of the Railway Times.

SIR,—At a time when so much complaint is being made of the mismanagement of this line, and after the exposure which took place by one of the first merchants of Gloucester, at the last half-yearly meeting, of the gross negligence and want of attention on the part of the *Managing* (?) Directors, one would be naturally led to suppose that they would have been over anxious to have made some effort to redeem themselves in the eyes of the public, and as far as they were able, to have remedied the evils complained of; but I am grieved to find, by a statement made to me by a large manufacturer this week, that the reverse is the case. After waiting three weeks for a reply to an application with respect to carrying his goods, his patience became quite exhausted; and he applied to the Great Western Railway Company, when not a post was lost in answering his letter, and an arrangement was entered into immediately with them. This is one of the many instances that are daily occurring of the gross negligence displayed in the management of this line, and unless some strong measures be adopted to change this management, our already much depreciated property must soon become totally worthless.

I am, Sir, yours, &c.,
AN ORIGINAL SHAREHOLDER.

BIRMINGHAM AND GLOUCESTER RAILWAY.

To the Editor of the Railway Times.

SIR,—I regret to find that an attempt is being made to get up a requisition to the Directors of the Birmingham and Gloucester Railway to resign their seats. If the case were one in which the Directors had made great promises and excited high expectations on entering office, and afterwards most signally failed, a requisition ought to be unnecessary, as one would expect that the Directors and the shareholders would then be equally anxious for a change both of measures and of men.

In this case, on the contrary, I hold that the shareholders have great cause for gratitude to the executive Board. The present Chairman, a gentleman who has gained much experience on the London and Birmingham and Eastern Counties' Railways, has altogether remodelled the arrangements of the line, and has promised much advantage from his new plans, which rather contemplate a gradual and safe increase of traffic than any hasty or grasping interference with the old-established trade by van and canal. The present Board have already given a dividend of 30s., and the receipts of the line are improved since July, 1841, by more than 1*l.* per mile per week. The Directors have also benefitted the Company by raising money on the new scrip, without having gone to the great expense of an Act of Parliament, and rendered calls on the proprietors and scrip-holders as light as possible, by keeping the capital account still unclosed.

And, in addition to all this, we have the authority of Capt. W. Moorsom, the late Engineer of the line, and brother of the Chairman, to expect an increased dividend of 2*l.* 10s. in August. That gentleman, at a meeting held the other day at Pershore to discuss the proposed Evesham branch, stated that he *now received* 4*l.* per cent. for his shares; and as Capt. W. Moorsom is never under his estimates (his first for the railway having been 600,000*l.*), it is to be hoped that in this case also we shall be agreeably disappointed, and find our 4*l.* soon amount to 12*l.* per share.

Under all these encouraging circumstances I feel at a loss to account for the shares being daily quoted at 48*l.* to 50*l.*, and much wonder that the constant demand alone has not raised the price, independently of the facts I have stated.

While on the subject, I cannot but express my regret that any person should be ill-natured enough to use such personalities as are contained in the letter of a correspondent in your paper for June 11, who signs himself, "An Advocate for Responsible Management." I am assured that the respectable gentlemen he has so insidiously characterised have felt much hurt at the letter. The humble remuneration for which those at present engaged are content to serve the Company should be their protection from such attacks.

In conclusion, I call on the shareholders to put every confidence in the present Committee of Directors, on the ground of what they have done and what they have promised; and to look forward with pleasure to the 2*l.* 10s. dividend accruing in August.

I am, Sir,
AN ADMIRER OF EFFICIENT MANAGEMENT.

July 19, 1842.

THE RAILWAY SHARE-MARKET.

To the Editor of the Railway Times.

SIR,—In watching [the fluctuations of the railway share-market, in which I am interested as a *bona fide investor*, I have observed for some time a practice among the London daily papers which I think they should be cautioned against, as I believe they do it unwittingly, although much mischief is the consequence. I mean, that of reporting variations in the prices of the shares *when no actual sale has taken place.*

As an instance of it, take the Blackwall Railway shares this week. On Monday a sale appears to have been made at 9⅜, and was inserted in all the papers, and the shares were quoted at 9 and 9¼. On Tuesday they remained the same; but on Wednesday, *without any sale being reported*, they are quoted at 9; and to-day they are quoted at 8¼ and 9, *although no sale appears to have been made.* I do not accuse the newspapers of lending themselves to stock-jobbing purposes; but they do most effectually serve the ends of speculators by altering the quotations without first ascertaining that *a sale has actually been made to warrant it.* You would do an essential service, I think, by pointing out this grievance in your valuable journal.

I am, Sir, yours, &c.,
A SUBSCRIBER.

July 15, 1842.

ECONOMICAL MANAGEMENT OF RAILWAYS.

To the Editor of the Railway Times.

SIR,—At the approaching half-yearly meetings the attention of shareholders in railways cannot be too keenly directed to economy in every department of the management. Amongst others I would call to their notice the salaries, or allowances, charged by Directors; and you would elucidate this, and confer a favour on shareholders generally, would you give a tabular view of the "charges for Direction," which your information on the subject would enable you easily to do. Thus—

	Miles.	Income about	Charge for Direction.	Per cent.
Grand Junction, including traffic on Manchester and Liverpool	135	£450,000	£800	.177
Birmingham and Glo'ster..	55	100,000	600	.6
Midland Counties'.....	57	140,000	1,200	.857

From such a table, the relative cost of management would be seen, and the Directors *perhaps* shamed into a reduction of their charges. From the above it appears, that the Grand Junction Directors receive 3s. 6d. per cent. upon a line of 135 miles; the Birmingham and Gloucester Directors, 12s. per cent. upon a line 55 miles; and the Midland Counties' Directors, 17s. 2d. per cent. upon a line of 57 miles; while the shareholders receive in the inverse ratio. The Grand Junction shareholders receive 12 percent. dividend; the Birmingham and Gloucester 1¼ per cent., and the Midland Counties' shareholders 4 per cent. Surely some "Reform" is called for here. If the Directors make small profits, so they should receive small pay.

I am, Sir, your obedient servant,
C.

NOTES TO THE TRAFFIC TABLE,
(on the opposite page.)

3. Main line, 53 miles; Tewkesbury branch, 2. — Total length, 55 miles.

4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone. The Company are now before Parliament for power to raise the capital to 500,000*l.*

8. Receipts include the Northern and Eastern toll, &c.

12. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester and Chester and Crewe lines, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 134½ (83½+21+31.)

14. The receipts include those derived from the Cheltenham and Exeter lines; the former opened for 18 miles, and the latter for 45. The divisor employed to ascertain the daily receipts per mile is therefore 181¼ (118¼+18+45.) The *rent* of the branch lines is together about 1,168*l.* per week. There is likewise a *toll* payable to the Exeter Company of a farthing per passenger and per ton of goods per mile travelled.

15. The dividends have been hitherto (up to 31st December, 1841) appropriated to completing the line and works.

17. The 26*l.* 19s. 1d. from goods, &c. is for toll only.

18. Ten per cent. is the maximum dividend allowed by the Company's Act.

19. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. The dividend is *nominally* at the rate of 9*l.* 10s. per cent., but to the original shareholders it is equal to 12*l.* 15s. per cent., as the dividend on the original shares is paid upon 100*l.*, although only 90*l.* has been called for; and on the quarter shares upon 25*l.*, although up to the 31st of December last only 5*l.* had been called for. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

20. The dividend is from the opening, and on the old shares alone.

21. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table.

22. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company. The sum applicable to the purpose of the dividend declared on the 10th of March, was 11,125*l.*, of which amount 10,051*l.* 17s. 1½d. had been earned prior to July 31st, 1841.

23. Capital of 993,300*l* includes new capital for widening the line, &c. The want of dividend does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table includes the receipts from the footpath, but is exclusive of the Brighton, Croydon, and Dover toll.

24. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount. The Gosport branch is included in the length stated.

25. Including Toll, &c., from Sheffield Company, and after deducting omnibus charges, &c.

26. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

27. The 4,645*l.* 0s. 2d. are the receipts after deducting omnibus charges, and payments to other Companies.

28. The receipts for goods, &c., include, horses, 35*l.* 13s. 0d.; carriages, 59*l.* 16s. 0d.; dogs, 1*l.* 10s. 6d.; parcels, 218*l.* 14s. 3d.; cattle, 21*l.* 19s. 6d.; corn, 8*l.* 9s. 8d.; heavy goods, 463*l.* 8s. 4d.; coal and lime, 121*l.* 5s. 2d. —Total, 930*l.* 16s. 5d.

31. The 3,850,000*l.* is the *nominal* capital on which dividends have to be paid; the amount actually raised is 3,000,000*l.* The details of the receipts are as follows—Passengers, 2,716*l.* 13s. 3d.; carriages and horses, 167*l.* 9s. 10d.; parcels, 146*l.* 1s. 2d.; mails, 50*l.* 5s. 9d.; merchandise, 936*l.* 18s. 0d.; minerals, 241*l.* 4s. 4d.; cattle, 32*l.* 19s. 0d. — Total, 4,291*l.* 11s. 4d.; including North Midland proportion of Manchester and Leeds traffic, and amount received for Sheffield and Rotherham.

32. The receipts are after deduction of Liverpool and Manchester toll.

33. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 134*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 32¼ miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

34. The capital of 533,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).

35. The returns are inclusive of Manchester and Birmingham toll.

36. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

Atmospheric Railway.—*Mr. Pinkus, on Thursday, forwarded to us a second letter, but its extreme length, and other objectionable characteristics, compelled us to return it to him for revision and condensation.*

London and Brighton Railway.—*We very much regret to be obliged to postpone Captain Beauclerc's important letter, but its length leaves us no alternative. It is in type, and shall appear without fail next week, which will be in sufficient time to answer the purpose of the writer.*

Mr. J. H.'s *suggestion has been under consideration, but there are various and valid objections to the plan proposed.*

Playfair *has our best thanks. The communication shall be used next week.*

The Toll Question.—Amicus *unfortunately came too late to affect the meeting on Thursday, but, if he desires it, the letter shall appear hereafter.*

An extract from Mr. Rankine's pamphlet on Cylindrical Wheels is in type, and shall appear as soon as possible.

G. W. *(Leeds.)—There is no doubt the branch line will ultimately exert a very beneficial influence on the stock of the trunk line. To the other question—Glasgow and Ayr.*

Argus *(Brighton).—We see no advantage that could result from raking up the past history of the party referred to. It does not by any means follow, that because he failed in business, he must be a rogue.*

M. P. *(Devon).—A portion of the shares were issued at a discount (say, 50l. shares at 40l.), so that while only 40l. per share was actually advanced for the purposes of the undertaking, the dividend is paid on 50l.*

Verb Sap. *is thanked. We had previously received similar information from another quarter.*

H.—*Our correspondent will, we trust, excuse the liberties we have taken with his letter. We are compelled to be very cautious.*

Greenwich Railway.—"A Shareholder in the Greenwich Railway *would desire to call the serious attention of the proprietors at the half-yearly meeting to the continued decrease in the weekly receipts, and which he thinks may be chiefly ascribed, first, to the failure of the experiment introduced on the 1st January last, whereby first-class passengers are virtually excluded from the line, as it is notorious they will not travel by the 9d. carriages, though both able and willing to pay 1s. or 1s. 3d. for the superior and more private accommodation they require and meet with on all other railways; if it be contended that the traffic is inadequate to the support of a separate first-class carriage with each train, one of the compartments in a second-class, capable of holding six or eight persons, might be fitted up with carpet, cushions, &c., and would amply repay the cost. The loss may be estimated at 4,000l. per annum. Secondly, there can exist no doubt but that the number of passengers would be very considerably augmented if the carriages were provided with seats and roofs, the want of which is so generally complained of; these additions, therefore, so essential to the comfort of a large portion of the passengers, and so fairly their due, ought to be immediately attended to, and promptly restored. It is also [he says] the opinion of many persons that 'goods and parcels' might be carried at a considerable profit to the Company—at least these things are deemed highly remunerative by the coach proprietors and carriers, who have to pay the whole expense of transit; whereas the cost of each railway train is the same whether goods are carried or not, and surely persons might be readily found to convey the packages from the termini at Deptford and Greenwich to a depot in either of those towns, or to houses in the vicinity, inclusive of Blackheath."*

Varro.—*There can be no doubt that the original holder is liable, the transfer not having been duly entered in the Company's books. The case is a hard one, but unfortunately it is of frequent occurrence.*

Manchester and Leeds Railway.—"*Sapere Aude*" *in our next.*

THE RAILWAY JOURNALS.

The Stamp Returns for the nine months ending the 31st of March last (published by order of the House of Commons), show the following results:—

RAILWAY TIMES	**113,374**
Railway Magazine	50,500

The total number of Supplement stamps (for Double Numbers) used by the *Railway Times*, during the above period, was 10,874, thus showing the ordinary circulation of the *Railway Times* to be more than double that of its contemporary.

THE RAILWAY TIMES.

SATURDAY, JULY 23, 1842.

THE disclosures made at the meeting of the Chester and Birkenhead Railway Company, as reported in another page, show how utterly ineffective, save in promoting and perpetuating delusion, is the system of "auditing" pursued in some of the Companies. It seems that the late Treasurer of that Company having been instructed to prepare his accounts in as detailed and complete a manner as possible, *their correctness was certified by a professional accountant;* but on a re-examination by the present Treasurer, "they were found ill-arranged, inaccurate, and in many respects deficient and incomplete," so much so, that it required much labour before they "*could be brought into an intelligible shape*, and rendered worthy of the confidence of the proprietors." We greatly suspect that the Birkenhead accounts do not present the only instance in which the certificate of a "professional accountant" would, on investigation, be found equally worthless.

Blameable, however, as was the conduct of the professional man in certifying to the correctness of such accounts, the Directors appear to be deserving of censure in allowing these inaccuracies and defects to remain so long undiscovered. And yet *another* system of auditing—and one which is in great favour with Boards of Management—was practised in conjunction with the professional examination. "The Chairman said, *the accounts were audited weekly by the Finance Committee.* * * The accounts laid before that Committee were placed before the general Board every Monday, and *every account was* AGAIN *gone through before the general body of Directors!*" Yet, spite of this auditing and re-auditing, the late Treasurer is found indebted to the Company in a balance of 2,300*l.*, when his accounts come to be examined, and the Directors are compelled to describe these accounts as "ill-arranged, inaccurate, and in many respects deficient and incomplete"! Had the Directors done their duty, it is impossible that such a state of affairs could have remained undetected. There are no fewer we believe than 12 of them upon a line of only 14 miles in length, and one would suppose some two or three of them might have been found vigilant enough to cast an occasional glance over the Treasurer's books.

There is, moreover, something calling for further explanation as regards the character of the "errors" in the accounts. The Chairman states distinctly, that these "errors have occurred from the bad keeping of the accounts, and are not abstractions of money;" and yet in almost the same breath, when questioned

Digitized by Google

whether the late Treasurer had paid over the balance, he says, "His accounts are made up, but he has not paid over the amount due. We are, however, to receive the principal part of the amount this week, and the remainder we shall have ample security for." The Chairman meant, we presume, to state, that in his opinion there had been no criminal "abstraction of money," and that the bad arrangement, inaccuracy, and "in many respects" deficiency and incompleteness of the late Treasurer's accounts, had arisen solely from that officer's inattention to his duty, as elsewhere alluded to by the Chairman. It would have been well, however, if he had been a little more explicit, and stated plainly whether, in the opinion of the Board, the large balance now due from the Treasurer was the *cause* or the *effect* of the inaccuracies and incompleteness of his financial statements.

A proper system of auditing railway accounts, if it did not realise all the benefits which some anticipate from its introduction, would at least prevent or promptly detect "errors" so gross as those of the Birkenhead and Brighton officials.

Mr. John Harman, Chairman of the London and Brighton Railway Company, in his Circular to the shareholders which we published last week, after indignantly contradicting, "in the most unqualified manner, the various reflections which have from time to time been cast on the general management of that concern, and more particularly on" himself "personally," expresses his conviction that, at the approaching meeting, he "shall be able to give such answers to any questions that may be put to" him "as will be perfectly satisfactory." We have already intimated that the proprietors will fail very greatly in their duty to themselves, and to their fellow-sufferers who may be absent, if they rest satisfied with any verbal answers, which may be disclaimed hereafter should occasion require; but at the same time, if questions *are* to be asked and answered, the following may assist in eliciting some interesting information:—

Is the Chairman of the Brighton Railway the same Mr. Harman who has appeared in public as a Director of the Leamington, the Yarmouth, and the Horsham Railway projects —the Commercial Steam-Packet Company— the Licensed Victuallers' Insurance Company —and a Patent Coal Company?

Was not Mr. Harman the Chairman of Sir John Rennie's Brighton Railway Company, and as such a party to saddling the present Company with a salary of 500*l.* a-year to Sir John Rennie?

Did Mr. Harman, as Chairman of the present Brighton Railway Company, refuse to allow Sir John Rennie to take any part in the prosecution of the works, although the Company were paying Sir John this 500*l.* a-year?

Did not Mr. Harman, as Chairman of Sir John Rennie's Company, undertake to settle all the outstanding debts of that Company, and would there be any objection on his part to submit to a Committee the drafts given to him for that purpose, as also his own banker's pass-book of that date?

Did not Mr. Harman also, as Chairman of the present Company, undertake to settle with a number of landowners on the line of railway, and would there exist any objection to submit to the same ordeal as is indicated in the preceding query?

In particular, would Mr. Harman state how much has been paid to Mr. C. Bleaden (a co-Director in some of the above Companies) for his interest in certain property at Coulsdon, near Croydon, and why the Company's landvaluer had nothing whatever to do with the bargain?*

Did not Mr. Harman, in his evidence before a Committee of the House of Commons in the year 1840, state that the estimates for the Brighton Railway would be exceeded to only a very trifling extent?

Did not Mr. Harman recently threaten to force the proprietors to pay the sum of 5*l.* per share, when he had in the year 1837 signed an agreement which declared that the shares to be then issued should be taken as with 5*l.* paid, and knowing at the same time that without such stipulation he and others would have been held liable for the expenses of the Rennie Company in prosecuting their Bill; and was he not, when he uttered this threat, in possession of the opinion of counsel that the 5*l.* could not be enforced?

Will Mr. Harman submit to the proprietors the letter forwarded by Mr. Wood (the night he absconded) to Mr. Dean, wherein he declared that, if pursued, he would produce certain documents which he had taken with him, and the publication of which would not only injure the concern, but destroy the character of one or more of the leading members of the Board—or words to that effect?

What course did Mr. Harman pursue with respect to that letter?

Did he submit it to his colleagues in Board assembled, or did he suppress it?

How many members of the Board have ever seen that letter?

Was it in consequence of that letter that secret orders were issued to Forrester, the officer, not to be *very* active in his efforts to catch Mr. Wood?

Does Mr. Harman know where Mr. Wood is now to be found, or where that party has been within the last month?

Will Mr. Harman and Mr. Dean explain their transactions together, and will each submit his banker's pass-book, and the cheques which have been paid in to the account of each at their respective bankers?

What is the annual amount of Mr. Harman's share of the Directors' allowance money?

Will he and his colleagues submit their share accounts to scrutiny?

Did the present (so-styled) Secretary pay any and what sum for the situation he held under Mr. Wood, or for the office he now holds; and if so, *to whom?*

Will Mr. Harman state the amount of salary paid to Mr. Dean, and enumerate the services rendered by that gentleman?

Will *all* the sub-Engineers deny having received a per-centage from contractors; and will such of them as are lucky enough to have a banker's account submit such account to inspection?

Such are a few of the questions which might be put with advantage at the approaching meeting. Next week we may perhaps continue our catechism.

"Richard Dawson, Agent," of Liverpool, has again been sending Circulars "to the Shareholders of the Edinburgh, Leith, and Newhaven Railway," puffing up that *extraordinary* undertaking, as preliminary to the general meeting, which, he says, is to be held in Edinburgh on the 28th inst. If Mr. Dawson, and those who employ him, would *say* less and *do* more, it would be better for all parties who happen, unfortunately, to have any connection as shareholders with the Newhaven project. Here is a line of railway a mile or two in length which has been in progress *for years*, and is still a long way from completion, while the funds of the Company are all but exhausted. If it be in reality so splendid a project as Mr. Dawson and the Directors would have us believe, how happens it that it should thus have languished, and become a byeword among the capitalists and speculators of the north? The truth is, that the very best scheme that ever was brought forward could scarcely have withstood the effects of the *mis*-management which has encompassed the (so called, but improperly called,) Edinburgh, Leith and Newhaven Railway from its commencement. Of this we shall probably have something more to say after the meeting has taken place.

We believe the only information which distant proprietors have usually received hitherto of the proceedings at these semi-annual meetings, is from a notice prepared by the Directors themselves. We wish some of our Edinburgh contemporaries would take upon themselves to give a full and impartial account of what may transpire on the 28th instant. It would probably throw a little additional light upon the present position of the Company if this were honestly accomplished. We shall be glad to be favoured with any particulars from independent shareholders who may be present.

G. H. Lang, Esq., who is already very favourably known to our readers by his recent pamphlet on the Government railway tax, has just sent forth "A Letter to the Right Honourable the Earl of Ripon, President of the Board of Trade, on the comparative safety of steam-boat and railway travelling."* Like Mr. Lang's previous production, the "Letter" is characterised by sound sense, embodied in clear and well-reasoned language, and supported and illustrated by a vast body of facts, which one would deem it difficult to compress into so small a compass. Our crowded columns to-day compel us to refrain from giving extracts, or even any lengthened notice of the little work— which, however, is the less to be regretted, as we have no doubt it will speedily be in very general circulation.

Mr. Lang commences by referring to the introduction of Lord Seymour's Act for the regulation of railways, as professedly based on the necessity of providing for the public safety, and to Mr. Gladstone's measure now in progress; and shows that, so far from requiring a peculiar stringency of legislation on the ground of excessive danger, railways are the safest of all modes of conveyance, and more particularly safer than steam-boat travelling. In support of this position he glances at the appointment of various Parliamentary Committees on the subject of steam-boats, all of which, however, failed of producing any legislative enactment for the regulation of this mode of conveyance. In 1817, in consequence of the explosion of a steamer attended with the loss of nine lives, a Committee made a very strong Report, and recommended the introduction of a Bill to enforce certain necessary regulations: but nothing was done, and it was

* A correspondent calls our attention to what he terms a curious illustration of the old saying, "One good turn deserves another." Mr. Bleaden, at the first meeting of the proprietors, strenuously supported the motion for allowing 2,600*l.* a year to the Directors, in opposition to an amendment (ultimately carried) for 2,000*l.*—See *Railway Times*, January 13, 1838.

* Published in London by Longman and Co.

Digitized by Google

not until 2 steamers had foundered, 3 had been destroyed by collision, 6 by fire, 8 wrecked, and 9 destroyed by explosions—involving of course the lives of hundreds of passengers—that the subject was again mooted in Parliament. In 1831, the destruction of 119 individuals at one swoop again attracted the attention of Parliament; but the recommendations of a second Committee were disregarded, and 3 steamers foundered, 8 were destroyed by fire, 9 by collision, and 8 by explosion, in addition to 18 wrecked (one involving the deaths of 64 persons), ere the matter was once more brought forward only to be again shelved. Two awful wrecks in 1838 led to the appointment of a Commission, who in 1839 made a Report, from which it clearly appeared that drunkenness, incapacity, and defective arrangements had led to a large number of these sad disasters. About this time Lord SEYMOUR'S Bill relative to railways was introduced, and notwithstanding it had been clearly proved that the elements of danger were more abundant in steam-vessels than upon railways—that the actual amount of personal injury and loss of life was greater—and that a large proportion of these accidents might have been avoided under due regulations—notwithstanding this, steam-vessels were exempted from the legislative control to which railways were subjected!

The "Letter" then refers to the progress of railway travelling since the passing of Lord SEYMOUR'S Act, and from an analysis of the Returns made to the Board of Trade it appears that, from the 1st of January to the 1st of July, 1841, 30 persons lost their lives, viz :—

"Passengers who were killed from causes beyond their own control	3
Passengers who suffered from their own folly, negligence or misconduct	2
Total number of passengers killed	5
Trespassers on the line of railway	5
Engineers, servants, labourers, and workmen on the line of railway	20
Total killed in six months	30

"The number of passengers travelling was 9,122,000; distance travelled, 182,440,000 miles; and the number of passenger killed from causes beyond their own control was 3. There was, therefore, one killed out of each 3,040,666 passengers; or, in other words, one passenger lost his life for each 60,813,333 miles travelled. Contrast this with stage-coach travelling. A railway traffic of 9,122,000 persons, each travelling 20 miles, is equivalent to a stage-coach with 10 passengers per day travelling an equal distance daily for 2,500 years. If, then, stage-coaches were attended with as little personal injury to the public as railways, the following would be nearly the proportional number of accidents :—

"The number of passengers killed from causes beyond their own control	1 in 833 years.
The number killed from their own folly, negligence or misconduct	1 in 1250 years.
The number of persons run over on the public road	1 in 500 years.
The number of coachmen, guards, ostlers and other servants of the coach	1 in 125 years."

During the same period, in addition to numerous minor steam-boat casualties, the following accidents occurred :—

"The *Themes* steamer, from Dublin to London, wrecked in English Channel, when	65 perished.
The *Governor Fenner* run down off Holyhead, by the *Nottingham* steamer, when	122 perished.
The *President* steam ship foundered, with all on board, when it is supposed	120 perished."

Mr. LANG then refers to the experience of the line with which he is more immediately connected (the Glasgow and Greenock), and shows, that of 872,665 persons carried in the first year after the opening, not a single passenger sustained the smallest injury, whereas of not half the number carried by the steam-boats on the Clyde—a parallel communication—some twenty were destroyed within three months of the present year.

"There is [proceeds the Letter] another circumstance which should not be overlooked. All the passengers who lose their lives in steamers perish from causes wholly beyond their own control, whereas a large proportion of those who are killed upon railways suffer from their own folly, negligence, or misconduct. It will perhaps scarcely be credited when I state, that of the serious accidents reported to the Board of Trade, *twenty-two happened to persons who jumped off when the carriages were going at speed, generally after their hats, and five persons were run over when lying either drunk or asleep upon the rails.*"

From the schedule of railway accidents drawn up by the Board of Trade, a few extracts are next made, and a *glaring* inconsistency pointed out. "*If a hundred passengers perish in a steam-boat, no return is necessary, and no inquiry is made—they are consigned to the deep and to oblivion at the same time: but if a railway passenger gets a cut on his finger, a sprained knee, or a severe shake,* this must be reported to the Board of Trade, under a penalty of 20*l.* for each day the return is withheld."

The recent accident on the Versailles line is next adverted to, and is ascribed to "causes not in operation in this country." Then comes a notice of steam-boat and railway accidents in America, from which it appears that, in an equal number of marine and locomotive engines, nearly four accidents happened in that country to marine engines for one accident to locomotives; and that in an equal number of marine and locomotive engines, there were upwards of 22 persons killed by marine engines for 1 killed by locomotives.

Mr. LANG then proceeds to inquire whether, judging from the past, the safety of the two modes of travelling is likely to increase or diminish, and shows, that if the railway accidents of 1841 had borne the same proportion to the number of passengers as the accidents of 1840 did to the passengers of that year, the killed would have amounted to 90. Instead of this, the number killed by accidents arising from causes beyond the control of passengers in 1841 was 24, of which number only 16 were passengers, and the rest were engine-drivers, conductors, trespassers, and persons run over on the several lines. With steam-boats it has been very different:—

"The Report of the Commissioners appointed by the Board of Trade, states 'that *our schedule exhibits an annual increase of disasters*, and shows, that nearly the half of them has occurred within the last three years, and that from the beginning of 1838 to the date of the Report (1839), a period of only 15 months, no fewer than 22 accidents have happened; they consist of

"'11 cases of wreck, foundering, or imminent peril	117 lives lost.
8 explosions	20 ditto.
and many persons injured.	
2 collisions	
1 fire	
Total	137 lives lost.'"

The fair inference from these facts is, that notwithstanding the comparatively short experience of railways, and the immense increase of traffic upon them, the accidents are rapidly decreasing; while in steam-boats, on the contrary, after nearly 30 years' experience, the accidents are increasing. "Competition [it is added] will sooner or later arise between railways and river steamers. This will lead to cheap and insufficient boats and machinery; and in order to increase their speed, the engines will be wrought with steam at too great pressure. All such experiments are replete with danger; and, it is to be feared, the result will be found in a gradually increasing amount of disasters."

Mr. LANG thus sums up his various propositions :—

"1st. That the history of travelling by steam, both in Great Britain and in foreign countries, had proved, prior to the introduction of Lord Seymour's Bill, that passengers by railway were exposed to less risk of personal injury than passengers by steam-boats.

"2nd. That since the passing of Lord Seymour's Act, notwithstanding the increase in the number of passengers by railways, the number of accidents to railway passengers has diminished, while the number of accidents to steam-boat passengers is increasing.

"3rd. That where steamers come into direct competition with railways, there is a tendency, arising from obvious causes, that the ordinary risks of steam navigation should increase."

As a remedy in some measure for this state of things, Mr. LANG, among other suggestions, recommends that steam-vessels should be embraced within the operation of Lord SEYMOUR'S Act, rendering it imperative on parties connected with them to make a return of all accidents attended with personal injury, in the same manner as is done by railways; and that the engineers and crews of steam-vessels should be subjected to the like penalties for drunkenness or misconduct as the engineers and conductors of railway trains. Mr. LANG has done much to set right the public mind as to the comparative safety of railway and steam-boat travelling, and we cordially recommend his "Letter" to general notice.

THE Railways' Regulation Bill now awaits the Royal Assent. It passed through the House of Lords with but one amendment, which has since been agreed to by the Commons. Its nature will be understood from the following notice of their Lordships' proceedings :—

"The Earl of RIPON moved the insertion of a clause to repeal that which restricted the use of carriages exceeding four tons in weight, including passengers. The noble Earl said, that if the clause to which he had alluded were allowed to be enacted, the effect of it would be to prevent some of the most important improvements in railway travelling.—Agreed to."

We shall take an early opportunity of printing the Act in full.

A CORRESPONDENT, in proof of his position that "the market price of railway shares is no criterion of their value," calls our attention to the South-Eastern and Dover Railway, which has been opened from its junction with the Brighton line to Tunbridge seven weeks, and of which the price per share and the weekly traffic are as follows :—

	Traffic. £.	Price per share. £.	£.
1st week	555	25½ to	26½
2nd "	663	24¾ "	25½
3rd "	696	25⅛ "	26¼
4th "	722	24¾ "	25
5th "	700	24 "	24½
6th "	779	23½ "	23⅝
7th "	846	22 "	23⅛

"Here [says our correspondent] is a railway in every respect calculated to meet the expectations of the original shareholders, receding in price, whilst the traffic is gradually increasing. The Directors of the railway have secured the entire approbation of the proprietors. The line will be opened 15 miles further in a

Digitized by Google

few weeks time; to Ashford during the present year; to Folkstone, next summer; and throughout to Dover in the course of the year 1843. Independently of its own natural resources, it is a railway which *cannot avoid* commanding a traffic, to which we can scarcely attempt to prescribe a limit, from the continent of Europe; yet with all its advantages, the shares are now quoted at 28*l.* per share discount, or 56 per cent.!" It certainly *is* strange.

THE Directors of the proposed Newcastle and Darlington Junction Railway (the Act for constructing which received the Royal Assent on the 18th ult.), have just issued a brief Report of their proceedings, in anticipation of the details to be laid before the shareholders at the first general meeting in October next.

From this document it appears that the total expenditure in obtaining the Act has been about 5,300*l.*—a sum not by any means extravagant when the powerful opposition which the Directors had to encounter is taken into account. As usual, the legal gentlemen come off best, the Solicitors' bills, including fees to Counsel, being 2,500*l.*, and the Parliamentary Agents', 1,300*l.* We are gratified to find that the Act has been obtained "without a single private agreement or compromise of any description having been entered into, either with the landowners on the line, or any other parties whomsoever."

It is further stated, that the whole capital specified in the Act (half a million) is subscribed for, and that the line from the Durham Junction Railway to the city of Durham, is already staked out, on the completion of which portion, there will remain a gap of only 18 miles of railway between York and Newcastle.

The Directors express a confident hope that the estimates will not be exceeded. We trust their expectations will be realised. Their energy thus far is deserving of all praise.

DEEPLY do we regret that the differences between the Grand Junction and Manchester and Birmingham Railway Boards still remain unsettled. In the present position of matters, as described in the Report of the Directors of the latter Company (inserted elsewhere), it is, perhaps, just as well that details should not be gone into, but we would earnestly ask, *when is all this to have an end?* It may be very pleasant to the diplomatists of both Boards—and of course it is profitable to their legal advisers—to go on negociating, and hair-splitting, and showing their dexterity in pushing forward or procrastinating arrangements for the conjoint working of the two railways, but meantime the poor proprietors are the victims, when with a line ready for traffic, week after week of the best portion of the year slips away unimproved. Nor is this by any means the extent of the mischief which squabbles like these create. Does any one suppose that in framing a future Railways' Regulation Bill this Grand Junction and Manchester and Birmingham dispute will be forgotten? No; the scandal thus brought upon the railway system will exert its baleful influence long after the belligerents have come to an understanding of the real interests of the two undertakings. On behalf, therefore, of Railway Companies generally, we once more call upon the contending parties to pause. If they cannot by mutual concessions arrange the points at issue—if they *will* stand out for the full extent of their real or fancied rights—if arbitration by competent and disinterested persons does not please them—then the sooner they get the matter determined by a legal tribunal the better. These tantalising postponements are highly discreditable. We suspect that if the Directors were *individually* liable for the damage thus done to the property of both Companies, or for the costs of legal and other proceedings, an amicable arrangement would very speedily be completed.

THE general meeting of the North Union Railway Company was held on Thursday last. The Report of the Directors (who set an example which we should be glad to see generally followed—by previously circulating among the proprietors a draft of the proposed statement), will be found in another column.

From the document in question it appears, that although from the continued general depression of the commercial and manufacturing interests, the gross receipts of the line have suffered, a vigilant attention to economy has enabled the Directors to recommend the usual half-yearly dividend of 2*l.* 10s. per share.

It is stated, that the Post-office authorities have compelled the Company to submit to a *second* reference as to the amount to be paid for the conveyance of the mails, and that the result has been the payment to the Company of 2,151*l.* less than would have been received under the original award. This appears a most extraordinary proceeding on the part of the Post-office, and we trust will be further inquired into.

The differences between the North Union and Lancaster and Preston Companies occupy a prominent place in the Report; but as it is stated that negociations have since commenced, which it is hoped may end in an amicable settlement of the matters in dispute, we need not advert further to the subject, more especially as a similar disagreement is referred to in another article which appears in our columns of to-day.

THE receipts upon the Great Western Railway during last week amounted to the enormous sum of 20,627*l.*, caused of course by the agricultural meeting at Bristol. This is the largest amount ever taken upon a railway in one week. Last summer the receipts on the Birmingham line just touched 20,000*l.*, a larger return *per mile* than this on the Great Western—the Birmingham, with its branch to Aylesbury, being 120 miles in length, and the Great Western, with its tributaries, 181.

—o—

THERE has been sent to us a copy of an order issued by the London and Greenwich Railway Directors. It is as follows, and we presume has reference to an accident noticed in another column:—"Ordered, that on no pretence whatever shall an engine be employed to carry any officer or servant of the Company either up or down the line, except the Engineer, and then only on a most urgent occasion, and that it be immediately thereafter reported to the Board."

—o—

WE published last week the resolutions agreed to by the House of Commons for the modification of the railway passenger-tax. A Bill, founded upon these and other resolutions relative to the stamp duties, has since been introduced, and is now in progress. There is no doubt that in a short time it will become law. It is proposed in the Bill that the alterations as affecting stage carriages and railways shall come into operation from the 3rd of October next.

—o—

YESTERDAY week there was presented to the House of Commons a petition from "John Bailey Denton, for alteration of the system of sectioplanography, as practised in consonance with the Standing Orders by the projectors of railways, canals, or other undertakings requiring the exhibition of plans and sections." The petition was referred to the Select Committee on Standing Orders Revision.

—o—

THE advertisement convening the Northern and Eastern Railway meeting is signed "William Marshall, Chairman," whence it appears that the honourable member for Carlisle, who was previously Vice-Chairman, has succeeded Mr. Crawshay.

—o—

IT is currently rumoured that the Directors of the Brighton Railway intend recommending the declaration of a dividend at the rate of 30s. per share, thus hoping to avert the indignation of the proprietors. It may be as well to inquire out of what funds so large a payment is to be made.

—o—

A CORRESPONDENT of the *Morning Herald* of yesterday, states that on Wednesday afternoon, an accident occurred on the Croydon Railway "to the 5 o'clock down train when ascending from New Cross to the Dartmouth Arms, arising from a powerful engine, with coal waggons attached, overtaking and running into it with such violence as to throw" him from his seat into the centre of the carriage, to the injury of his back and shin-bones.

RAILWAY OFFENCES AND OFFENDERS.

A FELLOW named Lewis, a tailor, was on Wednesday fined 40s. by Mr. Rawlinson, of the Marylebone Police-office, for using insulting and disgusting language while travelling on the Great Western Railway, in a carriage in which were Mr. John White, of Paddington, and several of the lady members of his family. Lewis was very promptly, and very properly, taken into custody by the Company's officers on the complaint of Mr. White; and in addition to the fine had a night's lodging in the station-house.

At the Derby Borough Assizes, on Thursday week, James Fearne was convicted of abstracting a piece of cloth from a package transmitted by Messrs. Pickford and Co. along the North Midland Railway, the prisoner being at the time guard of the luggage train. He was sentenced to twelve months' imprisonment, with hard labour.

The *Halifax Guardian* states, that on Tuesday week, at the magistrates' office, before J. R. Ralph, Esq., a man named John Seaton, was brought up by Mr. Forrester, Inspector of Police on the Manchester and Leeds Railway, on a charge of trespassing upon the line near Elland the day previous, with the intention of evading payment of the toll at Calder Bridge Bar. He was convicted in the sum of 10s. as a penalty, and costs, and not being able to pay, was committed to the House of Correction for 14 days. In consequence of the frequent occurrence of cases of this description, to the great danger of the trespasser and also of the passengers, the worthy magistrate stated, that charges of this nature would in future be punished with more rigour than hitherto. The day following, a man named Thomas Inman was convicted in the penalty of 5s. and 7s. costs for jumping out of one of the carriages, in which he was riding from Brighouse to Sowerby Bridge. It appeared that he was in a state of intoxication, and when near the latter station lost his hat, on which he immediately jumped out of the carriage. The clerk of the station said, the man had very narrowly escaped with his life.

THE EASTERN COUNTIES' AND NORTHERN AND EASTERN RAILWAYS.

THE controversy between the Eastern Counties' and Northern and Eastern Boards is of deep importance to the public. A contest not dissimilar in its nature has for some time past existed between the Greenwich and Croydon Railway Boards, but that discussion, in comparison to the warfare between the leviathans of the east, is to be likened to the celebrated tempest in a teapot. The Greenwich and Croydon Directors differed in opinion, neither gave way, and the public have learned nothing from their quarrels, but that they have resulted in an increase of fares and a diminution of railway travelling. Nothing has been practically done by either Company to point out a fair method of adjusting difficulties and giving conveniences to the public; both have been too greedy, and the Greenwich Board, like a frightened child, will not venture upon making the least approach to a settlement or reduction of its tolls, from not having the courage to take an enlarged view of the subject; and the Croydon Board, on the other hand, is, as one of our correspondents too truly remarked although he was otherwise wrong in his conclusions, like a baby crying its eyes out because the Greenwich Board will not give it what it wants, and because the public, who are looking on, will not commiserate. The articles in our journal occasionally solace the Croydon Board under its grief, but it would be ten times more desirable if the shareholders would just ascertain for themselves what really sticks in the way of perfecting an arrangement between the two Boards, and if it be *temper*, then care should be taken to prevent that horrid obstructive from further disturbing peaceful adjustments.

The disputes between the two Railway Boards of the east have, however, resulted in much valuable information to the public; and having anxiously considered the official statement of the Eastern Counties' Board, contained in our paper of the 9th instant, and the letter in last week's paper of Mr. Crawshay, the late Chairman of the Northern and Eastern Board, and which is the only communication in the shape even of an answer that has been sent us by the Northern and Eastern Company, we are impressed with the conviction that the latter Company have placed themselves seriously in the wrong with the public, and that their conduct in rejecting the fair offers and arrangements of the Eastern Counties' Board indicates obstinacy approaching to insanity. The Northern and Eastern Board make no statement for themselves, but leave Mr. Crawshay alone to be their champion. And now that he has quitted the Board—probably on some good grounds—his parting admonitions to his colleagues breathe a bad spirit, as they practically recommend throwing away chances of peace, and embracing litigation. Probably, if law be resorted to, the Northern and Eastern Company will meet their deserts, but irrespective of all legal questions, plain matters of fact have been brought before us, and published by the parties, and upon these we form our own conclusions, and make our justifiable comments.

The great principle announced by the proposed adjustments of the Eastern Counties' and the Northern and Eastern Boards is that more revenue can, in certain cases, be acquired by low fares than high fares, by low tolls than high tolls, and that such a principle must be put into operation, *upon trial at least*, for some ten miles of railway out of London, in order to drive the short stages and omnibuses off the roads in competition with the railway.

It appears that the Eastern Counties' Board, not being bound to assent to any reduction of toll under 4d. per passenger, and being at liberty, according to their clear legal rights, to allow the Northern and Eastern Company to cope as best they might with the difficulties of carrying at cheap fares the passengers invited to travel by the low fares of coaches and omnibuses, which take people up and set them down at their own doors, and to leave that Company either to lose money or to be overcome by the competition of the turnpike-road, were, upon the application of the Northern and Eastern Company, actually kind enough to meet their wishes, and to entertain a proposal for reducing, as an experiment, their fixed tolls, in order to enable the Northern and Eastern Company to make a material reduction in their fares to their short-distance passengers.

The official statement of the Eastern Counties' Board does not mention what the reductions were to be, but they must have been more than nominal, and each abatement was a concession of right on their part, with a chance only of having the loss of money made up in another shape; while, as regards the Northern and Eastern Board, a reduction of fares by them was necessarily their own commercial act, brought about by the impossibility of withstanding or vanquishing the omnibus competition unless such reduction were adopted. The other points to be arranged between the Boards were of great moment to themselves, but not so much so to the public, and on these we do not desire to dwell. Suffice it to say, that we are indeed thunderstruck with the Northern and Eastern Company refusing to arrange terms upon which they would have had,

1st. The tolls on their goods' traffic arranged at a moderate rate:

2nd. Their goods' station obtained at little cost, and already erected by the purse of the Eastern Counties' Company:

3rd. The privilege of carrying passengers to and from Stratford, at present strictly interdicted by the agreements between the two Companies.

Will the shareholders of the Northern and Eastern Company feel gratified to learn from their Board that the Eastern Counties' Railway Company refuse to carry goods except upon the *Parliamentary rates*—that they, the shareholders, must raise further capital to purchase land and erect a goods' station—that a traffic to and from Stratford has been spurned, which would have realised enough twice over to pay the disputed passenger duty? Awkward questions could be put at a general meeting on these subjects, and we strongly advise the Northern and Eastern Board not to trust too much to the good temper of their partners, who will not much relish a Report—"That in consequence of not arranging with the Eastern Counties' Company upon the very rational terms offered by the latter, the Directors are gratified to announce to the proprietary that during the last half-year they have paid a large increased sum for tolls on goods' traffic, and lost a large revenue by not carrying passengers between Stratford and London; and they have the happiness to add, that the shareholders will have to subscribe further capital forthwith for the construction of a goods' station according to the elaborate plans prepared by the Engineer, and which he estimates will cost 100,000*l.*, subject, however, to increase in case of alterations made by the Board in reference to the extent of accommodation wanted, which a Committee of Directors is now actively engaged in ascertaining by communication with all the carriers in the kingdom, and in case also the soil furnishes a better foundation for the heavy warehouses than can be hoped for by the appearance of the ground and the adjoining excavations."

It is impossible almost to imagine that the shareholders will really submit to their money being thus thrown away, and their interests thus disregarded; but still, strange as it may appear, there are ten chances to one that the shareholders at the next general meeting of the Northern and Eastern Company will, in the usual manner, say little, disperse quietly, and pass a warm vote of thanks to the Directors for contributing to their loss!

We have yet said nothing upon the actual position of the controversy between the two Companies, and we approach the subject with reluctance, because we regret to be obliged to find fault with a gentleman who, from his large and spirited investments in railways, is deserving of the thanks of all who are interested (and who is not interested?) in the success of those gigantic and useful undertakings. To read Mr. Crawshay's communication, and call it an answer to the official statement of the Eastern Counties' Board, would be farcical, and his own reputation would have suffered less from that statement than it does from his own letter. A mercantile man of nearly 50 years' standing and extensive transactions, first states that "*exact dates, causes or particulars of differences,*" existing between the two Companies, cannot interest the public! Why, how can the public judge of the controversy, and know which Company is in the right, without such a detail? In the Eastern Counties' statement there is a praiseworthy minuteness, and reference to documents, bearing the stamp of veracity in every part. Mr. Crawshay's duty was to have followed that statement, and to each and every portion of it given a distinct denial, or an explanation, or admitted its correctness. But with much nonchalance, Mr. Crawshay determines that a detail of facts—an historical account of exact dates, causes, or particulars—is useless and cumbersome! Inaccurate dates, mistaken causes, and erroneous particulars, he might with some reason have decried; but even exact dates, exact causes, and exact particulars, are deemed by him worthless. With such a preamble it is not to be wondered at that the remainder of his letter should have little influence in overturning the conviction produced by the Eastern Counties' statement, that the Northern and Eastern Board are entirely in the wrong.

The very first, and consquently chief, position of Mr. Crawshay of complaint against the Eastern Counties' Board is, that they allowed the treaty to go off, on the ground that they insisted on the second-class fare from Edmonton being 9d., instead of 10d., per passenger. Some rather strong observations were made on this subject by Mr. Crawshay at the Northern and Eastern meeting, which elicited loud cries of "shame"; and Mr. Crawshay seems to battle out the assertion, that there really was a difference continuing on this point, *not closed* by any concession of the Eastern Counties' Board before the treaty was broken off. Strange, indeed, is it, if this be the case, that in the Eastern Counties' statement the following passage should occur:—"Several further alterations were, however, even now *agreed upon*, and *especially one for changing the toll on second-class passengers to and from*

Digitized by Google

Edmonton, formerly fixed at 9d., to 10d.;" and as this was urged by the Northern and Eastern Board, and confidently stated to be a sufficiently low charge to meet the omnibuses, *it was agreed to by Mr. Rathbone*, although it was a further concession, instead of the fact being that the Eastern Counties' Directors ever arbitrarily insisted upon or required the contrary, as stated by Mr. Crawshay at the public meeting of the Northern and Eastern proprietors.

Which document contains the truth? If the latter statement, surely Mr. Crawshay must give some reasonable account of his being so very inaccurate, after his attention was expressly drawn to the point. Had the Eastern Counties' Board actually insisted on fixing this fare at 9d., it would have been a very reasonable demand to require for the public accommodation, because we have turned to the advertised fares of the Northern and Eastern Board before they raised them in October last, *and we actually find that this second-class fare to and from Edmonton was 9d. only*; and it would be discreditable, indeed, to the Northern and Eastern Company, had the treaty between the Companies been put an end to, as Mr. Crawshay alleges, because the Eastern Counties' Board insisted on the Northern and Eastern Company *resuming its old and established fare*. But we are disposed to believe the Eastern Counties' statement, that their Board conceded the alteration of 9d. to 10d. before the treaty was broken off; and therefore Mr. Crawshay must have committed a great error in now publicly alleging that the Eastern Counties' Board, by refusing to concede this point, caused the negociations to terminate.

The second point of difference mentioned by Mr. Crawshay appears to resolve itself into this—whether, if the Eastern Counties' Company made one concession, they were bound to make two concessions. If they allowed a station to be erected for booking passengers to and from Stratford and London, on which passengers the Eastern Counties' Company would receive tolls, were the Eastern Counties' Company bound to allow that station to be used, without compensation, for passengers going to or from Stratford, northwards, for which passengers they would receive no tolls? The question is one purely of pounds, shillings, and pence; and no doubt the sensible language of the Eastern Counties' Board to their neighbours on all occasions is, "Gentlemen, you can have whatever you want, but you must pay for it. We give away nothing; we only sell." It is childish of the Northern and Eastern Company to expect that they will get anything as a gift. Railway entrances to London cost a great deal of money, and those who make them have to look out for revenue at every turn.

Upon the third point, as to the Government duty, Mr. Crawshay mentions a view of the matter not alluded to in the statement of the Eastern Counties' Board, and not reconcileable with minute correctness in that statement. He substantially alleges in his letter, and he did so positively at the general meeting, that the terms laid down by the Northern and Eastern Board were, that if the past duty were to be paid by that Board there must be a retrospective reduction of toll, and consequently, of course, an actual repayment of money by the Eastern Counties' Company to the Northern and Eastern Company. When were those terms conveyed to the Eastern Counties' Board, and by whom and to whom? They are not alluded to in the Eastern Counties' statement, and it is material to know how often they were stated, if at all, before the general meeting of his own Company's shareholders, at which Mr. Crawshay presided.

It is wrong of the Eastern Counties' Company to have omitted the mention of those terms, if they were communicated to the Board during the negociations, and if they were not, it is very clear that Mr. Crawshay's allegations on this point must be taken with great distrust, and that it would do him an infinite deal of good to study the value of "exact dates and particulars." The question of the payment of this Government duty we fully discussed in a former number of the *Railway Times*. At that period we were not aware what was the contract between the parties. It now would appear that the written contract is silent on the subject, and therefore the question is, what is customary and equitable. We continue of the opinion formerly stated, that as the duty is levied by intention, and the whole scope of the Stage-coach Act, not upon the owner of a road, but upon the carrier for hire of passengers on that road, the carrier ought to pay the duty, although in point of form the Government may have made the owner of the road liable for the carrier's responsibilities. From further inquiry also, we have satisfied ourselves of the fact, that other Companies, similarly situated to the Northern and Eastern Company, have always paid the duty on passengers carried for hire by them over any railways used by them besides their own lines. It would have served the Northern and Eastern Company materially if Mr. Crawshay had been able to contradict this fact, which really seals and closes the question, if it cannot be controverted; and it would be quite absurd to hope that the Eastern Counties' Board can ever give way upon the point—nor should they. It would be inexcusable in that Board to apply the money of the shareholders in the payment of a debt, as *bona fide* due to Government by the Northern and Eastern Company, in our opinion, as any debt they ever contracted; and if Mr. Crawshay admitted to the Eastern Counties' Directors, as alleged in their statement, that it was fair and reasonable for the Northern and Eastern Company to pay the past duty, why did he ever retract this submission to just views, seeing that his Company were afterwards met, as appears to us, with great liberality and fairness by the Eastern Counties' Board?

Appealed to as we and the public are by Mr. Crawshay, to judge between the two Companies upon the whole matters in dispute, we cannot avoid arriving at the conclusion that the Northern and Eastern Board must give way, if they desire to possess public respect; and that they must pay the duty without troubling the Eastern Counties' Board further on the subject, and then seek a resumption of negociations, and, if still practicable, the adjustment of those terms which would *sensibly benefit the public*, from the reduction of fares—at present unfortunately so high, that the traffic from short-class passengers to the Northern and Eastern Company is, we are told, nearly annihilated.

THE LANCASTER AND PRESTON RAILWAY.—The Lancaster Canal Company have taken a lease of this line for 21 years, at a rent of 4 per cent. per annum on the paid-up capital of the Company. Possession is to be given to the lessees on the 1st of September next. The shares of the railway have advanced considerably since the arrangement was announced.

GLASGOW, PAISLEY, AND GREENOCK RAILWAY.

To the Editor of the Railway Times.

SIR,—I beg to call your attention, and through your journal the attention of all interested in the property of this and similar lines, to a few observations on the half-yearly statement which has just been issued by the Directors. I have no doubt you have had a copy of that statement sent you, but should you not, I beg to enclose one for reference.

The general result is melancholy—2s. 6d. in the half-year for a 25*l.* share; and according to their weekly published statements the receipts on passenger traffic during the first three months of this year, up to July 2nd, as compared with the same period of last year, average about 160*l.* per week less, but perhaps this may be, in part, ascribed to the commercial distress which has existed for the last twelve months. One main cause, however, is to be found in the enormous amount of expenditure in the formation of the line over the Parliamentary estimates, amounting to no less than 300,000*l.*—the expenditure being 700,000*l.* odds, whereas the estimate was 400,000*l.*

But another source of loss has arisen from what I conceive to be a misapplication of the funds, which again has led to a corresponding mystification of the accounts.

You may be aware that this line, after leaving Paisley, runs parallel with the river Clyde, and it was an important object with the Company to get the better of the competition of the river steamers, which were sailing at very moderate fares. This it was all very well to effect by rendering the line as perfect as possible, and making the fare so moderate as to induce passengers to prefer the railway; just as the competition is maintained by the Directors on the Greenwich and Blackwall lines. In their zeal, however, to *create a traffic*, the Directors have engaged in a most unprofitable trade, not warranted by their Act. To explain this, let me remind you that beyond Greenock, on either shore of the Frith of Clyde, are various watering places much frequented by the inhabitants of Glasgow and others, and to which the river steamers ply. To induce passengers to use the railway, the Directors have not only established a land conveyance to the nearest of these places, Gourock, by omnibuses, but have chartered steamers to run from Greenock to Helensburgh, Row, and Garelochhead, on the one coast, and to Dunoon, Rothesay, &c., on the other, paying a certain fixed sum to the steamboats, and taking chance of the passengers, either by charter per month, or at so much a head; and they sell tickets at the Glasgow and Paisley stations for the watering-places all through. Now this trade causes a direct loss to the Company; and you will observe, in the statement of revenue account, the sum of 54*l.* 19s. 10d. as the "expenses of omnibuses to Gourock" for the last half-year, while in a previous account the original cost of the omnibuses was carried to the credit of *capital*. In this half-yearly statement there is no similar entry on account of the steamers; but the books of the Company show that the sums paid for the charter of the steamers, less trifling occasional receipts, are carried to the credit account, not of *revenue*, but of "*capital*," and this is done on the assumption that it is an expenditure like rails, locomotives, or omnibuses, incidental to the fair starting of the line. Surely this is wrong. Would you think it correct if the Directors of the *Blackwall* line were to establish steamers, and advertise them to run from their pier to Woolwich, Margate, Ramsgate, or the like places, and to carry passengers by their trains and these steamers, at fares lower than are charged by the steamers from London Bridge? The expenditure at credit of capital has been increased, by this entry, to the extent of several hundred pounds, a sum which ought to have been set *against the revenue*, as it is an annual outlay precisely like the other charges on the line; and I daresay you will agree with me, that if this sum had appeared in its proper place, there would have been a very

Digitized by Google

small sum to divide. If the Act does not authorise any such steam-boat traffic, which it does not, my charge of misapplication of the funds is well founded, and the mystification of the accounts, to conceal this from the shareholders, proved.

I do not trouble you with any remarks upon the actual fares charged by these chartered steamers. Suffice it to say, they are so low as in the opinion of all parties to be very ruinous, which may be proved in this way. The fare to Greenock by the first-class is 2s. 6d., but the same fare is charged to Helensburgh by the first class and steamer, there being thus a loss of *something* to compensate for sailing the extra corresponding distance. Again, the fare to Rothesay, a distance of 20 miles beyond Greenock, is 2s. 9d. by first-class and cabin (the first-class to Greenock only being 2s. 6d.), allowing thus 3d. for the water conveyance—a sum ludicrously inadequate to the share of expense, *as is abundantly proved by this, that the Company allow one of the steamers* (which has contracted to carry their passengers at certain hours) *one shilling for each first-class ticket*. There is thus a positive loss of 9d. on each passenger. By the third-class and steam-boat to Helensburgh the charge is 6d. only, but this is also the charge to Greenock, leaving nothing for the expense of steamer.

On mere grounds of expediency and economy, therefore, independent of its illegality, this traffic is one which should not be carried on by the Railway Company. Assuredly, if persevered in, the dividend will very soon disappear.

You will also be astonished to learn that neither, in the account of *capital*, is the stock of carriages, omnibuses, buildings, furniture, &c. set down as *per valuations*, but at the original outlay, nor is there any sum allowed in the account of *revenue* for tear and wear. Very obviously this also makes up a fictitious balance on both accounts, and, if properly entered in the latter account, would have annihilated the surplus income, and left nothing at all to divide even this year.

It is surely better these things were attended to in time, than that the concern should go on accumulating loss year after year, from sources extraneous to the railway. They should also be pointed out as a beacon to warn the Managers of other Companies how they engage in matters not within their Acts of Parliament.

Your obedient servant,

A SHAREHOLDER.

Glasgow, July 12, 1842.

GLASGOW, PAISLEY, AND GREENOCK RAILWAY.

To the Editor of the Railway Times.

Sir,—In your paper of the 9th instant you state, that you cannot follow an argument contained in the last Report of the Directors of this Company, which argument is to the effect, that the sources of passenger traffic on this railway are not exhausted, inasmuch as, while 81,500 passengers have travelled by the railway, 40,000 have travelled by the steam-boats—which 40,000 passengers are to be regarded as affording a probable source of revenue to the railway.

In order to elucidate this argument, I beg to send you the following comparative statement of passengers conveyed by railway and river between Glasgow and Greenock, as ascertained by counting the numbers at Greenock :—

	No. by Railway.	No. by Steamboats.
During three weeks before 21st May, when third-class fares were adopted	16,358	19,212
During three weeks since the adoption of third-class fares.....	36,049	23,404

The argument, therefore, is, that as the numbers travelling by railway have increased 19,700, while those by steam-boats have increased 4,200, the great influx of summer passengers, which alone make the boats pay, is diverted from the river to the railway. Since the adoption of third-class fares on the railway there has been a general reduction of steam-boat fares. Although, therefore, 4,200 more passengers have travelled in the boats during a similar period, yet the whole numbers travelling have been conveyed at a lower rate of fare. Many of these boats must, consequently, in the course of time cease to run, and their passengers will be conveyed by the railway. Thus, it is argued, the numbers travelling by boats may be regarded as affording a probable source of future revenue to the railway.

I am, Sir, your most obedient servant,

A.

Glasgow, July 14, 1842.

[If our correspondent will look again at our remarks, he will find that his explanations do not meet them. We give his letter, however, as presenting some interesting details.—Ed. R. T.]

GLASGOW, PAISLEY, AND GREENOCK RAILWAY.

To the Editor of the Railway Times.

Sir,—With reference to my letter which appeared in your last paper, I beg to lay before you a few extracts from the Reports of the above Company, October 13, 1837, on the subject of the estimated cost of the works, stations, &c., viz. :—

"The estimate which may be relied on as sufficient is increased to 400,000*l.*, viz.—

Property of main line	£77,235
Earthwork	65,135
Three tunnels and two archways	22,004
Ironwork	46,778
Masonry in bridges, &c.	55,000
Blocks, ballasting, and rails' laying	42,551
Altering roads, &c.....	6,295
Fences, field-gates, retaining-walls, &c.....	22,108
Extra walling through Erskine	1,050
Depots, stations, &c.....	18,729
*Branch to Greenock Harbour	8,000
*Ditto to Port Glasgow Harbour	2,000
Sum to meet contingencies.....	33,115
Total.....	£400,000

"An important alteration has been made in carrying the line considerably further into Glasgow and Greenock."

I never understood that the Directors had any doubt about the estimate of 400,000*l.* being sufficient for everything, while they were putting forth statements such as the above; but it must be admitted that Mr. Turner, who has been their Solicitor from the commencement, has had the best opportunities of knowing everything connected with the whole affair.

I am, Sir, yours, truly,

GREENOCKIAN.

July 11, 1842.

EDINBURGH AND GLASGOW RAILWAY.

To the Editor of the Railway Times.

Sir,—As a permanent investor in the Edinburgh and Glasgow Railway, and still an occasional purchaser, I cannot be very injuriously affected by the fluctuations in the price of their shares, and should not have taken any notice of your correspondent "Investigator's" philippics against this line, as your numerous readers must be too well informed not to see into and appreciate his motives, were it not that in justice to this great undertaking, and its numerous proprietary in England, I think it right to offer you the few following remarks.

This line has certainly been an anomaly in railway progress, as far as the weekly traffic is concerned. It commenced with 1,036*l.*, speedily rose to 2,100*l.*, since which it has averaged about 2,000*l.*, rather tending downwards—instead of as *pari passu* one might have expected it would, rapidly augmenting its weekly receipts. Now, Sir, being very tolerably acquainted with the localities, I think the languid state of the traffic in June and the present month may be explained by the following :—

1st. The tide of emigration proceeding to Glasgow for America having already passed in April and May.

2nd. The absence of professors and students who separated in May for their several recreations during the vacation.

3rd. The absence of tourists and travellers who have scarcely yet commenced their peregrinations.

* These branches have not been made yet.

4th. From the competition of the canal interest, and opposition of the Agnewites.

Most of the above causes being but transitory, I cannot but be of opinion that in the course of a very short time the weekly traffic on this line must be materially increased, and I beg to assure your correspondent, "Investigator," from the excellent management on this line, not to depend too much on the expenses *being at the lowest*, 50 *per cent.*, or else he will be most disagreeably disappointed. Your correspondent should be aware that if the fares are low, on the other hand the cost for coke and wages, &c. is also low. I must also acquaint "Investigator" that the last loan of 75,000*l.* has been most probably made at 4 per cent., and I form this opinion on the best of all reasons, that having myself made a tender at 5 per cent. it was refused by the Company.

For the consideration of your readers I have subjoined the following figures :—

Receipts since its opening to July 9th, 20 weeks, 36,022*l.* 6s. 3d., or a fraction more than 1,801*l.* per week.

This for 52 weeks will be		£93,652
Expenses at 40 per cent.	£37,460	
Old loan, 300,000l., at 5 per cent..	15,000	
New ditto, 75,000*l.*, at 4 per cent..	3,000	
		55,460
		£38,192 = to

nearly 3*l.* 8s. per cent. on the share capital, 1,125,000*l.*

The above figures are no supposition, but matter of fact, what has actually been taken by a railway only open for 20 weeks, and at a time unparalleled for depression of trade. The expenses I have put down at 40 per cent., but I fully expect they will not be so much; and, in conclusion, I beg to suggest for the consideration of your readers, who are better acquainted with railway statistics than I am, the profits that may be expected in future from this promising line.

I am, Sir, your obedient servant,

C. T. H.

July 17, 1842.

EDINBURGH AND GLASGOW RAILWAY.

To the Editor of the Railway Times.

Sir,—This line has been opened to the public four months and one week up to the 30th of June, during which time they have earned 33,553*l.* 14s. 3d., including the proper proportion of the last week, of which two days are in the month of July. It is admitted on all sides that this line *can* be worked cheap, from the circumstance of its being the most level yet made of the same length, and the Company being manufacturers of their own coke; so that, until the maintenance of way falls on the Company, I should think that 33½ per cent. of the receipts would prove amply sufficient. This would stand thus :—

Gross receipts.....	£33,553 14 3
Deduct 33½ per cent.....	11,184 11 5
	£22,369 2 10

to divide on the whole capital of the Company. At the date of the last balance-sheet we had expended 123,000*l.*, or thereabouts. But we will suppose the capital on which dividends and interest have to be paid now amounts to 1,300,000*l.*—the interest on which, at 5 per cent. for four months, is 21,666*l.* 13s. 1d., which would leave 702*l.* 9s. 6d. more than 5 per cent. on the expended capital of the Company, which, I believe, is not a very common occurrence in railway statistics on so short an opening.

I remain, Sir, yours, &c.,

A SHAREHOLDER.

Manchester, July 14, 1842.

THE TOLL QUESTION—CROYDON AND GREENWICH RAILWAYS.

To the Editor of the Railway Times.

Sir,—Allow me through the medium of your journal, to suggest to the shareholders in the Croydon and Greenwich Railways, now that their half-yearly meetings are approaching, to come to resolutions to put the matters so long in dispute between

Digitized by Google

them, and which have proved so prejudicial to the interests of both, to arbitration; say to the Chairman and Directors of the London and Birmingham Railway Company, or to the Directors of the South-Western, or to both—each party being previously bound to abide by the decision given.

It is known to many of your readers, that a similar misunderstanding existed between the Midland Counties' and the Birmingham and Derby Companies, both being desirous to carry the London passengers to the exclusion of the other, until the rates were so reduced as to leave both without profit. At the last both parties grew tired, and agreed to refer the case, as I am informed, to the North Midland Directors, who decided to *divide* the traffic between them, by giving one Company the morning, and the other the afternoon trains, and both at remunerating prices. I do not mean that the traffic on the Croydon and Greenwich could be divided precisely in the same way, but such an arrangement of the fares to be charged and the tolls to be paid, might be fixed as would be beneficial to both. Now, let the Companies previously referred to act on the same principle, and then, instead of cutting each others throats, we should see both working amicably and *profitably* together.

I am, Sir, your constant reader,

R. T.

Liverpool, July 12, 1842.

RAILWAY BENEVOLENT SOCIETIES.—MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

SIR,—As you have considered the above subject worthy of your notice, and as I have received the written and expressed thanks of several individuals, sufferers by the present system (especially from the Manchester, Hebden Bridge, Wakefield, and Leeds stations, on the Manchester and Leeds line), for calling your attention to this subject, I take the liberty of requesting your insertion of the following plan for reforming the present abuses.

The plan I propose is as follows:—That all Committees should be appointed by the members, each having a vote; and that the voting be by ballot. That each Committee elect its own Chairman and Secretary. That the society be managed by a general Committee, which should be appointed annually, consisting of twelve individuals, who should appoint their own Chairman (who should be Treasurer) and Secretary, and determine their salaries. That on long lines there should be two or three divisions, each having a sub-Committee of five or seven persons, who should collect the funds and disburse the benefits. That to each of these divisions there should be a medical officer who should be elected by the members, having not more than 7s. per man per annum, to find both medicine and attendance; or, what would be much better and more professional, that the medical officer should have 2s. 6d. per visit, which should include medicine.

That any member dissatisfied with a decision of a sub-Committee, may appeal to the general Committee, who should sit quarterly for such purpose, and to examine and audit the books of the sub-Committees.

If any Railway Benevolent Society should think proper to adopt this plan, I shall be very happy to draw up and forward them a draft of a code of laws such as would be required for their government.

With thanks for past favours, I am, Sir, yours, respectfully,

R. CRAVEN.

3, Victoria road, Leeds.

EVESHAM JUNCTION RAILWAY—ENGINEER'S ESTIMATE.

To the Editor of the Railway Times.

SIR,—In replying to Mr. Addison's second letter I have not again to thank him for his courtesy, but simply to congratulate him on the strikingly novel, original, and effective character of his irony. He is exquisitely facetious on the signature I have adopted, but he has not shaken my right to make use of it.

As regards fact, however, Mr. Addison has not much strengthened his position by quoting the Tewkesbury branch. If he will refer to his Consulting Engineer, Capt. W. Moorsom, or to any of the Directors or large shareholders of the Birmingham and Gloucester Railway, they will inform him that the Tewkesbury branch two miles long has cost that Company a sum of not less than 20,000*l.* He will also find that this branch was down a valley, which reduced the work necessary before laying the rails to a very small amount; that there is only one bridge to carry a road across it (and that a road of the humblest description), and that as it is worked by *horse power* it is enabled to run into Tewkesbury on a level.

I cannot resist subjoining a few questions.

1. As the published estimate is only the "*result*" of a detailed estimate, and as the published section is confessedly wrong, where can parties thinking of subscribing see a *detailed* estimate and a *correct* section?

2. As the Tewkesbury branch is given as a model, is it intended to work the Evesham branch also by horse power?

3. Has Mr. Addison ever seen a single yard of railway laid down, or had any practical experience whatever on the subject?

I am, Sir, yours, &c.,

COMMON SENSE.

July 21, 1842.

MIDLAND COUNTIES' RAILWAY.

To the Editor of the Railway Times.

SIR,—The letter of "A Shareholder," in your last paper, is evidently written by some one whose knowledge of the subject is, I am sorry to say, far superior to his candour in treating it. I believe there are few shareholders who have, from its first origin, known more of the circumstances of this railway than myself, and I therefore feel it incumbent upon me, as far as lies in my power, to disabuse your readers of the erroneous impressions which some of the observations of your correspondent are calculated to produce.

It is perfectly true, that the first idea of the Midland Counties' Railway was suggested by the promulgation of a scheme for the formation of a mere coal railway, with a single line, from Pinxton to Leicester; but what this has to do with the present state of the railway, I am at a loss to imagine. It only shows, that those who became eventually the promoters of the line, had sufficient discernment to prefer a measure of great and general public utility, to one which would only have benefitted the Pinxton coalowners. Perhaps your correspondent has still a hankering after the old coal line; but let that pass.

The first surveys and estimates were made by Mr. Jessop, of Butterley, who, from motives highly creditable to him, but which need not be now entered into, gave way to Mr. George Rennie, upon whose authority the estimate of 600,000*l.* was announced in the prospectus. Mr. Rennie was afterwards superseded by the appointment of Mr. Vignoles; but *not* to avoid a tunnel, as stated by "A Shareholder." The fact was, that the Liverpool capitalists, who formed a large majority of the shareholders, had no confidence in Mr. Rennie's experience or judgment as a *railway* engineer, and it was at their suggestion, or rather desire, that Mr. Vignoles was appointed. True it is that Mr. Vignoles was not long in discovering, not only that Mr. Rennie's line was capable of vast improvement, but that his estimate was totally inadequate even for such a line as his. Mr. Vignoles never made an *estimate* of 850,000*l.* He had scarcely looked at the line, when he advised the Provisional Committee not to delay a moment in increasing the capital to that sum, but at the completion of the surveys, he gave in the estimate of 1,000,000*l.*; which was acted upon in Parliament.

The Parliamentary estimate, it is needless to say, does not include a farthing for carrying capital, in which it is well-known a large sum has been necessarily expended, but it should be also borne in mind, that the outlay required at stations was very imperfectly understood, and had in no case been correctly estimated, at the time the Midland Counties' Act passed. The price of iron too had exactly doubled between the making of the estimates and the purchase of the rails; and "A Shareholder" is strangely in error in his statement as to the land. He says there are only about "570 acres, scarcely any of which was of great value;" but the fact is, that the quantity of land is between 900 and 1,000 acres, and no one can travel on the railway without perceiving that it passes through a district of singularly rich and valuable land, from one end to the other, independently of the heavy prices which must always be paid in, or in the neighbourhood of, large towns, such as Leicester, Loughborough, Nottingham, and Derby. Indeed, there is no doubt that in calculating the cost of the land, the rapacity and extortion of landowners, setting in many cases all calculation at defiance, had not been taken into account.

If the object of your correspondent is to show that the railway has cost a large sum of money, he might have spared himself the trouble of writing, for nobody doubts that—but it is the height of unfairness to assume, as he appears to do, that because the sum is large it has been improperly expended. This he has not attempted to prove, but has satisfied himself with insinuating, by a pretended detail of the proceedings at the general meetings, that inquiry is there stifled. Now, I have attended every general meeting since the Act passed, and I take upon myself to assert, that the picture drawn by your correspondent is a tissue of false colouring and misrepresentation. It is, in fact, the mere coinage of the writer's brain. I never heard information asked for that was not promptly, candidly, and explicitly given. I have heard querulous observations made by individual shareholders, but whenever the proceedings of the Directors have been defended by any other than their own statements, or those of their officers, it has been by shareholders with a large stake in the concern, who have made the affairs of the railway their study, and have spontaneously stepped forward to repel insinuations which they knew to be groundless, but never, I will take upon myself to say, has there been a threat of using proxies; and at the very meeting to which "A Shareholder" alludes, the Directors allowed a question to be decided against their own views, by the majority of shareholders present, while they held proxies amply sufficient to have turned the scale the other way. But, with submission to the "Shareholder," I think the very fact, if true, that he dare not venture to move for a Committee of Inquiry, proves the confidence which is reposed in the Directors by the general body of proprietors.

I am quite sure that the Directors neither wish to shrink from inquiry, nor have occasion to do so, and that they will be very happy if every shareholder in the railway will act upon the only practical sentence in the long letter of your correspondent, by attending in person at the next general meeting, where they will be able to form a judgment for themselves of the fairness of its proceedings, and of the merits or demerits of those who manage the affairs of the Company.

I am, Sir, your obedient servant,

A MIDLAND COUNTIES' SHAREHOLDER.

Liverpool, July 20, 1842.

"LOCKING-IN" ON RAILWAYS.

To the Editor of the Railway Times.

SIR,—It must be obvious to most people, that as much if not more sound argument can be produced against the practice of leaving the carriage doors open than can be supported in favour of so doing. The alarm and confusion created by an accident similar to that which lately occurred on the Paris and Versailles Railway would cause many to throw themselves out, and thus endanger their

Digitized by Google

lives, while on the contrary they would be comparatively safe if the doors were locked; and as to danger arising from fire, there can be very little doubt but that on all occasions the guards must have ample time to unlock and open all the doors (*when the doors can open*) before any serious accident could result from the fire underneath the carriage.

I feel persuaded that on the late melancholy occasion above alluded to the unfortunate persons who were actually burned had been previously killed by the concussion, or so much hurt as to be unable to move; and it is, moreover, probable, that the carriages were so much crushed and deformed that the doors had become fixtures, and that even if unlocked they would not open.

I have witnessed some few accidents on railways of comparatively trifling gravity, and have therefore had an opportunity of observing how nervous even calm and deliberate persons (generally speaking) are liable to become on such occasions, which is a strong point in favour of locked doors, because it proves that the jumping out of a carriage is not a deliberate act, but one committed under the powerful impulse of a sudden sense of danger, and before the mind becomes collected enough to bring judgment to your assistance. There are very few persons, if any, who do not admit that it would be an act of folly to jump out of a carriage when a train is in full motion; but many of those very persons who grant you this when they are in a reasonable state, would jump out in the event of an accident, and while their reason was paralysed by fear.

I was on board a steamer when a boiler burst. A friend of mine, after the explosion, and without any reasonable cause, for he fortunately had not been injured in any way, came from below, and immediately jumped overboard, at the hazard of being drowned. He now laughs at the circumstance, and considers that throwing himself overboard was an act of madness; but a man certainly may be "frightened out of his wits."

I propose, therefore, that some plan should be adopted, by means of which the carriage doors shall all be fast closed when the train is in motion above a certain speed only, and that they shall be unlocked when the train is in a state of inaction, or moving only at that speed at which there would be no danger or difficulty attendant upon getting in or out of the carriages.

In order that this effect should be simultaneously produced on every carriage, I would place under every one a common governor, driven from one of the axles, and working as many bolts as there are doors to the carriage. Two spindles running, of sufficient length, underneath the body of the carriage, and perfectly out of the way, would carry the three or four levers that would be required to lower and raise the bolts; the two spindles being worked by the action of the governor, as in the steam-engine.

The above description being quite sufficient for so simple a thing, I do not trouble you with a drawing, but would willingly produce one if it were considered to be requisite.

There are various ways of obtaining the above object, three of which I will point out as quite sufficient for the purpose.

The governor can be worked by a common band of any kind from one of the axles; or the axle itself could carry the arms of the governor, which might lay alongside of the axle, and be driven up against it by means of two springs, when the train is at rest.

Or again, the effect might be produced by a friction segment resting upon the axle of the carriage, and so disposed as to maintain an invariable position when the train is at rest (at which time all the doors should be free), and to deviate from that position when the train is in motion, by means of which deviation all the doors would be fixed.

By the above method, which is not expensive or difficult to apply, or inconvenient in any way when applied, I think that some benefit may be derived; and if you are of the same opinion (even if you are not) I trust that you will find room for this paper in your useful publication.

I remain, Sir, your obedient servant,

H. H. E.

PROCEEDINGS IN THE HOUSE OF COMMONS ON RAILWAYS.

LIVERPOOL AND MANCHESTER RAILWAY.

July 21.—Message from the Lords, that they have agreed to the Bill with amendments.

LONDON AND GREENWICH RAILWAY (No. 3).

July 15.—Lords' amendments agreed to.

July 16.—Mr. Speaker reported the Royal Assent to the Bill.

RAILWAY DEODANDS—EASTERN COUNTIES' RAILWAY.—Our readers will recollect the late fatal catastrophe on the Eastern Counties' Railway, when four lives were lost. On that occasion the Coroner's inquisition which sat on the bodies imposed a deodand of 125*l.* in each case, amounting to 500*l.* The Railway Company petitioned the Lords of her Majesty's Treasury, that the levying of the deodands might be delayed until the Company had an opportunity of testing the validity and legality of the verdicts. The Lords of the Treasury granted this request as a matter of course; and last term the question was brought before the Court of Exchequer, in the shape of a motion, that the Company might be at liberty to pay the amount of one deodand, and be discharged from the payment of the other three, on the ground that as the accidental deaths of all the parties occurred simultaneously, and by the same cause (namely, the engine), that there could legally be but one deodand enforced, as the value of the article moving to the death of the unfortunate parties could not have four values, and consequently four deodands could not be enforced. In the course of the examination before the Coroner, it however appears, that that gentleman (Mr. Lewis) examined witnesses as to the value of the engine, who agreed in stating it to be worth 1,500*l.*, and with this information the jury, which were the same in all four cases, imposed the deodands, and assessed them at 125*l.* each, making a total, as before stated, of 500*l.* The Court of Exchequer were of opinion that the verdict was right, and decided that the deodands must be paid. A question has since arisen whether the jury, with such evidence as to the value of the engine before them, ought not to have returned a verdict for the full amount—viz., 1,500*l.*; but if they had done so, another question arises—whether that verdict would not have been set aside by application to the Court of Queen's Bench. This, however, was not the point that the Company wished to moot, and we understand that they have since paid the amount into the hands of the Sheriff of Middlesex, in order to meet the Queen's writ, which will issue on Friday next.—*Morning Herald* of Thursday.

—o—

LONDON AND BRIGHTON RAILWAY.—The Directors have now put on a third-class train, which leaves London early in the morning and returns late in the evening. The Railway Company have nearly completed a most commodious pier in Shoreham harbour, for the landing of passengers and merchandise; and next week the General Steam Navigation Company intend running steam-vessels from the pier to Havre. In consequence of the high price charged by the Chain Pier Company it is expected that the Dieppe steamers will run from the same place, as they are now compelled in rough weather to start from the harbour.—*Globe.* On Saturday last the railway brought down one of the largest trains that has yet travelled upon the line. It consisted of nineteen carriages, including four private carriages upon the railway trucks; and the number of passengers was 209 and a child. An extra train running at 7 o'clock in the evening, and an early train carrying third-class passengers, have been put on, and the convenience of these arrangements has been already experienced by the public.—*Brighton Gazette.*

EASTERN COUNTIES' RAILWAY.

OUR information presents no variation from what we have recently stated about the rapid progress towards completion of this valuable undertaking. Nothing can exceed the good faith in which the contractors along the unfinished portion of the line proceed with the active fulfilment of their contracts, while the constant superintendance and vigilance of Mr. Braithwaite, the engineer, and Mr. Hall, the Managing Director, are a sufficient guarantee that everything is going on at one and the same time with proper spirit; and that nothing has as yet occurred to make it probable that the opening of the whole line to Colchester at the time already announced will be delayed. The Company, we find from the public journals, have been very much engaged in a species of small litigation with trespassers on their property, and those who have attempted to establish untenable claims for compensation. We may as well here remark upon a singular circumstance which this sort of litigation has been to some extent the means of producing. Mr. Price, of Ilford, has been very active, in prosecution of some alleged rights of his daughter, in taking proceedings against the Company. In a former article we stated our impression that Mr. Price had already received enormous remuneration for any claims he could advance, and more particularly as regards a piece of leasehold land which he made out a title to on behalf of his daughter. The Company having to make some arrangements with Lord Salisbury, who had undesignedly sold to them a piece of land for freehold which was not so, found on looking over the title-deeds of their previous purchases, that the land for which they had compensated Mr. Price so largely, had actually been bought and paid for by the Company some time before, and that Mr. Price had no legal right to make a claim for compensation for that land, either on behalf of himself or his daughter. The result has been, that proceedings are in progress against Mr. Price to recover the money and land paid to him, or his daughter, for what the Company now claim as their own property—and to which, it is alleged, Mr. Price had no legal title whatever when he made his claim; and as Mr. Price has not shown a very friendly feeling towards the Company in certain transactions which have made their way to the eyes of the public, in consequence of proceedings before the Bench at Ilford, there is some likelihood that Mr. Price will find a little difficulty in coming to that amicable arrangement with the Company which a better feeling on his part would otherwise have insured.—*Essex Mercury.*

THE IRON MASTERS' MEETING.—The quarterly meeting of the iron masters was held in the Town Hall on Thursday. There never was a more thoroughly flat meeting of the trade. The report of all present was general depression, and no hope of improvement. The prices of iron were so varied, owing to the obligations to sell, that there could not be anything like an average quotation of price, but it may be fairly stated that a reduction upon the already ruinously low prices took place. Bars were offered to an old master at prices infinitely lower than was ever known to be asked for a similar description of iron.—*Birmingham Journal*, July 16.

RAILWAYS FOR WAR PURPOSES.—The *Berlin Gazette* states that an experiment has been made on the Berlin and Potsdam Railway as to the possibility of using the line, in case of war, as the means of transporting artillery. For this purpose a park of guns, with all their articles, and the usual number of men and horses, was placed on the common carriages of the railway, and was transported with the greatest safety by a single locomotive from one town to the other in 20 minutes.

ACCIDENT ON THE BIRMINGHAM AND DERBY RAILWAY.—A fine horse, employed in the luggage department on this line, was run over by an up-train on Thursday last, at the Burton-on-Trent station. The horse was killed instantly, the driver having a narrow escape, but the train was not delayed.—*Derby Reporter.*

BIRMINGHAH AND DERBY RAILWAY.

Presentation of a Piece of Plate to John Cass Birkinshaw, Esq., Resident Engineer of the Birmingham and Derby Railway.

[From a Correspondent.]

On Thursday week the assistant engineers, draughtsmen, contractors, sub-contractors, and other friends of this gentleman, sat down to a sumptuous dinner, which was prepared for them on this occasion by Mr. Bacon of the Queen's Hotel, who had evidently outdone himself in the style and elegance of the entertainment. The beautifully and richly carved Candelabra and Epergne stood in the middle of the table, giving grace and lustre to the whole. This present, which had been manufactured by Messrs. Edwards and Ball, of Birmingham, and had cost 200 guineas, was elaborately, and in every respect, worthy of the well known skill and ability of the artists.

Among several gentlemen who attended to do honour to Mr. Birkinshaw, on this their probably last dinner together before leaving, we observed Henry James Castle, Esq., formerly engaged upon the line under Mr. Birkinshaw, now of Queen's-square, London, and lecturer in the Engineering Department, King's College, Chairman; W. P. Hillcock, Esq., Assistant Engineer, Vice-Chairman; William Hanson, Esq., formerly Assistant Engineer; Messrs. Binns, Brothers, of Clay Cross; Messrs. Bakewell, Dickens, Thackwray, &c.; Messrs. Jackson and Bean, contractors; Mr. Walthen, Mr. Kirtley, &c. &c. The cloth being removed, and the usual loyal toasts having been drunk with repeated cheering—

The Chairman rose, and in calling the attention of the gentlemen around to the particular object for which they had that day met, regretted for their sakes that the office had not fallen into better hands, though for himself he could not but feel the greatest pleasure that, in doing his best to discharge his duty to them, he should be enabled at the same time to express all that he himself felt of personal esteem for the distinguished individual whom they had that day met to honour. Never had he met with, elsewhere, the kindness he had experienced from him, and yet he did not think that a single individual of the large assembly whom he then had the honour of addressing, would concede that he had experienced less. Yes, gentlemen, (continued he) we *all* of us know that our kind friend and guest, John C. Birkinshaw, Esq., is a man everywhere esteemed; and on that account I regret that the office of conveying to him the expression of our affection, should not have devolved upon some more worthy and more eloquent individual. Yet, gentlemen, though there are many among you who would have more ably expressed that feeling than myself, not one of you could have more sincerely felt it. (Cheers.) That you will give me credit for all sincerity, this continued cheering—the responsive re-echoing of the same feeling within yourselves—fully satisfies me; and in giving me credit for sincerity, you will, I know, give me credit for *more* than I can say—for all I would wish to say. Gentlemen, we have all known Mr. Birkinshaw some years; some of you, I believe, have had that honour many years, and during all that time in the faithful and zealous discharge of his duty to the Company, and his constant urbanity and kindness to those about him, you will I am sure re-echo me, when I say, "We shall not look upon his like again." I have but now, therefore, Sir [turning to Mr. Birkinshaw], the pleasant duty, in my own name and that of this meeting, to beg your kind acceptance of the piece of plate which you see before you. I have another small present also, not so costly nor so valuable as the former, but so pure in its purpose, so disinterested in its presentation, that, for the sake of its donors, it will I am sure be kindly received and deeply valued. This gold snuff-box, which I have now the pleasure of placing in your hands, Mr. Kirtley informs me is the sincere and spontaneous subscription of the enginemen and firemen of the line. It is a small, but it is also, as the other, a sincere offering, of (what they as well as ourselves would wish to convey to you a firm, abiding, innate conviction of) that love and esteem which we have always felt, and which we now beg most sincerely, most cordially, and most enthusiastically again to express towards you. Gentlemen, I have therefore to propose the health of our distinguished guest, John C. Birkinshaw, Esq.

Mr. Birkinshaw rose to reply, and in a short but able speech expressed his sense of the strong expression that his friends had that day given him of their kind regard and esteem, and his sincere conviction that the remembrance of that day would be as pleasant as it would be abiding.

After these came the following toasts, which were received with loud applause:—

The Chairman, and the institution with which he is connected, King's College, London; George Stephenson, Esq., the father of railways; Robert Stephenson, Esq.; the Vice-Chairman; the Chairman and Directors of the line; the Draughtsmen; the Contractors; the sub-Contractors; the Enginemen and Firemen.

The company retired at a late hour in the evening.

Accident on the Stanhope and Tyne Railway.—A melancholy accident occurred on the evening of Friday week at Lanehead, the Stanhope terminus of the Stanhope and Tyne Railway, occupied by the Derwent Iron Company, by which James Kemp, eight years of age, lost his life. He and two younger companions had rambled to the side of the railway at Lanehead, where the public footpath crosses it, upon which they had scarcely stepped, when three waggons loaded with lime, which the Crawlaw stationary engine was drawing up the steep incline, became retarded, in consequence of a great deficiency of steam; upon which the bankrider and three other persons who were along with him leaped off the waggon, apprehensive of danger, and had scarcely done so before the ironwork to which the waggon rope is attached broke, and the waggons immediately ran amain down the incline with frightful velocity, scattering the lime in clouds in the descent; and becoming disengaged from each other, were forced off the rails, at different points, near the bottom; the last of the three passed immediately over the children, cut and bruised the head and face of a little boy, son of Mr. George Teasdale, now recovering, and caught Mr. Kemp's son by the neck, and completely severed his head from his body, whilst the third miraculously escaped almost uninjured.

The Late Accident on the Edinburgh and Glasgow Railway.—We regret to state that Mr. John M'Leod, bookseller, died on Sabbath at 12 o'clock, of the injuries received by him at the late accident at Cowlairs, on the Edinburgh and Glasgow Railway. In the early part of the week, hopes were entertained that Mr. M'Leod was beyond danger; but the symptoms subsequently changed for the worse; lock-jaw ensued, and for several days before his death all hopes of recovery had fled. The deceased was universally respected, and his untimely fate will be mourned over by a large and attached circle of friends.—*Glasgow Courier.*

PARIS AND ROUEN RAILWAY.—Offices of the Company, 52, Rue Basse du Rempart, Paris.—Notice is hereby given, That the General Annual Meeting of the Shareholders of this Company will be holden at No. 38, Rue de la Victorie, Paris, on Saturday, the 30th of July instant, at Three o'Clock in the afternoon, for the purpose of hearing the Report of the Directors on the state and prospects of the concern.

ADOLPHE THIBAUDEAU, Secretary.

Every information may be obtained at the London Offices, No. 4, Austin Friars.

TO CAPITALISTS.—A Professional Gentleman requires a Person of respectability to fill a situation of trust, who can advance from £50 to £100 into the concern by way of security, for which 5 per cent. will be allowed, and the money paid back in such a way as may be agreed upon. Salary, £70 per year, paid weekly or quarterly. Address, by letter only, pre-paid, to H. S. P., 10, Walbrook-row, New North-road, Hoxton.

IMPROVED TURN-TABLE.—To the RAILWAY PUBLIC, and Parties interested in the ECONOMICAL WORKING OF RAILWAYS.—Gentlemen, I beg to introduce to your notice a very simple Machine which I have had erected on a railway station in this neighbourhood, whereby both engine and tender are turned or reversed without disjointing or uncoupling them, thereby effecting a saving of time, labour, and wear of machinery. I will point out a few of the advantages which it possesses, and leave you to make the comparison with what you observe to be the practice on other lines of railway.

First then as to time, which is a most important matter where quick dispatch is required. One man and one boy can reverse the engine and tender, with great facility and ease to themselves, in considerably less time than one minute. A coach may be reversed in less than half a minute. Two trucks may be turned at once, and if necessary, one man alone can turn the engine and tender in a minute.

My arrangements enable me to warrant the Machine to be made firm, substantial, durable, and of the best materials and workmanship, being all done under my own immediate inspection; and should you wish to avail yourselves of the above important advantages, I should be most happy to receive your orders, and to attend to your commands.

Any gentleman may see the above daily and hourly in operation, at the Station, at Rotherham.

I am, Gentlemen, your most obedient humble servant,

THOMAS PEARSON.

No. 6, Hall Carr Terrace, Sheffield,
July 22, 1842.

The following Testimonial has been given by the Directors of the Sheffield and Rotherham Railway Company:—

"We, the Directors of the Sheffield and Rotherham Railway, do hereby signify our approval of the Turntable which has lately been put down by our Secretary, Mr. Thomas Pearson, at the Rotherham Station, both as to its utility, and the ease and facility with which it is worked; and we can confidently recommend it to the attention of all Managers of Railways as a substantial, efficient, and very useful adjunct to any station.

"W. VICKERS, Chairman.
G. W. CHAMBERS, Deputy-Chairman.
T. LINLEY.
W. JACKSON.
B. VICKERS.
H. BRIGGS."

ON SALE—A QUANTITY OF COAL OIL, for burning in the open air; affords a good and economical light, and is well adapted for use on Railways, and in public works generally, where night out-door labour is required. Price 1s. per gallon.

Apply to Mr. Joseph Clephan, No. 14, Sandhill, Newcastle-upon-Tyne.

Newcastle-upon-Tyne, July 20, 1842.

TO RAILWAY CONTRACTORS.—TO BE SOLD a large quantity of Wrought Iron Rails, Sydney pattern, and Cast Iron Chairs, together with 196 Railway Waggons, lying on the South-Eastern Railway, at Leigh and Tudely, near Tonbridge.

Applications to be made to Mr. Thos. Cockson, 6, Calverley-place, Tonbridge Wells.

THIRD EDITION.

"HOW WILL THE INCOME TAX AFFECT ME?" is the pertinent title of a neat little *brochure*, giving a clear and accurate Analysis of the Property Tax Act, and is just the very thing for those who wish the question solved without wading through the Act itself."—*Morning Herald*, July 16.

May be obtained of every Bookseller, and is sent free by post, on receipt of One Shilling in a paid letter.

R. Tyas, 8, Paternoster-row.

PARISIAN BITUMEN COMPANY.—The Directors of the PARISIAN BITUMEN COMPANY beg to call the attention of Engineers, Architects, Surveyors, Builders, and the Public, to the price at which they will undertake to lay down their Bitumen, and to its applicability for pavements, roofs, lining tanks, &c.—also to the successful use of it as a cement in the Weirs on the Upper Medway, whereby great economy in the primary construction and future repairs are attained. The prices are as follows:—

Bitumen prepared for cement, per ton	£3	0	0
Covering viaducts or arches of bridges, catacombs, vaults, terraces, &c., to exclude damp, 1¼ inch thick, per superficial yard	0	4	6
Paving pathways, granaries, warehouses, &c., 1¼ inch thick, per square yard	0	4	6
Paving barns, court yards, tun rooms, wharfs, stables, &c., 2 inches thick, per ditto	0	5	6

The above charges do not include the cost of carriage, which must be borne by the parties by whom the work is required.

Mill Wall, Poplar, April, 1842.

TO CIVIL ENGINEERS, CONTRACTORS, &c.—PREMIUM.—A Young Man who has studied for some time under a Civil Engineer and Surveyor, wishes to place himself for a few months, without salary, with a Practical Engineer or Contractor engaged on a line of railway or other engineering work, and for which a small premium (adequate to the advantages offered) will be given. Apply by letter, post-paid, to A. Z., care of Mr. Robinson, Chemist, 164, Piccadilly, London.

SECOND REPORT OF THE COMMERCIAL BANK OF LONDON.

—At a General Meeting of the Shareholders, held at the Banking-house of the Company, 3, Moorgate-street, Lothbury, on Monday, July 18, 1842.

DIRECTORS.

Richard Walker, Esq., M.P., Chairman.
John Taylor, Esq., Deputy-Chairman.

Henry Barnewall, Esq.	Jonathan Hopkinson, Esq.
George Bulpett, Esq.	George Alfred Muskett, Esq.
E. S. Cayley, Esq., M. P.	Edward Oxenford, Esq.
Jas. A. Douglass, Esq.	George Rennie, jun., Esq.
Thos. Grimsditch, Esq., M.P.	John Shewell, Esq.
John Harvey, Esq.	Joseph Travers, Esq.
Arthur T. Holroyd, Esq.	Charles Weld, Esq.

MANAGER—Mr. Alfred A. Cutbill.
SOLICITORS—Messrs. Amory, Sewell, and Moores; and Messrs. Norris and Sons.

The following Report from the Directors was read by the Manager:—

The Directors feel much pleasure in submitting to their shareholders, at this the second annual meeting, the subjoined statement of the actual position of the affairs of the Company.

The general depression of the commercial and manufacturing interests of the country has compelled the Directors to use more than ordinary caution in conducting the business of the Bank, still an examination of the annexed account will prove such a steady and favourable progress as to enable the Directors to recommend to the shareholders a dividend of £5 per cent. on the paid-up capital for the first year. After providing for the current expenses, and making full allowance for all bad and doubtful debts, there will remain a sum of £7,203 16s., from which £4,000 being deducted for the dividend, and 10 per cent. being written off the preliminary expenses, will leave £2,392 13s. 4d. at the disposal of the meeting for rebate on current bills, and to add to the guarantee fund.

The Directors have the pleasure to state that the business of the branch in Henrietta street is progressing satisfactorily.

In accordance with the deed of settlement, four Directors now go out of office; they are Messrs. Oxenford, Rennie, Shewell, and Taylor, and, being eligible, they offer themselves for re-election.

Balance Sheet, 30th June, 1842.
Subscribed Capital, £400,000.

	£	s.	d.		£	s.	d.
Paid up ditto..	80,000	0	0	Cash in hand, Government stock, & Exchequer bills	108,627	4	2
Guarantee fund and dividends invested in the purchase of 1,034l. 0s. 4d. Reduced Three per Cents., which cost	935	5	2	Bills discounted and loans to customers on securities	214,248	6	1
Balance due to the customers of the bank..	246,824	17	11	Cost and value of banking premises in Moorgate-st. and Henrietta street, fixtures, furniture, &c.....	4,000	0	0
Balance of bad and doubtful debts account, being excess of allowance made at last general meeting	22	18	0	Preliminary expenses....	8,111	6	10
Balance carried down after paying current expenses & deducting all bad & doubtful debts	7,203	16	0				
	£334,986	17	1		£334,986	17	1
Dividend at the rate of 5l. per cent. on paid-up capital.....	4,000	0	0	Balance brought down being profit..	7,203	16	0
Ten per cent. paid off preliminary expenses.....	811	2	8				
Balances for rebate on current bills, and to add to the guarantee fund.....	2,392	13	4				
	£7,203	16	0		£7,203	16	0

RICHARD WALKER, Chairman.
A. R. CUTBILL, Manager.

Read and approved at general meeting, July 18, 1842.

The Chairman then, on the part of the Directors, declared a dividend for the past year of 5 per cent., payable on and after the 1st of August.

Resolved—That the Report just read be approved, printed, and circulated amongst the proprietors.

Resolved—That the thanks of this meeting be given to the Chairman, Deputy-Chairman, and Directors, for their able and judicious management of the business of the Bank, and that £1,000 be placed at their disposal.

Resolved—That the following Directors:—viz., E. Oxenford, Esq., G. Rennie, jun., Esq., J. Shewell, Esq., and J. Taylor, Esq., who go out of office in pursuance of the deed of settlement, be re-elected Directors of this Company.

Resolved—That the thanks of this meeting be given to Thomas Barnewall, Esq., for his superintendence of the Henrietta-street Branch, and for his continued efforts to promote the interest of the Bank.

Resolved—That the thanks of the shareholders be given to Mr. A. R. Cutbill, for the zeal and ability displayed by him as Manager of the Commercial Bank of London

(Signed) RICHARD WALKER, Chairman.

The Chairman having left the chair, it was resolved unanimously that the thanks of this meeting be given to Richard Walker, Esq., M.P., for his able and courteous conduct in the chair this day.

(Signed) JOHN TAYLOR.

COMMERCIAL BANK OF LONDON.

—The Directors hereby give NOTICE, That a DIVIDEND of Five per Cent. on the paid up Capital of the Company for the past year will be payable at the Banking House, No. 3, Moorgate-street, on and after Monday, the 1st of August next.

By order of the Board,
A. R. CUTBILL, Manager.

NORTHERN AND EASTERN RAILWAY.

—NOTICE is hereby given, That the BOOKS in which Transfers of Shares are Registered in this Company will be CLOSED from Thursday, the 4th, till Thursday, the 11th of August next, both days inclusive. And that the Dividend for the half year ending on the 30th of June last will be paid only to the Proprietor who may be Registered in the Company's Books on the 4th of August, 1842.

By order of the Board
WM. BOURNE, Secretary.

Shoreditch, London, July 20, 1842.

NORTHERN AND EASTERN RAILWAY.

—NOTICE is hereby given, That the next Half-yearly General Meeting of Proprietors of this Company will be held, pursuant to Act of Parliament, on Thursday, the 11th day of August next, at Two o'Clock precisely, at the London Tavern, Bishopsgate-street.

W. MARSHALL, Chairman.
WILLIAM BOURNE, Secretary.

Shoreditch, London, 20th July, 1842.

SMOKE NUISANCE.—MR. JOSEPH WILLIAMS,

of No. 67, Bedford street, Toxteth-park, near Liverpool, has the authority of Sir John Barrow, Bart., the Secretary to the Admiralty, for announcing to the public, that the Patent Apparatus for the Combustion of Smoke and Saving of Coal attached to her Majesty's Steam-packet *Urgent*, Lieutenant Emerson, R. N., Commander, after being in use upwards of six months on the Post office station between Liverpool and Dublin, is found to answer in every respect, and in the six months the saving of coal upon the *Urgent* has been about 300 tons.

The apparatus is simple in its construction, and is equally adapted for land and marine engines.

The Patentees have forborne pressing their invention upon the public until its merits could be ascertained by adequate trial. This it has undergone upon a large vessel plying in the Channel throughout the winter months, and they, therefore, now feel warranted in inviting the attention to it of all persons anxious for the removal of the nuisance of smoke from steam engines. To those who are concerned in steam navigation it may not be unseasonable to mention, that with this apparatus a steam-vessel going before the wind has no occasion to open her furnace doors, or to alter her course in order to keep a look out ahead. Having no longer a cloud of smoke hanging over her bows, she can keep her course without slackening her speed.

For terms and particulars, application may be made to Mr. Joseph Williams, 67, Bedford-street, Toxteth park, near Liverpool; to Mr. Wilson Haselden, Woodside Ferry, Cheshire; to Mr. Robert Daglish, jun., Foundry, St. Helens, by whom the apparatus was attached to the *Urgent*; to Messrs. Nasmyth, Gaskell, and Co., Foundry, Patricroft, near Manchester; to Mr. John Garnett, No. 1, Exchange-buildings, Liverpool; to Mr. John Bewley, Accountant, Brunswick-street, Liverpool; or to Messrs. Lowndes, Robinson, and Bateson, Solicitors, Liverpool.

CEMENT.—To ARCHITECTS, BUILDERS, and Others.

—The PATENT STUCCO PAINT CEMENT.—Its extraordinary qualities are rapidly becoming well known and appreciated. It will adhere to any substance or surface—no wet, or damp, or frost, can have any effect on it—time hardens and improves it—a house covered with it becomes encased in stone—the cost is trifling. The invention is a fortune to Builders, and to all who are interested in house property, old or new. The sole agents for the Patentees are Messrs. MANN & Co., 5, Maiden-lane, Queen-street, Cheapside.

Just Published, Price 1s.,

AN EXPERIMENTAL INQUIRY INTO THE ADVANTAGES ATTENDING THE USE OF CYLINDRICAL WHEELS ON RAILWAYS;

with an Explanation of the Theory of Adapting Curves for those Wheels, and its application to Practice; and an account of Experiments, showing the Easy Draught and the Safety of Carriages with Cylindrical Wheels. By W. J. MACQUORN RANKINE, Civil Engineer.

John Kingston, Esq.	Daniel Stoddart, Esq.

SUTHERLAND MACKENZIE, Esq., Manager.

London Offices, 449, West Strand, and 78, King William Street, City.

LIFE DEPARTMENT.

The additions made to the Life Policies granted by this Corporation for the last seven years vary from 41 to 65 per cent. on the premiums paid, and average 54 per cent. on the sums assured—a result, it is believed, far more favourable to the assured than any other Company has hitherto accomplished, when the low rates of premium charged by this Corporation are taken into consideration.

The next division of life profits will take place in December, 1846, being an interval of five years, and persons entering before the 1st of August next will enjoy one year's additional rating, and rank at next division of profits for five complete years.

Forms of proposals may be had at the offices, 449, West Strand, and 78, King William street, City.

F. G. SMITH, Secretary.

LONDON AND DOVER (SOUTH-EASTERN) RAILWAY.—The Public are respectfully informed that the TRAINS now RUN for the conveyance of passengers, parcels, horses, and carriages from the London Bridge Station as under:—

To Tunbridge, stopping at New Cross, Croydon, Reigate, Godstone, Edenbridge, and Penshurst—9 30. a.m.; 1 30 a.m.; 2 30 p.m; and 5 30 p.m. SUNDAYS—8 30 a.m.; 6 30 p.m.

From Tunbridge, stopping at Penshurst, Edenbridge, Godstone, Reigate, Croydon, and New Cross—7 45 a.m.; 10 30 a.m.; 3 p.m.; and 6 p.m. SUNDAYS—8 30 a.m.; 6 30 p.m.

Horses and carriages can be embarked and disembarked at the New Cross as well as at the London Bridge station, at each of which post-horses may be had to convey carriages to or from any part of London, at a charge of 10s. 6d., including post-boy. They will be in readiness also at the Tunbridge station on the arrival of every train to convey carriages to Tunbridge Wells, at 10s. 6d. each, including the driver, and to all other places at 1s. 6d. per mile.

Omnibuses ply for every train between the London Bridge station and the following coach offices, viz.:—Griffin's Green Man, Oxford-street; the Universal office, Piccadilly; the Cross Keys, Wood-street; the Swan with Two Necks, Lad-lane; and at any of Messrs. Horne and Chaplin's offices, at which, and at the London Bridge station, parcels may be booked for all places in connexion with the railway.

Full particulars and time-tables may be obtained at the London Bridge Station, and at the Offices of the Company, 10, Coleman-street.

By order,
JOHN WHITEHEAD, Secretary.

10, Coleman-street, June 1, 1842.

LONDON AND GREENWICH RAILWAY.—RAILWAY TRAINS RUN to and from London Bridge and Greenwich Stations direct, every quarter of an hour, from 8 in the morning till 10 at night; on Sundays from 8 till a quarter-before 11 in the morning, and from 1 till 11 at night Fares—First-class, 9d.; second ditto, 6d. The journey is performed in 12 minutes. Conveyances always in attendance at the Greenwich terminus to convey passengers to Woolwich, Charlton, Blackheath, &c. Omnibuses at the London terminus to Paddington on the arrival of the trains.

N.B.—Special extra trains may be engaged on application to the Inspectors on duty, to convey passengers from Greenwich after 10 o'clock at night, at the price of 50s. per train, all passengers above 50 to pay 1s. each.

J. Y. AKERMAN, Secretary.

Office, 37, Canterbury-square, Southwark,
June 16, 1842.

LONDON AND GREENWICH RAILWAY COMPANY.—NOTICE is hereby given, That a Half-yearly General Meeting of the Proprietors of this Company will be held at the London Tavern, Bishopsgate-street, on Thursday, the 28th of July instant, at Twelve for One o'Clock precisely.

The Chair to be taken at 12 o'Clock precisely.

GEORGE CARR GLYN, Chairman } of the Board
JOSEPH F. LEDSAM, Dep.-Chairman } of Directors.

By order,
R. CREED, Secretary.

YORK AND NORTH MIDLAND RAILWAY.—NOTICE is hereby given, That the Half-yearly General Meeting of Proprietors of Shares in the York and North Midland Railway Company will be held in pursuance of the provisions of the Act of Incorporation, in the Offices of the said Company, Tanner-row, in the City of York, on Tuesday, the 2nd day of August next, at Twelve o'Clock at Noon precisely.

The Report of the Directors, and a Statement of the Accounts, will be ready for the inspection of the Shareholders, on Monday, the 1st day of August.

GEORGE HUDSON,
Chairman of the Board of Directors.
GEORGE BAKER,
Clerk to the Company.

Railway Office, York, July 13, 1842.

BRISTOL AND GLOUCESTER RAILWAY.—The Directors of this undertaking will receive Proposals for LOANS of Money on Debentures, to be issued under the Provisions of the Acts of Parliament, in the month of October next, in sums of not less than £200, for terms of three, five, seven, or ten years, on Interest, at the rate of £5 per cent. per annum, payable half-yearly, at the Banks of Messrs. Miles, Harford, and Co., Corn-street, Bristol; and Messrs. Barnetts, Hoare, and Co., Lombard-street, London

For monies immediately advanced the security of Loan Notes, under the Seal of the Company, will be given, which may be exchanged for Debentures in the said month of October.

Tenders expressing the Sums and terms of years, to be addressed to the undersigned, at the Company's Office, Exchange Buildings, Bristol.

By order of the Committee of Management,
ROBERT FLETCHER, Secretary.

Office, Exchange Buildings, Bristol, May 30, 1842.

SHEFFIELD, ASHTON-UNDER-LYNE, AND MANCHESTER RAILWAY.—TENDERS FOR LOANS.—The Directors are prepared to grant Mortgages, under the powers of their Act of Parliament, for Loans of Money, in sums of not less than £200 each, and for periods of three, five, or seven years, at the option of the lender. Interest at the rate of 5 per cent. per annum will be paid half-yearly, for which interest warrants will be given for the period agreed on, payable at the Company's bankers in London, Manchester, or Sheffield.

Further information may be obtained at the Company's Offices in Manchester or Sheffield; at the Office of T. J. Parker, Esq., Sheffield; Messrs. Bagshaw and Stephenson, Manchester; or Messrs. Johnson, Son, and Weatherall, Temple, London.

By Order,
JOHN PLATFORD, Secretary.

Manchester, April 27, 1842.

NORTHERN AND EASTERN, BRIGHTON, CROYDON, DOVER AND SOUTH-EASTERN RAILWAYS.—Messrs. HORNE and CHAPLIN having effected the necessary arrangements for the conveyance of passengers and parcels by railway, and thence by coaches to the following places, beg to state, that places can be secured, and parcels booked at and forwarded from their several offices, where every information may be obtained as to the Hours of Departure, Rates of Fares, &c. &c., to

Norwich	Huntingdon
Cambridge	St. Neots
Wells	Biggleswade
Holt	Bury St. Edmunds
Dereham	Bishop Stortford
Fakenham	Hockerill
Newmarket	Harlow
Holbeach	Hertford
Wisbeach	Hoddesden
Chatteris	Waltham Cross
St. Ives	Ware

Also to

St. Leonards	Maidstone
Hastings	Godstone
Rye	Reigate
Battle	Worthing
Cranbrook	Lewes
Tenterden	Eastbourne
Tunbridge Wells	Horsebridge
Tunbridge	Hailsham
Penshurst	Uckfield

From the

Spread Eagle, Gracechurch-street.
Swan-Two-Necks, Lad-lane.
Cross Keys, Wood-street, Cheapside.
Golden Cross, Charing Cross.
George and Blue Boar, Holborn.
Spread Eagle, Regent Circus, and
Griffin's Green Man and Still, Oxford-street.

HORNE & CHAPLIN, Proprietors.

SURREY.—To be LET, a genteel Cottage Residence, suited to a respectable family, and containing dining room, drawing room, and study, five bed rooms, kitchen, pantry, and other usual domestic offices; with stable, coach-house, productive garden, and about 10 acres of excellent meadow land immediately adjoining thereto. This residence is very pleasantly situated at Brockham Green, near Dorking, and within five miles of the South-Eastern and Brighton Railway Stations. For terms and further particulars, apply to Messrs. Clutton, Surveyors, Hartswood, Reigate, and 8, Parliament-street, Westminster.

Lately published, price 2s. 6d.,

THE HYDRAULIC RAILWAY; being a carefully digested but plain Statement of the advantages to be derived, and the impediments removed, in establishing Hydraulic Propulsion on Railways; with a wide frontispiece of the Hydraulic Railway in operation, and a large drawing of its machinery. By J. G. SHUTTLEWORTH, the Patentee.

Sold by J. and J. Thomson, Market-street, and Simms and Dinham, Exchange-street, Manchester; J. Weale, High Holborn, London; and by all booksellers.

TO ENGINEERS.—A young Gentleman who has been about twelve months in a Surveyor's office, and subsequently served two years with an Engineer in general practice, is desirous of engaging himself to an Engineer with whom he may obtain additional practical experience for two years. No salary is required for that term. The Advertiser is a good Draftsman, and has had some experience in directing workmen and in field works. Respectable references will be given and required.

Address A. B., care of Leyland and Son, booksellers, Halifax, Yorkshire.

NEW EDITIONS of the following useful Works are just published at the *Railway Times* Office, 122, Fleet-street:

I.

TUCK'S MAP OF THE RAILWAYS for 1842 throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. V.

TABLES OF HACKNEY CARRIAGE FARES from the GREAT WESTERN RAILWAY to all parts of the Metropolis, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

THE TENTH THOUSAND.

Just published, *in a Sealed Envelope*, price 3s., and sent free, on receipt of a Post-office Order, for 3s. 6d.,

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection; followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases, &c.

By J. L. CURTIS and Co., Consulting Surgeons, London.

TENTH EDITION—Published by the Authors, and sold by Balliere, Medical Bookseller to the Royal College of Surgeons, 219, Regent-street; Strange, 21, Paternoster-row, London; Guest, 51, Bull-street, Birmingham; T. Sowler, No. 4, St. Ann's-square, Manchester; G. Philip, South Castle-street, Liverpool; Fannin and Co., 41, Grafton street, Dublin; Drummond, 114, High street, Edinburgh; and sold in a *sealed envelope*, by all Booksellers.

OPINIONS OF THE PRESS.

"This work, *a tenth edition* of which is now presented to the public, *ten thousand copies having been exhausted since its first appearance*, has been very much improved and enlarged by the addition of a more extended and clear detail of general principles, as also by the insertion of several new highly interesting cases We feel no hesitation in saying that there is no member of society by whom the book will not be found useful, whether such person hold the relation of a *parent*, a *preceptor*, or a *clergyman*."—SUN, evening paper.

"This is a work that we fear there exists too much need for to cause us to hesitate to recommend it for general perusal. Every branch of those frightful maladies, whether the result of immoral habits or secret vices, is here succinctly treated, and divested of all medical technicality; plain and easy directions are given for the best mode to be pursued in all cases, however complicated or apparently hopeless. To the married, as well as the unmarried, this little work alike affords consolation and cure in peculiar cases, and we are doing a service to society in recommending it to general notice."—*Essex and Herts Mercury*.

"Messrs Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable."—*Magnet*.

Messrs. Curtis and Company are to be consulted daily at their residence, No. 7, Frith-street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. The communication must be accompanied by the usual consultation fee of £1, and in all cases the most inviolable secrecy may be relied on.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate-street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Brides, Fleet-street, Middlesex.—Saturday, July 23, 1842.

TELEGRAPHIC RAILWAYS; OR, THE SINGLE WAY, recommended by Safety, Economy, and Efficiency, under the safeguard and control of the Electric Telegraph; with particular reference to Railway Communication with Scotland, and to Irish Railways. By WILLIAM FOTHERGILL COOKE, Esq.

Contents: Objects of the Treatise—Distinguishing Characteristics of present Railways—Evidence before Select Committee—Advantages of Telegraphic Communication—Mode of working the Blackwall Railway, by the Electric Telegraph—Description of the Electric Telegraph—Plan for a "Telegraphic" Railway—Course of an Express Train—Ballast Waggons—Permanent Obstruction—Crossing of Two Trains—Description of Signals—Concluding Remarks on Single Way—Mixed Lines—Scottish Junction Line—Irish Railways—Advantages common to Single, Mixed, and Double Lines—Public Confidence—Reduction of Stock—Income from Telegraph—Alertness—Adaptation to Wants of Country—Conclusion.

London, Simpkin, Marshall, and Co.; Liverpool, Wareing Webb, Castle-street; Manchester, Simms and Dirham; Birmingham, Wrightson and Webb; Leeds, Slocombe and Simms.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secrecy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 230, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

CHESTER AND BIRKENHEAD RAILWAY COMPANY—LOANS, £5,000.—The Company is ready to receive Loans on security of the said Railway for £5,000, in sums of not less than £500 each, at 5 per cent. interest.

Apply at the Company's office, Birkenhead.

WILLIAM DIXON, Chairman.

BRISTOL AND EXETER RAILWAY.—CONTRACT FOR WORKS.—Notice is hereby given, That the Directors of this Company will be ready to receive at their Office, No. 30, Broad street, Bristol, on Friday, the 12th of August next, at or before Twelve o'Clock, Tenders for the following Contracts:—

Tunnel Contracts, Nos. 1, 2, 3, and 4.—Consisting of the sinking of shafts, and completion of the respective portions of the tunnel at White Ball-hill.

Contract No 1, E.—The excavation and formation of the earthwork, and construction of all bridges, culverts, and other masonry, the ballasting, and the entire completion (except the formation of the permanent way) of that portion of the railway extending from the north end of the parish of Burlescombe to the road No. 60, near Pugham Mill, in the same parish; being a distance of about two miles.

Contract No. 2, E.—The execution of similar works on the portion of the railway extending from lane No. 38, in the parish of Halberton, to the Honiton turnpike-road, in the parish of Cullompton; being a distance of about two miles and three-quarters.

Drawings and specifications will be exhibited at the Engineer's Offices, in Temple Meads, on and after Monday, the 25th of July.

Printed forms of Tender may be obtained at the same place, and at the office in Broad-street.

The Directors will not consider themselves bound to accept the lowest Tender. They expect the several parties to attend in Broad street, at Twelve o'Clock, on the 12th of August.

The Company having on hand a certain quantity of rails and waggons, the Directors are willing to receive, at the same time, Tenders for them from the parties who may undertake any of the above works.

By order of the Directors,

J. B. BADHAM, Secretary.

Bristol and Exeter Railway Office, 30, Broad-street,
Bristol, 15th July, 1842.

AN ELEGANT AND USEFUL PRESENT.

Just Published, in One Volume, price 5s. 6d., handsomely bound, with gilt leaves, sides, and back, and illustrated by

FOUR HUNDRED ENGRAVINGS,

PICTURESQUE EXCURSIONS; forming, by means of its engravings and descriptive letter-press, a complete Guide to, and Remembrancer of, all scenes of interest connected with the following places and their neighbourhoods:—Richmond, Hampton Court, the river Thames from Kingston to the Nore, Margate, Ramsgate, Dover, Hastings, St. Leonard's, Brighton, Shoreham and its Railway, Worthing, Bognor, Southampton, Netley Abbey, Lymington, and the Isle of Wight. Edited by Arthur Freeling.

"A work in which the elegant and the useful are eminently combined."

London: Ackerman, Strand; *Railway Times* Office, Tilt & Bogue, and Bell & Wood, Fleet-St.; and all Booksellers.

CEMENT.—To ARCHITECTS, BUILDERS, and Others.—The PATENT STUCCO PAINT CEMENT.—Its extraordinary qualities are rapidly becoming well known and appreciated. It will adhere to any substance or surface—no wet, or damp, or frost, can have any effect on it—time hardens and improves it—a house covered with it becomes encased in stone—the cost is trifling. The invention is a fortune to Builders, and to all who are interested in house property, old or new. The sole agents for the Patentees are Messrs. MANN & Co., 5, Maiden-lane, Queen-street, Cheapside.

CRANES, ROPE BLOCKS, AND SCREW JACKS, manufactured by ELLIS AND NOTON, Salford, Manchester.—Fixed and Travelling Cranes, for Railways, Wharfs, and Warehouses, to lift from 5 cwt. to 20 tons and upwards, either by hand or steam power; Patent Signal Switches for Railways; Travelling and Fixed Crabs for builders, and Hoisting Tackle of every description, on the most improved principle.

Drawings of the above may be seen, and particulars obtained, at the works in Manchester, and at the office of C. F. Cheffins, 9, Southampton Buildings, Holborn, London.

LONDON AND GREENWICH RAILWAY COMPANY—GENERAL MEETING.

The half-yearly general meeting of the proprietors of the London and Greenwich Railway Company was held on Thursday, at the London Tavern, Bishopsgate-street, and was very numerously attended; William Shadbolt, Esq., in the chair.

Disorderly as the meetings of the Greenwich Company usually are, this surpassed in noise and confusion all previous exhibitions; but as the incessant interruptions which occurred would in no way illustrate the arguments, or confirm the statements of the several speakers, we shall, in the following report, notice them as seldom as possible. From this cause we must necessarily give a mere outline of various parts of the proceedings.

The Secretary (I. Y. Akerman, Esq.) having read the advertisement calling the meeting,

The Deputy-Chairman (Josiah Wilson, Esq.) read the following Report from the Directors, (a printed copy of which and of the accounts had been put into the hands of every proprietor on entering the room), and also the following Report from the Consulting Engineer.

DIRECTORS' REPORT.

The time having arrived when a statements of the accounts of the past half-year, with the proceedings of your Directors since they had the pleasure of meeting the proprietors, should be laid before you, your Directors beg to state that, agreeably to the conviction expressed in their last Report, the new works necessary for widening the railway, and forming the area of the station to be exchanged for the Croydon station, have been completed, in due time, and within the estimates, and, on the 10th of May last, the additional lines up to the Croydon junction were opened to the public. The Brighton, South-Eastern, and Croydon trains are now running thereon, and paying the increased toll of 1½d. per passenger. It will be satisfactory to hear that these works have been inspected and approved by General Pasley, the Inspector-General of Railways.

Your Directors, consulting the wishes of the Brighton, South-Eastern, and Croydon Railway Companies, have not yet effected the interchange of stations, and, until that shall have been accomplished, the building of the offices must necessarily be postponed. A general plan or elevation, comprising the offices of the four Companies, has, however, been agreed upon, and will be carried into execution so soon as general convenience will permit.

It will be recollected that, in the last Report, your Directors stated that an application had been made to Parliament for power to purchase a piece of ground agreed on by the Rectors and Churchwardens of the parishes of St. Olave and St. John for a burial ground, in substitution of theirs, required for the approach to the railway; but, finding public opinion so strong against interments in populous places, and a considerable opposition being threatened to the Bill, application was made to the parties to accept a sum of money for the purchase of their burial-ground, instead of another piece of ground, as required by the Act, which, after much negociation, they consented to, and a contract was entered into accordingly, subject to this Company obtaining power from Parliament for the purpose. The first-mentioned Bill was therefore abandoned, and an Act to enable the Company to purchase the burial-ground has been obtained. The attention of the Board is now directed to the formation of the approach to the railway from Borough High-street upon a level, and the requisite plans are in a state of forwardness.

In consequence of the differences between the Commissioners of Pavements and this Company having been referred to arbitration by the Court of Queen's Bench, the application to Parliament mentioned in the last Report, for power to purchase property for the purpose of making certain alterations in the streets, has not been proceeded with.

The station at Deptford has been completed, and opened to the public; and the Spa-road station is in course of erection. The relaying of the permanent way on wooden sleepers, in lieu of stone blocks, is now accomplished, and the whole line is in excellent working order. These circumstances, with others, the particulars of which may be found in a comparative statement of expenses now submitted to the proprietors, have enabled your Directors to effect a considerable saving in the expenditure. It will be observed that, in every item of charge which your Directors could control, they have effected reductions, amounting in the whole, as compared with the corresponding half-year, to 1,918*l.* 4s. 2d. But, however satisfactory it must be to find a reduction in almost every department, it is in a great measure counteracted by the increase of expenses, such as rates and taxes, not in the power of your Directors to abate, and by the decrease in the number of passengers, and consequent diminished receipts. The latter may, perhaps, be accounted for by the experiment of the altered prices not having proved successful, and your Directors are therefore induced to think that a return to the former prices may be desirable.

By the statement of accounts now submitted to the meeting it will appear that, after charging the usual half yearly amount of 1,000*l.* towards the liquidation of the expenses incurred by the re-laying and asphalting of the line, there will be a balance of 3,201*l.* 17s. 3d. applicable to the payment of a dividend, and your Directors therefore recommend that a dividend of 1s. 6d. per share be paid accordingly on all the unprivileged shares. The amount of income tax thereon will be borne by the Company.

Although the result of the traffic from the Brighton, Croydon, and Dover lines, for the last six months, has produced only 3,402*l.*, making an average of 567*l.* per month, yet during the last two months, since the increased toll has been received, the average has been 931*l.* per month, which induces the reasonable expectation that a progressive increase will take place, and that the just expectations of the shareholders will yet be realised, particularly as the Brighton traffic cannot be said to be entirely, and the South-Eastern and Dover scarcely at all developed; notwithstanding which, your Directors have the satisfaction of finding that the railway has been able to pay all its obligations, including interest on its mortgage debts, as well as the privileged shares, and with very little assistance from the contributing lines, has still the before mentioned amount left for the proposed dividend. The hopes of future prosperity are, therefore, based upon the expectations of increased traffic from the other lines now coming into operation.

The Croydon Company having brought into Parliament a Bill for making a road or approach from the Grange-road to their railway, but which, from the evidence, was obviously intended for a railway, your Directors felt it their duty, aided by most of the influential proprietors, to use every exertion in opposing the measure in Parliament, and are happy to say that the House concurred in their view of it, and threw out the Bill by a large majority.

Three vacancies have occurred in the Direction since the last meeting, by the resignation of Moses Asher Goldsmid, Esq., Andrew Bonar, Esq., and Joshua Field, Esq., your Directors have filled up the same by the election of Andrew Kennedy Hutchison, Esq., William Hughes Hughes, Esq., and John Small, Esq., whose election your Directors recommend should be confirmed, feeling assured that those gentlemen will, by their influence and exertions, render important services to the Company.

WILLIAM SHADBOLT, Chairman.

ENGINEER'S REPORT.

42, Fish street Hill, July 28, 1842.

To the Chairman and Directors of the London and Greenwich Railway Company.

Gentlemen,—I have the honour to state, that since my last half yearly Report, addressed to the Chairman and Directors, dated on the 12th of February ult., wherein I asserted that the whole of the works for widening the railway, together with the additional space required to be made to the London station, were so nearly finished that I was then enabled to assure you that the total cost thereof would fall considerably under the amount of my estimate. I have now the satisfaction of confirming that Report, and of adding that General Pasley, the Inspector-General of Railways, having approved of the execution of the said works, the traffic thereon commenced the 10th day of May ultimo, and has from that date continued without the slightest interruption.

The drawings and preliminary arrangements for improving the approach to the London station from Wellington-street are in a forward state.

I have the honour to be, Gentlemen,
Your most obedient humble servant,
(Signed) GEO. LANDMANN.

Those passages in the Report which refer to a return to the former charges on the line, and to the defeat of the Croydon Company's Bill, were vehemently applauded.

The CHAIRMAN moved, that the Reports be received, adopted, and printed for circulation among the proprietors.

The DEPUTY-CHAIRMAN seconded the motion.

A PROPRIETOR said, it was stated in the Report that the new works had been completed for less than the estimate, but it was not stated for how much less.

The DEPUTY-CHAIRMAN said, they could not as yet state the precise amount, but certainly the works had been completed within the estimate.

Mr. KETTERICK, referring to the passage in the Report which states that the Income Tax on the proposed dividend will be borne by the Company, was of opinion that this plan would give Government a larger sum than need be paid, since many of the proprietors might have a less income in the aggregate that 150*l.* per annum. The common sense view of the case was, that the proportion which each had to pay should be deducted from his gross dividend, and then those who had less than 150*l.* a year could recover back the amount paid.

Mr. HICKENS said, the Company must pay the amount.

Mr. CORNEY (a Director) observed, that the dividend of 1s. 6d. per share comprised the profits made during the whole year, but as the Income Tax was payable from April only, a tax upon the whole of the 1s. 6d. would be unfair. It was after all a mere trifle.

Mr. MONEY thought it extremely unfair, if it were proposed to pay the whole Income Tax incurred by the Company out of the surplus which was to be appropriated among the original shareholders, who were already poor enough. He himself held equally of both classes of shares—the old and the privileged—but others might be placed in a different position.

The DEPUTY-CHAIRMAN said, it was by no means intended that the original proprietors should pay more than their own proportion. The per-centage had already been deducted from the bondholders and would be deducted from the preference holders, when *their* dividend came to be paid.

Mr. KETTERICK referred to the paragraph in the Report relative to the interchange of stations, and inquired if the general plan there alluded to comprehended two stations.

The DEPUTY-CHAIRMAN said, it had reference to a station for each of the four Companies. The plan was a very magnificent one, and might be inspected at the offices of the Company.

Mr. KETTERICK next adverted to the asphalting of the arches. He was happy to hear that this had been done, but it had cost the Company 1,700*l.*

The CHAIRMAN—Including the relaying.

Mr. KETTERICK was sorry that the line had not been properly laid at first.

The CHAIRMAN said, the present Board were not responsible for *that*.

The DEPUTY-CHAIRMAN said, the stone blocks and rails which had been removed, would fetch between 3,000*l.* and 4,000*l.* in reduction of the charge for re-laying.

Mr. KETTERICK hoped, that now the arches were water-proof, some use might be made of them. It had been stated at the last meeting that some of them had been let.

Mr. CORNEY said, there were 52 arches let producing 500*l.* a year. Of these 25, producing 165*l.*, had been let since the last meeting, and the Directors were now negociating for the letting of 28 more. In fact, they were progressing very satisfactorily, and as fast as circumstances would permit. (Hear, hear, hear.)

Mr. KETTERICK was glad to find that there had been a reduction in the current expenditure, although it was accompanied by a decrease in the number of passengers. If the Directors in expressing their opinion that a return to previous prices might be desirable, meant a return to higher fares, he for one could not agree with them, for considerable as the decrease of revenue now was, he had no doubt it would in that case be more considerable still. ("Hear, hear," and "No, no.") The Directors should bear in mind that in addition to having to compete with the steam-boats, the railway was placed on the other side of London Bridge, so that many persons preferred the steamers as more readily accessible. He thought the Railway Company ought to hold out at least equal attractions with the steamers as regarded fares, and, if possible, greater attractions. He had maturely considered this subject, and talked with others who had done the same, and their opinion and his was, that if the railway could hold out greater attractions to the lower classes of society, by whom it was principally supported, and to whom as pleasure hunters 2d. was frequently an object, it would be able to compete more successfully with other modes of conveyance. He should like to see a third-class carriage established. He should like to see at least the lower class of fares the same as those on the Blackwall line. [The DEPUTY-CHAIRMAN—The Blackwall fare is 4d. Our great complaint is, that even now almost all the passengers go in the inferior carriages.] When he saw the Blackwall Company taking 500*l.* a week more than the Greenwich, he thought the Greenwich fares might with advantage be placed on the same footing. It was true that the Blackwall line had the advantage of summer excursions down the river [DEPUTY-CHAIRMAN—And the attraction of white-bait], but he was convinced that if the Blackwall fare had been 6d. instead of 4d., that Company would not have earned so much. [DEPUTY-CHAIRMAN—They are losing money by it.] He thought there ought to be a third-class carriage on the Greenwich line, at a fare of 4d. The next class might be charged 6d., and the best class 9d. or 1s., if deemed desirable. He did not wish to bring forward any motion on the subject, but when he saw that at Easter and other holiday times, the steam-boats were advertised to run for 4d., he was satisfied that the railway could not have its resources fully developed at a fare exceeding by 2d. that of the rival conveyance. (Hear, hear.)

The DEPUTY-CHAIRMAN said, it was possible that matters of this kind might frequently be brought forward at public meetings with good intentions, but being founded on inexperience, they would generally be found injurious if carried out. The Directors had given, and continued to give, the question of fares their best attention, and would be glad to confer on the subject with the honourable proprietor who had just spoken, or with any other shareholder, but they thought it injudicious to moot the question at a general meeting. (Hear, hear.) It was the peculiar province of the Directors, whom he hoped they looked upon as honest men, to determine such points. They found that bankers and merchants, and others moving in a respectable sphere of life, used the 6d. carriages, and that the others were almost deserted. (Hear, hear.) During the last half-year they had been earning nothing more than before, and it was that consideration which induced the Board to give an opinion that a return to the former prices might be desirable. (Cries of "No, no.") He hoped the matter would be left in the hands of the Board. The present prices had been tried in deference to wishes expressed at a previous meeting, which proposition had been based on inexperience, and if the question were handled now, a similar result might ensue. (Hear, hear.)

Mr. KETTERICK thought they had the best possible experience to guide them, namely, that of the steam-boats and the Blackwall Company.

The DEPUTY-CHAIRMAN—The Blackwall Company are losing money.

Mr. CORNEY begged to state, that in 1839 the Greenwich Company carried 10,000 fewer passengers than during last year, but earned 4,000*l.* more. (Hear, hear, hear.)

Mr. KETTERICK said, they had not so much competition to contend against in 1839 as now.

Mr. ADDISON thought this question should be left to the Directors, but at the same time they ought to give the experiment of reduced fares a longer trial. (Cries of "No, no," "Yes, yes.")

Mr. D. SALOMONS deprecated the discussion of such matters at public meetings. As to bankers and merchants riding in the inferior carriages, these parties had a perfect right, as well as others, to choose their own mode of conveyance, although it would be well if they would occasionally think of those whose capital was invested in procuring the accommodation, and patronise the superior vehicles. A matter which was so much one of detail as the proper rate of fare to be charged, ought in his opinion to be left entirely with the Directors, who, if worthy of confidence at all, were worthy of the full confidence of the proprietors, and upon whom the whole of the responsibility of such things ought to rest. Higher fares were not satisfactory, and now low fares were complained of. He was sure that the proprietors generally were not sufficiently acquainted with all the circumstances of the case to give an opinion which could be safely acted upon, and he hoped, therefore, that this question would not be further discussed, but that another part of the Report would now be brought under consideration. (Hear, hear, hear.)

Mr. KETTERICK, after disclaiming all desire to interfere in matters appertaining to the office of Directors, asserted his right, as an independent shareholder, to give an opinion upon a matter which, although the honourable proprietor who had last spoken might consider it secondary, he (Mr. Ketterick) deemed to be of primary, nay vital, importance. (Hear, hear, hear.)

Mr. LEWIS LEVY adverted to the differences between the Croydon and Greenwich Companies, and said, he was one of the six or seven individuals who, at the late Croydon meeting, had stood up against the Grange-road scheme. (Hear, hear.) It had been thrown in his teeth, that he held more Greenwich shares than Croydon, otherwise, it was said, he could not have acted as he did. Now the fact was, that he held but 25 Greenwich shares, while he held 500 Croydon. (Hear, hear.) Had

Digitized by Google

it been otherwise, he hoped he should not have been swayed by the consideration of a few pounds of return more or less. He knew, however, the integrity of the Greenwich Directors, and he stood up for justice. (Hear, hear.) At the Croydon meeting he had been met by two gentlemen, one of whom got up and said, that he held 200 Greenwich shares and yet, that he thought the Grenwich Board in the wrong. He hoped these gentlemen were now present, and he would call upon them to explain why they thought so. It was unfortunate that there should be any dispute, but in his opinion the Greenwich Company had right on their side. (Hear, hear.) If, however, the matter could be amicably adjusted for the interests of both Companies it would be very desirable. The Grange-road B ll had not merely been thrown out by the House of Commons; it had been kicked out—(loud laughter)—and in his opinion very properly so, for it was clear that the parties wanted to construct a railway in a barren spot which had scarcely ever been heard of. (Renewed laughter.)

Mr. SALOMONS said, this was a question where there was a great deal of right on the Greenwich side, and some right on the other side. (Cries of "No, no," "Yes, yes," and considerable interruption.) He would repeat, that there was some right on the Croydon side, for there was scarcely any question where it was not so. If the proprietors of the Greenwich Railway came to those meetings merely to cry "No, no," and "Yes, yes," and to clamour for no surrender, the matter would pro bably remain unsettled for another year. But he would ask if it were not for the benefit of the public and of both Companies that some approximation should be made to a better understanding. His own position in addressing the meeting was this. He held shares in the Greenwich line—old shares only—but not a single share in the Croydon, having purposely disqualified himself. He held shares in the South-Eastern line, but he trusted that he should not be considered as in any way swayed by self-interest in the discussion of this question. It was as one of the public that he spoke, and that he protested against the continuance of this unseemly contest, which might have been settled very easily by half a dozen men of experience and impartiality. The press was teeming with the squabbles of the parties, and here was one of them seen covertly bringing in a Bill to deprive the other of their toll. (Hear, hear.) He would give no opinion as to the right of the Croydon Company to apply to Parliament, but he was sure that no member of the House who had voted for the arrangement which compelled the Greenwich Company to widen their line, could consistently have supported the Grange-road Bill. But whatever might be the merits of the dispute between the two Companies, the question must at last be looked upon as affecting a third party—the public—and, if not otherwise settled, it was more than probable that Parliament would ultimately interfere. He thought it might easily be arranged if the subject were approached without excited feelings. This Company had been compelled to expend a large sum of money in widening their line, and that sum ought to be paid back, or an equivalent return secured. He hoped there would be moderation at the Greenwich Board for the sake of their own proprietors and the public, and at the Croydon Board for their own honour. This question ought never to have been dragged before the public. [A VOICE—Who dragged it?] He did not care which party was right or which wrong, but the dispute ought to be settled, as during its continuance the interest of the public was being damaged, and of course the interest of both Companies. He must say that the Croydon Directors had behaved most unhandsomely in slyly bringing in the Grange-road Bill. (Hear, hear.) If the Directors entertained feelings of personal hostility—[The DEPUTY-CHAIRMAN—We totally disclaim every such feeling] if the Directors could not coolly and calmly approach the discussion, let them appoint some of the proprietors to settle it. (Cries of "Parliament *has* settled it," and much confusion.)

Mr. MACLAUREN called the honourable proprietor to "order," and was met by counter cries of "Chair, chair." At last,

Mr. SALOMONS resumed, and said, he was sure there must be personal feelings involved in the dispute or certain acts would never have been undertaken, he would not say by individuals, but the Boards collectively. He would repeat his earnest hope that this unseemly dispute would speedily be arranged. He thought the Greenwich Directors had been remiss in not opposing the Grange-road Bill at an earlier stage. [The DEPUTY-CHAIRMAN—There was a good reason for that.] The matter was very easy of adjustment, if a meeting were to take place for the purpose.

Mr. HOMER said, he had attended the House of Commons' Committee for 15 days, when the widening of the line was in discussion about two years ago, and he believed the Deputy-Chairman had been present for 21 days. [DEPUTY-CHAIRMAN—I attended for 22 days.] There had been a strict Parliamentary investigation with an array of counsel on each side, and although many of the Kentish members, to whom principally the question was referred, had naturally leaned to the other side as affecting their constituents, the Greenwich Company had triumphed. After passing through all that ordeal when it was attempted first to cut off the Greenwich line altogether, and next to pay no additional toll, the matter had been settled, and there ought now to be no abatement. (Applause.) He would not treat at all respecting it. (Renewed applause.) He spoke the feelings of the proprietors in Birmingham and its neighbourhood, whose proxies he held, and on whose behalf he had again attended the House of Commons' Committee for seven days about six weeks ago. Notwithstanding the powerful influence opposed to them, the Greenwich Company had relied upon the justice of their case, although they had hardly got justice. [The DEPUTY-CHAIRMAN—Hear, hear.] They ought to have had a 6d. toll granted them. When would a 4½d. toll redeem the increased capital? [DEPUTY-CHAIRMAN—It never will.] Compromising would do no good. They might lose, but they could not gain. (Hear, hear.) He trusted it would be the unanimous sentiment of the proprietors that the Directors should stand by what Parliament had determined. (Cries of "All, all.") Let them not be frightened by the squibs of impudent and monstrous publications. [A VOICE—And dishonest.] The voice of the meeting ought to be "Stand fast." (Cries of "Leave it to the Directors.") He had every confidence in the Directors, and he hoped they would never yield. He would now say a few words upon another point. The Report stated, that a saving of 1,900*l.* had been effected in the expenditure, and yet after all they had only a dividend of 1s. 6d. for twelve months. He was almost ashamed to go home with it. ("Hear, hear," and laughter.) He thought the Directors might have reduced their own allowance. (Hear, hear.) He admitted most readily that they had not more than a compensation for their labour, but while the proprietors could so ill afford it, they might give up a part. [DEPUTY-CHAIRMAN—If we were to give up all, it would not make a difference of more than 2d. or 3d. in the dividend.] It was not so much the actual addition to the dividend that he looked at, as the example of economy that would thus be set before all below them. Without offence to the three newly-elected Directors, he thought 6 Directors were quite sufficient to manage the affairs of the Greenwich Railway. On the Birmingham and Gloucester line, although there were 12 Directors, only 5 of them usually acted, the rest being called in on emergencies. [A VOICE—The Birmingham and Gloucester Direction is a failure.] It would be found that five or six parties could get through work better and more quickly than a dozen. [The honourable proprietor was proceeding in the same strain, when he was interrupted by cries of "Question."]

Mr. ADDISON said the proprietors were greatly indebted to the Directors for their recent exertions in Parliament, and he hoped this question would therefore be postponed. (Hear, hear.)

Mr. HOMER gave the Directors credit for zeal and ability at all times, but the Company could not afford to pay them 800*l.*, and he would move that that sum be reduced to 500*l.* (Confusion.)

Mr. MONEY would warmly second the proposition, and of all parties present he ought to do so, for he had been for years Chairman of this Company when no remuneration was granted to the Directors. (Hear, hear, hear). When repeatedly appealed to to propose an allowance he had always said, "No; it will be time enough when the proprietors can afford it." (Hear, hear, hear.) When it was proposed to give the present Board 800*l.* a year for their services, and it was urged that payment might be an object with some of the poorer of them, he had intimated his intention of proposing a similar vote with respect to the old Board, and the present Directors had promised him their support, but when he brought it forward not one of them did so. (Hear, hear, hear.) The Company were not in a position to pay this 800*l.*, more especially when it was paid entirely out of the small pittance of the original proprietors, and the preference shareholders paid nothing. (Loud applause.) He would admit that the Directors deserved the 800*l.*, but the Company could not afford it. When this 800*l.* was voted, he, but for being unavoidably late in his attendance at the meeting, would have moved that a considerable proportion of this allowance should have been borne by the holders of preference shares. (Renewed applause.) As he had already said, he held equally of both, so that to himself individually it mattered not how it was paid. The property of the original proprietors had been destroyed by the mode adopted for raising the last capital. To those who could not take up their proportion of the new shares the mode of raising the capital was fraudulent. (Hear, hear, hear.) The Directors of course did not view it in that light at the time. [The honourable proprietor then referred to a little work which he had written on the subject, and stated that any proprietor might have a copy of it by sending to his residence.] Unless the preference shareholders chose to pay a portion of the Directors' allowance, its amount ought to be reduced. On that ground he should support the motion. (Applause.)

Mr. W. A. WILKINSON (Chairman of the Croydon Railway Company) said, he was placed in a peculiar position in addressing that meeting, and he would briefly state what had induced him to become a shareholder in the Greenwich Company. In arguing the proposed modification of the toll, he had been actuated by a sincere desire to promote the mutual interest of the two Companies. [A VOICE—It is dishonest.] It was his firm belief that the Greenwich shares would be benefitted. (Disturbance.) If he were addressing an unwilling audience he should desist. (Cries of "Go on," and renewed confusion.) He had not intended to take any part in the proceedings of the day, had not the subject of toll been mooted by others. He had come there, he would assure them, not to create disunion, but to advocate conciliation. (Cries of "Oh, oh.") Honourable proprietors argued that by the Act of Parliament the toll was fixed at 4½d., but had that toll answered their expectations? It was quite a mistake to suppose that the Croydon Company wished to take anything from the Greenwich. (Laughter, and ironical cries of "Certainly not.") The Greenwich Company had a right to get all they could——

Mr. MACLAUREN (interrupting) must protest against this line of argument. (Great confusion, and vociferous shouts of "Sit down." Mr. Maclauren stood his ground for some time, but at last gave way.)

Mr. WILKINSON resumed—He did not observe in the accounts any division of the 3d. and 4½d. toll, and perhaps such could not be given; but he held in his hand a return, from which it appeared that in the eight weeks that had elapsed since the 4½d. toll came into operation, the Croydon Company had paid, or would have to pay, to the Greenwich as toll, the sum of 780*l.* 11s. 7½d., whereas

Digitized by Google

in the corresponding eight weeks of last year with the 3d. toll, the amount paid was 912*l.* 2s. It was true that the Brighton Company now carried some of the Croydon passengers, but the total toll upon these payable to the Greenwich Company during the eight weeks referred to, was only 131*l.* 2s. 6d., so that while in 1841 the amount received in eight weeks by the Greenwich Company on a 3d. toll was 912*l.* 2s., this year with a 4½d. toll it was not more than 911*l.* 14s. 1d.—

The DEPUTY-CHAIRMAN—What were the fares of the Croydon Company?

Mr. WILKINSON—The fares, of course, were different.

The DEPUTY-CHAIRMAN—Of course they were! (Interruption.)

A PROPRIETOR—What have the Croydon Company got by the change?

Mr. WILKINSON—The Croydon Company have lost, but that is not the point which the Greenwich proprietors have to consider. It mattered not whether the toll was called a 4d. toll, or a 6d. toll, or a 1d. toll; the toll which the Greenwich Company should desire ought to be that which would bring them the greatest revenue. (Cries of "So it is.") If the Greenwich Railway were flourishing, if its shares were at a premium, and its dividends as many shillings or pounds as they were pence, then they might talk of "no surrender," but surely in their present position the question deserved at least to be considered and discussed. (Further interruption.) The question lay in a nut-shell, and he would illustrate it by a brief reference to figures. The number of passengers carried by the Croydon Company over the Greenwich line, in 1840–41, was, in round numbers, 379,000; the gross receipts from whom, to the Croydon Company, amounted to 27,000*l.* Of that sum the Greenwich Company received as toll 4,700*l.* Taking the working expenses at 50 per cent. on the gross receipts, there would remain to the Croydon Company 13,500*l.*, from which the 4,700*l.* above referred to was to be deducted, leaving a net profit of 8,800*l.* Now, suppose the fares on the Croydon line to be reduced one half, as has been tried on a northern line—and the Greenwich Company seemed anxious that others should adopt low fares, although they themselves preferred high fares—(Cries of "No, no.")—suppose that that great reduction should have the effect of quadrupling the number of passengers—(Shouts of "Oh, oh," and laughter)—then the Croydon Company, if—[DEPUTY CHAIRMAN—Aye, *if.*]—such increase took place, would realise a gross revenue of 54,000*l.* Deducting, as before, 50 per cent. for expenses, there would remain 27,000*l.*, but the toll of 4½d. to the Greenwich upon so large a number of passengers would be 28,000*l.*; and was it to be expected that in such a case the Croydon Company would work their line and lose 1,000*l.* a year by it, for the purpose of handing over 28,000*l.* to the Greenwich Company? (Confusion.) His colleagues and himself had always been met by the Greenwich Directors saying that the proprietors were averse to any change, and if such were the sentiments of the proprietors, the Directors were bound to act according to them; but he would contend that, whereas they were now getting only about 4,000*l.* per annum, they might easily get 6,000*l.* or 7,000. [The interruption was here so great, some wishing the honourable gentleman to go on, but the greater number opposing it, that Mr. W. declined to enter further into the question.] One word, however, as to the Grange-road Bill. He would deny, most emphatically, that the Croydon Board had acted surreptitiously. The Bill was introduced to authorise the construction of a road, but they were not bound to say to Parliament that that road would never be made into a railway. (Loud laughter, which lasted for several minutes.) They would excuse him when he said that the course which the Greenwich Company were now taking was the most ready one towards the carrying out of a railway. (Renewed confusion.)

The Reverend COWPERTHWAITE SMITH, of Lichfield, said, he held 200 shares in the Greenwich Railway, and he would rather that the Directors should at once throw them into the Thames than listen to any proposition so degrading as that made by the Croydon Company. If they did so, they almost deserved to be tarred and feathered. (Loud laughter.)

Mr. SCRIMGEOUR admired manly conduct, and was sorry that Mr. Wilkinson had not been listened to with more patience. He thought, however, that that gentleman's arguments had only strengthened the Greenwich case. These arguments were made up of *if, if, if.* (Hear, hear.) He (Mr. Scrimgeour) based his arguments on the fact that 2 and 2 made 4, and he preferred this mode of calculation to 2 and an algebraical unknown quantity, which the honourable gentleman said would be 6, but which was more likely to prove 3. He could not think that Mr. Wilkinson coolly and dispassionately believed what he asserted. It was absurd to suppose that any such traffic as Mr. Wilkinson had calculated upon would ever come upon the Croydon Railway. The Croydon Company had been bound to pay the 3d. toll in perpetuity, but then it was intended to be 3d. net, although by some means they had imposed on the Greenwich the payment of the Government tax, and the heavy parochial rates. Could the Croydon Company have ever gone over 1½ miles of metropolitan railway for a sum represented by a 3d. or a 4½d. toll? [The DEPUTY-CHAIRMAN—No; nor a 6d. toll.] *When* the enormous increase of traffic referred to by Mr. Wilkinson was found to exist, he had no doubt a railway would be made somewhere. (Laughter.) The Croydon had always been intended for a trunk line, and as such the opening of the Brighton and South-Eastern Railways must have diminished the toll from the Croydon, however friendly the two Companies had been. The Croydon Company were charging 1s. toll for a railway that cost less than half what the Greenwich cost. [The honourable proprietor went at some length into various illustrations and allusions, amid marked signs of impatience on the part of the meeting.]

Mr. WILKINSON explained and said. the whole of his argument was to the effect that a reduction of toll would produce an increase of revenue.

At a subsequent stage of the proceedings the honourable proprietor alluded to Mr. Scrimgeour's remark, that he (Mr. W.) did not believe what he asserted. Mr. S. denied having said so.

Mr. MACLAUREN had given every attention to the speech of the honourable Chairman of the Croydon Company, but it contained no single feature which had not already been prominently put forward in the *Railway Times.* (Hear, hear, hear.) He would deny that there had ever been a dispute between the two Companies, although the honourable Chairman of the Croydon Company had tried to make it one, by speaking disrespectfully of the Greenwich Directors. [Some altercation here took place, in the course of which Mr. Wilkinson disclaimed the conduct imputed to him, and Mr. Levy stated that, at the meetings of the Croydon Company the Greenwich Directors had always been spoken of with the utmost respect.] *When* the capital of the Greenwich Company was 400,000*l.*, they had a right to enforce a 9d. toll, and when that capital was doubled the same toll was still retained. The Greenwich Company then, in consideration of the traffic to be brought over the trunk line, voluntarily agreed to reduce the 9d. toll 66 per cent, namely, to 3d.; and even after *that* the Croydon Company had by some means contrived to cast upon the Greenwich the duty—and while upon this point he hoped the Greenwich Directors would, as another Company were about to do, try the question. They were now called upon to reduce the toll still further, and because they would not do so the Croydon Directors were obstructing them in every possible way. (Cries of "No, no," and "Yes, yes.") They were charging 6d. for carrying passengers 8 miles from New Cross to Croydon, but if these passengers wished to go over the Greenwich line they charged 9d. for 2 miles. (Great applause.) He would contend that this was a complete obstruction of the agreement entered into between the two Companies. When the question of widening the Greenwich line was in agitation, the Croydon Directors had said that the Brighton and Dover traffic would be lost if this were not done, and when it was done, then they said they would use the widened line just so long as it suited them, and no longer. (Hear, hear, hear.) He had seen a great deal upon this subject in all shapes in the *Railway Times*, which he could not help saying was a very partial observer on this question, and the speech of the honourable gentleman was but a repetition of what had been put forth times out of number. (Hear, hear, hear.) The *animus* of the Croydon Directors showed a disregard of equitable principles. The Chairman had set his wits to work—and every one would allow that he had both talent and perseverance—for the purpose of coercion. The toll ought to be fixed on the principle of relative cost, and on no other, and if necessary he would move a resolution to that effect. (Cries of "No, no." "It is settled by Parliament," &c. &c.)

Mr. Salomons and Mr. Scrimgeour explained.

In the course of the latter gentleman's first address he had alluded to a relation of Mr. Salomons, who he said had been vociferous in applauding all statements favourable to the Croydon Company. Mr. Scrimgeour had also alluded to some one as having "the hands of Esau but the voice of Jacob." On adverting, in his second address, to the same points, Mr. Cohen, the party alluded to, exclaimed, "You are an impertinent rascal." This, of course, led to a scene of the utmost confusion. There were loud cries of "Chair, chair," "Apologise," "Turn him out," &c. Mr. Salomons strongly reprobated the disorderly conduct of his relative, although great provocation had been given. Ultimately Mr. Cohen and Mr. Scrimgeour mutually explained, and order was partially restored.

The DEPUTY-CHAIRMAN said, if the Croydon Directors would go fairly to work to carry out the spirit of the Act of Parliament, by establishing a moderate rate of charge, and if then they could show the Greenwich Company that, with a receipt to themselves of 27,000*l.*, they had, according to Mr. Wilkinson's supposition, to pay 28,000*l.* as toll, could it be doubted that they would be listened to? (Hear, hear, hear.) The Companies were entirely at issue as to whether the relative cost should regulate the toll. Suppose the fare for the 10 miles of the railway from London to Croydon to be 10d., the Croydon Board claimed 8d. for their 8 miles, and would allow the Greenwich only 2d. for *their* 2 miles, although these 2 miles had cost more than the other 8. Was that fair? He did not say that the Greenwich Company ought to have double, but some allowance ought to be made for the greater first cost. (Hear, hear). The disposition of the Greenwich Directors was not to object to anything reasonable, but they would not be dictated to—they would not be threatened by the Croydon Board, who seemed to play the part of the dog in the manger. (Applause.)

Mr. MONEY said, he knew very little of the dispute except from what he had heard to-day; but it appeared to him, that while the Croydon Company were injuring the Greenwich to the extent of 20 per cent., they were injuring themselves 100 per cent. (Hear, hear, hear.)

After some further conversation, it was agreed that the motion for the adoption of the Report should be first put, which was done accordingly. It was carried unanimously.

Then followed a resolution for the payment of the 1s. 6d. dividend, on and after August 22, which also passed unanimously.

On a proposition for confirming the election of the three new Directors,

Mr. TIMOTHY TYRRELL said, it had been understood, at a previous meeting, that every Director should hold at least 100 old shares. Was it so with all the Directors, old and new?

The CHAIRMAN said, it was.

Mr. TYRRELL inquired how many of the Direc-

Digitized by Google

tors were connected with the London Joint Stock Bank.

The CHAIRMAN said, he alone had any such connection.

Some questions were put as to the borrowing of 5,000*l.*, from which it appeared that the money had been advanced by the bank at 5 per cent., while the usual rate of interest was 6 per cent.—that this had been done to save the proprietors from calls—and that no per-centage, as previously, was charged.

The names of Messrs. Hutchison, Hughes, and Small were then severally put, and the election was confirmed unanimously.

Mr. HUTCHISON returned thanks, and stated that he had resolved not to accept the office unless unanimously elected both by Directors and proprietors, because he was confident that the utility of a Director must otherwise be much cramped. Since his election he had given great attention to the affairs of the Company, and believed he was reasonably informed thereon, and he thought the concern, if properly managed, might still be made a thriving one. (Hear, hear, hear.)

Mr. MONEY was glad Mr. Hutchison had been elected, for being a very able lawyer, he would guard against the recurrence of those legal errors which had crept into the Company, first by inattention to the drawing up of the agreement, and secondly in allowing the passenger tax to be thrown on the Greenwich Company.

Mr. SMALL returned thanks for himself, and the Deputy-Chairman for Mr. Hughes, who had been compelled to depart during the previous discussion.

Mr. HOMER then brought forward his motion for the reduction of the Directors' allowance.

Mr. HICHENS opposed it, and said, that although 1s. 6d. was not a large dividend, probably a cheap Direction would reduce it to 1s. What could 9 Directors receive less than 800*l.*, more especially as their duties were more onerous than those of almost any other Board?

Mr. SALOMONS opposed the motion, as did also Mr. LEVY, who referred to the 1000*l.* which the Joint Station Committee at London Bridge received, in addition to the allowance in their several Companies.

Mr. MONEY said, nothing had yet been explained as to the payment of this 800*l.* by the old shareholders only.

Mr. ADDISON said, the Act of Parliament required that the preference proprietors should have 5 per cent. interest clear.

Mr. MONEY said, he should endeavour previous to the next meeting to mature some equitable proposition on this subject.

There were loud cries of "withdraw," and after some demur, the motion was withdrawn accordingly, amid applause.

Mr. SCRIMGEOUR then brought forward a long resolution for the appointment of a Committee of Investigation. The resolution was received with loud and long-continued shouts of laughter. Mr. Scrimgeour protested that his only anxiety was to set at rest certain rumours to the disadvantage of the Management, which, however, he himself did not credit.

Mr. KETTERICK seconded the motion, and after some desultory discussion, it was put, when only the seconder's hand was held up for it.

In the course of his speech introductory to the motion, Mr. Scrimgeour had complained that a gentleman who had promised to support his motion had disappointed him. Mr. Hemming, as the party alluded to, explained, and referred to charges of mismanagement which he said had been made against the Directors.

The DEPUTY-CHAIRMAN said, if the charges proceeded from a newspaper, they would know what weight to attach to them, but if from a respectable source, the Directors would be glad to deal with them.

A vote of thanks to the Directors was then proposed by Mr. Hichens, whereupon

The DEPUTY-CHAIRMAN begged that the words, "and confidence," should be added after the discussion which had that day taken place.

This was agreed to, and Mr. Hemming having seconded the motion to show, as he said, that he had no feeling hostile to the Directors, it was carried unanimously.

The CHAIRMAN expressed his thanks, and the meeting separated after a three hours' sitting.

When the room was nearly cleared, a vote of thanks to the Auditors and the Accountant was proposed, and we believe carried and acknowledged.

DUKE OF CORNWALL'S HARBOUR, AND LAUNCESTON AND VICTORIA RAILWAY COMPANY—GENERAL MEETING.

THE half-yearly general meeting of proprietors of this Company was held on Thursday last at the London Tavern.

After the reading of the advertisement convening the meeting, and the confirmation of the minutes of the preceding half-yearly meeting,

The CHAIRMAN (John Ramsbottom, Esq., M.P.) stated, that in consequence of the Arbitrator, to whom all matters in dispute between the Company and Mr. George Ross had been referred, not having yet made his award, the affairs of the Company remained in the same state as at the last half-yearly general meeting.

Thanks were voted to the Chairman, and the few shareholders present separated.

DUBLIN AND DROGHEDA RAILWAY COMPANY—SPECIAL MEETING.

A MEETING of this Company was held in Dublin on Thursday, July 14; GEORGE ALEXANDER HAMILTON, Esq., in the chair. The meeting was convened for the purpose of obtaining the sanction of the shareholders to a negociation now in progress with Government for a loan of 150,000*l.* at 5 per cent., which was progressing in a most satisfactory manner.

Mr. ECKERSLEY read the Report, which stated the capital of the Company to be 450,000*l.*, and about one-half of which is subscribed by English capitalists; also that 132,000*l.* has been paid up by the proprietors, and that 120,000*l.* of that sum had been expended on the undertaking.

Mr. MOONEY read an order authorising the Directors to get the proposed loan, and moved its adoption.

Mr. HOYTE seconded the resolution, which was passed unanimously.

Mr. BRODIGAN stated that out of 5,360 floating shares belonging to the Company, 3,560 were paid up to the 27th June.

The thanks of the Company were given to Mr. Hamilton, and the meeting separated.

EASTERN COUNTIES' RAILWAY.—We find from a paragraph in another column, that the Eastern Counties' Railway Company have paid the deodand of 500*l.*, imposed on the occasion of the fatal accident at Brentwood in 1840. The *Times* of yesterday observes, that it hopes this "may accomplish the object so much desired, of making the officers of Railway Companies more careful of the lives and safety of her Majesty's subjects than it would seem, from the numerous accidents that have occurred, they have hitherto been." We may fairly add that so far as this line is at present concerned, this remark was wholly unnecessary. Through the strict regulations and arrangements of Mr. Hall, the Manager, and the inventions of that gentleman which have been brought into operation upon the line, such a well-understood communication has been established, and such punctuality and attention have been secured, that the travelling, to say the least, is certainly as safe as that of any other line in the kingdom. This is proved by the total absence of anything like accident for a long time past; and we find, from the weekly traffic returns, that the public fully appreciate the skill and care with which the working of the line is at present conducted.—*Chelmsford Chronicle.*

ACCIDENTS ON RAILWAYS *NOT* RAILWAY ACCIDENTS.

[From the Daily Papers.]

ON Tuesday evening a lengthened inquiry was gone into before Mr. Payne, at Guy's Hospital, on view of the body of Joseph Clutterbuck, aged 38, one of the guards on the Croydon Railway, who was killed on the above road. From the evidence adduced, it appeared that about half-past 6 on Sunday evening, as the train that left Croydon at the hour stated was going over Croydon-common, a person named Cramer, who was in one of the third-class carriages, attempted to get on the roof for the purpose of riding on the guard's seat; the deceased got up for the purpose of turning him off, which Cramer immediately did, and while deceased was in the act of descending off the carriage, the train, which was going very quick at the time, passed under the bridge, deceased's head came in contact with the brickwork of the archway, and threw him off the roof on to the chains between the two carriages. He was immediately got out. When the train came to the Jolly Sailor station he was found quite dead. Mr. Gregory, the engineer, stated that no person was allowed to ride on the guard's seat, and the Directors had proceeded against Mr. Cramer under the General Railway Act. Mr. H. Cramer stated that on other railways he had rode on the guard's seat, and he thought he could do so on the above line. He was very sorry for the unfortunate occurrence. The jury, after a short hesitation, returned a verdict of "Accidental Death." Mr. Cramer was held to bail to meet the charge at the Sessions, and has since been fined 40s.

On Tuesday an inquest was held at the Railway Hotel, opposite the London and South-Western Railway terminus, Nine Elms, Vauxhall, before Mr. Carter, on the body of John Mitchell, aged 45, a labouring man, who was killed on the railway at Woking-common, at an early hour on Monday morning, while lying drunk on the line. Sarah Stedman, sister to the deceased, living at Woking, said her unfortunate brother was a labouring man, and had left a widow and one child. He occasionally gave way to intemperate habits. Verdict, "Accidental Death."

On Wednesday evening an inquest was held at the Railway Tavern, Brentwood, by Mr. Lewis, the coroner, on the body of William Fitch, aged 33, who was killed on the Eastern Counties' Railway on Monday last. From the evidence adduced by the witnesses it appeared that the deceased was an excavator, in the service of Messrs. Hills and Co., contractors, and was engaged at the works now in progress at the extensive cutting at Brentwood. He got upon the earth train to proceed up the line, when, just as it had attained its full speed, he fell off on the rails, and met with instantaneous death, by the whole of the loaded waggons passing over his body. No blame being attached to any of the Company's servants, the jury returned a verdict of "Accidental death."

A fatal accident occurred on the line of the Manchester and Birmingham Railway on Monday forenoon last. A farmer, named John Leah, aged 52, residing at Cheadle Hulme, Cheshire, having engaged some men to mow the hay grass growing on the slopes of the line, was watching them work, and as the half-past 9 o'clock train was advancing from Manchester he observed his dog lying basking on the line. The dog not heeding his call he ran to take it out of the danger, and, immediately on his getting hold of it the engine came up and knocked him down, and some of the carriage wheels passed over his body. He was killed on the spot, and his body was much mutilated.

The *Manchester Chronicle* of Saturday last contained an account (which was duly transferred to the London papers) of an alleged fatal accident on the line of the Liverpool and Manchester Railway, at Parkside. We (Ed. *R. T.*) have authority to state that the account in question is wholly without foundation.

ATMOSPHERIC RAILWAY—MR. PINKUS'S CLAIMS.

To the Editor of the Railway Times.

SIR,—I observe in your journal of the 16th instant the attempted answer of Messrs. Vignoles, Clegg, and Samuda, to the charges contained in my letter of the 9th instant. You will remember that I have not sought this controversy, but have remained silent whilst your paper, during two years, has teemed with elaborate articles on the operations of these persons. When my name is dragged into a journal so extensively read, reporting the allegations of Mr. Vignoles, a new hand, before a scientific society, with an unfair motive, I appeal to the same channel for my defence. Sir, *audi et alteram partem*, is a maxim, an honourable rule, with all who guide that important engine the Press. Here is my reply, one that I apprehend every impartial mind will deem to be conclusive. First, I will do Clegg and Samuda; then say a word or two to the would-be "learned Theban." I charged Clegg and Samuda with piracy, and abuse of confidential employment. With amazing boldness they deny both. I shall now, therefore, prove that they attempt to support one another in untruth, and if I do, doubtless your readers will believe that the whole of my charges are correct. Their whole stress is laid on the mere *extracts from letters—alleging* them to be *garbled*. I gave *extracts only*, and PROFESSEDLY SO, *from two letters only*, with a view to show that the parties were in *confidential communication* with me, and as Mr. Vignoles unwittingly observed, "long AFTER he [Pinkus] had taken out both his patents," (1834 and 1836), but Mr. Clegg's letter had been previously printed at greater length in the *Sun* of 19th June 1840. The extracts from Samuda's letter could have been of no use to me, but to show that when engine-makers are employed, as he says, "a general plan never can contain the whole minutiæ," but is usually "coupled with such explanations as are always expected and given during the progress of such works." They "seldom have anything else," but "apply to the inventor" for any particulars which the drawings do not sufficiently explain. Now this confession *exactly applies* to all the engines, works, and machinery, which these men DID make *under my instructions*, and under the eye of Mr. Clegg, which proves such instructions to have been confidential necessarily. This is what I desired to show. Now the "machine" to which the letter refers, and which they have correctly given, was not built by them, but they had undertaken *to complete it*, so as in practice to combine the methods specified in my first and second patents, and the works of the railway previously begun by them; to wit—the *engines*, the *mains*, the *valve*, &c. &c. Mr. Clegg says, "I never was employed by Mr. Pinkus in *any way whatever*, and never was altogether three hours in his company," *only that* while he was in Paris I "wrote to him," to ask as a favour that he would "call at the patent office, and inquire whether his French patents were valid." He also says, "beyond this I never had any transactions with that gentleman." How true these assertions are you shall be enabled to judge by the following *extracts*. Observe, extracts from other letters—the originals of which are herewith sent.* Now, Sir, my interviews with Mr. Clegg were during about one year, at Messrs. Samuda's works, where he was engaged in manufacturing. There it was my works were being constructed; there, *as well as at his own house*, I was in communication with him. He had agreed to become the Engineer in a British and Continental Company for carrying out the Atmospheric Railway, the prospectus of which was printed. Messrs. Samuda were to be the manufacturers, and *Mr. William Bollaert* the Secretary. Here are extracts from his letter:—

June 16, 1840.

"My Dear Sir,—I have seen your letter in the *Sun* newspaper of the 16th instant, on the subject of Clegg's infringement of your invention. I have read Samuda's reply and your answer to it, dated the 18th. Having been well acquainted with the matters referred to for some years past, and having procured the letter of introduction to Mr. Maugin, of Paris, and knowing Mr. Clegg *was to be the Engineer of the intended Company*, and that he was *confidentially employed by you*, I have no hesitation in saying that the statements contained in your letter are strictly true.

Very truly yours,

(Signed) "WILLIAM BOLLAERT.

"To Henry Pinkus, Esq."

Mr. Bollaert states in another writing, "I procured from Baron De Haber, at Mr. Pinkus's instance, letters of introduction to Messrs. Berryer and Maugin for Mr. Clegg, with a view *to facilitate Mr. Pinkus and Mr. Clegg's object in Paris*," and Mr. Bollaert wrote to me from Rome about March, 1839, asking, on reading in the papers of Clegg and Samuda's operations, "*if some roguery was not going on.*" Mr. Clegg was consulted, as I have said, in respect to the estimates for works going on as well for the *English* Company; the following is a proof—"Half a mile of 12-inch pipes laid complete with lead joints will come to 924*l.*; half a mile of single way, including iron bars 40 lbs. to the yard, blocks, chairs, keys, pins and fixing, will come to 636*l.*—SAMUEL CLEGG." These works, as well as others, Samudas were engaged on, and assisted me, after consultation with Clegg, in estimating, with a view to the completing, by contract, other works in addition to those they had made. Previously to this, in respect to the *English* Company, one of the Directors, in July, 1837, wrote,—"I have seen a letter from Clegg, in answer to a communication made to him, in which he says he had not come to any undertaking with *respect to terms*, as you had promised to call on Saturday last." In another confidential matter, Samuda wrote in *June*, 1838, "Mr. Clegg will be very happy to give you what you require respecting the matter you were speaking about to-day. He will be at our works to-morrow.—(Signed) J. D. A. SAMUDA."

A Committee of Inquiry of the Pneumatic Railway Association met Mr. Clegg, to question him in my presence, and to inspect the works at Samudas. In their Report, 15th February, 1838, they remark—"And if any further evidence were wanting in the estimation of your Committee, it has been abundantly supplied by the very recent *declaration of Mr. Clegg*, a distinguished practical engineer, that the principle is not only quite correct, but that if even now the affairs of the Company were properly managed, *this pneumatic system* must very soon supersede the present methods of railway. It is important to remark that this opinion was made by Mr. Clegg himself, and communicated to the Directors of the Pneumatic Railway Association, so early as July of last year" (1839.) My works were then *far advanced*. Was it the "40-*inch main*" of which he has written; or was it of the "12 inches" which he had estimated for? Is not the smaller main *combined* with *the common* railway, "as well as the other *found in my first specification?*" Mr. Clegg merely asks if my patents were all-sufficient, why I should take out a "third patent *eight months after his?*" He once gave evidence of "their importance;" now they are of *none*. Will this answer be agreeable to him?

Having made experiments in his presence, and telling him in confidence of his employment, as the selected Engineer of the intended British and Continental Company, that I intended to *seal by heat the valve which I had already* specified, (*i. e.*) "the valve composed of *flexible material combined* with *metallic plates fastened down on one side of the valve-aperture*," so as far to form an hinge valve, an edge falling into a groove of cement to seal it, for which I had already *several months before began a third patent*, for *details* in which the *sealing was to be specified*, that there was delay in completing this patent; that he and Samuda knew it; that Mr. Clegg, instead of attending to the interest which was *confided in him*, (*i. e.*) taking measures to introduce the system for which the letters of introduction to Messrs. Berryer, Maugin, and Baron Marguerite, were given to him on the evidence of Mr. Bollaert, he and Samuda set secretly about securing patents under a deceptive title, "improvements in valves" applicable to pumps, but specified the details I had communicated to them. I had a caveat entered in a *certain* patent office, but had no notice when they passed the patents, at the instance of Samuda and Clegg, eight months after I secured the third patent, *begun before theirs*, and specified (Mr. Clegg having done one for me) another method of sealing. This is my answer to his interrogatories!!

Is Mr. Clegg fully answered on all these points? If not, I can add more. Now for MR. JACOB SAMUDA. Their "indignant denial" would be to have "*their veracity weighed*" against mine. He says, "the *insinuation* that I have at any time been either in the *service* or *confidence* of Mr. Pinkus, *is equally untrue* with the rest of his letter," and "that the *experiments*" *broken* up were "the locomotive pneumatic engine." I have already answered the fact of giving *extracts* only from his letter of the 8th of May, 1837. I will now give you *others*, the originals of which you will have seen.* If the works broken up were of "the locomotive engine" *only*, what was done with all those extensive works constructed by him? The model at Lord's Ground *was never put into operation*, therefore could not have "*failed*," but it was made by *him* as well as *Johnson*; his letter herein shows it. A Director in the Pneumatic Railway Company wrote to me on April 21, 1836—"Mr. Samuda has been here, and I have *concluded with him* (for some of the works referred to) for 1,020*l.*, the specifications and drawings are to be submitted to you." On *the 5th of May*, 1837, and mark, ONLY *three days* before the alleged "garbled letter," Messrs. Samuda wrote—

(EXTRACT.)

"May 5, 1837.

"You will oblige us by informing us, in writing, that the works *we have done*, by *your orders*, to the *mains*, to the *air pumps*, *model*, and at *Kensington*, are for account of the Directors of the Pneumatic Railway Company, to enable us to apply to them for the payment.

(Signed) "SAMUDA, BROTHERS.

"To Henry Pinkus, Esq."

These are part of the works they constructed under my orders, yet have they the effrontery to say they were never employed by me, or in my confidence!

Again, on the 12th of May, 1837—

(EXTRACT.)

"In answer to your request, we state the value of the machinery we have constructed for the Pneumatic Railway Association, viz., a 30-horse engine (equal in strength of parts to 40 horses), and three air-pumps. Our price for engines of that description is 1,000*l.*; and the air-pumps and other machinery we should be sorry to contract for again for less than 500*l.*, had it not been for the sake of an introduction to the Association, through which we hoped to obtain much valuable employment. We have made all of the machinery in such a manner as to merit a continuance of orders.

(Signed) "SAMUDA, BROTHERS."

Yet they with solemnity declare they were never employed by me, confidentially or otherwise. Are they answered! That is a subtilty they have *in arrear pensée*—they mean they were *pro forma* paid by the Company; but I had alone the power of controlling all practical operations, and the money which paid them *for the works they made was mine*, but *relinquished* to forward the undertaking. Yet MR. CLEGG "never was employed" and Messrs. Samuda "never in the service or confidence of Mr. Pinkus!" They allege that they never knew me until after my first two patents were sealed. What is there in that? They knew my works, and have pirated them; they had secrets *divulged to them*, and knew that a *third patent* was begun. They saw my experiments in 1835—they were employed in 1836, 1837, and 1838, and abused my confidence. In 1839 they ran through secretly, patents, and sealed them and their *integrity*. In 1840 they were exposed; in 1841 they obliged me, by expending their *friends'* money, to prove *my* inventions; and in 1842 they are joined by *coadjutors* to induce the public to carry into practice my patents in Ireland; and as I hope by 1843 they may be joined by parties *who may have something wherewith to pay*; then, under

advice of the *Times*, my "redress" *will* "*be* in a Court of Law."

MR. VIGNOLES.

Having, as I doubt not your readers will believe, convicted the parties, I shall reply to their *employée*, and show that he, doubtless smarting under mortifying exposure to sustain representations that I have characterised, "strains at a gnat and swallows a camel." He asserts that I have "attributed to him motives of the basest kind *in coarse terms*." That I had attributed motives is true, but not, as I think, in coarse terms; yet under injustice "anger hath its privilege." He has *identified himself* with Clegg and Samuda; he makes use against me of the same *materials and language, verbatim et literatim*, which the party has *paid propogators* to use. I have told Mr. Vignoles that his allegations before a scientific society were *untrue*, but he "owes a duty to the British Association as well as to himself, to notice" my "letter," and he says, that it is not the first nor the second time that I have brought my case before the "scientific world" to be as often "effectually met." This is as true only as his other assertions. It has been the other way, for after similar bold asservations met by *documentary facts*, the parties have shrunk from exposure, contented to pursue their very reputable (?) course by means of *employées!* He is correct in one thing, "the public will judge between us;" but let him not be too sure that he requires no justification; "the world judges of the man by the company he keeps." In this case he has egregiously committed himself and the "scientific world" is indebted to him, what? Just nothing! If I sustain myself in this matter, the public will think less, yet less, of him, and will perhaps look into his late professional operations! He has now satisfied himself by examining all the documents (what documents? Clegg and Samuda's,) and reading *all the specifications*. Now then it is that I tell him, and undertake to prove, that either his claim to a knowledge of scientific matters is measurelessly beneath contempt, or he has distorted and set forth "a garbled" account of my specifications and claims to the invention of the system pirated, as well as in the statements reviewing and comparing them with Medhurst's crude plans, and as I believe, apart from any scientific knowledge, he knows, as in fact he has alleged, they are utterly "*impracticable*;" yet what they are they only became, as I have the means of proving, and as I understand they have been informed by those who know the fact, long after my practical method was made known. Proofs shall be in due time exposed to the "scientific world," in whose field he has abundantly shown his capacity to be *minus*—his presumption *plus*. In my last letter, Mr. Editor, I told you that I am engaged in law in respect to this matter, and necessarily I must be engaged in more with all the parties referred to; and I am constrained not to set forth, *pendente lite*, the evidence I must use in any future suit. You will not allow me the space that would suffice to refute the weak twaddle of Mr. Vignoles's review, but you were *already in possession, before that review*, of the part of my letter, as well as pamphlet, setting forth a part (and substance) of my specifications, and you have now what Mr. Vignoles quotes from Clegg's. Pray let your readers judge whether they are identical. For this controversy is *on matters of record* (mine being first patents), not of "*merit*"; let it be judged whether Mr. Vignoles has not given "a *garbled*" and distorted account of it. As drowning men catch at straws, Mr. Vignoles would "dispose" of the case of my having made known the plans and details mentioned by him before the British Association of Science. He says, "it is not of 'material consequence,' but *strange*." I tell him *it is* of consequence, since it exposes his *subtilty and method*. The meeting *was* in 1836; and, "strange" as it may appear, was called specially on the 27th of August for *my purpose* (the section not intending to meet that day, I having missed previous opportunity), by Davies Gilbert and Dr. Lardner—the *former* in the chair—when the latter spoke also on my subject. In the *Bristol Mirror* of the 27th of August and the 3rd of September, and the *Bristol Gazette* of the 8th of September, may be seen—Mr. Vignoles searched; could not find!—"Section G. This section met at 11, at Merchants' Hall, when *H. Perkins*, Esq., read a paper on the 'transmission of *sound* by the rarefaction of air.'" There was a *misprint* in my *name*, and in the word "*sound*" for "*power*," which must be evident to every scientific man. Does this "dispose" of the case to his satisfaction? From the "date of publication," says Mr. Vignoles, "the world can judge." "The *principle* of applying the *compression* of the atmosphere to produce locomotion" is, he says, "nearly two centuries old." My method is *not* by compression. How alike is this to Mr. Vignoles! It was something more than one century, *but was in no way most remotely* relative to "*produce locomotion;*" but, on the *contrary*, was to be used as *fixed power*, at the *extremeties only* of a lengthened *pipe*.

You will see by my pamphlet sent you that *I do* justice to Papin, and give the substance from page 43 to 46 of my specifications. Valance applied the same principle by at least *a correct application*, partial vacuum, notwithstanding Mr. Vignoles sneers at it before a "scientific association." Valance *did not* "propose to put his *passengers within the receiver of an air-pump!*" But that system is not *this system*, nor was that true method of application "touched on by Medhurst in 1810," as his pamphlet, and Valance's answer to it, prove; and the crude and impracticable suggeations printed in his pamphlet in 1827 (as alleged), privately given to his friends, were not made until after *my inventions in* 1825, *subsequently patented*, and speak for themselves, as to *method and practicability, now proved*. I can inform Mr. Vignoles that practical, scientific men, concur with me, and laugh at his assertion "that no impartial person can read these passages" (referring to those and the disgrams in your journal) without attributing to Mr. Medhurst the "original merit," and that what he (Mr. V.) stated was "strictly true." Look at the diagram, *No.* 1, *set forth* by Mr. Vignoles, *a practical engineer*, where for a water-joint the *suggested canal*, to suit and preserve a *pressure of air* equal to half an atmosphere, must have *been* 16 *feet deep*, and be upon *a perfect level with less*, the air *blown* into the pipe must have been forced *through the water*, and no piston could move; but if rarified instead to *one-tenth that degree, which was no part of Mr. Medhurst's plan until after my projection*, the water would have filled the pipe, and so no piston could move. Valance was before Medhurst in the application of *vacuum*, and *I was before both* in the inventions under discussion. Equally cogent objections and *impracticabilities* apply to matters referring to *the other diagrams*, but were *provided for in my specifications*, after extensive experiments, in which I was assisted by Dr. Lardner; yet Mr. Vignoles, a *practical* (Railway) Engineer, refers them to the "scientific world" to sustain his *scientific knowledge*, in an effort to serve his employers. This reply is proffered to other "Scribes and *Pharisees*" that may hence be employed. "Now, what" he asks "has Mr. Pinkus done?" I refer him to my *specifications* and the facts *herein stated*. *Can he*, and will he, *honestly* explain them? These it is my intention to sustain, but of which he has given a most "garbled" and untrue statement. Equally untrue is Mr. Vignoles's assertion that he came invited in 1835 to inspect my models. He was *not invited*, but came in an improper way, and acted in an ungracious and discourteous manner *during my absence!* and was reproved for it by a gentleman present. Therefore it is untrue that Mr. Stephenson told me *emphatically*, in his *presence*, "it won't do;" but both Mr. Vignoles and Mr. Stephenson condemned the *principle applied in the manner stated in that part of my letter which you omitted to print*, but which was in your *possession before* Mr. Vignoles's answer, and to which I refer. And for Clegg and Samuda's "*triumphant* refutations," I refer him and your readers to the *refutations of the triumph in this reply*; they will see whether "garbled extracts of letters" are satisfactorily answered by *other* "*extracts*." He will see how the third patent was begun *before* Clegg's; why it was *varied and sealed* afterwards; why the *sealing of the valve* was not "discoverable in my *previous patents*." Regarding Mr. Vignoles's opinion of my *method of sealing* the valve, of my composition and galvanic wire "for practical purposes," why that is an opinion, the value of which may be estimated by his scientific knowledge herein exemplified. Thence, *ex nihil nihil fit*, I am not accountable for any part of any specifications incorrectly published by others, *e. g.* Mr. Vignoles. The *unfinished papers* that I communicated in two instances were correct as far as they went; *the legal opinion on which I have quoted their own counsel against them!* but I refer to the *record under my hand*, and the "extracts" in this communication to show whether Mr. Vignoles is justified in *suggesting* the retort on me, "an unscrupulous inventor," or whether I should be justified in retorting on him "the unscrupulous *employé*." They have made a "cauldron;" let Hecate and the three witches stew these "ingredients" and sing their chorus.

I am, Sir, your obedient servant,
HENRY PINKUS.

[We give this letter at the urgent request of Mr. Pinkus. If the parties therein referred to desire to reply, we shall be bound in fairness to allow them a hearing; but after *that*, all communications on the subject must appear in our advertising columns.—ED. R. T.]

SOUTH-EASTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—As you have fully adopted the notions of one of your "correspondents" in your paper of last week, by the conspicuous manner in which you have introduced them into an editorial article of the *Railway Times*, it is hardly necessary to apologise for asking the favour of your insertion of this communication, which contains a few remarks on the fallacy of what is there stated, respecting the *shares* in the South-Eastern and Dover Railway. Of the future prospects of this line of railway I have an excellent opinion, but, of all the railways that ever were opened, not one that I am cognisant of depended so much on the opening throughout as the South-Eastern, until which time its capabilities cannot be by any means fully developed.

Your "correspondent," after noticing the gradual increase of the traffic from the opening (seven weeks), starting at 555*l.* per week, and terminating at 846*l.*, seems astonished beyond measure to see the price gradually falling from 25½*l.* to 22*l.*, in the same period of time. This certainly does seem odd at the first blush of the thing, but your "correspondent" ought to know that there are other things which affect the price of the shares, during the partial opening of a line, besides the traffic. Your "correspondent" omits the important fact of an issue of 28,000 new shares at 50 per cent. discount, adding to the nominal cost of the road all but 1½ millions of money, and *a large proportion of these shares* were taken up by speculators, not at all with an intention of keeping them. This vast increase of stock has weighed down the market, especially so at a time that has been found accompanied by a general decline in almost all other railways. But after all, what does the traffic prove? Anything but satisfactory to the expectations of the shareholders. In my calculation I take the traffic of 8 weeks, which amounts to 5,871*l.*, or 734*l.* per week. The number of passengers in that time was 19,488, so that, reckoning only 1s. per passenger (the Croydon toll), and leaving out the Greenwich of 4½d. altogether, as a set-off against those passengers who may be supposed not to traverse that line, you have a net revenue of 600*l.* weekly to pay the expenses of working a line of 40 miles (in a part of the country where coke must be dear), and that line burthened with a heavy staff of officers and men out of proportion to its actual necessities. If

This small amount of traffic would have reduced

Digitized by Google

the price of the shares, independently of the creation of so large an amount of new stock. The short time allowed to pay up the calls on the new shares, finishing the whole amount in January next, full twelve months before the opening of the road, naturally gives rise to the suspicion that previous to the opening a further want of money will be apparent; for who ever heard of a Railway Company calling up all their resources a year previous to the opening? It is more customary to do so twelve months after the road is opened.

The last thing I shall notice in your correspondent's remarks, is the assertion that the shares are at a discount of 28*l.* a share, or 56 per cent., and you add, "It certainly is strange." Strange it certainly would be if this were the fact. But how stands the case in reality? The shares, instead of being at 56 per cent. discount, are just about 28 per cent., *or one-half* of what your "correspondent" states. The last issue of shares was at 50 per cent. discount, or 25*l.* shares for 50*l.*, which reduced the par of the whole to 37*l.* 10s., two shares costing 75*l.* And if you add the forfeited shares, issued last December at 27 discount to the proprietors, *the amount of par* is further reduced to less than 36*l.*, so that the present price of 23*l.* would reduce the discount to 13; but take the price of your "correspondent," 22*l.*, and deduct it from 36, it leaves 14*l.* a share, or 28 per cent., *just one half of* what your "correspondent" makes out.

I am Sir, your obedient servant,

A LOOKER-ON.

26th July, 1842.

MANCHESTER AND LEEDS RAILWAY.

To the Shareholders.

GENTLEMEN,—Our traffic receipts during the last six months only amount to the paltry sum of 109,000*l.* It is evident, therefore, that our shares are not worth more than par, and that a 6 per cent. dividend cannot be maintained. If our Directors are wise, they will divide only 5 per cent. for the past half year.

A short while ago our prospects were cheering—our shares were at 18*l.* to 20*l.* premium, and we had great expectations held out to us of a large traffic, by those who had the best means of judging. Now are we again doomed to taste the bitterness of hope deferred, and also our future prospects are not cheering. You are sick no doubt, brother shareholders, of the endless and extensive fluctuations which have taken place in the value of our shares, and doubtless you have perused several letters, which have recently appeared in the *Railway Times*, blaming "jobbers" for producing these fluctuations. Now, gentlemen, in my opinion those fluctuations are owing in a great measure to the well-meant but mistaken efforts made by some of our shareholders to keep our shares at a high premium. If these parties are wise, they will in future allow our stock to settle down quietly, at or about par, which is in my opinion its full value—a conclusion I am forced to come to from the following considerstions:—

1st. More capital will probably be wanted. I have little faith in the estimate of cost last furnished us, after so many disappointments. The Halifax branch and extension line will be expensive affairs, depend upon it.

2nd. A deal too much is expected from a revival in trade. Those who wish to raise our shares in the market tell you that the failure of the Leeds line has been caused by the depression of business; but, gentlemen, have we not had bad times since August 1836, and, during the interval, have not the Grand Junction, London and Birmingham, and other lines, opened with the most brilliant results? In bad times merchants and manufacturers travel a great deal, to push business, whereas in good times they write by post instead; and it is idle to say that our failure is owing altogether to the dullness of trade. It ought to be borne in mind, too, that during the last four months we have had the most beautiful weather to induce parties to travel for pleasure.

3rd. The Sheffield line will one day be completed. No undertaking in England is ever left unfinished. Has not the Thames tunnel been completed, and can you doubt that some time or other, say before 1847, the Sheffield line will be opened throughout? When that time comes, brother shareholders, we may make up our minds to lose one-fourth of our receipts. Should our weekly receipts have ere then averaged 6,000*l.*, they will be reduced to 4,500*l.*; should the average be 8,000*l.* per week, they will no doubt be reduced to 6,000*l.*

It appears then, gentlemen, that while our present condition is not encouraging, our future prospects are by no means brilliant. You will inquire to what is this state of matters owing, and what can be done to better matters? In reply I would say, that "to the exorbitant cost of construction," all our misfortunes are owing. That cost may have been unavoidable possibly, and *no person in the world* may be to blame; but, had the line been formed for 1,733,000*l.*, as from printed Reports I was led to believe when I first embarked in the Leeds line, a weekly receipt of 5,000*l.* would have afforded a dividend of 10 per cent.! Again, had the cost been 2,250,000*l.*, as we were assured in March, 1839, the same traffic would have afforded a dividend of 8 per cent.; and had the cost not exceeded 2,800,000*l.* (the sum named in our Directors' Report of September, 1840), near 7 per cent. might have been divided. In these calculations I take the borrowed money at one-third of the entire cost, and the working expenses at 100,000*l.* per annum. What the dividend will be on a cost as we are now told of 3,150,000*l.*, or on a cost of 3,500,000*l.*, which is as near the mark perhaps, remains to be seen!

It is difficult to say what ought to be done to better matters; but it would be well to make a searching inquiry as to the amount of "through" traffic from Manchester to Leeds, and to reduce the fares if needful. The receipts of the Oldham and other branches ought to be given separately, and the shareholders ought to enforce the most rigid economy in the construction of the Halifax and Extension lines. It would be well, too, to call for full explanations as to the enormous excess in the cost of our line; no satisfaction has been given to us on this point in the Directors' Reports. Great dissatisfaction was expressed by several of our shareholders some time ago regarding the enormous excess in cost of works, but their mouths were closed by assurances of a traffic ample enough to pay a good dividend! Is it not high time to revive the agitation? It may check extravagance in future at least. Ponder these remarks, gentlemen, and come to the next meeting, taking for your motto, as I do for my signature,

"SAPERE AUDE."

July 11, 1842.

MIDLAND COUNTIES' RAILWAY.

To the Editor of the Railway Times.

SIR,—By the letter you inserted in your journal of last week, my attention has been called to the statement that a Director in the Midland Counties Railway is supplying that Company with the coke for the locomotive engines, and that he is receiving 20 per cent. more than it might be obtained for. If Directors may become contractors, there is no security for the proprietors that their affairs will be honestly and fairly administered. I have referred to the Act, and find the following clause at page 94, sec. 142:—

"Provided nevertheless and be it further enacted, That no officer of the said Company receiving a salary, nor any person concerned or interested in any contract with the said Company, shall be capable of being chosen a Director of the said Company, nor shall any Director be capable of accepting any other office or place of trust or profit under the said Company, or of being concerned or interested in any contract with the said Company, during the time he shall be a Director of the said Company; and if any Director of the said Company shall at any time whilst such Director, accept or continue to hold any other office or place of trust or profit under the said Company, or shall at any time cease to be a proprietor of ten shares at the least in the said undertaking, or if any Director, or any Secretary, Clerk, Treasurer, or other officer or servant of the said Company shall, either directly or indirectly, be concerned in any contract with the said Company, or in any contract for any land required by, or article to be used or consumed by the said Company, or shall participate in any manner in any work to be done for, or goods to be sold to the said Company; and every such Director, Clerk, Secretary, Treasurer, or other officer or servant shall thereupon be immediately, and is hereby, discharged from the Direction, office, service, or employ of, in, or under the said Company, and rendered incapable of being thereafter employed by them unless re-appointed, and such re-appointment be confirmed at some general or special general meeting of the said Company."

It appears to me that a party cannot be interested in any contract *during the time* he shall be a Director, although *thereafter* he may be re-chosen; but as I am no lawyer, I shall be obliged if some one versed in the construction of Acts of Parliament, would favour me with the legal interpretation of this clause.

I am Sir, your obedient servant,

A PROPRIETOR.

Leeds, 21st July, 1842.

EDINBURGH AND GLASGOW RAILWAY.

To the Editor of the Railway Times.

SIR,—It appears by two letters in your paper of this day that no two persons can possibly agree on the "expenses" and "dividend" on this line.

First, we have "Investigator," who knows nothing of the concern he presumes to investigate, trying to depreciate the value of the shares by false reports; then comes "Scotus," who is equally wrong; and lastly, we have "C. T. H." and "A Shareholder," certainly the most correct and impartial writers.

As for "Investigator" assuming the expenses to be 50 per cent., he must have been under the effects of whiskey or spleen; they will not exceed, and most probably will be considerably under, 40 per cent., at least so parties say connected with the railway—parties whose opinions are worth receiving.

"C. T. H." is perfectly right in his enumeration of the probable causes of the present low traffic, as a proof of which the last week's receipts are 2,214*l.*, the best week yet; and although the Glasgow fair was in the week, yet it plainly proves that the railway is in no bad odour with the public, barring the Agnewites, who are faithful to their bond not to patronise the railway. Yet their opposition will vanish, and then the Edinburgh and Glasgow will rank with the best paying railways in the United Kingdom. Its facility for procuring coal, the economical principle, and the unwearied assiduity of the servants, all tend to this—the last reason especially, for civility is a thing much sought after but seldom found on railways.

The shares are decidedly below their real value, and at 46 or 47 I consider them to be a good investment.

The traffic is on the increase, and the goods traffic is not yet fully developed. Surely then, with all these advantages, "Investigator" is wrong, but whether he errs in ignorance or design is a mystery to,

Sir, your constant reader,

DIOGENES.

Guildhall Coffee House, July 23, 1842.

P.S. "Investigator" sets down 50 per cent. as a stated fact for expenses, whereas the very Directors themselves say, "They are not yet certain as to the probable expense, although they are convinced it cannot by any means exceed 40 per cent. Which knows best?

EDINBURGH AND GLASGOW RAILWAY.

To the Editor of the Railway Times.

SIR,—"D. T. H." in his letter to the *Railway Times*, dated 17th July, makes a much lower calculation than he need have done, as to the average receipts of the Edinburgh and Glasgow line; for instance, he takes them *from the opening of the line*. Now it is notorious that hundreds of people never think of travelling on a line until it has been proved sound by two or three months' traffic, and had he allowed *two months only*, and made his calculation from that period, viz., the end of April, he would have found that the average receipts have been up-

Digitized by Google

wards of 2,050*l.*, and one of the best features for the proprietary is the gradually increasing traffic; the last returns having been 2,214*l.* This to me, and I doubt not to the majority of the shareholders, is quite enough to make me decide on not selling at present prices, for I have very little doubt we shall long before Christmas have the shares up to at least 10*l.* premium.

Yours, obediently,

W. F.

London, 27th July.

EVESHAM JUNCTION RAILWAY.

To the Editor of the Railway Times.

SIR,—Out of courtesy to "Common Sense" I have replied to his communications, but only under my own name; he has as yet not shown me the same courtesy. I therefore for the future must decline corresponding with him unless he adopts the course that I have from the beginning, viz., that of corresponding under my own name, not being ashamed of it. On his acceding to this request, I shall feel pleasure in correcting his misstatements.

I am, Sir, yours, obediently,

JOHN ADDISON.

Westminister, July 27, 1842.

["Common Sense" may do as he pleases in this matter; he certainly has no reason to be "ashamed" of *his* name. This much for Mr. Addison's satisfaction.—ED. R. T.]

CHESTER AND BIRKENHEAD RAILWAY.

To the Editor of the Railway Times.

SIR,—As the Auditor alluded to in the Report of the Chester and Birkenhead Railway Directors, I read that document, and your comments thereon, as you will suppose with considerable surprise; and I feel assured that you will not refuse to do me some degree of justice by permitting this communication to appear in the columns of your paper. It will, I apprehend, be conceded by all, that at the present time the shareholders are entitled to the fullest possible amount of information, and I therefore beg urgently to invite inquiry as to the accuracy of the accounts audited and rendered by me, and to say that I shall be most happy to give to them, the shareholders, every information on this subject in my power.

I do not make this proposal unadvisedly, for such a requirement on the part of the shareholders will enable me to state the facts more in detail than the limits of which I now feel at liberty to avail myself would allow.

In the meantime, for the satisfaction of the shareholders, I beg to state that all vouchers, with the exception of one for 25*l.* (the circumstances connected with which were communicated to me), were produced, and that the balance in the traffic account for September, 1841, with reference to which there appears to have been some discussion at the public meeting, is in strict accordance with the actual state of the case, and does, if connected with the subsequent receipts and payments, show on the 31st December last, a balance to the credit of the Company of 5,372*l.* 3s. 11d., which amount, as shown in the statement accompanying the balance-sheet, was composed as follows:—

In the Borough Bank.....	£4,404	11	0
,, North and South Wales ditto	0	17	8
,, Hands of Dixon and Wardell	797	9	3
And of the Treasurer on ferry account..	169	6	0
Total	£5,372	3	11

This amount will also, if the accounts now rendered are a faithful transcript of the books, produce the present balance of 6,678*l.* 15s. 2d., and be capable of explanation as above.

In like manner the general accounts have invariably been proved to be correct, and in December last the balance was shown to be composed of the banker's balances, of 27*l.* 8s. 9d. due to the Treasurer on petty cash account, and of 300*l.* owing by Mr. Hilliar.

I beg again to assure the shareholders that I shall be happy to meet any inquiry, and to attend any meeting of shareholders, when the charge against me can be fully, and as far as I am concerned, satisfactorily refuted.

I am, Sir, your obedient servant,

J. H. STANWAY.

Manchester, July 28, 1842.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—Some statements having been made on the part of the Directors and Engineer in favour of the manner in which the works on the Brighton Railway have been executed, I consider it right to observe, that taking into consideration the highly favourable materials on the line for the formation of a railway, particularly as respects stability and economy, no public works have been worse conducted, and very few worse executed in the most essential points, viz, the cuttings and embankments. The brick, stone, concrete work, and permanent way, are in many respects a further proof of the want of experience and judgment on the part of the Engineer, and no practical man who has observed their progress from the commencement could have formed any other opinion.

It appears that one of the Directors, Captain Beauclerc, has come before the public in opposition to the rest on a traffic question, and at a time when they are all called upon to explain the expenditure of about a million and a-half sterling beyond the value they have accounted for to the shareholders. Now, I think it would have been much more creditable to the Captain, if he had come before the public with a clear explanation of the manner in which that large sum had been applied, than diverting the attention of the shareholders by any less important question, and especially one upon which the shareholders are not expected to interfere.

The Captain was one of the first to complain of my directing the attention of the shareholders to the evident mismanagement of the concern; I hope he will be one of the first to satisfy the shareholders that he has not been a party, to the questionable proceedings which have been so much opposed to their interests. If the shareholders wish to protect their property, they must not permit minor questions to interfere with the important one respecting the enormous sum not represented by any corresponding value in works or land, and the absolute necessity of rigid investigation of the accounts, and the quantities of the respective works, &c., as the only course to restore the confidence of the public, and increase the value of the shares.

I remain, Sir, your obedient servant,

J. TROUP.

LONDON AND BRIGHTON RAILWAY.

To the Proprietors of the London and Brighton Railway.

BROTHER SHAREHOLDERS,—In spite of the market price of our shares, we appear at last to be getting into a better condition; for what we poor unfortunate fellows have to look to principally is the receipts, which, happily for us, after having our patience so tried, are considerably on the increase, and no one for a moment doubts they will be much more so before Christmas. My stake in the line exceeds very little 1,000*l.*, but I mean to hold on, feeling satisfied we shall have considerably higher prices before that time.

Yours, obediently,

W. F.

Brighton, 27th July.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times

SIR,—As a holder to a considerable extent of shares in the Brighton Railway Company, I cannot withhold my testimony to the straightforward manner in which you have ever defended the interests of the proprietors in this hitherto unfortunate undertaking. And satisfied am I, that if the course be adopted which you have laid down in your periodical, a rapid improvement will speedily be seen; and as there are numerous *questions* to be put to the Chairman at the approaching meeting, I really cannot think any individual so well calculated to conduct the proceedings as the author of the letter signed "H." in your last number.

It is to be regretted that so much correspondence is continually going on, and so many suggestions and recommendations being made, and yet when the time arrives for the full discussion of the very points which have caused the numerous communications, they should stand aloof when courage is most needed, and leave the matter just where they found it. I trust the business at the ensuing meeting will be conducted with candour and good feeling, and an earnest desire to benefit the shareholders, and not in mutual recrimination, which has so frequently disgraced the proceedings of public meetings of this character.

Your obedient servant,

S.

LONDON AND BRIGHTON RAILWAY.

AT the request of a gentleman who is very deeply interested in the prosperity of the Brighton Railway, we publish the following Reports, issued in 1837, by the Directors. The contrast between the promises and the actual results is indeed striking:—

To the Directors of the London and Brighton Railway.

Gentlemen,—In consequence of your instructions that I should, in the first place, take effective measures to have the whole of the enlarged plans and sections taken, to determine upon the exact line of railway, and to report if any improvements could be made on the main line of railway between Croydon and Brighton, and also on the branch line from Brighton to Shoreham, I beg leave to report to you, that I have been incessantly engaged, with my assistants and surveyors, for nearly two months, in prosecuting the surveys, and in the examination of the country in every direction; and having completed the plans and sections on a working scale, it gives me great pleasure to report to you, that the improvements of which the line of railway is susceptible can be made within the limits allowed by the powers of the Act of Parliament.

The only material deviations are at Merstham and Balcombe, where it was desirable to make the tunnels straight; and as the consent of the parties to whom the land belongs has been obtained, these improvements can be effected.

In consequence of the recommendation of Captain Alderson, of the Royal Engineers, the Parliamentary Committees of the Lords and Commons, authorised the substitution of a tunnel at Merstham, for open cutting, and the lengthening of the tunnels at Balcombe and Clayton; whereby, and by other improvements which I have made, I have been enabled to reduce the cuttings from 9,251,000 cubic yards of earthwork, to 5,867,000 cubic yards, making a saving in cutting of 3,384,000 cubic yards; and by introducing arching in some places instead of continuous embankments, and availing myself of the advantages of the Parliamentary powers, I have reduced the embanking from 4,793,000 cubic yards of earthwork to 3,715,000 cubic yards; making a reduction in the amount of embanking of 1,078,000 cubic yards. The work is, therefore, one of ordinary extent.

With these improvements, and allowing the most liberal prices for the work, the amount of my estimate for the main line, exclusive of contingencies, is reduced to 706,000*l.*, and allowing 10 per cent. for contingencies (amounting to 70,600*l.*), the total amount of my estimate is 776,600*l.*, being 29,372*l.* less than the Parliamentary estimate; which saving being added to the 70,600*l.*, will give me nearly 15 per cent. for contingencies.

No material alteration has been, or can be, made on the branch to Shoreham; the cost of this branch, I find on a revised estimate, amounts to 69,800*l.*

These estimates, of course, do not include the value of the land or buildings.

In my labours I have had the advantage of the assistance of Mr. Joseph Locke, who has taken great pains to make himself thoroughly ac-

Digitized by Google

quainted with the whole of the main line, and the branch to Shoreham: and has gone over the ground with me, and fully considered everything that could bear upon the improvements of the line, the manner of execution, and the value of the work; and although I do not exactly agree with him upon the value of every part, we fully agree upon the principle and manner of carrying the work into execution. He will of course report to you his own opinion, as well as present you with the amount of his estimate.

In conclusion I beg to state—

That this line of railway is the very best which can be obtained between London and Brighton.

That there is no necessity for any fresh application to Parliament.

That the main line can be executed for 805,972*l.*, and the branch to Shoreham for 69,800*l.*

That the main line can be completed, and opened to the public in three years from the commencement of the work, and the branch to Shoreham in about 18 months.

And with regard to the often agitated question of the supposed necessity of cutting chalk with a slope of one to one, instead of the plan I propose to adopt, I have calculated the extra quantity of cutting that the slope of one to one would require, and I find that, for both the Merstham and Clayton cuttings, it would only amount to about 1,000,000 of cubic yards extra, the cost of which would not exceed 40,000*l.*, which sum is the additional expense that such an extraordinary expedient would occasion, if resorted to; but I shall prove, in the execution of the work, that it is altogether unnecessary.

I am, Gentlemen,
Your most obedient humble servant,
JOHN U. RASTRICK.

London, December 7, 1837.

To the Directors of the London and Brighton Railway Company.

Gentlemen,—I have had the honour to receive from your Secretary the following resolution of your Board, dated 31st of October last, namely—

"That Mr. Locke be requested to go over the line with Mr. Rastrick, and investigate his plans, sections, and estimates, and report his opinion upon the line, and the improvements that have been made upon it; and the sufficiency of the estimates, and the time in which the line can be completed."

In pursuance of this, I have accompanied Mr. Rastrick over the line, with a view of forming an opinion of the merits of the several changes contemplated by him. I have by this investigation, acquired a more intimate knowledge of the nature of the works required for this railway, and can now offer my remarks with more confidence than I have hitherto been enabled to do.

My opinion of your line is already well known to you, and it may be unnecessary for me to repeat it. That opinion has undergone no change, and believing that Parliament has exercised a wise discretion in the selection of the direct line, I will content myself with stating that passengers can be conveyed upon it by locomotive engines at a safe and rapid speed—that the gradients will not exceed 1 in 264, nor the curves 1 mile in radius. The alterations made in the line since it was last under my notice, are, in my opinion, judicious; and by the introduction of a tunnel at Merstham, and an extension of those at Balcombe and Clayton, much of the deep cuttings, so strongly objected to in Committee, has been avoided, and yet there is no deviation of such an extent as to render another application to Parliament necessary.

The question, however, of the practicability of your line is now considered to be set at rest—there is now no doubt but that the direct line can be made, and that when made it can be worked; and the ground being therefore so fare prepared, I will proceed at once to the other branches of your inquiry.

The working plans and estimates of Mr. Rastrick have been laid before me, and although I might agree generally with him as to the prices of particular works, I have thought it better to make my estimate entirely on independent grounds. With these materials before me, and with the advantage of my recent inspection of the line, I have estimated the cost of the works, including the excavations and embankments, bridges, tunnels, rails, chairs, sleepers, &c., and every other item belonging to the formation of the railway, and also the sum of 16,000*l.* for stations, and 30,000*l.* for management, (but exclusive of the cost of the land and buildings,) at the sum of 850,000*l.*, and the Shoreham Branch at 70,000*l.*; and I have no hesitation in expressing my belief that the works may be executed for these sums.

I ought to observe, that, in forming my estimate, I have not been governed entirely by the propositions of Mr. Rastrick. There may be cases where his plans are superior to those which I might recommend; and, again, I might prefer a peculiar method of execution not approved of by him; but, under all these circumstances, the differences between us are so slight, and our estimates so nearly equal, as to give the assurance that we are not far from the truth.

The line at Brighton still admits of a slight alteration. I have mentioned this to Mr. Rastrick, who will, I doubt not, pay to the suggestion whatever attention it merits.

The time in which the line may be executed need not exceed two years and a half.

It is unnecessary for me to trouble you with the details of my calculations, either as to the cost or the time of execution. The aggregate amount is what more directly affects you than the steps by which the conclusions are obtained: I may, however, be permitted to exceed the limits of my instructions by venturing an opinion, that contractors are to be found to undertake the work for the amount and within the time I have stated.

On the Southampton Railway heavier works, through more precarious materials, and at a less cost, are now being satisfactorily executed; and, with the experience of those works, I see no reason to apprehend difficulty in encountering those on your line. There is scarcely a district in England where the material is more favourable, and thus the contingencies, both as to cost and time, are rendered less vague than are usual in such cases.

I wish not, however, to under-estimate the difficulties of your works; they are such as to require vigilant attention. But so much has been said and written on the subject of the Brighton Railway that the public has been led to believe the formation of any line almost impossible, and I think it right to endeavour to place the subject fairly before you, in order that you may know that your works do not exceed those that have been successfully accomplished on other railways.

I am, Gentlemen, your obedient servant,
JOSEPH LOCKE.

London, December 8, 1837.

LONDON AND BRIGHTON RAILWAY.—The opening of the new Pier, which has been constructed by the London and Brighton Railway Company, in the western branch of Shoreham Harbour, was celebrated on Monday last, by a party of friends to the undertaking, who embarked at the Chain Pier in the *Dart* steam-packet, and proceeded in her to the harbour. A most lovely day rendered the excursion a very delightful one; and the firing of guns, hoisting of flags, &c., imparted unusual animation to the banks of the river. Shortly after the arrival of the vessel at the new wharf, the party sat down to a cold collation on board the *Dart*, and under the presidency of Mr. Dean, drank "Prosperity to the undertaking, and to the intercourse about to be opened with Havre." The health of the Directors of the Railway, and that of the Directors of the General Steam Navigation Company, were drank with loud cheers; and the usual loyal and festive toasts were not forgotten. We were also pleased to see that the men employed in constructing the Pier were regaled with plenty of beef and ale.—*Brighton Gazette*, July 28.

HER MAJESTY'S SECOND TRIP BY RAILWAY.

ON Saturday afternoon, shortly after 3 o'clock, her Majesty the Queen, accompanied by his Royal Highness Prince Albert, and their Serene Highnesses the Prince and Princess of Saxe Coburg Gotha, with a numerous suite, in four of the royal carriages, left Buckingham Palace for Windsor, *via* the Great Western Railway to Slough. The most excellent arrangements for the accommodation of the royal party were made, under the superintendence of Mr. Saunders the Secretary, and Mr. S. Clark, the Superintendent of the line, and on the arrival of the *cortege* at the Paddington terminus, Mr. C. Russell (the Chairman), and several members of the Board of Directors, received her Majesty, and led the way, under a handsome awning constructed for the occasion, to the royal carriage, which was tastefully decorated with the choicest flowers. A great number of ladies were admitted by tickets to witness the departure, and at about 20 minutes to 4 o'clock, the *Mentor* engine having been attached to the train (which consisted of four carriages), the signal was given, and the royal party were quickly out of sight. Her Majesty and the Prince appeared in excellent health, and gracefully acknowledged the loyalty of the assembled company.

GLASGOW AND AYR RAILWAY — KILMARNOCK BRANCH.

THIS important branch is making rapid strides towards completion. The very numerous bridges along the whole line are completed. The permanent rails are being laid down, at some places on wooden rests and at others on stone blocks, at Bonnington Bog, Carmel Water, Busbie, Furgushill colliery, opposite Mountgreenan and Annick Lodge; and in several places near Dalry, the intricate intermingling of rails at the junction with the Glasgow line being already formed. The cuttings and embankments are considerably advanced, many are finished, and all in a state of progress; even the heavy three-breasted excavation at Peasehill, near Dalry, where a wheel rope and rollers are employed to pull the empty waggons up the ascent to the second breast by means of the descending loaded ones, may be reckoned within three months of completion. The sides of the embankments and the slopes of the cuttings are mostly smoothed, sown with grass, and assuming a verdant hue. Going along, it was curious to observe indications of the hardy habits of the Irishmen engaged upon the laborious work of excavation. Near the road leading to Annick Lodge, and also at Peasehill, where there are very heavy cuttings, they have built themselves about a dozen turf huts of about 10 feet by 8, and thatched them with the same material. Instead of chairs they have narrow boards on turf supports all round the walls; and, saving a few coarse basins and cooking implements, they seemed to possess no requisite of comfort, yet, peeping out of their low doors, and strolling in their neighbourhood, healthy well-clad women and rosy-cheeked children were seen in abundance. But these "clay biggings," like the scaffolding of a building, so unsightly to the eye, will pass away when the services for their tenants' "thews and sinews" shall be transferred to France or Belgium, or where hard work is to be done, and then will be left only the fertile and picturesque country through which the line passes, studded with gentlemen's seats and white-washed farm houses. In going along the railway the traveller passes Busbie Castle, Cunninghamhead, the woods of Annick, the villages of Doura and Furgushill, Mountgreenan and Blair House, while at a distance, at different localities, he obtains a peep over the trees at the sea, the parish churches of Irvine and Stevenston, the tower of Kilwinning, the hills of Dundonald, Craigie, Loudoun, Galston, Cumnock, Arran, and Kilbirnie. The route, we have no doubt, will be a favourite one, even with jaunting parties. There is not a single bare or barren spot along the whole distance.—*Kilmarnock Journal.*

NOTES TO THE TRAFFIC TABLE,

(on the opposite page.)

3. Main line, 53 miles; Tewkesbury branch, 2. — Total length, 55 miles.

4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone. The Company are now before Parliament for power to raise the capital to 500,000*l.*

8. Receipts include the Northern and Eastern toll, &c.

12. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester and Chester and Crewe lines, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 134½ (83½+21+31.)

14. The receipts include those derived from the Cheltenham and Exeter lines; the former opened for 18 miles, and the latter for 45. The divisor employed to ascertain the daily receipts per mile is therefore 181½ (118½+18+45.) The *rent* of the branch lines is together about 1,163*l.* per week. There is likewise a *toll* payable to the Exeter Company of a farthing per passenger and per ton of goods per mile travelled.

15. The dividends have been hitherto (up to 31st December, 1841) appropriated to completing the line and works.

17. The 38*l.* 3s. 8d. from goods, &c. is for toll only.

18. Ten per cent. is the maximum dividend allowed by the Company's Act.

19. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. The dividend is *nominally* at the rate of 9*l.* 10s. per cent., but to the original shareholders it is equal to 12*l.* 15s. per cent., as the dividend on the original shares is paid upon 100*l.*, although only 90*l.* has been called for; and on the quarter shares upon 25*l.*, although up to the 31st of December last only 5*l.* had been called for. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

20. The dividend is from the opening, and on the old shares alone.

21. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table.

22. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company. The sum applicable to the purpose of the dividend declared on the 10th of March, was 11,126*l.*, of which amount 10,051*l.* 17s. 4½d. had been earned prior to July 31st, 1841.

23. Capital of 993,800*l* includes new capital for widening the line, &c. The dividend of 7s. 6d. per cent. does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table includes the receipts from the footpath, but is exclusive of the Brighton, Croydon, and Dover toll.

24. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount. The Gosport branch is included in the length stated.

25. Including Toll, &c., from Sheffield Company, and after deducting omnibus charges, &c.

26. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

27 The 4,891*l.* 5s. 0d. are the receipts after deducting omnibus charges, and payments to other Companies.

28. The receipts for goods, &c., include, horses, 53*l.* 9s. 0d.; carriages, 74*l.* 13s. 0d.; dogs, 1*l.* 10s. 0d.; parcels, 205*l.* 7s. 9d.; cattle, 10*l.* 7s. 6d.; corn, 4*l.* 5s. 0d; heavy goods, 502*l.* 0s. 11d.; coal and lime, 108*l.* 7s. 1d. —Total, 960*l.* 0s. 3d.

31. The 3,850,000*l.* is the *nominal* capital on which dividends have to be paid; the amount actually raised is 3,000,000*l.* The details of the receipts are as follows—Passengers, 2,929*l.* 6s. 4d.; carriages and horses, 214*l.* 3s. 1d.; parcels, 175*l.* 19s. 1d.; mails, 50*l.* 5s. 9d.; merchandise, 1,094*l.* 11s. 8d.; minerals, 263*l.* 17s. 4d.; cattle, 32*l.* 1s. 0d. — Total, 4,760*l.* 3s. 10d.; including North Midland proportion of Manchester and Leeds traffic, amounting to 143*l.* 5s. 0½d.

32. The receipts are after deduction of Liverpool and Manchester toll.

33. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 134*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 32¼ miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

34. The capital of 533,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).

35. The returns are inclusive of Manchester and Birmingham toll.

38. The traffic stated does not include the Leeds and Selby.

TRAFFIC OMITTED.

Grand Junction Railway. — *Week ending July* 16. — *Receipt from passengers*, 7,570*l.* 7s. 11d.; *goods, &c.*, 1,630*l.* 10s. 10d.; *total*, 9,250*l.* 18s. 9d.

London and Birmingham Railway.— *Week ending* [*July* 16. *Receipt from passengers, &c.*, 14,898*l.* 19s. 3d.; *goods, &c.*, 2,873*l.* 16s. 4d.; *total*, 17,762*l.* 15s. 7d.

TO CORRESPONDENTS.

A Leeds correspondent is anxious to know what were the receipts of the Liverpool and Manchester, Grand Junction, and London and Birmingham Railways for the first four months after they were opened throughout, as compared with the four months ending June, 1842. *We cannot give an answer* (immediately *as our correspondent desires*); *perhaps some of our friends can.*

Cambriensis *will see that his suggestion has been attended to. We are at all times happy to receive information on such subjects.*

Nolo Persequi *need not be alarmed. We have the best possible defence*—the truth. *Juries now look more to the merits of a case than in the olden time.*

C. D. *(Edinburgh).—The quotations of shares were given as in the lists specified. The same may be said of the amount paid up in the other instance referred to.*

Payment of Dividends.—*A correspondent wishes us to impress upon Railway Directors the propriety of paying the dividends as soon as possible after they are declared "Last half-year [he says] they were not in many instances paid to the proprietors till the end of March, nearly three months after the accounts were closed. As the days of meeting are already fixed, they cannot be altered; but surely the Directors might arrange to pay the dividend immediately after the meeting, to the persons whose names may be registered—say the* 1st *of August."*

Bruff's Engineering Field Work.—*Another section of this excellent work has just made its appearance. The subject is* Levelling, *which is handled in the same masterly manner as the previous treatise on Surveying. We cordially recommend it to our readers. It is published by Simpkin and Co.*

Eastern Counties' Railway.—*We thank* Argus *for his communication. The general meeting of proprietors will soon be held, and doubtless the Directors will be candid and straightforward, as hitherto, in stating all circumstances regarding expenditure, past or to come. The report had reached us, that in consequence of the payment of interest on debenture money, and of the old extortion of landowners and the attendant litigation, and of the heavy works arising from the slips on the Gubbins embankment, apparent to all who have travelled on the line —there would be some excess of expense. But the traffic on the line is so promising and increasing (the numbers carried for* 17 *miles already, as we are credibly informed, exceeding the number put down in the estimates for the whole line to Colchester), that we feel great confidence that this accidental and unestimated expenditure will be more than met by the increased revenue.*

Captain Beauclerc's Letter on the Brighton Railway.—*There were several typographical mistakes in the letter inserted in our last. The principal were these:*—"with *the last sumpter van*," *not* in—"*the same impetuous zeal*," *not* gait—"jolly *god*," *not* sotty—"*family affiliations*," *not* applications. *Our printer also neglected to remove a notice to correspondents relative to this letter, and which had been prepared under the impression that an expected influx of matter of temporary interest would delay the publication of Captain B.'s letter for a week.*

Income Tax.—Sigma, *of York, asks the following question, and we shall be glad if any of our correspondents can supply an answer:—Suppose I have a situation with a salary of* 200*l.—have* 50*l. per year from railway dividends—*30*l. per annum from Joint-stock Bank dividends —and* 20*l. per annum from casual interest, for money deposited with my bankers, small sums lent, &c.; and suppose, during* 1841, *I invested* 1,000*l. in a Railway Company—sold shares, and cleared* 200*l.—how shall I make my return under the Income Tax Act?"*

Midland Counties' Railway.—*The letter of a* Glasgow Citizen *shall appear next week.*

We are again compelled to withhold the extract from Mr Rankine's pamphlet on Cylindrical Wheels. It shall appear on the first possible opportunity.

South-Eastern Railway.—A Proprietor *in our next.*

Railway Axles.—*We have been favoured by Mr. C. Hood with a printed paper "On some peculiar changes in the internal structure of Iron," but at too late a period of the week to admit of our giving any attention to it in our present number.*

*** Now that the meetings are coming upon us thick and three-fold, we trust our correspondents will study brevity as far as they can.

THE RAILWAY JOURNALS.

The Stamp Returns for the nine months ending the 31st of March last (published by order of the House of Commons), show the following results:—

RAILWAY TIMES.....	**113,374**
Railway Magazine	50,500

The total number of Supplement stamps (for Double Numbers) used by the *Railway Times*, during the above period, was 10,874, thus showing the ordinary circulation of the *Railway Times* to be more than double that of its contemporary.

THE RAILWAY TIMES.

SATURDAY, JULY 30, 1842.

BEFORE another number of our paper can appear, the Brighton Railway meeting will have been held. What the result of that meeting *ought to be*, our readers, we doubt not, are pretty nearly agreed; what it *will be*, we have seen too much of the cunning tactics of Directors, and the innocent credulity of their constituents, to venture to predict. Be it what it may, we have the satisfaction of knowing that, as public journalists, we have done our duty in exposing and denouncing a series of official misdeeds so gross and glaring that the railway system, rank though it be with corruption and abuse, cannot present a parallel to them. And however successful the Directors may be in stifling for a time a full inquiry into their by-gone transactions, we feel assured that the day will come, and that right speedily, when such inquiry will be forced upon the proprietors, when they find that the present promises of those to whom they have entrusted the management of their property are as baseless as the past—when they learn, by bitter experience, that enormous and extravagant as has been the Company's expenditure, *that* expenditure has not yet reached its limit.

The safety of the Directors will, it is easy to see, lie in two things—the want of union among those whose confidence has been so lamentably abused, and the dread which pervades all such bodies as railway proprietaries, of injuring their own property in public estimation by a fearless investigation into its actual condition. With respect to the latter point, nothing can be more unfounded than such fear. Temporary inconvenience or injury might arise from the appointment of a Committee of Scrutiny capable of probing, and determined to probe, to the bottom the doings of the Directors—although even *that* is by no means certain—but the ultimate effect would unquestionably prove most salutary, by allaying the fears of the timid, and satisfying all parties interested that at any rate the worst was known. As it is, who will take upon himself to assert, that a tithe of the mismanagement of the Brighton Railway has yet seen the light? The mysterious language of Mr. PARSONS, the Chairman of the late Committee, qualified although it has since been by that gentleman, is sufficient to excite distrust, and to induce a belief that, bad as has been the known conduct of Mr. HARMAN and his colleagues in their capacity of Directors, there is worse remaining behind. Whereas, were a searching examination set on foot—not a petty carping at pence items, but a bold and determined scrutiny into the pounds, the thousands and tens of thousands of pounds, which have

Digitized by Google

not yet been satisfactorily accounted for—the present holders of shares would know precisely the value of their investments—even supposing there should exist no power of causing any party to *refund*—and the public at large would have data before them whereby to regulate their future speculation. Surmise and rumour are ever sure to exaggerate reality. Perhaps, after all, the Brighton Directors are not a whit more culpable than their brethren of other Boards; and although iniquity, whether private or official, is neither in law nor morals *less* iniquitous because the wrong-doers are multitudinous, nor each individual culprit less liable to punishment, curiosity alone, were there no more powerful stimulant, might prompt the proprietors to inquire what extent the head and front of Managerial offending has.

One would naturally suppose that such an inquiry would not only not be resisted by the Directors, but advocated and enforced—nay, that they would insist upon having all their actions subjected to the most rigorous examination which malice itself could suggest. High-minded and truly spotless men there are at the Brighton Board—men who would scorn to stoop to disreputable deeds. Are these parties content to share in the odium which the Board collectively, and individual members of it, have incurred? Are they content to lie under grave imputations of misconduct? If these imputations are unfounded, let the innocence of the accused be made clear to all the world; should the contrary prove to be the case, those who are guiltless of participation in the injury inflicted upon the Company—nay, who may have done their utmost, though unsuccessfully, to resist the machinations of others—owe it to their own characters to demand such an inquiry as will cast the blame where it is justly due. Vague votes of thanks prepared beforehand, and ready to be produced at a general meeting, by partisans or private friends of leaders in the Direction, will not clear the fame of the Board from the suspicions which for months have been gathering upon it. It is utterly impossible that a twentieth part of the case can be fully, even if it could be usefully, brought before a public meeting, were the sitting protracted for a week. It is on record that one month's transactions occupied the late Committee almost daily for many weeks; what then is to be expected from a strict examination of the proceedings from the beginning? Those Directors, we repeat, who are conscious of their own integrity will *insist* upon further inquiry. Away with the mischievous distinction so often drawn between official and personal misconduct! Villany is villany, against whomsoever practised, and the misappropriation of a Railway Company's funds as clearly a robbery as if the victim were a solitary individual. A dishonest Director cannot be an honest man, although Parliamentary parlance may assume the co-existence of public delinquency and private purity.

Nevertheless, should the Directors decline such an ordeal, and despise, or affect to despise, the imputations cast upon them, it will be for the proprietors to take the matter into their own hands. Let them only be firm, and success is certain, however clamorous may be the creatures of the Management with their well-feigned indignation that the actions or intentions of those who honour the Company with their services should ever have been suspected. There is no need of hard words, or long speeches. On the very face of the business there is a strong necessity for inquiry. Inquiry, full and fair, is all that there is occasion to demand, and by the result let the Directors stand or fall. The really independent proprietors must beware of pretended censurers of the past policy of the Management—parties who will get up personal bickerings, or dilate upon trivial and irrelevant topics, to draw off attention from matters of moment until the time and patience of the meeting being exhausted, the business of the day is huddled up with or without the customary compliment to the Board.

Let them guard, too, against having any motion carried or negatived by a show of hands. Packed assemblages are easily got together. Let the votes be taken as prescribed by the Act of Parliament, and if the motion be one of consequence—one involving a principle—let the polling be adjourned to a future day, so that the sense of the proprietors generally may truly be ascertained. This we are aware is a very tedious and troublesome process, as compared with the hour's or two hours' "despatch of business," which commonly prevails; but the meeting of Friday next is one of no ordinary character. Upon the steps then taken it will depend whether the Brighton Railway, with its extensive, and as yet but partially developed, resources is to be a paying concern or not. Need we say another word to recommend vigilance and vigour. Injury which can never be repaired has already been done to the property of the shareholders through the incapacity (if nothing worse) of the present Board, but there is still much worth struggling for; and if the present opportunity be neglected, further mischief will inevitably result.

Mr. RASTRICK, it is said, has resigned his office as Engineer-in-Chief—whether as a matter of course on the (so-called) completion of the line, although somewhat hurriedly, or as taking a hint and anticipating the decision of his employers, it boots not too closely to inquire. But Mr. RASTRICK's retirement, from whatever motive arising, does not take him out of the jurisdiction of the proprietors, nor will Mr. RASTRICK desire that it should be so, provided he can face investigation without fear. In *his* case investigation is indispensable, or farewell to whatever professional reputation he may heretofore have enjoyed. No man is foolish enough to expect that Mr. RASTRICK could have constructed the railway without expending a very large sum of money—larger perhaps than the estimate originally set down—but every one expects, and those whose property is invested in the undertaking have a right to demand, that Mr. RASTRICK should do *what he has never yet done*, give a satisfactory explanation of the enormous excess which has arisen—should show that this excess has been occasioned by circumstances which he could not foresee, and over which he had no control. If Mr. RASTRICK can prove that nothing which he has done, or omitted to do, or connived at in the conduct of others, has led to the trebling of the estimates upon which his own reputation, as well as that of Mr. LOCKE, was staked, the proprietors may complain of his want of skill in the preliminary operations, but they cannot fairly question the integrity of his subsequent conduct. It remains with Mr. RASTRICK to set all doubts on this matter at rest.

So much has recently appeared in our columns with respect to this railway, that we will not now go into minute details. We cannot, however, let this last occasion pass without strongly urging upon those who may be present at Friday's meeting the necessity of determining, by a distinct motion, that not one farthing of the money about to be paid by the South-Eastern Company* shall be appropriated, on any pretence, to any purpose whatever, until a meeting of the shareholders has been convened specially to determine upon its disposal. If this be not done, and done immediately, they may rely on it that every shilling will be absorbed before they know what has become of it. We speak advisedly, when we give it as our opinion, that if the future expenditure is to be on the same scale and of the same character as the past, the South-Eastern money, and more, will not suffice to *finish* the Brighton Railway and discharge the liabilities of the Company. Let the proprietors look to it in time.

We had meant to suggest some further questions to the worthy Chairman, relative to the amount of the Brighton Solicitors' Bills—the sum paid to Mr. DANIEL WHITTLE HARVEY, for the premises at Brighton now occupied by the Resident Engineer—the Rochester Road scheme, and its preliminary expenditure—a certain Cemetery project, and its results—the *exact* amount of the sum carried off by Mr. WOOD (which we are informed was more than double the amount stated by the Chairman, although the late Committee did not find it out)—and various other matters; but, as already said, we waive for the present all further details.

THE proceedings of the proprietors of the Greenwich Railway on Thursday last, are principally remarkable for the mode in which they were conducted. A bright specimen of a deliberative assembly was this Greenwich meeting! To have listened to facts or arguments by which prejudice might have been removed, or obstinacy overcome, would have taxed too strongly the faculties of the majority present; it was much easier to cry down a speaker, and shout "No surrender," although in that shout might be drowned a voice which could have shown how the property of this poor eighteen-penny-dividend-paying concern might have been greatly improved. One could scarcely expect the Chairman to enforce such order as is observed in all decent societies, when his own Deputy was guilty of the gross indecorum of interrupting, by his impertinent remarks, almost every speaker who addressed the meeting. By the way, *who* is this very gentlemanly personage—this Mr. JOSIAH WILSON—who speaks so sneeringly of the newspaper press? Our word for it, he is one who at some time or other has not 'scaped whipping in the discharge of his official functions. We have known many, besides Mr. Deputy-Chairman of the Greenwich, to whom the press was an object of affected contempt—*affected*, we say, for at the very moment when these very small persons would fain appear most indifferent, they quake at the power which they asperse; and fortunate it proves for their constituents that it is so.

The object of many of the parties present at the meeting was very evident; it was to show the Croydon Company that any attempt to induce a change of measures in respect of the toll question is hopeless. If the Greenwich Company were to be the sole sufferers, we might permit them without remonstrance

* The amount claimed was, we understand, invested in the funds on Monday or Tuesday last by the South-Eastern Board, to await the result of the examination of the accounts of construction, as provided for by the Act of Parliament. This section of the line is now therefore the absolute property of the South-Eastern Company.

Digitized by Google

to "do as they like with their own;" but others are involved in the injurious effects of the Greenwich policy, and those most especially to whom Mr. SALOMONS referred, namely, the public. We trust that, now there has been an infusion of fresh blood into the Greenwich Board, the important considerations mixed up in this toll question will not be so summarily dismissed as certain individuals in the Direction and out of it appear to recommend.

We are not now about to discuss the merits of the toll question as handled by the opposing parties. In truth, we doubt whether argument could have any effect upon a body who shut their eyes to these plain facts—that they have already lost a large revenue by the steps which the Croydon Board (whether wisely or unwisely for themselves it matters not) have adopted—that the parties desiring to make the experiment are ready to guarantee them more than they can ever hope to gain under present arrangements—and that even if the proposed scheme should not answer the expectations of *all* parties, a return to the present system could easily be effected. Much stress is laid upon the Parliamentary decision of a 4½d. toll; but can Parliament compel the Croydon Company to pay it? Can they, or can the "no surrender" party of the Greenwich Company, force the Croydon Company to use the Greenwich line, whether they will or no? All that the Greenwich Company have to look at is, how they can make the most money out of their property. It is very evident that they are not doing so now—for they formerly made more—and yet some of the Directors and those whom they represent will not allow the question even to be argued!

Our space will not permit us to dwell longer on this almost threadbare topic; but we fear we shall have many occasions of reverting to it, and of noticing the question of fares, which was brought forward at the meeting of Thursday.

ALTHOUGH the usual dividend has been declared in the Liverpool and Manchester Railway Company for the six months just ended, that important undertaking has not escaped the effects of the commercial distress which has so seriously crippled the resources of other speculations of a like kind. It will be seen from the Directors' Report, which we publish elsewhere, that there has been a decrease in every department of the Company's business, as compared with the corresponding period of last year. We trust and believe that this depression will be only temporary.

When the meetings of the principal Companies have been held, we shall endeavour to institute a comparison of their respective disbursements. Till then, we must leave the Liverpool and Manchester balance-sheet to speak for itself.

IN regard to railways, the jobbing in share markets, the buying and selling not for investment or realisation merely, but the gambling in extensive time-bargains where no shares actually pass between buyer and seller, have established evils and injuries which no public journal can have the strength entirely to eradicate; and amidst these evils none are more distressing than that innocent members of society should be "pigeoned" by false appearances and representations, and led into foolish investments, while men of accurate knowledge of all the facts of a railway undertaking get out of bad speculations, to leave them as a burden and loss upon the shoulders of the uninitiated, the ignorant, and the confiding. Great as this evil is, and deeply as it has taken root, there is another which is as bad, if not worse, and which is generated in a considerable degree by the former; and it consists in the extraordinary apathy of shareholders at general meetings in inquiring into their affairs, and in the dread they exhibit of drawing up the curtain which hides mismanagement and waste, lest the market price of their shares should be prejudicially affected. What is the latter course of conduct but this: that parties having a property not worth the market price wish to promote and continue deception, and to court darkness, until they have met with some innocent and ignorant persons to relieve them of their investments, before any promulgated fall in value shall have taken place. This wickedness (for it cannot be called anything else) must be restrained and put down; and painful as will often be the duty upon ourselves, we see no hope of amending the mischief but by acting the part of universal shareholders, and pointing out to our brother railway proprietors of the world at large, with the pen of scrutiny, of truth, and of reason, the facts relating to each railway—its expenditure, its management, its traffic, its revenue, and whether it has been or is in a healthy or unhealthy condition, and what steps must from time to time be taken in regard to different undertakings, in order to bring about a proper and faithful discharge of duties in Directors and officers; and we trust that this exposure and such comments will keep the eyes open of those seeking fresh railway investments to compare existing prices always with true value—to trace whether these prices be sound or fictitious, and to lay out their money accordingly. Thus in time proprietors will, we hope, discover the folly of silence, and cloaking, and glossing, and hiding at public meetings; and will force the light of day into every transaction, let the consequences as to the rise or fall of prices be what they may, and in this candour and courage of shareholders the first evil to which we alluded will find a seasonable and invincible check.

Nothing can be more sad and humiliating than to find Directors buying shares, propping up the market, inducing friends to buy, and thus leading, by jobbing transactions, to a progressive rise in prices, and by giving confidence to the investors of money in all quarters, enticing into the trap those who follow leaders whom they deem wise, and whose good sense and shrewdness have been stamped and confirmed by the manifest indications of a rising market. At last a price is reached which may be about the summit to which rottenness can creep, and then the leaders are shrewd indeed, for they back out of the undertakings, or they job by buying or selling, as may be advisable in time-bargains; and thus, according to the sporting phrase, "hedge" their losses; or they make themselves "safe" by selling enough of shares to "square" their accounts. Thus they get ready for the approaching storm, and leave plunged in misery, and distress, and loss, those who have trusted to parties in the Management being fair and upright characters. But if shareholders would with firmness require at each half-yearly meeting to become as well informed as Directors themselves, and if they would insist upon the development of the bare and naked truth in everything, all the partners would be on a level, and their public discussions, disseminated by the press, would make strangers to the concern acquainted with every fact desirable to be known, and then shares must reach and keep at their proper level, rising and falling from sound causes, and maintaining a just price. No man need then feel the indignation which is naturally created by witnessing a Director, who may have been clamorous in his confidence in an undertaking, deserting it when its shares have reached their highest price; nor would the poor widow, who may have staked her all to improve her little income, upon her dependence and implicit trust in the characters of those managing the speculation in which she is excited to invest, have to feel her heart sink within her and break at hearing the intelligence, when expecting increased prosperity, that half, three-fourths, or the whole of her property has, by a sudden although just fall in shares, become irretrievably lost. Correspondents must keep us acquainted with all circumstances that can enable us to discharge faithfully the responsible duty which we have thus announced our intention of undertaking. Bad management must be castigated—rottenness exposed; while deep will be the gratification of awarding praise wheresoever it is deserved.

FEW things could contribute more to the prosperity of railway property, absolutely as well as relatively, than the comparison which the periodical statements of each Company as regards receipts and expenditure would seem likely to suggest. Unfortunately, however, the diversity which prevails in the various establishments in the mode of setting forth to the shareholders the results of the half-year's operations, goes far to neutralise any good effect which otherwise might be looked for. We trust we are not guilty of an uncharitable construction of the motives which influence not a few Boards of Management, when we venture to hint that this diversity is more frequently the result of design than of accident. It would, perhaps, not be very creditable to some of them if comparisons were instituted with their neighbours, and hence, we are inclined to think, no pains are spared to set at defiance every attempt at classification and contrast. Disbursements the most incongruous are lumped together, as if all that concerned the poor proprietors were to know the sum total of their liabilities; and it so happens that any attempt to penetrate the mystery of Managerial accounts is looked upon and resented as trenching upon the prerogative of the Directors, or of that section of them who claim to be the "Committee of Finance," nay, probably is regarded as a slur cast upon the whole Board, which nothing but an entire and unqualified retraction of any and everything bearing the semblance of suspicion can remove. Why should there be such childish submission to the *ipse dixits* of Directors? What would be thought of the impudence, on the one hand, of a servant or agent who should take upon himself the air of an injured person when called upon to expound his accounts; or what, on the other, of the folly of a master who dared not demand the production of such accounts, whenever and in whatsoever form he might deem fit? And yet in precisely this position are Railway Directors and their constituents placed. To listen to the expressions of insulted dignity whenever an isolated proprietor is bold enough to "hint a fault and hesitate dislike," one would suppose that Managerial integrity were above suspicion, and yet, alas, we have but too frequent occasions of recording facts which would leave a very different impression. The least fault which can be imputed to more than one Board of Direction

Digitized by Google

is negligence. The members may not, collectively or individually, share in the fruits of direct jobbing or downright peculation, but from *their* inattention the field is left open to subordinates, and very closely is it reaped! We have known Boards of Management, wholly above any imputation of dishonourable conduct, who would not hesitate, and have not hesitated, to entrust to their officers the power of turning the patronage of the Company to the basest uses—officers who as regularly pocket a per-centage upon the goods supplied to the Company as ever did the most corrupt and craving major-domo of a West-end establishment. To repress such practices requires much more of daily vigilance than is bestowed upon the affairs of their several undertakings by nine-tenths of existing Directorates; and yet, until something of the kind be successfully carried into effect, Railway Companies will fail to reap the full measure of the benefit to which their enterprise justly entitles them—in fact, will continue to be regarded as fair prey for plunder and peculation. The reform of such abuses rests mainly with the Boards of Management, and although self-reformation may be not the less called for, it is to be hoped that no opportunity of accomplishing so desirable an object will be omitted.

As respects the accounts of the Companies, it were greatly to be wished that all of them would adopt one uniform mode of setting forth the items of their expenditure. We are by no means advocates for external interference in the management of railway affairs; but we confess we should not be sorry to find it imperative on all the Companies to set forth their accounts after a certain fixed form. This need by no means interfere with the methods adopted in the different Companies of *keeping* their accounts, but the value of such regulation as that to which we have referred will be fully appreciated by all who have vainly endeavoured, from the heterogeneous mass of half-yearly balance-sheets, to deduce anything like general principles, or a satisfactory comparison of details.

We understand that Mr. Robert Stephenson has been for some time in Paris, engaged in investigating the Government project for a railway from Paris to Calais, and the Belgian frontier, by Arras and Lille. He is now examining the country in detail, and we have reason to believe that his opinion on the subject is highly favourable. Every assistance has been rendered by the French Government.

Yesterday, at the Guildford Assizes, Mr. Henry Cramer, whose folly was the cause of the fatal accident (noticed elsewhere) to one of the guards on the Croydon Railway, pleaded guilty to a charge of misdemeanour preferred at the instance of the Company. The indictment charged him with endangering the lives of the other passengers. A nominal fine of 40s. was imposed, the defendant having expressed his regret at the occurrence. The presiding judge (Mr. Justice Coltman) doubted whether the charge could have been legally supported had Mr. Cramer pleaded "Not guilty."

The intelligent correspondent who furnishes us with the following table, is anxious, for the sake of facilitating future comparisons, of eliciting the *total mileage* of the engines on the different lines of railway. We need hardly say that we shall feel great pleasure in giving a prominent place to any statement of the kind. As our correspondent observes, the receipts and expenses per mile supply a tolerably accurate approach to the truth:—

A Comparative view of various Working Expenses Receipts, and Profits, from July to December, 1841.

	Miles run during the six months, about	Locomotive power.		Maintenance of way.		Amount of locomotive power and maintenance of way.		Repairs of coaches and waggons. On Tuesday afternoon, July 11, an entertainment was given to 236 of the children belonging to the day and Sunday schools connected with the great railway station at Wolverton. After tea the children were examined, in the presence of their parents, by the Chaplain of the station, the Rev. G. Weight, M.A., in the scriptures, in the elements of Euclid, and other branches of knowledge, and numerous reward books were given for proficiency. The Episcopal chapel at the station having been found much too small, it has been determined that a church and parsonage-house shall be erected there, and about 3,500*l.* have already been subscribed or promised in aid of this object. Wolverton is the only railway station in England where any permanent provision is made for the moral instruction of the people. We have received a copy of a very interesting Report issued by the Committee who have charge of this matter. We shall endeavour to make room for it next week.

—o—

A mid-day mail train is, we are informed, about to be started on the Edinburgh and Glasgow Railway. This will prove a great accommodation to the inhabitants of the terminal cities.

—o—

A Correspondent states, that at the approaching Brighton meeting it is intended to propose a reduction of the number of Directors, and to declare a dividend of 20s. per share—to smooth over the past, by remarking on the violence and injustice of the press—to profess a great anxiety to give information, and attempt to inspire hope for the future—touching gently on the South-Eastern payment, but noticing nothing of their own accounts being behind. It is also said that Mr. Harman defies the proprietors to remove him until his vocation dies a natural death in January next!

—o—

On the motion of Mr. Richard Hodgson, a return has been ordered by the House of Commons "of the sums paid by the Postmaster-General to each Railway Company for the conveyance of the mails, stating the number of miles, and the rate per mile paid to each Company, under each contract, and the total amount paid to each of the said Companies."

—o—

It appears from a Salisbury paper that the effect of railway communication, in lessening the expense of travelling, is strikingly exemplified in that city. Previous to the completion of the South-Western line, the lowest charge made for an outside place on the coach to London was 18s.; while the mail, and some other coaches that passed through Salisbury, charged 20s. A coach is now running by which the journey may be made for 13s.!

—o—

We find, from a petition recently presented to the House of Commons on the subject of the coal duties, that the following motion was proposed by Lord G. Somerset, in a "Select Committee" of the House of Commons, in 1838:—

"And it is the opinion of this Committee that the clause contained in the several Acts by which railroads terminating at or near the city of London have been sanctioned, and by which clauses a duty of thirteen-pence per ton, on all coals carried on the said railways, within certain specified points, varying in distance from the city of London of from 15 to 17 miles, is made payable to the Corporation of the city of London, be repealed."

The motion was however defeated by a majority of 1; the *Ayes* being Captain Alsager, Mr. Finch, Mr. Hume, Mr. Wood, and Lord G. Somerset; and the *Noes*, Mr. Bell, Sir James Duke, Alderman Humphery, Mr. Lambton, Mr. Pease, and Alderman Sir Matthew Wood—*every one of the latter body being interested in the rejection of the motion*; two from their connection with the city of London; three as coalowners, namely, Mr. Bell, Mr. Lambton, and Mr. Pease; and one of them, namely, Sir James Duke, as a coal-factor! So much for the decisions of Select Committees!

—o—

Last week we mentioned that a gentleman named Denton had presented a petition to the House of

Digitized by Google

Commons praying for an alteration in the Standing Orders as affecting plans and sections of proposed railways and other similar works. The following is a copy of the petition:—

The humble Petition of John Bailey Denton, Land Agent and Surveyor, of Gray's Inn Square, in the County of Middlesex,

Sheweth—That your petitioner is of opinion that the system of sectioplanography, as practised, in consonance with the Standing Orders of your honourable House, by the projectors of railways, canals, local drainages, or other undertakings requiring the exhibition of plan and section, fails to elucidate the nature and merits of all such undertakings, and does not convey to the owners and occupiers of property affected by such undertakings any adequate idea of the effect such works will produce upon their estates.

That your petitioner, impressed with the necessity of some alteration in this regulation of your honourable House, ventures to transcribe a specimen of sectioplanography (being an extract from the deposited drawings of an intended measure, of which the proper notices and requisite forms have been served and obeyed), with a view to instance the difficult and complicated form in which public undertakings requiring the exhibition of plan and section are presented to persons interested, for the purpose of obtaining their assent and approval.

[*Here a drawing is interlineated.*]

That your petitioner respectfully begs to call the attention of your honourable House to this extract, which exhibits the system of sectioplanography on an horizontal scale of 20 chains, or 1,320 feet to the inch, and a vertical scale of 6 feet to the inch, or a proportionate scale of horizontal length to vertical height as 220 to 1, and humbly submits that it cannot be comprehended except by a professional or scientific man, whereas the use and object for which it is adopted requires that it should be open to the understanding of all classes of the community.

That your petitioner, with great deference and respect, submits to your honourable House that the method of "relief or model mapping," on such proportional scales of horizontal distance and vertical height as most truly accords with nature, possesses all the properties and uses of plan and section, and is a mode of delineation intelligible to all individuals; and if the process be limited to the maps deposited in the different parishes on all lines of projected improvements, little additional expense would be incurred, while the object of your honourable House would be effectually gained.

Your petitioner therefore earnestly prays your honourable House will take into consideration the propriety of some alteration in the existing regulation of Parliament, and will be pleased to inquire whether the method of relief or model mapping might not be substituted with advantage to the public for the uses and in the manner above set forth.

And your petitioner will ever pray, &c.

J. Bailey Denton.

February 8, 1842.

—o—

We announced last week that the Lancaster Canal Company had taken on lease the Lancaster and Preston Railway. It will be seen from a sketch of the proceedings of the North Union Railway Company's meeting that the bargain is a good one for the proprietors of the railway.

RAILWAY OFFENCES AND OFFENDERS.

At the Brentford Petty Sessions, on Monday, an attorney of Ealing, named Sleap, was fined 2*l.* for being drunk and disorderly, and using abusive language to Mr. Whitechurch, the Superintendent of the Ealing station on the Great Western Railway. It appeared that on *Sunday*, the 17th, Mr. Sleap had attempted to get out of one of the railway carriages while in motion, and was only saved from mutilation or death by the promptitude of Mr. Whitechurch, who in return for his kindness was assailed with foul language and slang by this worthy member of a learned profession. Mr. Whitechurch, who it was clear from the evidence of impartial witnesses had acted with great forbearance towards the *gentleman*, was at last compelled to give the offender into custody, but he appears to have been afterwards released on bail. The fine was of course immediately paid; but Mr. Sleap, who cross-questioned the witnesses and made a long speech in self-defence, gave notice of appeal. We think he had better let the matter rest where it is.

Last week, at Keynsham Petty Sessions, Betty Goulstone was fined 50s. and costs for a wilful and malicious trespass by removing two rails from the fences of the Great Western Railway Company, in the parish of Saltford.

LIVERPOOL AND MANCHESTER RAILWAY COMPANY—GENERAL MEETING.

On Wednesday last the general meeting of the Liverpool and Manchester Railway Company was held at the Cotton Sales' Room, in the Exchange-buildings, Liverpool, for the purpose of declaring a dividend, and on other affairs. The chair was taken shortly after 1 o'clock by John Moss, Esq., at which time the meeting was rather numerously attended.

The Chairman opened the business, by stating that Mr. Charles Lawrence was unable to attend, in consequence of a domestic calamity having occurred, and that he had directed him to take the chair. He said, he regretted the absence of Mr. Lawrence on his own account, as well as on that of the shareholders.

Mr. C. W. Clay (the Clerk of the Company) having read the advertisement convening the meeting—

Mr. Booth proceeded to read the Report to the twenty-first half-yearly meeting, as follows:—

REPORT.

Liverpool, 27th July, 1842.

The Directors regret that they are unable to submit to the proprietors a more satisfactory Report of the working of the railway for the half-year ending the 30th June last.

The receipts in the merchandise department during the first four months were seriously curtailed, owing to an unfortunate contest with the Canal Companies, as competing carriers between Liverpool and Manchester. An excessive reduction of freights was, as is usual in such cases, the mode in which the hostile competition was exhibited, and a small portion of the public was the only party receiving even a very temporary advantage from the reduced rates. The Directors did not willingly engage in so extremea course, and while it is evident that sacrifices similar to their own must have been submitted to by the canal proprietors, it may be sufficient to observe in this place, that though the Directors will always regret the necessity for an unprofitable contest with the Water Companies, they will be prepared nevertheless, with the sanction of the proprietors, to maintain if need be, under severer pressure than they have yet experienced, that position as an independent Company which is essential to the success and stability of the concern.

The proprietors are aware that the general depression in trade and manufactures which the Directors have had so frequently to notice, continued unabated throughout the six months just closed. The severity of the distress in the districts through which the railway passes is exhibited in the increased amount of parochial assessments which the Company have been called upon to pay. The rates and taxes for the half-year being nearly at the rate of 10,000*l.* per annum, in addition to the Government passenger duty.

The gross receipts in each department of the Company's business have decreased as compared with the corresponding period of 1841. In the merchandise traffic any detailed comparison of receipts, under the circumstances of extreme competition and reduced rates above referred to, would afford little information. In the coaching department the decrease for the half-year, as compared with the corresponding period of 1841, amounts to 4,649*l.*

In the current disbursements it has not been possible, with due regard to the public accommodation, to make reductions proportioned to the reduced receipts. A considerable amount of the current expenditure is of a fixed nature; and in the case of parochial rates, has been even increased by the very causes to which may be ascribed, in part, the diminished receipts. In the locomotive power department, while the Directors have been obliged to run nearly the same number of trains as heretofore, yet by the improved construction of the engines, combined with strict economy of management, the half-year's disbursements under this head are considerably less than they have hitherto been; the stock of engines at the same time having been maintained, and being at present in a very efficient and satisfactory state.

Since the half-yearly meeting of the proprietors in January last, the Directors have been authorised, by a special meeting held in this place on the 20th of April, to proceed with an amended line of railway from Ordsall-lane across the lands of the Manchester, Bolton, and Bury Company, to join the Manchester and Leeds line at Hunt's Bank.

For this purpose it was necessary to apply to Parliament for authority to make the deviations required by the amended line, especially to carry the same through the lands of the Old Quay, and of the Manchester, Bolton, and Bury Companies, and along the north west side of Upper Booth-street, Salford, which was necessary in order to effect an independent line of communication between the Liverpool and Manchester and the Manchester and Leeds Railways. The junction line, when completed, will form an integral part of the Liverpool and Manchester Railway. The Act of Parliament has been obtained, and nearly the whole of the land between Ordsall-lane and Hunt's Bank has been purchased at prices very little, if at all, exceeding the estimates. The houses and other buildings which occupy the site of the intended line from New Bailey-street to Hunt's Bank will speedily be cleared away; and the Engineer is now engaged in preparing specifications for contracts for the new works which are to be erected in their place. The authority of the proprietors will be requisite to enable the Directors to receive on loan, under the authority of the Act of 2nd of Victoria, Sess. 1839, such sums of money as may be necessary to complete the purchases of the land, and defray the cost of the intended works.

A Statement of the Receipts and Disbursements for the Half-year ending 30th June, 1842.

Total.....		£1,515,255	3 6
By the foregoing accounts it appears, that the net proceeds for the half-year amount to..		£54,496	2 10
To this must be added, the surplus after paying the last half-year's dividend		8,122	9 7
Making.....		£62,618	12 5
The Directors recommend a dividend of 5*l.* per share, on 12,090 100*l.* shares, amounting to.....		£60,450	0 0
Which being deducted from the net proceeds above stated will leave a balance of		£2,168	12 5

This balance, or so much as may be necessary for the purpose, the Directors, with the sanction of the proprietors, intend to appropriate to the payment of the Income Tax, which will soon be chargeable on the Company for six months from the 5th of April last; carrying forward the remainder to the credit of the next half year's account.

By the provisions of the Act of Parliament authorising the Income Tax, parties legally exempt from this tax may receive a certificate from the Treasurer of the Company stating the amount of tax paid in respect of their particular dividends, which will enable the Property Tax Commissioners to order the return of the tax so declared to have been paid.

The reading of the Report was followed by loud cheers.

The CHAIRMAN expressed a hope that the Report would meet with the approbation of the proprietors generally, and said that the Directors would require the sanction of the meeting to enable them to receive on loan such sums of money as might be necessary to complete the purchase of the land, and defray the cost of the intended works.

Mr. ROBINSON, presuming that the Directors intended to go on with the works, moved that they be empowered to borrow the money requisite for the purpose. He also moved that the Report be received, adopted, carried into effect, and printed, and that a copy be sent to each proprietor.

Mr. TAYLEUR seconded both these motions, which were unanimously carried.

The CHAIRMAN said, it would be necessary to have another motion, authorising the payment of the dividend, proposed and seconded. He thought, considering all the difficulties with which the Directors had had to contend, that a dividend of 5*l.* per share was very good. (Hear, hear.)

Mr. WILLIAM COMER accordingly moved that the dividend be paid.

Mr. TURNER seconded the motion, which was also unanimously adopted.

In reply to the question of a proprietor,

Mr. BOOTH announced that the dividend would be payable on the 9th of August.

The meeting then separated, the proceedings not having lasted more than 20 minutes.

MANCHESTER, BOLTON, AND BURY RAILWAY COMPANY—GENERAL MEETING.

DIRECTORS' REPORT.

In allusion to the results of the past half year, the Committee regret that their business has experienced no improvement: the prevailing depression and stagnation of trade continue not only without alleviation, but have become wider and deeper, and as it is difficult to foresee when commerce will revive, a larger balance is retained in hand in the division of profits than otherwise might have been thought necessary.

In January last communications were received from the Board of Trade, recommending (in consequence of the accident that had occurred to third-class passengers on the Great Western Railway) an improved description of third-class carriages. A compliance with this suggestion would have involved considerable expense to the Company, at the same time that it was difficult, owing chiefly to the heavy and unequal pressure of the passenger duty, to discern a profit on the third-class traffic; and your Committee were led to the conclusion that, under the circumstances, it was better to relinquish this description of trade altogether. Since then (at the importunity of Companies who considered themselves injured thereby), the Chancellor of the Exchequer has promised to substitute, instead of the poll tax, an equal duty of 5 per cent. on the passenger receipts of the various railways. In consequence of this, your Committee have been induced to incur the expense of an improved description of third-class carriages, and to run them on the railway at morning and evenings.

The proprietors will be aware that in the summer of 1839, the Liverpool and Manchester Railway Company obtained an Act for the construction of a junction railway through Salford, uniting their own with this and the Manchester and Leeds Railway.

Since that period there have been many discussions as to the eligibility of that line compared with other modes of connection. The result, however, has been the adoption of a modification of the junction line through Salford; the chief alteration consisting in the avoidance of running over a portion of this railway, the deviation in lieu thereof being made to pass across the Company's property in Salford, but running in juxta-position, and communicating, with their railway in Upper Booth-street; and by this means uniting the three railways together in a manner equally sufficient for all intercommunication, without that interference with each others traffic which was involved in the former mode of junction.

This change of plan called for new terms of agreement between this and the Liverpool and Manchester Company. After considerable discussion an arrangement has been concluded. The Liverpool and Manchester Company have already purchased the land and buildings required in Salford, and it is now expected that this link of connection, so long delayed, though still so requisite, will be actively proceeded with.

Your Committee, in reference to the preceding statement of accounts, have directed a dividend of 20*s.* per share to be paid to the proprietors on the 2nd of August next.

JAMES BRANCKER, Chairman.

NORTH UNION RAILWAY COMPANY—GENERAL MEETING.

ON Thursday, the 21st inst., the usual yearly general meeting of the shareholders of the North Union Railway, was held at the Railway Office, Preston; THEODORE W. RATHBONE, Esq., in the chair.

The notice calling the meeting having been read,

The CHAIRMAN addressed the meeting, and said—The Report of the Directors, and statement of the Company's accounts, issued by order of the last Board, have now been a considerable time in your hands, and will have made you acquainted with the results of all that has taken place during the last half-year; and, whilst we shall be happy to afford you any further information you may require, I do not know that there is anything of moment that I can now add to these statements. We certainly had fully anticipated being enabled, on this occasion, to have announced to you the completion of an arrangement with the Lancaster Railway Company for the concentration of the traffic of the two railways, as formerly, in one passenger station in Preston, having recently had a very friendly and satisfactory conference on this subject with a deputation of the Directors of that Company, at their express request, and on the ground of the very great importance and expediency of such an arrangement. You are, however, no doubt all aware of the arrangement which has since taken place between the Lancaster Canal and the Lancaster Railway Boards, for a lease of the Railway to the Canal Company, during a period of 21 years, for a payment of 4 per cent. net dividend to the railway proprietors on their paid-up capital. By this arrangement the Lancaster Railway is, of course, transferred into the hands of a totally different body from that by which it has been hitherto managed; but, so far from increased difficulty in consequence, in coming to satisfactory arrangements on all subjects of mutual and public interest, we confidently anticipate, both from all our past intercourse with the Managers of the Lancaster Canal, and from the circumstance of the carrying establishments north of Preston being thus consolidated under one united management, increased facilities and greater promptness in carrying into operation all such arrangements. You are, no doubt, aware that the Lancaster Railway was offered to the North Union Directors, first on a payment of a 5, and afterwards of a 4 per cent. dividend to the proprietors; but the railway actually

Digitized by Google

not realising, or being capable of realising so long as it is exposed to the competition of the Canal one-half even of the reduced rental thus required, the North Union Board, after a full consideration of the proposal in every point of view of the future capabilities of the concern, unanimously decided that it would not be a prudent or warrantable course for them to enter into such an engagement; and that the loss to their proprietors might have been far greater from it than they think possible from any other occurrence whatever. It may give some idea of the extent to which the North Union dividends might have been affected, to mention, that on a 21 years' term, the difference in amount between the present net income of the Lancaster Railway, and the rental to be paid to furnish the 4 per cent. dividend, would have been no less a sum than between 120,000*l.* and 130,000*l.* The proper course to be taken relatively to the future, and to all competition for any part of the present North Union traffic, or opposition in any quarter, should such hereafter arise, has the vigilant increasing attention and consideration of the North Union Board; but you will, no doubt, feel with us, that questions of so much difficulty and delicacy cannot with propriety be prematurely discussed and brought forward at a public meeting; and you will, we hope, feel assured of the same frank and full communication on our part which has ever been during our management of the affairs of this undertaking, so soon as ever any of them are in a state to submit to you for your approval. With these few observations, I will call upon you, the Secretary, to read the Report, and to proceed with the other business of the day.

The Secretary then read the Report and statement of the traffic account which we gave last week.

Mr. Brown moved that the Report be adopted.

Mr. Troughton seconded the motion.

The Directors in their Report having proposed the continuance of the usual half-yearly dividend, viz., 2*l.* 10s. per share, amounting to 15,847*l.* 10s., and thus leaving the balance of 741*l.* 0s. 7d. to the credit of the new profit and loss account, the proposition was cordially assented to.

A short discussion next arose as to the proper manner of paying the Income Tax, which it was settled should be paid out of, and charged in, the expenses of the past half-year.

The three retiring Directors, namely, Theodore Rathbone, Esq., Reece Bevan, Esq., and Edward Cropper, Esq., were then re-elected; after which the meeting, which was not very numerously attended, and the proceedings of which occupied but a short time, broke up.—*Preston Chronicle.*

SOUTH-EASTERN RAILWAY—DOVER HARBOUR.

Return to an order of the Honourable the House of Commons, dated July 7, 1842, for a copy of the Report of the Officers appointed by the Admiralty to consider the Plans of Mr. Cubitt for constructing a Harbour of Refuge at Dover.

Admiralty, Dec. 10, 1841.

Sir,—In obedience to the Lords Commissioners of the Admiralty, conveyed to me by your letter of the 22nd November, to put myself in communication with Lieutenant-Colonel Thompson of the Royal Engineers, and with Mr. Cubitt, on the subject of forming a harbour of refuge at Dover, I lost no time in communicating with those gentlemen, and I have now the honour of enclosing our joint Report.

I hope you will pardon the liberty I take in adding, that the more I have considered this subject the more I am convinced that Government has never undertaken a work, the necessity of which was so urgent, nor the effects of which, whether in peace or war, would be so important.

I have, &c.,

(Signed) F. Beaufort, Hydrographer.

Sir John Barrow, Bart.

PROPOSED HARBOUR AT DOVER.

In obedience to the Directions of the Lords Commissioners of the Admiralty, and of the Master-General of the Ordnance, we have this day met here, and having maturely examined the plan and estimates for the construction of an artificial harbour at Dover, which were submitted to the Lords Commissioners of the Treasury by Mr. Cubitt, Civil Engineer, and having discussed the whole subject personally with Mr. Cubitt, we feel ourselves warranted in making the following Report:

That if, according to the plan above proposed, the breakwaters are to be detached from the land, there will be some considerable danger that the sand and shingle, which will be impelled from the westward by the swell and wind, and which will therefore enter at the western opening laid down in that plan, will be arrested in its progress to the eastward as soon as it becomes sheltered by the breakwater, and consequently must, by accumulating there, rapidly tend to fill up the proposed railway.

That a similar effect would take place, though in a less degree, through the eastern opening.

That therefore, instead of such a breakwater, detached from the shore, we would strongly recommend that both a western and an eastern pier be carried out simultaneously from the shore, each of them curving round so as to enclose a basin of equal dimensions to that in Mr. Cubitt's plan, but leaving an opening between the pier heads of 800 or 900 feet, through which any ships can beat in and out with undoubted facility.

That these piers should be constructed on the principle explained in Mr. Cubitt's Report, of framework caissons, ballasted with shingle, and floated into their places.

That the above opening or entrance should be fitted with an under-water threshold or semi-pier, according to Mr. Cubitt's original plan, and highly-ingenious suggestion, and that it should carry 4½ or 5 fathoms at low water.

That the advantages of thus enclosing the harbour by two piers abutting on the shore, instead of an insulated breakwater, will be—

1. The perfect protection of the harbour from the incursion of all moving single.

2. The immediate use of the piers as they grow out from the shore, for the purposes either of refuge, or of communication with mail packets, or for a station for revenue cruisers.

3. The advantage of ready communication along the piers to the batteries at their heads, to the light-houses which would stand there, and to the stairs and cranes from which vessels in distress would have to be relieved.

4. The important saving of time in the formation of an available harbour, from the much greater rapidity with which these piers would be executed, when compared with the work of an insulated breakwater, as all the materials would be directly run out upon railways and deposited with precision, instead of their being tediously embarked in well-boats, then towed out under the varying interruptions of wind, weather, and tides, and deposited with uncertain irregularity.

5. The equally obvious saving in the expense, which, from the moment the caissons are first placed, would pervade the whole series of works so constructed, up to the final completion of the roadways and parapets. This saving may, in round numbers, be fairly assumed at two-fifths, or 40 per cent. of that part of Mr. Cubitt's estimate which applies to the embankments, and which amounts to 850,000*l.* This sum, diminished by two-fifths, would only be 510,000*l.*, and would thus make the very considerable saving of 340,000*l.*, besides a proportionate reduction in the contingencies.

(Signed) Robert Thomson, Lieut.-Col. Rl. Eng.
F. Beaufort, Hydrogr. to the Admir.

Admiralty, Dec. 9, 1841.

The above Report has been communicated to Mr. Cubitt, and he authorises me to say that, "all the observations and suggestions therein have his entire concurrence."

Ad 1, 1842.

RAILWAY ADJUDICATIONS.

MIST *v.* THE WEST LONDON RAILWAY COMPANY.

Rolls Court, July 25.—Mr. Pemberton, for the plaintiffs, moved that the West London Railway Company might be ordered to pay into Court 600*l.*, part of 7,219*l.* 13s. 9d., admitted by their answer to be retained by them. The motion was opposed by Mr. Kindersley and Mr. Ramsden.

The bill was filed by the trustees and executors of the will of Henry Mist, who died in August, 1804, and devised to the plaintiffs his freehold estate, Sandford-house, and lands at Fulham, upon trusts, for the testator's wife and son. The Sandford-house estate was near the junction of the Thames and a creek or inlet called Counter's Creek, which bounded the estate eastward. By Act of 5th Geo. IV, for making navigable Counter's Creek, the Kensington Canal Company was formed, and it was necessary for the purposes of the Act that the channel of the creek should be deepened and widened where it was bounded by the Sandford estate. In consequence, an agreement was made on the 31st of January, 1825, between the trustees and parties beneficially interested under Mist's will and the Kensington Canal Company, to convey to the Company a slip of ground adjoining the creek 1,117 feet long and 4 feet wide, and the Company proceeded to erect a wall and to slope the banks; and in 1826 they brought into Parliament a Bill to amend their former Act, which was opposed by Mist's trustees, on the ground that the Company had not fulfilled their contract. On 28th April, 1826, an agreement was entered into by the counsel of the parties, by which 1,200*l.* was to be paid to Mist's trustees by the Company for all compensation, and the Company were to build a wall, &c., and thereupon the opposition to the Bill was withdrawn, and it received the Royal Assent in May, 1826. In November, 1828, the Company paid 100*l.*, but the remaining 1,100*l.*, with interest, was due, and on the 1st of April, 1828, the Company, under the provisions of their Acts, gave to Mist's trustees ten promissory notes for 100*l.* each, sealed with their common seal, payable in five years, with interest in the meantime at 5 per cent. In 1836, the Birmingham, Bristol, and Thames Junction Railway Act was passed, and, by an agreement of 18th February, 1836, between the Kensington Canal Company and the Provisional Committee of the Thames Junction Railway, the Canal Company were to sell, and the Junction Railway Company to purchase, the lands and works of the Canal Company for 36,000*l.*, and the Canal Company were to pay all their debts which might in any way affect the premises agreed to be purchased. In the report of their liabilities the debt to the trustees of Mist of 1,100*l.*, with 200*l.* interest, was included. Another deed was executed, dated July 24, 1839, between the Canal and the Junction Railway Company, in which it was recited that the Railway Company were to enter into a covenant with the Canal Company to pay the debts and liabilities scheduled, and to indemnify the Canal Company therefrom; and they covenanted to deliver to the creditors of the Canal Company the dividends in monies and in shares apportioned in respect of their claims set opposite to their names. In the schedule to this deed, 1,300*l.* was set opposite to the names of Mist's trustees, being 1,100*l.* with 200*l.* interest, and 600*l.* was stated to be the dividend in money, and 500*l.* in guaranteed shares, and 300*l.* for dividends on common shares. The plaintiffs, by their bill, prayed for an account of what was due to them, that the defendants might be decreed to pay it; for a declaration that the plaintiffs were entitled to a lien on all the lands of the Canal Company, and to have their demand satisfied out of the price agreed to be paid by the Railway to the Canal Company, without prejudice to the claims of other landowners for premises taken and not paid for.

Lord Langdale said, the Canal Company did not appear to succeed, and they were desirous of parting with their property to the Railway Company, the money the Canal Company were to receive to be applied in satisfaction of the claims

Digitized by Google

against them. The Railway Company took upon themselves the performance of that obligation, and took possession of the lands of the Canal Company. They made an arrangement that the creditors were to take part money and part shares, but any one refusing such an arrangement was not disabled from receiving money. It was alleged the plaintiff maintained his right to receive money. The bill was filled against the Canal Company in the first instance, and also against the Railway Company, who had the property, and engaged to pay the creditors. Their answer admitted 10,000*l.* was to be paid, and that they retained 7,219*l.* 13s. 9d., which would satisfy what was due to the plaintiffs and to other creditors, upon the arrangement they had proposed to make. The plaintiffs said they were entitled in money to 1,300*l.* (for principal and interest), and the Railway Company said 600*l.* only in money, the remainder in shares. The bill was framed upon the notion that the whole sum was to be recovered in money, and not in part money and part shares. The Railway Company said they had retained the 7,219*l.* 13s. 9d., not for the plaintiff's claim alone, but also for other claimants on the Canal Company, and that 600*l.* was that which was set apart to answer the plaintiff's claim. He should read the answer, and give his decision to morrow or next day.

July 26.—Lord LANGDALE, at the sitting of the Court, stated that he had the papers in this cause, and it appeared that the Company admitted they were bound to make compensation for the damage done to the plaintiff's estate, but they insisted that they were entitled to do so partly in money and partly in shares of their own Company; but this the plaintiff repudiated. Under the circumstances, therefore, as it was admitted that the money was due, the 600*l.* must be brought into Court. The Company's answer had been skilfully drawn, but it was impossible to avoid making the order asked. The 600*l.*, therefore, must be brought into Court.

Mr. KINDERSLEY inquired what time his Lordship would allow the defendants to pay the money into Court.

Lord LANGDALE—What time? Why, I suppose they have the money in their hands.

Mr. KINDERSLEY said they had not.

Lord LANGDALE was quite surprised, after the statements which had been made. Surely the Railway Company was not at a loss for this sum. He assumed, however, that the money had been expended upon the railway.

Mr. KINDERSLEY said—Yes, my Lord, but yet there is no railway.

Lord LANGDALE—They had, then, he assumed, expended the sum upon the works; they must, therefore make it good. The Company might take three weeks to pay in the 600*l.* It was, however, with surprise that he heard that the defendants had expended this money, which had been expressly provided for the payment of the damage done to the plaintiff's estate.

THE WEST LONDON RAILWAY COMPANY v. BARNARD.

Home Circuit, Guildford, July 28.—This action was brought to recover 191*l.* from the defendant, that sum being the amount of calls made upon him as a proprietor in the above undertaking, and the case involved a question of some importance to persons connected with these undertakings.

Mr. Thesiger, Mr. Platt, and Mr. James, were for the Company; Mr. Serjeant Channell and Mr. Peacock for the defendant.

It appeared that this Railway Company was established somewhere about 1835, and the defendant was one of those who subscribed to the Parliamentary declaration that is required before an Act of this description can be obtained, and the number of shares he subscribed for was 10. After the Act was obtained the defendant took no further proceedings, and he did not insert his name in the list of registered proprietors of the undertaking; and it appeared he had not paid any of the calls, in all amounting to 19*l.* upon each share, that had been made on him. The Company now contended, that inasmuch as he had signed the original deed for the constitution of the Company, that he was in the same position as if he had registered his shares after the Act of Parliament was obtained, and that his having neglected to do so did not release him from his liability to pay the calls that had been made.

Mr. Serjeant CHANNELL took several technical objections both as to the form of the pleadings and to the evidence that was adduced, but the principal point urged by the learned counsel was, that there was a great distinction between the original subscribers to a railway undertaking, and the persons who, after the Act of Parliament was obtained, were regularly registered as proprietors, and he contended that, inasmuch as the defendant had only subscribed the Parliamentary declaration, and had never taken any steps to get his name registered as a proprietor, he was not liable to pay the calls.

After some discussion the learned judge said that he thought the question involved so much of law that it could not be satisfactorily decided in its present shape, and he should therefore direct a verdict to be entered for the plaintiffs, but the defendant would have liberty to move for a nonsuit to be entered upon the points that had been raised.

SOUTHERN COMMUNICATION WITH IRELAND.

To the Editor of the Railway Times.

SIR,—Amongst the various modes that have been canvassed for the conveyance of the mail through South Wales, it appears to me singular that the possibility of railway communication has not been mooted. That a railway would afford the greatest amount of facility, certainty and dispatch, will not at the present moment be doubted, and put all idea of competition far beyond the reach of hope. I am aware that the very mention of a railway conveys a notion of something requiring a vast expenditure, and demanding a great intercourse to make profitable, and I will allow that the public generally have a fair right to draw such deductions, judging from the past experience; but this experience, so dearly bought, has also brought a knowledge of what is really essential, and what is not; and I am certain of being able to prove that South Wales and the South of Ireland may derive all the benefits of railway communication at a far less cost than is generally supposed.

No one will, I think, pretend that extravagant and elegant stations are requisite; all we want (for the present at least) is a single line of rails, firm, safe, and substantial, with plain useful stations that will shelter the travellers from the winter's cold and summer's heat. Experience has shown that the enormous expense hitherto incurred in levelling hills and filling vallies to obtain nearly a level line is quite unnecessary, and that the improvement in locomotive power enables us to surmount inclinations with facility and safety that six years ago would have been thought perfectly impracticable. For instance there is an incline on the Birmingham and Gloucester Railway of 1 in 37, that is travelled over daily with ease, and without any diminution of speed. Another thing to be borne in mind is, that the railway should be in such direction as to catch all the local and intermediate traffic. Of course, though this be kept in view, due reference should be made to shorten, as far as possible, the absolute distance between the two termini.

With these views, I beg to propose a line that will, in my humble opinion, meet every object that can be desired, and, by taking advantage of lines at present constructed, lessen the total cost.

I perfectly agree with Mr. Vivian that the less water conveyance the better, because the less uncertainty, but the Bristol Channel must be crossed somewhere, and that at night and at all times of the tide.

I propose, therefore, that the mail shall be conveyed by the Great Western Railway to Weston-Super-Mere, where a safe and commodious harbour and piers have long been in contemplation, and the undertaking only requires a little encouragement to be taken up with spirit, and as it is in good hands, would shortly be completed. From this place to Penarth-road is but a short run for a steamer, and practicable at all times, and if at Penarth a floating pier were erected, the passengers and mails could be landed at all times of the night at any state of the tide.

This undertaking (the pier) and a branch to join the Taff Vale Railway, would meet with the support of the enterprising inhabitants of Cardiff, if, indeed, it would not be taken up and constructed entirely by the Railway Company, and I am sure they would find it much to their interest.

From hence I propose to use the Taff Vale Railway as far as the Aberdare Canal, along-side of which a railway may be constructed, passing through Aberdare, and down the Neath valley to the flourishing town of Neath. From Neath to Swansea it is of uncommonly easy construction. Crossing the Swansea river, a line has already (I believe) been projected, to join the Llanelly and Llandilo Railway near Loughor bridge. This latter railway now extends to within 6 miles of Llandilo, and preparations are making to take it to the latter place.

From Llandilo the railway would run down the beautiful Vale of Towy to Carmarthen, from whence, through St. Clears, Llandowor, over King's Moor, through Milton, to Hobb's Point,

Going over the line, the executed and unexecuted portions stand as follows:—

	Executed	Unexecuted
Cardiff to Abedare Canal	20	—
To Neath	—	20
To Swansea	—	8
To Junction with Llanelly and Llandilo Railway	—	8
To Llandilo	16	—
To Carmarthen	—	14
To Hobb's Point	—	35
	36	85

Let us also follow the mail train downwards in time leaving

London	9	0	P.M.
Weston	2	0	A.M.
Cardiff	4	0	—
Neath	6	0	—
Swansea	6	30	—
Llandilo	8	0	—
Camarthen	9	0	—
Hobb's Point	11	0	—

On the superiority, in every respect, of Milford Haven for a packet station, none but *interested parties* would dream of hazarding a doubt.

Now, then, fairly comes the consideration of expense, and I honestly believe that a fair remuneration can be confidently expected, looking at it simply as a question of investment of money, apart from any patriotic considerations of a higher nature. This may startle some, who may be inclined to shake their heads and sagely doubt, and therefore, if you will allow me space, I will enter a little into detail, and prove by figures that it is not a mere assertion, and I also invite inquiry as to their correctness.

It will be seen that there are 85 miles of railway to construct, and to furnish with engines, carriages, and stations; as I presume the 36 already constructed, belonging to the Taff Vale Company and the Llanelly Company, will be worked by themselves. I may here mention that Captain W. S. Moorsom, in his Report on a Cornish railway, gives a list of 16 double railways, whose whole length is 264 miles, that have cost 3,091,999*l.*, or an average rate of 13,180*l.* per mile.

But these are double lines, mostly constructed when iron bore a far higher price than now, when flat gradients were considered indispensable, and when, from the great demand for labour, it was also excessively dear; and without even going into calculation, we may safely infer the same lines might be at present made for about 10,000*l.* per mile. But, we are in a country where labour is cheap, iron is at hand, and, as I will presently show, only requires a single line. In round numbers my estimate is an average of 7,000*l.* per mile, and I would venture on a heavy penalty to get a sound, substantial, and consequently a safe and efficient, line of railway,

Digitized by Google

complete in every respect, executed for that sum. This amount will be thus disposed of:—

Earthwork and fencing	£2,400
Bridges, stations, and water tanks	1,500
Iron and laying of way	1,600
Land and damages	700
Locomotives and carriage establishment	500
Act of Parliament, management, and contingencies	300
Total	£7,000

85 miles, at 7,000*l.* per mile, is 595,000*l.*, independent of the branch below Cardiff, and the Pier in Penarth roads, and that would, no doubt, be executed by other parties.

Thus we can have a thoroughly safe and effective railway through the country for the sum of say, in round numbers, 600,000*l.*, a mere baggatelle in comparison to its vast benefits. The interest of this sum at 5 per cent. is 30,000*l.* per annum, which sum must be made over and above all expenses of locomotive power, salaries, maintenance of way and works, Government duty, and all expenses of every kind whatever. Now the working expenses of the London and Birmingham Railway, for the half-year ending December 31, 1841, were 34 per cent. upon the gross returns, and for the York and North Midland a trifle more, but the preceding year of the latter considerably less. Now, there are many expenses that might be abridged without diminishing the efficiency of a railway of small traffic, an enumeration of which, in this letter, would be out of place, as belonging more peculiarly to the practical working of the line; but we may safely, nay liberally, assume the expenses to equal one-third of the receipts, consequently we shall require, in order to pay the working expenses and return 5 per cent. interest to the shareholder, a gross revenue of 45,000*l.* per annum, or 123*l.* 6*s.* per day. This amount would be paid by passengers only, for at the very low average rate of 2d. per passenger per mile, it only requires 88 each way throughout. I should not despair of seeing the through traffic alone equal that within two years from the opening of the railway; for who would submit to a long sea voyage up and down the most unpleasant navigation in the world, to being whisked along through a fine country at a railway pace?

Should you deem me too sanguine, allow me to state the increase of the number of passengers consequent upon the establishment of the following railways:—

Between Liverpool and Manchester	800 per cent.
Stockton and Darlington	380 ,,
Newcastle and Carlisle	455 ,,
Arbroath and Forfar	900 ,,
Brussels and Antwerp	1,400 ,,

Taking into consideration the course of the proposed railway, embracing all the local and intermediate traffic of South Wales, can there now be a doubt but that the speculation would be a good one?

I had intended to have gone more into detail, and shown how, either by the use of the electric telegraph, or by working the line in sections, that a single track could meet the demands of a much larger traffic than would ever be required in this case, but must now leave this for some future period, when the consideration of these matters may be of more practical benefit.

I cannot, however, take my leave without exhorting the men of Wales to arouse from their present lethargic slumbers. Let public meetings be called at every place in South Wales having a thousand inhabitants—let Swansea, Cardiff, Neath, Carmarthen, and Llanelly take the lead; but do not call meetings and pass empty resolutions. No! Subscribe to meet the expenses of an immediate survey, and also undertake to have shares, should the work be practicable within a certain cost.

Employment will thus be given to your industrious population, the resources of the country developed, new sources of wealth opened out, and fresh impulse given to trade; Wales and the South of Ireland will be indissolubly connected, and the undertaking will be an honour to the public spirit and enterprise of Cambria. I am, Sir, your most obedient servant,

P.

MANCHESTER AND LEEDS RAILWAY—BENEVOLENT INSTITUTION.

To the Editor of the Railway Times.

Sir,—The letter signed "R. Craven, 3, Victoria-road, Leeds," inserted in the *Railway Times* of July 23, is without foundation, as no person at this station, to my knowledge, has given Mr. Craven thanks for his previous communication to you respecting the Benevolent Institution established on the Manchester and Leeds Railway.

I am, Sir, yours, truly,

H. WOOLLVEN,

Clerk in charge of the Hebden Bridge Station, Manchester and Leeds Railway.

Hebden Bridge, July 23, 1842.

MERRYWEATHER'S RAILWAY FIRE-ENGINE.

In the *Railway Times* of June 10th we noticed a trial on the previous day at the Euston-square station, of a new and powerful fire-engine which had been built for the London and Birmingham Railway Company by Mr. Merryweather, of Long Acre, London. We are now enabled to supply the particulars of this stupendous engine, represented in the above engraving, which is the first that has been adapted to travel on railways, and the most powerful ever constructed (for land service) in this or any other country.

The engine consists of two gun metal cylinders, 9 inches in diameter, with a 10-inch stroke, the contents of which are delivered into a spherical copper air-vessel, the capacity of which is nearly 20 gallons. The cistern, which is 13 feet long, holds, when full, nearly 500 gallons of water. The pistons and valves are of metal, the latter being of a most ingenious and excellent construction, peculiar to Mr. Merryweather's manufactory. The whole of the valves are placed in separate and easily accessible chambers, the water ways being 3¾ inches throughout. The handles fold up fore and aft, so as not to project beyond the ends of the cistern while in travelling order, but they open out when required for working to 23 feet in length, and are kept extended by a sliding bolt of a simple and ingenious description. At each end of the engine a buffer-bar, equipped with spring-buffers, is hinged so as to fall down out of the way of the levers when the engine is working, but while travelling it is kept in a horizontal position by a pin-bolt. In the front part of the engine, immediately over the cistern, there is a hose-reel capable of carrying upwards of 400 feet of rivetted leather hose, all joined up, the whole or any portion of which can be run out and attached to the engine in a few seconds. A pocket on each side of the cistern carries two lengths of suction pipes, one long and one short branch pipe, with a complete set of Merryweather's improved nose-pipes, ranging from 1¼-inch down to ¾-inch in diameter. A leather portable dam of suitable dimensions, with a proper complement of axes, crow-bars, wrenches, &c., complete the equipment of this immense engine. There is room at the handles for 46 men, and when one jet only is employed, a nose-pipe 1¼-inch in diameter is used, but if it is desirable to apply two distinct streams of water, two ¾-inch nose-pipes are employed, the jets being delivered at a distance of nearly 150 feet from the branch pipes.

The London and Birmingham Railway Company have been particularly fortunate in their exemption from fire as well as other accidents, which reflects great credit upon the prudent precautions and the judicious provisions which have been adopted throughout their establishment—for *prevention* in the first instance, and for *cure* when the former fails. The capabilities of their new fire-engine, as regards working and travelling, are such as to afford most sufficient protection to the extensive establishments of the Company at Camden Town, Wolverton and other stations, as well as to all property adjacent to their line of railway. The splendid performances of this engine on its late trial, as well as the excellence of the workmanship, and the skill displayed in adapting it to the peculiar service for which it is intended, gave great satisfaction to all who saw it.

BRISTOL AND EXETER RAILWAY.—On Tuesday last, a Board of Directors of the Bristol and Exeter Railway Company was held in Exeter, consisting of the Chairman, Deputy-Chairman, and other members of the Board, with Mr. Badham, the Secretary, Mr. Brunel, the Engineer, &c., who were engaged during the day in examining the intended line from the proposed terminus up to the extensive cutting at Rewe. The site of the terminus is exciting great interest in Exeter, but the precise spot is not yet decided on by the Directors. We understand that the remaining works are to be prosecuted with vigour, and it will be seen by our advertising columns that tenders for contracts are advertised for, in order to the completion of the tunnel at the White Ball hill, and the cuttings of Burlescombe and Willand. In a few weeks more the tenders for contracts on remaining portions of the line will be announced.—*Plymouth Times*, July 23. The principal inhabitants of North Curry have memorialised the Directors of the Bristol and Exeter Railway, praying that they will cause a station-house to be erected between Lyng and Durston, immediately opposite the centre of North Curry, the inhabitants undertaking to make a good road across the Moor, from North Curry to the station-house, about two miles.—*Sherborne Journal.*

ACCIDENT ON THE BLACKWALL RAILWAY.—On Wednesday [week] an accident happened on the Blackwall Railway which created much alarm, and although not attended with serious consequences, shows the necessity of great caution on the part of the servants of the Company. It is well known that the Railway Company have recently commenced the carrying of heavy goods from the West India Docks, at the Poplar station, to the terminus in Fenchurch-street. The goods are conveyed on trucks attached to the trains. On Wednesday afternoon, the ½-past 2 o'clock train was on its way to London, when three baskets of sugar, which were not properly secured on a truck, slid off, and fell down on the line, and the Blackwall train following closely afterwards, the whole of the carriages were thrown off the rail. Very fortunately they did not overturn. Considerable delay took place before the sugar was again placed on the truck, when the train proceeded to its destination. —*Globe* of Monday. [The utility of the electric telegraph was, we understand, shown very clearly in this instance, intelligence of the accident having instantaneously been conveyed to the engine house, and the engine stopped. The consequences might otherwise have been very serious.—ED. R. T.

THE SURVEYOR, ENGINEER, AND ARCHITECT JOURNAL, No. 31, for August, 1842, Price 1s. 6d., with Two half-sheet Plates, will contain:—Papers on Economic Geology—The Bridge of Dee, Aberdeen, with a Plate—The Physical Structure of the North West Coast of Ireland, with a Map—The Lead Country of Northumberland, Durham, and Cumberland—Post-office Communication with Ireland—Architectural Designs, with a half sheet Plate—The Amended Instructions of the Church Building Society—The College of Civil Engineers—Dr. Reid's Lectures at Exeter Hall—Review of Books—Report of the Electrical Society, and the usual routine of Miscellaneous and Scientific Intelligence.

LONDON AND GREENWICH RAILWAY.—At the Half-yearly General Meeting of the London and Greenwich Railway Company, held at the London Tavern, Bishopsgate-street, in the City of London, on Thursday, the 28th July, 1842, it was moved and carried unanimously—

1. That the Report now read be received, approved, and adopted; and, together with a Statement of the Accounts, printed and circulated among the Proprietors.
2. That a dividend of 1s. 6d. per share on the unprivileged Shares be now declared, payable on and after the the 22nd of August next.
3. That the election of Andrew Kennedy Hutchison, Esq., as a Director of this Company, be confirmed.
4. That the election of William Hughes Hughes, Esq., as a Director of this Company, be confirmed.
5. That the election of John Small, Esq., as a Director of this Company, be confirmed.
6. That the Directors are entitled to the best thanks and confidence of the proprietors, which are hereby offered to them.
7. That the best thanks of the Proprietors be given to Colonel Landmann, for the able execution of the works entrusted to his care.
8. That the best thanks of the Proprietors be tendered to Mr. Vallance, the Solicitor of the Company.
9. That the thanks of the Proprietors be tendered to the Auditors, for the diligent and faithful discharge of their duties.
10. That the thanks of the Proprietors be given to Mr. Adron, the Accountant, and the other officers of the Company.

WILLIAM SHADBOLT, Chairman.
J. Y. AKERMAN, Secretary.

London, 28th July, 1842.

LONDON AND GREENWICH RAILWAY.—RAILWAY TRAINS RUN to and from London Bridge and Greenwich Stations direct, every quarter of an hour, from 8 in the morning till 10 at night; on Sundays from 8 till a quarter before 11 in the morning, and from 1 till 11 at night. Fares—First-class, 9d.; second ditto, 6d. The journey is performed in 12 minutes. Conveyances always in attendance at the Greenwich terminus to convey passengers to Woolwich, Charlton, Blackheath, &c. Omnibuses at the London terminus to Paddington on the arrival of the trains.

N.B.—Special extra trains may be engaged on application to the Inspectors on duty, to convey passengers from Greenwich after 10 o'clock at night, at the price of 50s. per train, all passengers above 50 to pay 1s. each.

J. Y. AKERMAN, Secretary.

Office, 37, Canterbury-square, Southwark,
June 16, 1842.

LIVERPOOL POLYTECHNIC SOCIETY.—The COUNCIL of the LIVERPOOL POLYTECHNIC SOCIETY announce, that they will award, at the close of the present Session, PRIZES, in Money, or a Medal, for Communications of adequate merit, on the following subjects:—

£10 for the best Essay on any subject connected with the Objects of the Society.
£5 for the best Mechanical Drawing.
£5 for the best Model of Machinery, showing the latest improvements.
£5 for the best Model of a Merchant Vessel, showing the latest improvements.
£5 for the best Ornamental Iron Casting, combining perfection of Workmanship with good Taste.

All Communications to be forwarded, (carriage paid,) addressed to the Secretary of the Polytechnic Society, at the Royal Institution, Liverpool, on or before the 13th December.

All Models and Drawings will be returned.

Communications laid before the Ordinary Meetings of the Society may compete for the Prizes.

Any further information may be obtained by application to the Secretary.

C. F. SALT, Secretary.

Royal Institution, Liverpool, June, 1842.

By order,
CHARLES A. SAUNDERS,
THOMAS OSLER, } Secretaries.

Dated 7th July, 1842.

Railway Offices—2, Princes street, Bank, London; Railway Station, Bristol.

PARISIAN BITUMEN COMPANY.—The Directors of the PARISIAN BITUMEN COMPANY beg to call the attention of Engineers, Architects, Surveyors, Builders, and the Public, to the prices at which they will undertake to lay down their Bitumen, and to its applicability for pavements, roofs, lining tanks, &c.—also to the successful use of it as a cement in the Weirs on the Upper Medway, whereby great economy in the primary construction and future repairs are attained. The prices are as follows:—

Bitumen prepared for cement, per ton	£3 0 0
Covering viaducts or arches of bridges, catacombs, vaults, terraces, &c., to exclude damp, 1¼ inch thick, per superficial yard	0 4 6
Paving pathways, granaries, warehouses, &c., 1¼ inch thick, per square yard	0 4 6
Paving barns, court yards, tan rooms, wharfs, stables, &c., 2 inches thick, per ditto	0 5 6

The above charges do not include the cost of carriage, which must be borne by the parties by whom the work is required.

Mill Wall, Poplar, April, 1842.

STRATFORD, ESSEX.—TO ENGINEERS, RAILROAD COMPANIES, MACHINISTS, EXPERIMENTALISTS, and Others.—Mr. W. H. DEAN will Sell by AUCTION, on the premises, at Stratford, on Thursday, August 11th, 1842, at Eleven o'Clock, the Stock in Trade and Plant of Mr. W. Hancock, Engineer, comprising Six Steam Omnibuses for Common Roads (the Engines are so constructed as to be convertible for Steam Boats, Fixed Engines, Pumping Engines, or for Railroads); Two Railroad Locomotive Steam Engines; a High-Pressure Steam Engine (4-horse power), shafting and riggers; Five Capital Lathes, with side rests; a Portable Steam Engine (2-men power); Two Useful Lathe Wheels, with varied motion; Sundry Vices; a Bench and Shears; Two Forges, with Bellows; Sundry Anvils; a Forge Crane; a quantity of large Wrought Iron Boiler Plates; Strong Springs for Locomotive Carriages; Blowing Machines, and Exhausters; a Powerful Double Screw-Press; Two Large Wrought-Iron Tanks; Twenty Wrought Iron Chambers for Boilers; a Powerful Triangle, with Crane and Pulley; Sundry Useful Machinery; a Chaise Cart on Springs, &c.

May be viewed Three Days prior to the Sale, and Catalogues had at the Angel Inn, Whitechapel, the various Inns in the neighbourhood, and of the Auctioneer, Stratford.

BIRMINGHAM AND DERBY JUNCTION RAILWAY.—NOTICE is hereby given, That the Half-yearly General Meeting of Proprietors of the Birmingham and Derby Junction Railway Company will be held, in pursuance of the provisions of the Act of Incorporation, at the Waterloo Rooms, Waterloo-street, Birmingham, on Tuesday, the 9th day of August next, at Eleven o'Clock in the forenoon, for the Election of Three Directors, in the place of the same number who will retire by rotation, and for other purposes.

The Chair to be taken at Twelve o'Clock precisely.

(Signed) HENRY SMITH,
Chairman of the Board of Directors.

Lawley-street, Birmingham, July 26, 1842.

Extract from the Act of Incorporation, Section 93.

"And be it further enacted, that no Proprietor of any Share on which any call made shall be unpaid shall, at any meeting of the Proprietors of the said Company, be allowed to vote, either personally or by proxy, until the money called for in respect of such Share shall have been fully paid."

BIRMINGHAM AND DERBY JUNCTION RAILWAY.—NOTICE is hereby given, That the Books kept by the Birmingham and Derby Junction Railway Company for entering the Memorials of the Transfer of Shares in that Company, will be Closed, in pursuance of the provisions of the Act of Incorporation, from Friday, the 5th day of August, to Tuesday, the 9th day of August next, both days inclusive.

By order,
THOMAS KELL, Secretary.

Lawley-street, Birmingham, July 26, 1842.

STOCKTON AND DARLINGTON RAILWAY.—The Directors of this Company are desirous of receiving Tenders for the supply of 500 tons of Malleable Iron Rails, each Rail being 15 feet long, and weighing 73 pounds per yard, and in accordance with a template which may be seen on application at the Company's offices in Darlington. The delivery of the whole to be completed on or before the 15th November proximo.

Parties desirous of tendering will be furnished with a printed form detailing further particulars, on application to Mr. John Harris, Engineer, Darlington; and no tender will be attended to unless written out on the printed form.

Tenders to be delivered in on or before the 11th day of August next, at the Company's Office in Darlington.

The Directors do not bind themselves to accept the lowest tender.

MIDLAND COUNTIES' RAILWAY.—NOTICE is hereby given, That the General Annual Meeting of the Proprietors of the Midland Counties' Railway Company for the present year, pursuant to the provisions of the Acts of Parliament relating to the said Railway, will be held at the Railway Station at Derby, on Saturday, the 13th day of August next, at Twelve o'Clock precisely, for the purpose of proceeding in the execution of the said Acts.

The Books which are kept at this Office for the Registration of the Transfer of Shares in this Company, will be Closed from Saturday, the 6th, to Saturday, the 13th day of August next, both days inclusive.

By order of the Directors,
J. F. BELL, Secretary.

Duked, Leicester, 27th July, 1842.

TO RAILWAY CONTRACTORS.—TO BE SOLD, a large quantity of Wrought-Iron Rails, Sydney pattern, and Cast-Iron Chairs, together with 196 Railway Waggons, lying on the South-Eastern Railway, at Leigh and Tadely, near Tonbridge.

Applications to be made to Mr. Thos. Cochson, 6, Calverley-place, Tonbridge Wells.

BRISTOL.—ROYAL AGRICULTURAL SOCIETY OF ENGLAND.—All the Superior Building Materials of the Pavilion and Cattle Yard, as erected by Mr. H. Manning, of High Holborn, London, comprising about 5,000 Baltic Deals and Pine Planks; 4,000 yards of Plain and Patterned Floor Cloth; the Handsome Stained Glass Windows, suitable for a Conservatory; 120 Portable Chairs, Iron Trestles; Doors hung in Frames; Fencing; Cattle Sheds; Rick Cloths; Scotch Sheeting; Hurdles; a Portable Forge, also a quantity of Zinc Pipes and Guttering; three of Manning's Colonial Cottages, two in two rooms each and one in one room, well adapted for a Fishing or Shooting Box, or for an Emigrant's Dwelling, will be Sold by AUCTION, by Messrs. ALEXANDER AND SON, in the Show Yard, adjoining the Victoria Rooms, Clifton, on Tuesday, August 2, and Thursday, August 4, 1842.

The Cattle Sheds, Fencing, Rick Cloths, Hurdles, Scotch Sheeting, and part of the Floor Cloth will be sold August 2, and the remainder on August 4.

May be viewed three days preceding the sale, by catalogues only, price Sixpence (to be returned to purchasers), to be had of Mr. MANNING, at his Office, 251, High Holborn, London; at the Show Yard of the Royal Agricultural Society; and at the Auctioneer's Office, Broad-street, Bristol.

Books, with Plates descriptive of the works, are sold at the Tunnel, Price One Shilling.

UNITED KINGDOM LIFE ASSURANCE COMPANY, 8, Waterloo-place, Pall Mall, London, Established by Act of Parliament in 1834.

DIVISION OF PROFITS AMONG THE ASSURED.

This Company, established by Act of Parliament, affords the most perfect security in an ample paid-up Capital, and in the great success which has attended it since its commencement in 1834.

In 1841 the Company declared an addition to the Shareholders of one-half of their Stock, and also added £2 per cent. per annum, from the date of the policies, to those parties who had insured with profits.

The Premiums nevertheless are on the most moderate scale, and only a moiety need be paid for the first five years when the Insurance is for Life.

The amount of bonus added to policies since the commencement of the Company in March 1834, to the 31st December 1840, is as follows:

Sum Assured.	Time Assured.	Sum added to Policy.
£1000	6 Years 10 Months	£136 13s. 4d.
1000	4 Years	80 0 0
1000	1 Year	20 0 0

Every information will be afforded on application to the Resident Directors, Edward Boyd, Esq., and E. Lennox Boyd, Esq., of No 8, Waterloo-place, Pall Mall, London.

Frederick Hale Thomson, Esq., *Surgeon*, 48, Berners-street, attends at the Office daily, about half-past Two o'Clock.

IMPORTANT SALE OF PLATE GLASS WORKS.—The extensive and valuable Plant of the Manchester and Liverpool Plate Glass Company's Works will be offered for Sale by PUBLIC AUCTION, IN ONE LOT, in the month of September next, unless previously disposed of by private treaty.

These Works have been all newly erected, are Freehold of Inheritance, and comprise about Five Statute Acres of Land, enclosed with substantial walls. The Glass-house has three furnaces; the Casting-house fourteen large annealing kilns, with space and preparations for as many more. The Grinding-room contains twenty-eight grinding benches. There are two Steam-engines of forty-horse power each; Smoothing-rooms; Silvering-room; Pot-room, with a large stock of Pots and Cisterns. Two good Dwelling-houses. Gas Works. Smiths' and Joiners' shops, &c., with all requisite utensils and conveniences for making and finishing 3,000 feet of Plate Glass per week, and (with but little outlay of) double that quantity.

These Premises are situated in the Township of Sutton, near St. Helens, Lancashire, about 11 miles from Liverpool, and 20 from Manchester; having railway communications into the yard with the adjoining Collieries, and with the Liverpool and Manchester Railway, from which it is distant only a few hundred yards. They are advantageously located for obtaining experienced workpeople in all the branches of the Glass Trade; viz., Plate Glass, Crown, German Sheet, Bottle, &c. &c.; and the premises are admirably adapted for carrying on a large Foundry, Engineering, or other similar business, as well as Plate Glass making.

Orders to view the Premises may be had on application either personally or by letter, to Mr. George T. Bateson, St. Helens; Mr. T. L. Grundy, at the Company's Warehouse, 26, Soho-square, London; Mr. Joseph Crosfield, Warrington; Messrs. Richard Bateson and Sons, Liverpool; or Mr. J. C. Grundy, Exchange street, Manchester.

N.B.—The time and place of sale will appear in a future Advertisement.

SCOTTISH UNION FIRE AND LIFE INSURANCE COMPANY; instituted 1824, and incorporated by Royal Charter.

LONDON BOARD.

Charles Balfour, Esq.	Robert Murray, Esq.
J. Deans Campbell, Esq.	R. Oliverson, Esq.
J. Gordon Duff, Esq.	Divie Robertson, Esq.
Robt. Gillespie, Esq.	H. F. Sandeman, Esq.
James Gooden, Esq.	John Small, Esq.
John Kingston, Esq.	Daniel Stoddart, Esq.

SUTHERLAND MACKENZIE, Esq., Manager.

London Offices, 449, West Strand, and 78, King William Street, City.

LIFE DEPARTMENT.

The additions made to the Life Policies granted by this Corporation for the last seven years vary from 41 to 65 per cent. on the premiums paid, and average 54 per cent. on the sums assured—a result, it is believed, far more favourable to the assured than any other Company has hitherto accomplished, when the low rates of premium charged by this Corporation are taken into consideration.

The next division of life profits will take place in December, 1846, being an interval of five years, and persons entering before the 1st of August next will enjoy one year's additional rating, and rank at next division of profits for five complete years.

Forms of proposals may be had at the offices, 449, West Strand, and 78, King William street, City.

F. G. SMITH, Secretary.

TO ENGINEERS AND CONTRACTORS.—A well qualified person, thoroughly acquainted with the manufacture and designing of machinery, is desirous of obtaining an engagement as Draughtsman or Superintendent in an Engineering Office or Works, where he would be willing to make himself generally useful. Address, care of Mr. A. Wright, No. 2, East-place, Kennington-road, London.

Digitized by Google

LONDON AND DOVER (SOUTH-EASTERN) RAILWAY.—The Public are respectfully informed that the TRAINS now RUN for the conveyance of passengers, parcels, horses, and carriages from the London Bridge Station as under:—

To Tunbridge, stopping at New Cross, Croydon, Reigate, Godstone, Edenbridge, and Penshurst—9 30, a.m.; 11 30 a.m.; 2 30 p.m; and 5 30 p.m. SUNDAYS—8 30 a.m.; 6 30 p m.

From Tunbridge, stopping at Penshurst, Edenbridge, Godstone, Reigate, Croydon, and New Cross—7 45 a.m.; 10 30 a.m.; 3 p.m.; and 6 p.m. SUNDAYS—8 30 a.m.; 6 30 p.m.

Horses and carriages can be embarked and disembarked at the New Cross as well as at the London Bridge station, at each of which post-horses may be had to convey carriages to or from any part of London, at a charge of 10s 6d., including post-boy. They will be in readiness also at the Tunbridge station on the arrival of every train to convey carriages to Tunbridge Wells, at 10s. 6d. each, including the driver, and to all other places at 1s. 6d. per mile.

Omnibuses ply for every train between the London Bridge station and the following coach offices, viz.:—Griffin's Green Man, Oxford-street; the Universal office, Piccadilly; the Cross Keys, Wood-street; the Swan with Two Necks, Lad-lane; and at any of Messrs. Horne and Chaplin's offices, at which, and at the London Bridge station, parcels may be booked for all places in connexion with the railway.

Full particulars and time-tables may be obtained at the London Bridge Station, and at the Offices of the Company, 10, Coleman-street.

By order,
JOHN WHITEHEAD, Secretary.

10, Coleman-street, June 1, 1842.

GREAT NORTH OF ENGLAND RAILWAY.—NOTICE is hereby given, That the Thirteenth Half-yearly General Meeting of the Proprietors of the Great North of England Railway Company, will be held at the Railway Office, Darlington, in the county of Durham, on Tuesday, the 30th day of August, 1842, at Twelve o'Clock at noon, at which time and place the Proprietors of the said Company or their proxies, lawfully constituted, are requested to attend.

The Books in which Transfers of Shares in the said Company are registered will be Closed, in pursuance of the Act of Incorporation of the said Company, from Tuesday the 23rd day of August, 1842, to Wednesday the 31st day of August, 1842, both days inclusive.

Dated this 12th day of July, 1842,
FRA. MEWBURN, Clerk to the Company.

Great North of England Railway Office,
Darlington.

YORK AND NORTH MIDLAND RAILWAY.—NOTICE is hereby given, That the Half-yearly General Meeting of Proprietors of Shares in the York and North Midland Railway Company will be held in pursuance of the provisions of the Act of Incorporation, in the Offices of the said Company, Tanner-row, in the City of York, on Tuesday, the 2nd day of August next, at Twelve o'Clock at Noon precisely.

The Report of the Directors, and a Statement of the Accounts, will be ready for the inspection of the Shareholders, on Monday, the 1st day of August.

GEORGE HUDSON,
Chairman of the Board of Directors.
GEORGE BAKER,
Clerk to the Company.

allway Office, York, July 13, 1842.

BOLTON AND PRESTON RAILWAY COMPANY—TENDERS FOR LOANS ON MORTGAGE.—The Directors of this Company are prepared under the powers of their Acts of Parliament, to receive TENDERS for the LOAN OF MONEY, in sums of not less than £200, and for terms of 3, 5, 7, or 10 years, and to GRANT MORTGAGES of the said undertaking, and of the Rates, Tolls, or monies arising therefrom, as securities for such Loans, bearing interest at the rate of £5 per cent. per annum.

INTEREST WARRANTS, for the whole term for which the loan shall be made, will be delivered to the Lenders along with the Mortgages, and be made payable half-yearly, at the Company's Bankers in London, or Bolton, as may be preferred.

The Tenders are to express the sums, and the term of years for which the same are proposed to be lent, and to be addressed to the Secretary, at the Company's Office, Bolton.

By order of the Board of Directors,
PETER SINCLAIR, Secretary.

Bolton, 24th May, 1842.

Lately published, price 2s. 6d.,

THE HYDRAULIC RAILWAY; being a carefully digested but plain Statement of the advantages to be derived, and the impediments removed, in establishing Hydraulic Propulsion on Railways; with a wide frontispiece of the Hydraulic Railway in operation, and a large drawing of its machinery. By J. G. SHUTTLEWORTH, the Patentee.

Sold by J. and J. Thomson, Market-street, and Simms and Dinham, Exchange-street, Manchester; J. Weale, High Holborn, London; and by all booksellers.

NORTHERN AND EASTERN, BRIGHTON, CROYDON, DOVER AND SOUTH-EASTERN RAILWAYS.—Messrs. HORNE and CHAPLIN having effected the necessary arrangements for the conveyance of passengers and parcels by railway, and thence by coaches to the following places, beg to state, that places can be secured, and parcels booked at and forwarded from their several offices, where every information may be obtained as to the Hours of Departure, Rates of Fares, &c. &c., to

Griffin's Green Man and Still, Oxford-street.

HORNE & CHAPLIN, Proprietors.

IMPROVED TURN-TABLE.—To the RAILWAY PUBLIC, and Parties interested in the ECONOMICAL WORKING OF RAILWAYS.—Gentlemen, I beg to introduce to your notice a very simple Machine which I have had erected on a railway station in this neighbourhood, whereby both engine and tender are turned or reversed without disjointing or uncoupling them, thereby effecting a saving of time, labour, and wear of machinery. I will point out a few of the advantages which it possesses, and leave you to make the comparison with what you observe to be the practice on other lines of railway.

First then as to time, which is a most important matter where quick dispatch is required. One man and one boy can reverse the engine and tender, with great facility and ease to themselves, in considerably less time than one minute. A coach may be reversed in less than half a minute. Two trucks may be turned at once, and if necessary, one man alone can turn the engine and tender in a minute.

My arrangements enable me to warrant the Machine to be made firm, substantial, durable, and of the best materials and workmanship, being all done under my own immediate inspection; and should you wish to avail yourselves of the above important advantages, I should be most happy to receive your orders, and to attend to your commands.

Any gentleman may see the above daily and hourly in operation, at the Station, at Rotherham.

I am, Gentlemen, your most obedient humble servant,
THOMAS PEARSON.

No. 6, Hall Carr Terrace, Sheffield,
July 22, 1842.

The following Testimonial has been given by the Directors of the Sheffield and Rotherham Railway Company:—

"We, the Directors of the Sheffield and Rotherham Railway, do hereby signify our approval of the Turntable which has lately been put down by our Secretary, Mr. Thomas Pearson, at the Rotherham Station, both as to its utility, and the ease and facility with which it is worked; and we can confidently recommend it to the attention of all Managers of Railways as a substantial, efficient, and very useful adjunct to any station.

"W. VICKERS, Chairman.
G. W. CHAMBERS, Deputy-Chairman.
T. LINLEY.
W. JACKSON.
B. VICKERS.
H. BRIGGS."

Just published, in 8vo., bound in cloth, and lettered, Price 6s. 6d., the Second Edition of

A TREATISE on ENGINEERING FIELD-WORK: By PETER BRUFF, Engineer and Surveyor; Associate of the Institution of Civil Engineers. This volume, forming Part II. of the above work, contains an elaborate Treatise on Levelling, with its application to the purposes of Civil Engineering.

Recently published by the same Author,

Part I. of the above work, price 8s. 6d., comprising Surveying, as applied to engineering and other purposes.

"We again, with much pleasure, recommend this work to the student. We think it the best practicable work which has been published on the subject."—*The Civil Engineer and Architects' Journal.*

London: Simpkin, Marshall, and Co., and by order, of all Booksellers.

TO ENGINEERS.—A young Gentleman who has been about twelve months in a Surveyor's office, and subsequently served two years with an Engineer in general practice, is desirous of engaging himself to an Engineer with whom he may obtain additional practical experience for two years. No salary is required for that term. The Advertiser is a good Draftsman, and has had some experience in directing workmen and in field works. Respectable references will be given and required.

Address A. B., care of Leyland and Son, booksellers, Halifax, Yorkshire.

NEW EDITIONS of the following useful Works are just published at the *Railway Times* Office, 122, Fleet-street:

I.

TUCK'S MAP OF THE RAILWAYS for 1842 throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

II.

ROBINSON'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Map, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Corrected to July. Price 1s., in cloth.

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection; followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases, &c. By J. L. CURTIS and Co., Consulting Surgeons, London.

TENTH EDITION—Published by the Authors, and sold by Balliere, Medical Bookseller to the Royal College of Surgeons, 219, Regent-street; Strange, 21, Paternoster-row, London; Guest, 51, Bull-street, Birmingham; T. Sowler, No. 4, St. Ann's-square, Manchester; G. Philip, South Castle-street, Liverpool; Fannin and Co., 41, Grafton street, Dublin; Drummond, 114, High street, Edinburgh; and sold in a *sealed envelope*, by all Booksellers.

OPINIONS OF THE PRESS.

"This work, *a tenth edition* of which is now presented to the public, *ten thousand copies having been exhausted since its first appearance*, has been very much improved and enlarged by the addition of a more extended and clear detail of general principles, as also by the insertion of several new highly interesting cases We feel no hesitation in saying that there is no member of society by whom the book will not be found useful, whether such person hold the relation of a *parent*, a *preceptor*, or a *clergyman*."—*Sun*, evening paper.

"This is a work that we fear there exists too much need for to cause us to hesitate to recommend it for general perusal. Every branch of those frightful maladies, whether the result of immoral habits or secret vices, is here succinctly treated, and divested of all medical technicality, plain and easy directions are given for the best mode to be pursued in all cases, however complicated or apparently hopeless. To the married, as well as the unmarried, this little work alike affords consolation and cure in peculiar cases, and we are doing a service to society in recommending it to general notice."—*Essex and Herts Mercury.*

"Messrs Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable."—*Magnet.*

Messrs. Curtis and Company are to be consulted daily at their residence, No. 7, Frith street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. The communication must be accompanied by the usual consultation fee of £1, and in all cases the most inviolable secrecy may be relied on.

MANCHESTER AND LEEDS RAILWAY.—NOTICE is hereby given, That the next Half-Yearly Meeting of the Manchester and Leeds Railway Company will be held at the Company's Offices, Hunt's Bank, in Manchester, on Thursday, the 1st day of September next, at Twelve o'Clock at noon precisely.—Dated this 1st day of August, 1842.

HENRY HOULDSWORTH, Chairman.

Hunt's Bank, Manchester.

CEMENT.—To ARCHITECTS, BUILDERS, and Others.—The PATENT STUCCO PAINT CEMENT.—Its extraordinary qualities are rapidly becoming well known and appreciated. It will adhere to any substance or surface—no wet, or damp, or frost, can have any effect on it—time hardens and improves it—a house covered with it becomes encased in stone—the cost is trifling. The invention is a fortune to Builders, and to all who are interested in house property, old or new. The sole agents for the Patentees are Messrs. MANN & Co., 5, Maiden-lane, Queen-street, Cheapside.

AN ELEGANT AND USEFUL PRESENT.

Just Published, in One Volume, price 5s. 6d., handsomely bound, with gilt leaves, sides, and back, and illustrated by FOUR HUNDRED ENGRAVINGS,

PICTURESQUE EXCURSIONS; forming, by means of its engravings and descriptive letter press, a complete Guide to, and Remembrancer of, all scenes of interest connected with the following places and their neighbourhoods:—Richmond, Hampton Court, the river Thames from Kingston to the Nore, Margate, Ramsgate, Dover, Hastings, St. Leonard's, Brighton, Shoreham and its Railway, Worthing, Bognor, Southampton, Netley Abbey, Lymington, and the Isle of Wight. Edited by ARTHUR FREELING.

"A work in which the elegant and the useful are eminently combined."

London: Ackerman, Strand; *Railway Times* Office, Tilt & Bogue, and Bell & Wood, Fleet-St.; and all Booksellers.

SIXTY-TWO SUPERIOR POST, TROOP, JOB, AND CART HORSES.—To be Sold by AUCTION, by Mr. DIXON, at his Repository, Barbican, on Friday, August 12, 1842, commencing at Eleven o'Clock precisely, on account of the vast number of Lots for sale on that day, Fifteen very superior, long-tailed, Black and Grey Troop Horses; sold by order of the Commanding Officer of her Majesty's Regiment of Royal Horse Guards—being supernumeraries of that splendidly-mounted Regiment.

Thirty-five powerful, active, known good, Post and Match Carriage Horses, the property of Mr. Gapp, Mr. Hardiman, Mr. Mallilieu, Messrs. Millard and Crier, Mr. Hawkins, Mr. Lilley, Mr. Pattison, and Mr. Crowe—being their final reduction for the season.

Twelve valuable, powerful, fine-shaped, young, seasoned Cart Horses, and Eight Sets of Thill and Chain Harness, the genuine property of Mr George Orbell. Sold in consequence of having completed the Company's Contract.

On view, and Catalogues had, two days before the Sale.

TO CIVIL AND PRACTICAL ENGINEERS.

The Friends of a Young Man, aged 20, wish to place him with some gentleman in extensive business, where his services may be considered an equivalent for the opportunities he may have of acquiring a *practical* knowledge of his profession. He has served two years with a Land Surveyor, under whom he acquired a practical knowledge of Land Surveying Mapping, &c., since which he has been two years at the College of Civil Engineers, where he obtained some of the highest testimonials for his proficiency in several branches—more especially as an Engineering and Architectural Draftsman, for which he obtained the highest Prizes awarded by the College.

Address to C. R., Mr. Maulcom's, Baker, South Molton-street, Oxford-street.

WANTED TO PURCHASE, Railway Bonds of the first class.

Apply to T. Allsop, 24, Cornhill.

In Royal Octavo, 3s. 6d., cloth, lettered, with four Engravings.

TELEGRAPHIC RAILWAYS; OR, THE SINGLE WAY, recommended by Safety, Economy, and Efficiency, under the safeguard and control of the Electric Telegraph; with particular reference to Railway Communication with Scotland, and to Irish Railways. By WILLIAM FOTHERGILL COOKE, Esq.

Contents: Objects of the Treatise—Distinguishing Characteristics of present Railways—Evidence before Select Committee—Advantages of Telegraphic Communication—Mode of working the Blackwall Railway, by the Electric Telegraph—Description of the Electric Telegraph—Plan for a "Telegraphic" Railway—Course of an Express Train—Ballast Waggons—Permanent Obstruction—Crossing of Two Trains—Description of Signals—Concluding Remarks on Single Way—Mixed Lines—Scottish Junction Line—Irish Railways—Advantages common to Single, Mixed, and Double Lines—Public Confidence—Reduction of Stock—Income from Telegraph—Alertness—Adaptation to Wants of Country—Conclusion.

London, Simpkin, Marshall, and Co.; Liverpool, Wareing Webb, Castle-street; Manchester, Simms and Dirham; Birmingham, Wrightson and Webb; Leeds, Slocombe and Simms.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secrecy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. ALLSOP will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

TO RAILWAY CONTRACTORS.—TO BE SOLD, a large quantity of Wrought-Iron Rails, Sydney pattern, and Cast-Iron Chairs, together with 196 Railway Waggons, lying on the South-Eastern Railway, at Leigh and Tudely, near Tonbridge.

Applications to be made to Mr. Thos. Cockson, 6, Calverley-place, Tonbridge Wells.

BRISTOL AND EXETER RAILWAY.—CONTRACT FOR WORKS.—NOTICE is hereby given, That the Directors of this Company will be ready to receive at their Office, No. 30, Broad street, Bristol, on Friday, the 12th of August next, at or before Twelve o'Clock, Tenders for the following Contracts:—

Tunnel Contracts, Nos. 1, 2, 3, and 4.—Consisting of the sinking of shafts, and completion of the respective portions of the tunnel at White Ball-hill.

Contract No. 1, E.—The excavation and formation of the earthwork, and construction of all bridges, culverts, and other masonry, the ballasting, and the entire completion (except the formation of the permanent way) of that portion of the railway extending from the north end of the parish of Burlescombe to the road No. 60, near Pugham Mill, in the same parish; being a distance of about two miles.

Contract No. 2, E.—The execution of similar works on the portion of the railway extending from lane No. 38, in the parish of Halberton, to the Honiton turnpike-road, in the parish of Cullompton; being a distance of about two miles and three-quarters.

Drawings and specifications will be exhibited at the Engineer's Offices; in Temple Meads, on and after Monday, the 25th of July.

Printed forms of Tender may be obtained at the same place, and at the office in Broad-street.

The Directors will not consider themselves bound to accept the lowest Tender. They expect the several parties to attend in Broad street, at Twelve o'Clock, on the 12th of August.

The Company having on hand a certain quantity of rails and waggons, the Directors are willing to receive, at the same time, Tenders for them from the parties who may undertake any of the above works.

By order of the Directors,

J. B. BADHAM, Secretary.

Bristol and Exeter Railway Office, 30, Broad-street, Bristol, 15th July, 1842.

BRISTOL AND EXETER RAILWAY.—NOTICE is hereby given, That the next Half-yearly General Meeting of the Proprietors of this Company, will be held, in pursuance of the Act of Parliament, at the White Lion Hotel in the City of Bristol, on Thursday, the 25th of August, at Twelve o'Clock. The Chair will be taken at One o'Clock precisely.

FREDERICK RICKETTS, Chairman.

Shares in arrear do not entitle the holders to vote.

The Transfer Books will be closed on Monday, the 15th of August, and not be re-opened until after the said General Meeting on the 25th of August.

By order of the Board of Directors,

J. B. BADHAM, Secretary.

Bristol Office, 30, Broad-street, 5th of August, 1842.

PARIS AND ROUEN RAILWAY.—Offices of the Company, 52, Rue Basse du Rempart, Paris.

A sufficient number of Shareholders not being present in order to constitute a General Meeting on the 30th ult., the Annual General Meeting of the Shareholders will therefore be held in conformity with Article 40 of the Statutes, at 38, Rue de la Victoire, on Tuesday, the 30th instant, at half-past 2 o'Clock in the afternoon.

By order of the Board of Directors,

ADOLPHE THIBAUDEAU, Secretar

Paris, 1st August, 1842.

SHEFFIELD AND ROTHERHAM RAILWAY.—ANNUAL GENERAL MEETING.—Notice is hereby given, That the Annual General Meeting of the Sheffield and Rotherham Railway Company will be held at the Sheffield Station, on Thursday, August 11th, 1842, at Twelve o'Clock at noon, for the general purposes of the Acts of Parliament, and that the Transfer Books will be Closed from the 7th to the 15th of August, both inclusive. Dated this 1st day of August, 1842.

THOMAS BADGER, } Law Clerks.
HENRY VICKERS. }

N. B.—An Abstract of the Half-yearly Accounts ending 30th June last, may be had by Proprietors on application at the Secretary's Office, on or after the 8th instant.

August 1st, 1842.

LONDON AND BRIGHTON RAILWAY COMPANY—GENERAL MEETING.

THE half-yearly general meeting of the proprietors of the London and Brighton Railway Company was held yesterday, at the London Tavern, Bishopsgate-street; JOHN HARMAN, Esq., in the chair. The attendance was exceedingly numerous.

The SECRETARY (C. R. Mackenzie, Esq.) having read the advertisement convening the meeting,

It was unanimously resolved, that the common seal of the Company be affixed to the register of proprietors, which was accordingly done in the presence of the meeting.

The CHAIRMAN then said, he was aware that it was almost impossible for him to expect that those in the meeting who had read the various attacks made against the Management of that Company could attend there with quite unprejudiced feelings; but resting satisfied with the course the Directors had pursued from first to last in that undertaking, he had no doubt that if any persons were in the room with the feelings he had described, they would be perfectly removed before they left it. He asked for the strictest investigation, and was there that day to answer every question that might be put to him, as he always considered *that* the proper place to meet the shareholders on any question arising between them and their Directors; and he felt persuaded that he should be able to satisfy them on any question that might be asked as to the course which the Directors thought was the only one that would promote their interests. If he trespassed rather longer on their time on that occasion than he usually did, he was sure they would pardon it, and would give him an attentive hearing, inasmuch as he looked upon that as one of the most important *crises* they had had to contend with since their first commencement of business. He thought the time was arrived when there should be a fair and proper understanding between the subscribers and their Directors. (Hear, hear.) The time was arrived when those petty attacks which had been made against the Direction out of doors should be proved to be unfounded; and, if so, receive that opprobrium which they deserved from the shareholders; and, if on the contrary, then might they vent their indignation on him and his co-Directors. ("Hear, hear," and applause.) They had only one object in view—they could have but one object in view, though they had difficulties to contend with, which were stated in the Report, and such as he believed no other Company had greater—besides that of many of the subscribers being led away by insinuations to which he had already alluded, and who came there that day under the belief that they had in an undertaking an investment which was likely to profit them little or nothing; but he considered that he should fail much in his duty if he did not succeed in removing that impression, and in proving that the concern was in that wholesome condition which, under all circumstances, the proprietors had a right to anticipate. (Cheers.) According to the expressed wish of the last meeting, the Report of the Directors had been submitted to the proprietors some two or three days previously, and he doubted not but every gentleman in that room had seen that document before coming to the meeting; but he would still make some few observations respecting the Report calculated to give the shareholders further information, and which it would have been difficult to embody in such a document. He would first allude to the Report of the Committee appointed in January last, to investigate the accounts of the Company. In referring to the course adopted by the Directors on that occasion, he believed they would bear him out in saying, that the Directors threw not the slightest obstacle in the way, but, on the contrary, acquiesced in the formation of that Committee, and in any improvements which they suggested; but in acting honourably towards the shareholders, the Directors would not have discharged their duty towards themselves had they not made some remarks in the perfect good feeling that had existed towards them by the Committee, and which never ought to be wanting in one body of gentlemen towards another. The Committee had stated that they found great difficulty in classing the expenditure of the different accounts under their proper heads, and also that they found the system of keeping the accounts contrary to that which amongst men of business ought to be adopted. The Report would tell them of the course that had been pursued from the commencement in these accounts; they, the Directors, were not many of them at first acquainted with railway business, but they were all men who had been connected with merchandize in some respect or other; and he hoped, as such, were considered fitting to be entrusted with the management of the Company's affairs. They had endeavoured to follow the course adopted by other Companies, and had instructed their Secretary to visit those Companies, and he had devoted considerable time to making himself acquainted with the accounts, and had led them to believe that he would keep theirs on a similar basis. He regretted they had placed so much confidence in that Secretary, and that the Directors did not go with him when he made those inquiries, as a different mode of book-keeping might have saved a vast deal of trouble at their various meetings. (Hear, hear.) During the progress of the works, he considered they could not be put in possession of every item of expenditure, but he believed there would be no difficulty when the various contracts were ended, and then he would be most happy to give every information which the Committee might request. There was another point necessary to be alluded to, he meant the 71,000*l.* as charged improperly at the last meeting to the account of expenditure. The fact was, that having had power when under their difficulties to borrow money, they did borrow from various sources a sum of 71,000*l.*, which sum had been appropriated to the construction of the works of the railway; but when the last accounts were made out, they were under acceptances bearing the seal of the Company for 71,000*l.*, and in the drawing up of the Report, instead of the 71,000*l.* being charged for repayment, the loan was registered to the construction account. This had been made a handle of, but he hoped to no purpose, and he had received letters from anonymous correspondents on the subject, which would lead them to believe that they were raising some 71,000*l.* more than they wanted, whereas the Committee in their Report had stated that the addition of this sum had been an oversight in drawing up the Report. (Applause.) The next point that deserved notice was the great increase in the expenditure over the original estimate. None could regret this more than the Directors, but if they had kept near the sum estimated, they would be the only Company in the kingdom, in an undertaking of such magnitude as this, that had succeeded in doing so; and he believed that the expenditure of other Companies had increased quite as much as theirs, if not more. As stated in the Report, the shareholders could not expect the Directors to be answerable for the estimates, either of land or works, as they were obliged to take an opinion from what they could collect from their surveyors or engineers, but he had no doubt, as those gentlemen were present, they were capable of satisfying any proprietor from what sources these extra expenses had arisen. (Hear, hear.) One more observation with regard to the Report of the Committee. At the last meeting, when the Chairman expressed himself ready to answer any questions which might be put to him, he added, "taking care to say nothing that would tend to the injury of the undertaking,—*there* the lips of the Committee were sealed." Now, had that gentleman stopped there, there was ample room for any person to imagine what he pleased, as it seemed as if something momentous were kept back which he was ashamed to bring forward; but with this he would contrast that gentleman's concluding remark, which was, "that he was not aware that he had anything of the slightest importance to communicate which was not embodied in the Report." Taking these two sentences together, he hoped they would conclude that the Directors had acted honourably by them. (Applause.) Respecting the accounts, they would perceive that they were made up to the 30th of June, and that the gross expenditure up to that period was 2,473,378*l.* 18s. 6d. He would now give the meeting a statement of their liabilities from that time to enable the Directors to complete the works in every way which they at present had in hand, and everything else they contemplated doing. There remained to be done in District No. 1, 11,419*l.* to be paid to contractors for works contracted for; in No. 2, 16,484*l.* 1s. 3d.; in No. 3 District, 10,256*l.* 19s. 7d.; tunnel account 12,065*l.* 17s. 5d., making a total of 50,225*l.* 18s. 3d., including the 10 per cent. held back from the contractors. The amount of extra work in District No. 1 was 4932*l.*, in No. 2, 2,314*l.* 19s. 9d. No. 3, 976*l.* 0s. 6d., work ordered since June last 921*l.* 16s. 8d., making together 9,204*l.* 16s. 11d. There was also an outstanding account of 2,137*l.* 5s. 9d. in this department, making a total of 61,568*l.* 0s. 11d. The total outstanding accounts in other departments were 21,094*l.* 6s. 1d. The payments for land required for temporary purposes being reduced greatly by a recent award, 10,000*l.* would now be ample for the extra cost of land, which was before estimated at 15,000*l.* (Hear, hear.) He would mention, that the Directors had agreed to appropriate 2,000*l.* towards improving the approach to the terminus in Brighton, considering that the town of Brighton had some claim upon the Company, inasmuch as the Act gave them some right to require the railway nearer the town. To complete this approach, the town of Brighton would subscribe 2,500*l.*, and in agreeing themselves to appropriate 2,000*l.* if the approach were made in a manner satisfactory to the Company's Engineer, he thought it would be deemed a very reasonable act by the proprietors. (Hear, hear.) They would require a further outlay for the joint station at London Bridge, of about 20,000*l.* There were acceptances not yet due amounting to 24,000*l.*, on loan notes 6,000*l.*, and they had to repay to the traffic 14,204*l.*, making the gross liabilities to com-

Digitized by Google

plete all that was in hand, 158,943*l.* To meet these liabilities, they had, on the 30th June, a balance of 16,370*l.*; arrears on calls, 2,480*l.*; on loan notes, 46,337*l.*; shares which at par would produce 40,100*l.*; land to be re-sold, 60,000*l.*; and a large quantity of old materials, which were estimated at 5,000*l.*; making altogether a sum of 170,288*l.* 9s. 4d., to meet an outlay of 158,943*l.* 1s. 2d.—thus leaving a balance of 11,345*l.* 8s. 2d. (Hear, hear, hear.) It was right to state, however, that they had ordered more waggons, amounting to 5,237*l.*; goods' engines to 5,330*l.*; and had incurred an expense of 949*l.* in altering the four wheeled engines to six. Now, if the meeting would not form its opinion from what had been there stated, but be guided by reports, they would come there on that occasion under the impression that it would be quite impossible to carry out their works without something like an addition of 300,000*l.* or 400,000*l.*, but the Directors had met them that day to inform them that they wanted nothing more to carry on the undertaking. (Loud applause.) There was another point in the Report to which he would advert, namely, the money received from the South-Eastern Company. He told them at the last meeting that that money was perfectly free, and would not be wanted for the purposes of the railway—he was happy to confirm that statement. (Renewed applause.) That amount was now vested in the names of four Directors, and would be an available asset when transferred. A difficulty might arise as to its appropriation; still the interest arising from this money would no doubt be at the disposal of the shareholders, and at the proper time they should be called together, when he would be happy to receive their instructions upon the subject. (Hear, hear, hear.) There was one point which he regretted did not strike him before; it was the cost of the land. Hitherto some of the shareholders had been very much disappointed in the way in which 390,890*l.* 12s. 8d. had been put into one sum in the accounts. With a view to remove any erroneous impression, details had been prepared, showing every particular connected with the amount of purchase-money, compensation, and law expenses. [The Chairman here exhibited these accounts. They were very voluminous, and the Chairman said, they should remain at the office for the inspection of any shareholder.] He would draw attention to another subject of importance. At the last meeting he was asked by an honourable proprietor how he meant to pay the interest on the loan notes and debentures, and if he remembered aright, he demurred to answer that question, as they were called together for a specific purpose, and he was perfectly aware that, if he did, he might have said what might have been very much calculated to mislead them. Had they not suffered from the unfortunate slips on the Croydon line, the sum they had from their own traffic would have enabled him to answer it satisfactorily, instead of which it might have been such as to lead to an opinion that by the time they had paid interest on these, there would be nothing to divide amongst the shareholders. Since that time the traffic of their line had greatly increased, and he did not think that any gentleman who had seen it could deny that it would increase relatively to that of any other railway in the kingdom. (Applause.) While the traffic increased he was happy to say that the expenditure was rather at a stand-still; it had not increased — (hear, hear, hear,) — it had rather decreased. The fact was, that having sold a portion of their line to the South-Eastern Company, they were relieved of the expenditure to that extent; and looking to the future, he had no hesitation in saying that he believed that at the next half-yearly meeting, unless some unforeseen casualty should arise, their traffic would be such as would enable the Directors to offer the shareholders a very handsome dividend indeed. (Applause.) The accounts made up to the 30th of June, showed that the traffic during the last six months had produced 63,326*l.* 7s. 2d., which, with the balance on last half-year's account of 12,479*l.* 12s. 8d., made an amount of 75,806*l.* 9s. 10d. From this sum was to be deducted 38,796*l.* 15s. 10d., the expenditure of the Company up to the 30th June, leaving 37,009*l.* 14s.; but which sum was chargeable with interest paid to the 15th of January last of 9,364*l.* 2s., thus showing an amount of 27,645*l.* at the disposal of the shareholders. It was right to state, that this sum might be further charged with interest from the 15th of January to the 30th of June; but, on the other hand, a portion of the interest due upon the debt payable by the South-Eastern Railway Company was applicable to the profit and loss account of the same date. [The honourable gentleman here read some items to be paid as interest, but we could not accurately catch them.] If they did not reckon the interest accruing from the 15th of January to the 30th of June, setting against it the portion of interest due on the South-Eastern purchase, from the opening of the South-Eastern Railway up to the 30th of June, they might declare a dividend of 15s. per share. If they *did* reckon that interest the dividend would be 10s. It was for the meeting to determine which mode should be adopted. He believed that in some Companies it was usual not to consider money due till paid. It mattered not to investors how it was settled; for what they did not receive this half year they would receive the next. If they now declared a dividend of 15s. per share, they would have to declare at the next meeting 5s. less. The present receipts, he was happy to say, were nearly 4,000*l.* per week; the preceding week they were 4,600*l.*—(hear, hear)—and in this week he anticipated 5,000*l.* (Hear, hear, hear.) He hoped therefore it would not be doubted that they would keep up this, and an increase to a considerable extent, unless some calamity should arise, which no body of Directors could avert. (Hear, hear.) Take the capital of the Company at 2,520,000*l.*, and from this deduct the 330,000*l.* to be paid by the South-Eastern Company, the total capital would then be 2,190,000*l.*, and in order to pay 5 per cent. on the money borrowed, and 5 per cent. to the shareholders, receipts of 3,480*l.* a week would suffice. (Applause.) Now he would anticipate the result for the next half-year at such an amount that, instead of dividing 5 per cent. they might expect a very much larger dividend. He was sorry he had occupied their time so much, but he thought he should not have discharged his duty to the Directors, himself, and the shareholders, if he had not entered into these particulars, as it was necessary that they should come to a decided understanding how they stood towards each other. (Applause.) [The honourable gentleman having requested a patient hearing for every proprietor who wished to address the meeting, sat down amidst considerable applause.]

The London Solicitor (R. Sutton, Esq.) was about at the request of the Chairman, to read the Report, when

Captain Kelly made some observations relative to the time for holding the summer meetings, but the proprietors generally appeared to consider this question as comparatively unimportant, and amid cries of "Question," "Chair, chair," &c., the gallant gentleman sat down.

The Report was then read as follows:—

DIRECTORS' REPORT.

Gentlemen,—The Directors now lay before you a full and explicit statement of their proceedings since the last half-yearly meeting, by which you will be put in possession of the present position, and as far as they are able to give it, the future prospects of the Company.

They feel bound, in justice to themselves, to refer to several subjects contained in the Report of the Committee appointed in January last, to investigate the accounts of the Company.

In the first place, the Committee allude to the imperfect mode of keeping the accounts, and the difficulty they found in classing the expenditure under appropriate heads.

The course which the Directors originally were desirous of pursuing in keeping the accounts, was to follow the system adopted by other great Railway Companies, and with this view they procured introductions for their late Secretary to the Accountants of both the Birmingham and Great Western Railways, and considerable time was occupied by him in examining the mode in which their accounts were kept, after which he assured the Directors that he had made himself thoroughly master of the subject, with a view that the accounts of this Company should be conducted on similar principles, and although it appears that he adopted a different method, there can be no doubt that had he been present at the investigation, he would have removed many objections raised by that Committee, and have rendered their inquiry less laborious.

It has always been the intention of the Directors to make out a complete and detailed account, classing the expenditure of every department under its appropriate head, from the commencement of the undertaking; but during the progress of the works it was found utterly impossible to follow out this system, although it will be adopted when the accounts of the several contractors are closed. The same difficulty existed with regard to the accounts for land, as it was necessary, from time to time, to take additional quantities, and in some instances, absolutely to purchase a portion of that which had only been taken for temporary purposes, while in other instances payments were made on account, in order to obtain possession of the land pending the investigation of the titles, and these accounts will also shortly be closed.

Another portion of the Report requiring notice, is the excess of expenditure over the original estimates.

The Directors cannot be expected to take upon themselves the great responsibility of the various estimates, either for land or works, but they confidently refer to the Reports which they have from time to time submitted to the proprietors, as being most full and explicit; they have never withheld information, but as the necessity for further capital presented itself, they made it known to the proprietors without reservation, and even up to the last half-yearly meeting, so far from any dissatisfaction having been evinced, the Directors and Engineer have been encouraged by unanimous votes of thanks and confidence. The Directors are quite as much concerned at the additional expenditure which has been incurred as the shareholders; they have never parted with the funds of the Company without the strictest scrutiny, nor have they acquiesced in any expenditure without being fully convinced by their Engineer that it was absolutely necessary. In order to account for the excess of expenditure, they refer to the explanations of their Engineer, which were embodied in the Report of the Investigation Committee.

Another subject in the Report to which the Directors beg to refer, is that the amount of 2,639,000*l.* was stated in the half-yearly Report in a manner which might, at first sight, lead to the conclusion that the cost of the railway would amount to that sum, instead of 2,568,000*l.* The facts are as follow—that besides a sum of 2,269,359*l.* already expended, and an amount of 298,852*l.*, which it was estimated would still be required to complete the works, making together 2,568,211*l.*, the sum of 71,000*l.*, which was a liability of the Company for money borrowed, was inadvertently included in the paragraph of the Report, making the estimate 2,639,211*l.* The addition of this sum was an oversight in drawing up the Report; but the Directors distinctly assure the proprietors, that there was no error of the sort in the books of account as has been generally inferred from the Report of the Committee of Investigation, nor in fact does that Report state it otherwise than as an error in the paragraph.

Another subject connected with the Report of the Committee of Investigation demands the notice of the Directors.

At the special general meeting of the proprietors, upon receiving the Report, an observation fell from the Chairman of that Committee which has been the subject of much speculation, and has given rise to many unpleasant remarks. When that gentleman expressed himself ready to answer any questions which might be put to him, he added, "taking care to say nothing that would tend to the injury of the undertaking—*there* the lips of the Committee were sealed." The Directors, aware that this observation applied only to cases of disputed accounts with contractors and others, did not think it necessary to offer any observations, more particularly as in his concluding sentence that gentleman stated he was not aware that they had anything of the slightest importance to communicate, which was not already embodied in the Report. This assertion the Directors considered sufficient to satisfy every unprejudiced mind.

Having felt it due to themselves thus to draw the attention of the shareholders to the Report of the Investigation Committee, the Directors beg to add, that they have, as far as time has permitted, followed the suggestions therein contained.

The Directors now proceed to submit to the shareholders an account of the receipts and expenditure of the Company, up to the 30th of June last:—

It will be seen by these accounts, that the traffic during the last six months has produced 63,326*l.* 7*s.* 2d.. which, with the balance on last half-year's account of 12,479*l.* 12*s.* 8*d.*, makes an amount of 75,806*l.* 9*s.* 10*d.* From this sum is to be deducted 38,796*l.* 15*s.* 10*d.*, the expenditure of the Company up to the 30th of June, leaving 37,009*l.* 14*s.*, but which sum is chargeable with interest paid to the 15th of January last of 9,364*l.* 2*s.*, thus showing an amount of 27,645*l.* 12*s.* at the disposal of the shareholders. It is right to state, that this sum may be further charged with interest from the 15th of January to the 30th of June; but on the other hand, a portion of the interest due upon the debt payable by the South-Eastern Railway Company is applicable to the profit and loss account to the same date.

During the first three months of this year, ending on the 2nd of April, the average receipt per week was 1,826*l.* 5*s.* 6*d.*; and during the last three months, ending on the 2nd of July, it was 2,989*l.* 16*s.* 4*d.* per week; and the average weekly expenses of working and maintaining the line was 1,494*l.*; and in the month of July the average receipt per week was 3,968*l.* 0*s.* 9*d.*—thus showing a great progressive increase.

It must be borne in mind that the Company have been subjected to serious losses by the accident which occurred in the autumn of last year on the Brighton line, and the continued interruptions on the Croydon line.

It will also be seen from these accounts, that goods are now carried upon the railway; and it is gratifying to the Directors to state, that there has been a gradual improvement in this branch of business since the commencement, and that there is every prospect of very considerable increase.

Arrangements have been made, and are still making, with various persons in the different towns along the line, and adjacent to the railway, for the establishment of permanent traffic in merchandise, which will be mutually beneficial to the traders, the public, and the Company.

The receipts upon the Shoreham branch and Kingston Wharf have also increased during the last half-year; a landing-place at the wharf has been run out for the accommodation of steam-boats, and a new and important communication has been opened with the Continent, which will add greatly to the increase of traffic, without any additional expenditure. The conveyance of goods and merchandise has recently commenced from this wharf along the main line, and a considerable trade in coals has already been established with the interior of the country.

By the annexed Report of the Engineer it will appear, that he has almost completed the contract and extra works, which, at the last general meeting, he stated, remained to be executed; and he assures the Directors that the estimate he then gave for those works will not be exceeded. He is engaged in the settlement of the Contractors' accounts, which there is every reason to believe will be adjusted before the next general meeting.

At the last general meeting 211 shares were forfeited, of which number 201 have since been re-allotted to the several proprietors, upon their paying all the calls due, with interest thereon. The arrangement referred to in the last Report with the holder of 45 shares has not been carried into effect, in consequence of his bankruptcy, and these shares are at the disposal of the Company. In all other respects the number of registered shares remains the same as at the last meeting.

The Directors have raised by loan notes, under the seal of the Company, the sum of 300,000*l.* as authorised by the last general meeting, and it is their intention to apply, in the next session of Parliament, for an Act to confirm this loan, it having been impossible, under the Standing Orders, to do so in the present session. In this Act it is also proposed to reduce the number of Directors to twelve, and a copy of the Bill will, in due course, be submitted for the approval of the shareholders.

The station at London Bridge is progressing rapidly, and in all probability will be completed in the course of the present year; at least, so far as to enable the traffic of the three Companies now using it to be conducted more conveniently and economically.

On the 19th of May last, the Directors received notice from the South-Eastern Railway Company of their intention to pay, on the 19th July, the purchase money for that portion of the Brighton Railway which they are authorised to take, and requiring a statement of the accounts to be delivered to them, as provided by the Act of Parliament. These accounts (with the exception of a few items which cannot yet be accurately ascertained) amounting to 327,334*l.* 15*s.* 2*d.*, were accordingly made out as expeditiously as possible, and were furnished on the 16th of July to the South-Eastern Company.

In pursuance of the Act of Parliament, the above amount has been invested in the sum of 357,410*l.* 10*s.* 8*d.*, Three per Cent. Consolidated Bank Annuities, in the names of Joseph Baxendale, William Wilson, John Harman, and John Catley, Esqrs.

Arrangements are being made by the Surveyor to the Company for the re-sale of the surplus lands, which will be completed without delay; and the Directors are happy to state that as far as settlements have been made for land taken for temporary purposes, they have been very satisfactory.

In concluding this Report, the Directors, reviewing the difficulties with which they have had to contend, and which have probably been greater than those on any other railway in the kingdom, and the efforts they have made to carry out the wishes expressed again and again by the proprietors, by pressing forward the works, and thereby opening the entire line at the earliest possible period—feel confident of the approbation of the proprietors, who will have the benefit of a much earlier return for their investment than could have been anticipated. There can be no doubt that if the works were to be re-constructed, and more time allowed for their execution, considerable saving might be effected; but this remark will apply to every undertaking of equal magnitude. The Directors believe, however, that there is no instance on record where works of the same extent as those on the Brighton Railway have been executed in so short a space of time, or nearer the estimated cost. In their purchases of land, they have uniformly endeavoured to protect the interests of the shareholders: in every case where the demands were exorbitant, and such as ought not to be submitted to, the purchase was either left to a reference or a jury. They court the fullest inquiry, well aware that they can justify every payment they have made, but they doubt not that the reflections which have been attempted to be cast upon their proceedings will be entirely removed on the perusal of this Report. The traffic on the line is steadily increasing; the stock of the Company is in good order; the money arising from the purchase of the South-Eastern Company will be at the disposal of this Company, when the accounts are finally settled; the railway is in excellent condition, and nothing can be more promising than the prospects of the undertaking.

A resolution will be submitted to the meeting for the appointment of Auditors.

(Signed) JOHN HARMAN, Chairman.

London, August 1, 1842.

ENGINEER'S REPORT.

To the Directors of the London and Brighton Railway.

Gentlemen,—Since my last half-yearly Report, I have been gradually completing those contract and extra works that were of the most immediate importance, which have been of a very tedious nature, and such as I could not allow to be gone on with in the first months of the year, as neither the weather or the season were propitious for such undertakings, and this has in a great measure prevented the closing of the contracts on the middle district of the line.

The works at the present time are in the most satisfactory state, although in the commencement of the year there were occasional slips in some of the embankments, which required constant attention.

The cuttings, generally speaking, have stood well; there have been some few slips in them, but nothing of importance, and as the slopes have been well drained, it will secure them against the penetration of wet. The first 13 miles of the line are in the most perfect and permanent condition. There is nothing for me to direct your attention to till the Earl's Wood embankment, where some settlements took place in the early part of the year; but by great perseverance and constant attention the line was kept in a working condition. I have now given orders for the trimming and footing the slopes, as the weather is very favourable for that operation, so as to reduce them to a uniform inclination, which will secure the embankments from all future danger.

These remarks apply equally to the embankment adjoining the Salford viaduct.

From thence to the deep cutting at Kemp's Farm, a distance of 11 miles, the road is in the most perfect order.

The slip that took place on the embankment near Kemp's Farm has had my constant attention, and from having it effectually drained the foundation has become so consolidated that after three months' observation I have not perceived any settlement in it. The remainder of the line to Brighton is in the best possible order.

During the last half-year there have been some slips in this part of the line that have been effectually made up, and I have every reason to believe that nothing but the ordinary expense of maintenance will be required on this portion of the line.

The whole of the tunnels and tunnel shafts are in the very best order.

At all the stations on the line the works necessary for the traffic are now nearly completed.

The passenger sheds at Hayward's Heath have been taken down and converted into warehouses for goods, and carriage sheds for the different stations.

From what I have stated, you will perceive that there remains very little to complete every part of the works on the line, and with the exception of the Earl's Wood embankment, the Salford viaduct embankment, and the embankment at Kemp's Farm, the whole of the railway is in the most complete order, and permanent state of repair; and as every convenience will have been provided for when the works now in course of completion for the stations are finished, no further outlay will be required.

The works at the Joint Station at London Bridge are making rapid progress, and will be in a condition to receive part of the traffic in a few months, and I hope the whole will be finished before the end of the year.

In concluding my Report, I need hardly draw your attention to the fact, that when the few works that I have enumerated above have been finished, that the London and Brighton Railway will be found to be in a more complete and efficient condition than any railway in the kingdom.

I now advise you to advertise the maintaining of the railway for a term of years, and it gives me great pleasure to inform you, that from offers that have been made to me, I have no doubt that it will be let at a price, per mile, far below that of any other railway in the kingdom.

I am, Gentlemen, your most obedient servant,

JOHN U. RASTRICK.

London, July 25, 1842.

The Report was received without any particular marks of approbation.

Major-General HODGSON (a Director) believed that nothing had been explained by the Chairman as to the money invested by the South-Eastern Company for the purchase of a portion of the line.

The CHAIRMAN said, he had already explained what had been done.

A PROPRIETOR said, it was proposed in the Bill to be applied for in the next session to reduce the number of Directors from 20 to 12. Would so small a number suffice?

The CHAIRMAN said, the Directors were proposing to act in this matter on the impression conveyed by a late meeting of the proprietors. The draft of the Bill would on a future day be submitted to the proprietors, and then would be the time to give an opinion on the subject. In order to bring the business of the day formally before the meeting be begged to move that the "Report of the Directors be received and adopted."

Mr. T. HARVEY seconded the motion.

Mr. TROUP rose to propose a series of questions, but from the low tone in which he spoke, he was very imperfectly heard by the meeting, and frequent interruptions were the result. He complained of a difference between the amounts now stated by the Chairman as extra works, and those which stood on the Company's books, which he had examined at the office. For instance, the Chairman said there was 2,314*l.* for extra works in District No. 2. whereas the books showed it to be upwards of 30,000*l.*

The CHAIRMAN said, if there was any mistake, it must be on the part of the honourable proprietor. The sums which he had stated had been taken out with the greatest care from the books. He had not said that the whole of the extra works in District No. 2, amounted only to 2,314*l.*, but that *that* amount still remained unpaid in respect of these works.

Mr. TROUP said, the impression which the Chairman's statement was likely to leave on the meeting was, that only 2,314*l.* had been expended in District No. 2, on extra works, whereas it now appeared it was upwards of 32,000*l.*

The CHAIRMAN said, it might be so, but all that he had referred to was the amount still due. It was to be remembered too, that he had spoken of districts which included several contracts. In the District No. 2, it appeared there was still 16,000*l.* to pay on contracts, and as before stated, 2,314*l.* on extra works.

Mr. CATTLEY (a Director) thought, that as the honourable proprietor held but one share in the undertaking, the expenditure on extra works could not greatly affect him. It would not be five farthings in the pound on his dividend.

Considerable confusion again arose, whereupon Mr. Troup said, he had come prepared for interruption, and would therefore hand in a written statement, which he begged might be read.

The CHAIRMAN held up the document, which appeared to be of great length, but the meeting would not hear it read.

Mr. PARSONS, after alluding to the state of his health, which disinclined him from addressing a public meeting, said he should endeavour, in the few remarks he had to submit, to preserve that tone of cordiality of which the Chairman had set an example, while, at the same time he would express his convictions without reserve. He begged to say that he did not participate in an approval of the Report generally. The manner of that document was very confident, and reminded him of previous documents of the same kind, in which the estimates which had since proved to be so inadequate were spoken of in terms equally positive, and scrutiny from time to time challenged. He would touch upon some of the paragraphs in the Report *seriatim*, because the proprietors held that document in their hands; but before doing so, he must express his regret that what had fallen from him on a previous occasion as Chairman of the Committee of Investigation had been capable, as undoubtly it was, of a double interpretation. He certainly had not deemed it so at the time, otherwise he should have been more guarded. (Hear, hear.) With respect to the Report, the first paragraph upon which he wished to say a few words was that in which the blame, which was generally attached to the accounts, was attributed to the late Secretary, that individual being now absent. He (Mr. Parsons) did not believe that to the late Secretary alone or principally was to be ascribed the condition of the accounts. (Hear, hear,

Digitized by Google

hear.) The Report went on to say that the Directors had procured for their late Secretary introductions to the Accountants of two other Companies, and that they were assured that he had made himself thoroughly master of the subject; but was it not the duty of the Directors to see that their intentions were carried into execution? (Hear, hear.) Ought they to have left it for the Committee of Investigation, unacquainted as most of the members of that Committee were with such matters, to discover *instanter* how extremely defective these accounts were? The blame, he would contend, rested on the Board. (Hear, hear.) The Report said that the late Secretary adopted "a different method" of keeping the accounts from that in use on the two lines referred to. He did not know in what mode the books of the Great Western Company were kept, but he did know that of the Birmingham Company; and to characterise by such an expression as "a different method" the relative state of the Birmingham and Brighton accounts was extremely calculated to mislead. Different, indeed, they were—as different as black from white—as summer from winter! The Report proceeded to set forth that "if he [Wood] had been present at the investigation [of the Committee] he would have removed many objections raised by that Committee, and have rendered their inquiry less laborious." He, as Chairman of the Committee, and he believed the Committee generally, were at issue with the Directors on that question. The Committee did not admit that Mr. Wood could have rendered any assistance. The fact was, that the Committee did not discover much of Mr. Wood in the books. The gentleman more immediately entrusted with them had given many verbal explanations to the Committee, and from his retentive memory had at times materially assisted them, but there were other times when no such explanations could be given, and when the Committee had been occupied for hours over single items. (Hear, hear.) But what an idea of accounts did it suggest when it was stated that the explanation of them depended on the presence or absence of any party. (Hear, hear.) Here was an expenditure of two millions and a half depending for explanation upon life or death! (Hear, hear.) He need not remind the meeting that the accounts of such an undertaking as the London and Brighton Railway ought to be so kept as to be transmitted from one Board of Direction to another, so as to be intelligible to all, and to be capable of being contrasted with those explanations the Directors presented. The next paragraph upon which he would remark was that in which it was stated that "it had always been the intention of the Directors to make out a complete and detailed account, classing the expenditure of every department under its appropriate head from the commencement of the undertaking." Now every one must know that unless such accounts were kept progressively as the works proceeded they could not be afterwards supplied without an entire reconstruction of the books *ab initio*. What right had the Directors to assume that they would remain in office till the works were closed. (Much applause.) When the works were completed and the expenditure at an end, one of the great uses of details was at an end. The accounts ought to have been kept from the first in such a way as to have enabled the Directors to have tested by them the statements of the Engineer and other officers of the Company. The Report went on to say that "during the progress of the works, it was found utterly impossible to follow out this system." Had not other Companies done it? He knew that there were some who had. It was added that it would be "adopted when the accounts of the several contractors are closed." He was glad that it was to be so—perhaps it was all that could now be attained—but he would contend that it should have been done from the commencement. The next paragraph in the Report to which he would call attention was that in which it was said, "The Directors cannot be expected to take upon themselves the great responsibility of the various estimates either for land or works." He was not aware that such responsibility had been thrown upon the Directors—certainly not by the Committee—except in so far as they had trusted too implicitly to the statements of their officers. The great source of the errors in the estimates was the want of proper details, and it was this which prevented the Committee of Investigation from making out a satisfactory Report. Had they sat till Doomsday, they would never have been able, from the materials before them, to make a satisfactory answer to the questions which they had been instructed to reply to. But the Directors said, they had "never parted with the funds of the Company without the strictest scrutiny, nor had they acquiesced in any expenditure without being fully convinced by their Engineer that it was absolutely necessary." This was completely at variance with the experience of the Committee. Where, he would ask, could they find the proofs of this scrutiny? (Hear, hear, hear). The Committee were furnished with no details as to the purchase of the land; they were told such details were not in existence. While on this point, he would beg to ask whether the details of land now laid on the table, and referred to by the Chairman, applied to the whole line, including the Shoreham branch. [CHAIRMAN—The whole main line and the branch likewise.] The Committee did not find evidences of the Directors' scrutiny in the engineering department. No measurements, no prices were supplied in the Engineer's estimate; there was no separation of extra works and contracts; but the whole was lumped in one amount. (Hear, hear). Did they find it in the imperfect bills laid before them?—in the fact which till then was not known to the Directors themselves—that from one district of the line no receipts had been sent to the head office by one of the sub-engineers from the commencement of the works, although large sums of money had passed through his hands? (Hear, hear, hear.) Was the proof of scrutiny found in the general statement of accounts, which were such that the Committee could not understand them? The Report of the Committee had been censured, and perhaps it was in some respects open to it; but it was impossible to please everybody. The Committee had been occupied 34 or 35 days, generally for five or six hours a day, frequently longer, but nowhere could they discover the evidences of scrutiny to which reference had been made. (Hear, hear.) There was only one other of the paragraphs in the Report—for he should confine himself to the question of capital—upon which he would speak. The addition of 71,000*l.* to the capital account was described in the Report as an "oversight." He could not agree with this. It was an instance on a large scale of that defective system of accounts which the Committee found to characterise the whole concern. It was in fact a prominent entry in the statement of liabilities, prepared before the last general meeting, to enable the Directors to state to the proprietors the eventual outlay. In point of fact it remained unknown to the Board, and to all the officers of the Company, until an explanation was sought for by the Committee a short time before the last general meeting, a period of nearly two months. The Committee designated it a misstatement, and although he was desirous not to use harsh expressions, he must again so designate it. The Committee had endeavoured to draw up a balance-sheet but they found their efforts wholly fruitless. The Directors had no balance-sheet; had they had a proper one, it was quite impossible that so glaring an "oversight" could have escaped detection. (Hear.) These comments he had felt it his duty to offer to the meeting, and he trusted he did so without any expression of angry feeling.

The honourable proprietor sat down amid loud applause.

Mr. MAHON said, there had been grave charges brought against the Directors within the last six months, and as those gentlemen had said they would not answer anonymous accusations, he had extracted the substance of them, and begged now to put a few questions. Some of these were of rather a delicate nature, and it was with extreme reluctance that he proposed them. He was actuated, however, solely by a desire to benefit the undertaking. The questions he had written down, as it was impossible to carry the whole of them in his memory, and although some of them had been already answered by the explanations which the Chairman had given, he would read the whole of them. The honourable proprietor then read as follows:—

Are the works of our railway fully completed, so that no further capital will be required? It has been over and over again asserted, and is still persisted in, that our capital account is by no means closed, that the ultimate cost of our line will cost three millions and a half.

2nd. Are the Directors now prepared to supply us with a statement of the total quantity of the land purchased, the prices paid for the several parts, and all the details thereof? Has the whole of the land purchased for our use been paid for? No outstanding account for land? What are the expenses alluded to by our Committee as attending the furnishing those details? With respect to the surplus land belonging to the Company, amounting to about 60,000*l.*, is it to be sold by public auction? Has any portion of that property been sold, and if so, in what way, and to whom? Have two houses opposite the station gate at Croydon been sold; and if so, to whom and for what consideration, and whether by public sale or private contract? Have all receipts been transmitted to the head office from every division of the line? Are the Directors now in a position to afford complete information respecting all checques that have been drawn, their amount, date, names of parties in whose favour drawn, &c. &c.? Have all monies raised by the Company been regularly paid unto the bankers', and whether proofs of such payments can be shown? If not unto the bankers, to whom were they paid? Are all receipts now forthcoming, and if not, why not? Have proper conveyances of the land purchased been executed? How many bonds have been signed by one Director only? The Committee of Investigation have reported that in their examination of the mortgage account they remarked the great risk incurred by the Company from the want of precautionary measures having been adopted with respect to it. May I ask what were the precautionary measures so omitted, and how can our legal adviser justify such omission? Have not our legal expenses during the last three years amounted to near 40,000*l.*; and what amount still remains due to our Solicitors, both in London and Brighton? Who pays the bills, who examines and audits them? Is our Engineer now able to supply the details of the extra works, so as to enable us to ascertain precisely what value in works or land we have got for the sums expended over and above the original estimate? Will our Engineer be good enough to inform us whether the causes alleged in his remarks to the Committee of Investigation, for the great excess of actual over estimated cost, were not known, or easily discoverable; and if not, which of those causes were so unknown and undiscoverable in the year 1840, when the works were very far advanced, and when the following statement was put forth in the official Report submitted to the shareholders in July of that year:—"The Directors, in conjunction with their Engineer, have gone into calculations to enable them to form an approximate estimate of the further amount requisite, not only to complete the works, but to provide stations, engines, carriages, &c., and for meeting every other expense incident to the opening of the line throughout, upon a *liberal* scale; and the result of their investigation has led them to the conclusion that 600,000*l.* will be sufficient for these purposes, and which will bring the whole cost of this great undertaking under 1,800,000*l.* Whilst the Directors have power, under their Act of Incorporation, to raise 2,400,000*l.*, its whole cost will not exceed 1,800,000*l.*, from which will have to be deducted at least 300,000*l.* for the portion of the line to be taken by the South-Eastern Company, and the re-sale of land not required by the railway."

Our Engineer has mentioned the rise of prices as

Digitized by Google

one of the causes of the increased expenditure. At what particular time did that rise take place? Did not our Chairman inform the Select Committee on Railways, sitting in the year 1839, "that he had contracted for nearly all the works—that they averaged quite within the estimate—that the purchase of the land would very little exceed the estimate, and that in his opinion 1,400,000*l.* *would do everything* we should require?" Are vague generalities to be received as sufficient excuses for such an enormous excess over the estimated cost as has taken place? Mr. Rastrick has stated as one main cause of that excess, the state of the soil, the exact nature of which it was previously impossible to ascertain. Now, how is this statement to be reconciled with his own, Sir John Rennie's, and Mr. Locke's repeated declarations, after having caused sections to be carefully taken in every direction, and after personal examination of the soil, that it was exceedingly favourable to the cheap execution of the works? Was not the nature of the soil ascertainable; and if not, was it not very blameable in our Engineer to entrap subscribers by such confident statements? Had not the stone of the country along our line been pronounced to be admirably calculated for use in buildings and other purposes—it appears from the Report of our Committee, that that was an erroneous statement? Could not the hardness of the stone have been tested? if not, why not? If it could, why were those erroneous statements so confidently made? How many bridges have fallen in, or sunk, or been obliged to be re-constructed, and from what cause? There have been severe attacks made upon our Engineer, for allowing some contractors to substitute day jobs for contracted piece work, by which means it is alleged large fortunes were made by some contractors, as much as 25,000*l.* by one persons, who is said to have been insolvent some time before. I allude to Contracts 12 and 13, and 2 and 3. Will our Engineer be good enough to explain those cases, if there be any of the kind? Are we to pay any part of the cost of the action commenced against the publication containing these charges? Whether the whole of the Secretary's salary goes to that officer, or whether any member of this Company receives any part of that officer's pay? Has the sum of which we were defrauded by Mr. Wood ever been precisely ascertained? How did he get those sums into his possession? Have any steps been ever taken to find him out, and recover the money from him? Did Mr. Wood, on the night he absconded, or subsequently, forward a letter to any person connected officially with this Company, threatening injurious disclosures if he were pursued? If there was such a letter, what became of it? Was it submitted to any members of the Board? In what proportion is the allowance of Directors shared amongst them? Have any materials necessary for our railway, as oil, iron, coal, &c., been supplied by any of the Directors, or by any of their immediate connections? Is our Chairman either Director or Chairman of any other large speculative concern?

When the honourable proprietor had got as far as the question relative to the day-work on a certain contract, he was called to "order" by Mr. L. Heyworth of Liverpool, but the meeting clamoured for him to proceed.

Mr. MAHON regretted extremely that any opposition should have proceeded from such a gentleman as Mr. Heyworth. (Hear, hear, hear.) If Mr. Heyworth could set these charges at rest, he (Mr. Mahon) would feel greatly indebted to him; for he had embarked in the railway a good deal (for him) of property—more perhaps than he ought. (Applause.) He again most emphatically disclaimed all personal offence to the Directors; but these questions *must* be answered. (Hear, hear, hear.) If it went forth to the public that the Directors could not answer those questions which had very properly been put, the injury to the Company would be very great. (Renewed applause.)

Mr. LEVY said, he should like to hear something about the dividend. (Laughter.)

The CHAIRMAN deeply regretted that the questions had not been sent to him a day or two before; but he would answer them as far as possible.

Mr. CATTLEY said, if the honourable proprietor had really wished for answers, he would have sent his questions to the Chairman; in which case he (Mr. Cattley) pledged himself they would all have been answered. (Confusion,)

The CHAIRMAN said, so far from objecting to the questions, he was glad they had been put. He must again express his regret that they had not been transmitted previous to the meeting.

Mr. MAHON said, he had only completed them that morning, but they had over and over again appeared in print, and that was the reason why he now brought them forward..

Mr. HEYWORTH thought it was an entire loss of time to read these questions. (Loud cries of "No, no.") If the honourable proprietor had put them, and then called for a Committee of Investigation to inquire into them, he (Mr. Heyworth) would have seconded the proposition. Off-hand answers now would not satisfy him nor anybody else. If these questions were to be put at all, they should have been referred to a Committee, whose duty it would have been to report to a special meeting. (Considerable disturbance.)

The CHAIRMAN said, he would now proceed to answer, as far as he was able, the various questions put to him. [The honourable gentleman then read them at length; we shall merely indicate them.] With respect to the works the explanations already given appeared to be satisfactory. The whole land had been paid for, with the exception of some belonging to Sir I. L. Goldsmid, and the Archbishop of Canterbury, amounting altogether to less than 5,000*l.* The next question was as to the expenses which prevented the Committee of Investigation from furnishing details. He would leave the Committee to answer that question.

Mr. PARSONS said, it was the answer of the Directors themselves to the Committee.

The CHAIRMAN said, there could be no doubt that expense would have been incurred had the details *then* been furnished. As to the sale of surplus land, the Directors had given orders that all of it should be sold by auction. In some instances they were bound to offer it, in the first instance, to the owners of adjoining property; but if *they* did not offer a price which the Directors could accept, that land would then be sold like the rest. As to the two houses at Croydon, they certainly had been exchanged for property belonging to his (the Chairman's) father on another part of the line; but he put it to his brother Directors, whether, in all negociations in which his family, or any person connected with him, were concerned, he (the Chairman) had not made it a rule never to interfere. ("Hear, hear," from the Directors.) He believed that the exchange referred to had been to the advantage of the Company. (Hear, hear.) He was quite sure, for he had heard it repeatedly stated, that the Company could not confer a greater obligation on his father than to replace him in his previous position. (Hear, hear,) He was sorry that any person should have entertained an impression that he (the Chairman) could have acted in this matter in the way attributed to him. (Hear, hear.) The question as to receipts he would answer in the affirmative, and so with regard to the cheques. As far as he knew, all monies had been paid into the bankers, with the exception of 500*l.* sent to the late Secretary by that person's daughter, and which he had appropriated to his own use. All receipts were forthcoming; he knew no reason why they should not. Had proper conveyances of property purchased been executed? He would refer that to the Solicitors.

Mr. FAITHFULL (the Brighton Solicitor) said, legal conveyances had been executed in all cases in which the titles could properly be cleared up. There were only a few not executed.

Mr. BENNETT (of Brighton)—How many?

Mr. FAITHFULL could not say.

Mr. BENNETT—20? 10? 5?

Mr. FAITHFULL would not pledge himself, but did not think they exceeded 5 in his district of the line.

Mr. SUTTON said, there were about 7 in his district. In all these cases, however, agreements had been signed, and possession obtained.

[Some skirmishing here took place between Mr. Bennett and Mr. Faithfull.]

The CHAIRMAN resumed—No bonds had been signed by one Director. In fact the bonds were not signed. The seal of the Company was affixed by order of the Board, and usually in the presence of two Directors. As to the precautionary measures mentioned by the Committee, he did not know what they meant, except it related to the case of the late Secretary.

Mr. PARSONS said, the Committee meant to express their dissatisfaction with the bond account generally. There was no check upon the receipt of money by Mr. Wood. That person was known to be a defaulter on the Stock Exchange, and he had heard had failed previously to that; and yet the Directors had taken no security from him. (Hear, hear.) Mr. Wood gave receipts to the parties, but no notice was taken of such receipts at the office of the Company till the pass-book returned next day from the bankers'; so that Mr. Wood might any night have walked off with the money received.

The CHAIRMAN said, Mr. Wood never got the bonds till the money had passed the bankers, and *that* was the reason why he had not been able to give his daughter her bonds.

Mr. PARSONS said, he had spoken of the receipt of money, not of the delivery of bonds.

The CHAIRMAN said, a great proportion of the money was paid at once at the bankers.

Mr. PARSONS said, half seemed to have been paid at the office.

Mr. CATTLEY—Not a tenth part.

The CHAIRMAN resumed, and said, he had known nothing of Mr. Wood, until he found him Secretary of the South-Eastern and Brighton Company, which had been one of those that ultimately become amalgamated. He (the Chairman) had proposed Mr. Dean as Secretary. He did not then know of Mr. Wood's affairs on the Stock Exchange. The next question was, as to the legal expenses being 40,000*l.* in three years. He believed that if the costs on both sides, of buyer and seller, were taken into account, the amount would be as stated, including the Surveyors. 'Who paid, or examined the accounts?' The accounts went before two or three Committees. If for instance it related to the stores, the account was first brought before the Store Committee; it then went to the Audit Committee, and lastly to the Finance Committee. Could precaution go further? No payments had been made in the Engineer's department without proper certificates, and the same in other departments. The amount remaining due to the London Solicitors was about 1,000*l.* and to the Brighton Solicitor 2,000*l.* The next question was, could the Engineer supply particulars as to the extra works? Mr. Rastrick would answer for himself.

Mr. RASTRICK said, there were two contracts now under the consideration of arbitrators, including contract, No. 1. Contracts 2 and 3 were settled; so was contract 5. Nos. 6 and 7 would be settled in about a week. No. 8 was the Balcombe tunnel, and was all but arranged. No. 9 would be settled in a week. No. 10 was the Ouse viaduct, respecting which the Company were at law with the original contractor. No. 11 was under arbitration; for Nos. 12 and 13, the contractor had not sent in his account. That which related to the Clayton tunnel would be settled in three or four weeks. Beyond that point all had been settled; and of these settlements every detail as to price and measurement was set forth.

Mr. LEVY—Now as to the dividend! (Laughter.)

The CHAIRMAN resumed. He certainly had stated before a Committee of the House of Commons, in 1839, that the contracts had been let under the estimates; and so they were, but it was the extra works on which the great excess had arisen, and of which, at the time, he could not be supposed to have had any conception. As to the soil, was ot its nature ascertainable; or was not the Engi-

Digitized by Google

neer blameable for entrapping subscribers by his statements? Mr. Rastrick would no doubt reply.

Mr. RASTRICK said. it was only from the surface that the nature of the soil could be discovered. The parties to whom the land belonged would not allow them to bore; and even if they did, the precise state of the ground could not be ascertained. He would instance one case. At the tunnel at Redhill two shafts had been sunk, and it had been found that the soil was sand. A contractor had taken the contract with that idea; but on getting to work it was found to consist principally of Fuller's earth. It was easy to talk glibly of the nature of the soil, but Engineers did the best they could; and he would defy any man to state beforehand with any degree of accuracy what the nature of the soil might be.

The CHAIRMAN said, the next question was as to the day work, and the large fortune said to have been made by an individual.

Mr. RASTRICK had not allowed day work to be substituted for contract work, but in cases where it could not have been avoided. The Keymer embankment was included in the contracts referred to, and in that instance the material had run off from the embankment as fast as it was placed there—a contingency which had occurred on the Birmingham and other railways likewise. It was not to be supposed that under these circumstances the contractor could keep men constantly employed on this embankment in the way alluded to, and if they had not had recourse to day work, the line would not have been opened even now. As to the contractor getting 25,000*l.* by this day work, it was a most confounded falsehood, and the rascal who wrote it knew that it was so. ("Hear. hear, hear," and disturbance.) The truth was, the contractor had lost money by it. (Hear, hear, hear.) An accusation, too, had been thrown out against Mr. Coombe, one of the sub-Engineers, of having connived at this alleged plunder of the Company. Mr. Coombe had brought his action, and his slanderer would have to meet him in a Court of law. He scorned to notice these publications, where every anonymous scoundrel could put forth the most unfounded statements. He had never demeaned himself to write in such papers, and never would. (Hear, hear, and laughter.) [The honourable gentleman was vehemently excited in delivering this speech.]

Mr. MAHON disclaimed all participation in the statements which have from week to week appeared in the *Railway Times*.

The CHAIRMAN resumed—Will any portion of the expenses of Mr. Coombe's action against the *Railway Times* be borne by the Company? Certainly not; they had nothing to do with the action. Was any part of the Secretary's salary paid to any other person? He could only say, that the whole of the Secretary's salary was paid to that gentleman. If he handed over any part of it to others, it was not at least to him—(laughter)—although he believed he was the party pointed at. The precise amount of Mr. Wood's delinquencies was 1,594*l.* 13*s.* 2*d.* How Mr. Wood got possession of this money was easily accounted for, by the fact, that a Secretary must have such opportunities. [Mr. LEVY believed there had been "another screw loose" at Brighton.] Had any steps been taken to apprehend Mr. Wood? Certainly there had, and there had not been (as elsewhere insinuated) any secret orders issued to the officer *not* to take Mr. Wood. If that were doubted, Mr. Forrester, the officer, would set the point at rest. Did Mr. Wood forward a letter threatening injurious disclosures? He did; that letter came into his (the Chairman's) hands, and was by him read to his brother Directors; but the impression was, that as Wood was scoundrel enough to decamp with the Company's money, he would be base enough to threaten disclosures for which he (the Chairman) believed there was no shadow of truth. He should have been glad had Wood been taken, for it would have saved him the necessity of noticing these points. He had been told that Wood was at Baden-Baden. As to the allowances of the Directors, it was regulated according to the attendance of the members. He himself had the honour to have 100*l.* in addition to the usual sum.

Captain BEAUCLERC (a Director) said, the real truth was that the Chairman, as being the Chairman of numerous Committees, received a great deal more than any other member of the Board.

The CHAIRMAN said, he had stated nothing to the contrary. He should be glad to be excused from attending some of these Committees. It was considered right that he should *ex officio* preside over these Committees. He did not see that his time should not be paid for as well as that of others.

Mr. CATTLEY was sure the Chairman was greatly underpaid. (Hear, hear.)

The CHAIRMAN—With respect to the next question, he certainly was Deputy-Chairman of the Licensed Victuallers' Insurance Company, and he was also a Director of the Bank of Ireland; but if he chose to be connected with half a dozen Companies he did not know what business it was of anybody's. It would be different if the Brighton Railway Company paid him for the whole of his time, but till they did so, he should not, so long as he did his duty to them, ask any person's leave with what Companies he should or should not be associated. (Hear, hear, hear.) He believed he had now answered every question put to him.

Sir ISAAC LYON GOLDSMID said, that considering his position with the Company he had determined, in order to avoid angry expressions, to commit his sentiments to writing. The honourable Baronet then proceeded to read as follows:—

GENTLEMEN,—I have been applied to by several persons to propose the adoption of this Report, and if I had agreed to this it would naturally imply an approval of its contents; but although I might not have been able to go so far as to move that the Report should be adopted, still I was anxious to remain silent on this occasion, as for various reasons it was obviously my interest, on public and private grounds, to take this course. 1st, I am a large shareholder, and would wish for a dividend upon my investment. 2nd, I have a great stake in Brighton, from the extent of my property there; and therefore must desire the prosperity of the undertaking; and in the third place, nothing, probably, would induce so readily an adjustment of my own difference with the Company, still unfortunately in litigation, as my now evincing my confidence in the present Board of Direction.

My object then was to see whether I could, consistently with my sense of duty, remain silent, and for this purpose to understand what was to be done at this meeting. Having heard that a dividend was likely to be declared from a surplus revenue, amounting to about 30,000*l.*, I was desirous of looking at the accounts that were to be laid before the proprietors at this half-yearly meeting, and I applied to the Chairman for that purpose, when he informed me that they would, according to the Act of Parliament, be ready on and after Saturday, the 23rd July, for such of the proprietors as might wish to see them. I went accordingly on the 26th, expecting, at all events, to learn that the books had been re-modelled according to the recommendations of the Committee, which were confirmed by you, and to which the Chairman at the public meeting stated should be done. I found, however, that the recommendations of the Committee have not been attended to: I saw the statement of revenue and expenses, and on my observing some inaccuracy, and asking for an explanation, it was at once admitted that my objection was right in principle, and that the books had not been placed upon the new system. It was stated as a reason for this, that the gentleman who had been employed by the Committee of proprietors to examine the accounts, and whom we had supposed to have been continued in the employment of the Company for the purpose of re-modelling them, had been occupied almost ever since with the South-Eastern accounts. It appeared to me, however, extraordinary that no other person could be found in London for one or other of the purposes, after such positive directions from the proprietors, and such a solemn pledge of the Board. The revenue account which I saw was admitted, on two subsequent occasions when I called, to be inaccurate, and to require re-examination; and on Monday last it was exhibited to me nearly in the same state in which it now appears before you. But although, since I first saw the account, the balance had been reduced from 30,000*l.* to 27,600*l.*, I am sorry to say that the inaccuracies I pointed out still remain, and I think you will be forced to come to the conclusion that a large deduction has still to be made from the sum now mentioned, as properly applicable to a dividend.

You will see on looking to the accounts, that there are two sums stated to be applicable for a dividend, one being the balance of the account of the half-year ending 31st December, 1841, amounting to 12,465*l.*, and the other the balance of the half-year ending 30th June, 1842, amounting to 15,190*l.*, together 27,645*l.* It is evident, however, that accounts of receipts and charges ought to be made up to the same period, therefore there ought to be deducted from this sum 13,750*l.*, the interest on the 600,000*l.* mortgage bonds from the 15th January to the 30th June, which charge has been wholly omitted from the account. For the same reason, the tolls on the Croydon line and the duty to Government, from the 6th of June to the 30th of that month, should be charged to the account, and these two sums of 13,750*l.* and about 800*l.* being deducted from the 27,650*l.*, leave a balance of 13,100*l.* only really applicable to dividend. But an answer to these remarks is suggested in the Report (in consequence, I suppose, of my having made observations to a similar effect to the accountant when the accounts were produced for my inspection). And what is this answer? That a portion (we are not told what portion) of the interest due upon the debt payable by the South Eastern Company is applicable to the profit and loss account to the same period.

Now, in the first place, that debt is not ascertained, and I leave it to you to consider whether it be not rather premature to begin doing what is equivalent to a division of the interest on this debt, at a time when you know the amount of neither interest nor principal. But let us waive this, and suppose that this Company receive from the South-Eastern Company the amount of 327,000*l.*, which has been claimed (including interest). Then it only follows that the interest on this sum may be properly set off against the interest on the loan-notes, which are about of the same amount, and not one shilling of the interest on which is reckoned in the present account—as it ought to have been, were it not for the debt from the South-Eastern.

But are we to be told that the charges due and not mentioned in the account are to be paid with the interest on the South-Eastern debt, not for a half year, but ever since the debt became due? For it is impossible to understand, either from the Report or the accounts, what is meant in this respect. I ask, then, is the whole of the interest due on the mortgage-bonds (viz. 13,750*l.*), the whole that is due on the loan-notes, the deficiency on the Croydon tolls, and the Government duty, which are not charged from the 6th of June till the 30th of that month—are all these to be taken from the accumulated interest of three years, which is supposed to be due from the South-Eastern? If so, what ought to be the course to prevent the proprietors, especially the distant proprietors, from supposing that the payment of the dividend comes from a balance of revenue after deducting the expenses? Why, it is clear that all the items of charge ought to be stated on one side of the account, and the sum which you take from the interest supposed to be receivable from the South-Eastern, to supply the deficiency, ought to be placed on the other; for without this, it is impossible to form any idea of the probable amount of your income, after deducting the expenses.

Whether the Directors have been adopting a similar course as to their other payments, it is impossible to say, but as the matter now stands, there is not more than 10*s.* a share actually divisible from

Digitized by Google

surplus income among the proprietors, including some of the South-Eastern interest.

I am aware of the charm exercised by the very name of a dividend, I therefore make these statements with regret. But can we fail to see that this account of dividend is, *unfortunately*, of the same complexion as that we had of construction, respecting which I must trouble you with a few words, because I have some information which I think will be interesting to offer.

You know we had in the half-yearly Reports (notwithstanding strong engagements to the contrary), various specific and gradually but rapidly increasing amounts of cost, rising from 920,000*l.*, the first estimate (with 200,000*l.* for land, &c.), to 1,800,000*l.*; then in six months to 2,070,000*l.*, then in six months more to 2,320,989*l.*, and again in six months to 2,569,211*l.*, at which cost the amount exceeded by a considerable sum the utmost amount authorised to be raised by the Act of Parliament, and that without the slightest previous intimation to the proprietors.

Have the Directors, in consequence of the excesses of expenditure, done what in my opinion they ought to have done in their own justification? Have they asked Mr. Locke (one of the two gentlemen on whose judgment and accuracy we depended when the line was about to be commenced) how he can account for the difference between the enormous sum of 1,900,000*l.*, which the main and branch lines have already cost, exclusive of land and buildings, and 920,000*l.*, the sum at which Mr. Locke ertimated the cost of the lines, or 875,000*l.*, at which Mr. Rastrick estimated them, each excluding land and buildings? I presume they have not done so, otherwise we should doubtless have been furnished with this information.

Sir, I at least could not fail to put this question to Mr. Locke, when I recollected that I would not go into this Direction unless under a distinct and positive engagement that my joining should depend upon Mr. Locke's Report in conjunction with Mr. Rastrick's, on a re-survey of the line. I have, therefore, thought it my duty to inquire of Mr. Locke whether he could account for the extraordinary discrepancy between the estimate and cost, and you shall now hear my letter and his reply:—

COPY.

St. John's Lodge, Regent's Park, May 5, 1842.

Sir,—Before consenting to become a Director of the London and Brighton Railway Company, I was led, by your high reputation for accuracy in estimates, to require your opinion as to the cost of the works, in addition to Mr. Rastrick's. You were accordingly consulted; and after investigating the subject stated, in your Report to the Directors, (which was subsequently published), that, in your judgment, the cost of the works on the main line, and on the branch to Shoreham (exclusive of the price of land) would be 920,000*l.*; and in reliance on this confirmation of Mr. Rastrick's views I accepted the office of Director, which I held up to last year.

From the recent Reports of the Directors and Engineer, it appears, however, that the actual cost of executing the works (excluding the price of land) has been considerably more than double your estimate; and I am naturally desirous to know how so extraordinary a discrepancy between your opinion and the result can have arisen. I shall, therefore, be obliged if you will do me the favour to inform me in what manner you account for this great excess of the expenditure over your calculation.

I remain, Sir, yours, most obediently,

(Signed) ISAAC L. GOLDSMID.

Joseph Locke, Esq., C.E.

COPY.

Paris, May 17th, 1842.

DEAR SIR ISAAC,—I beg to acknowledge the receipt of your letter of the 5th inst., respecting the Brighton Railway, requesting to know in what manner I account for the great excess in the expenditure over my calculations.

To give a distinct answer to this question would, I apprehend, be very difficult, and particularly by me, who since those calculations were made have not in any way united or participated in carrying the plans of that railway into execution.

How far the original intentions have been adhered to, or the prices of such work have been exceeded, I cannot pretend to say, nor do I consider myself justified in offering any opinion on the validity of the reasons that have been assigned for the extra expenditure.

My calculations of the cost of the Brighton Railway were based on the prices of a large contract (amounting to 250,000*l.*), which I had just let on the South-Western Railway. That contract contained about 3½ millions of cubic yards of earthwork, which is nearly one-half of the whole quantity on the Brighton, and four short tunnels in chalk. It has been successfully executed with a very trifling contingency, and I have reason to believe that the contractor gained money by it.

The mode of excuting the work, and keeping the accounts of the Brighton Railway, has, I understand, been different to that adopted on the South-Western, and the difference in the systems may have in some degree produced the different results in the cost of the two works. I shall not, however, enter into a discussion as to Mr. Rastrick's mode of management, but I think it due to myself to state, that the estimates which I then made were in my opinion adequate to the work, and that my own subsequent experience has confirmed that opinion. I do not therefore consider myself in any way responsible for the excessive cost of the Brighton Railway.

It may be unnecessary for me to add, for you will probably recollect the fact, that the estimate submitted to me for revision contained only the works on the main-line and Shoreham branch, and that it did not include land, stations, engines, or stock.

It is true that 16,000*l.* were included in the estimates for the points, crossings, and sidings, &c. but not for the building of stations, the cost of which formed no part of the submission made to me.

I am, Sir Isaac, very faithfully yours,

JOSEPH LOCKE.

Sir Isaac Goldsmid, Bart.

This letter of Mr. Locke's will perhaps remove the somewhat singular belief expressed by the Directors in their Report, that works equally extensive have never been executed nearer the estimated cost, or, in other words, that Engineers always estimate extensive works at less than half the sum for which they are really executed.

Consider these circumstances, and when you find such an enormous excess of expenditure over estimate; when you find that Mr. Locke (who investigated the works so fully in conjunction with Mr. Rastrick) cannot account for the excess, and to this hour sees no reason to alter his opinion that the works might have been done within the estimate, I leave you to form your own conclusion on the subject.

I ask you, ought I to be silent after looking at accounts and estimates like these—has any one a right to tell me, you ought not to utter a word of complaint, because you have a difference with the Company? Am I to make no inquiry respecting the value of my property as a shareholder, merely because the Directors will not leave my dispute with them, as a shareholder, to arbitration? If I had wished to show hostility to the Boord I should have kept back until this meeting any objection to the accounts. But, on the contrary, I no sooner saw them, than I pointed them out to their officers, and thus gave an opportunity for correcting the errors and omissions in question. But they are persisted in. I must now say, that speaking from 40 years' experience in Directions in which I am still engaged, I am compelled to express my surprise at such accounts, and cannot but feel the most poignant disappointment at the failure of predictions of the highest authority, and at the little respect that has been shown to the power and directions of the proprietors.

During the reading of this statement the honourable Baronet was repeatedly interrupted, but as frequently encouraged by the voice of the meeting to proceed. Mr. Cattley, in particular, declared that it was intolerable that they should listen to written speeches, and stated that Sir Isaac had been a party to all the proceedings which he now condemned, and that it was entirely through the honourable Baronet and that he (Mr. Cattley) had become a Director. Sir Isaac replied in very spirited terms, and stated that the principal reason why he had moved in this matter was because he had induced others to join the Direction.

In the midst of a most tumultuous interruption, Sir Isaac read the letter of Mr. Locke above given, and his own statement piecemeal. He spoke very strongly of Mr. Cattley's opposition to the reading of his statement. He argued that if the Directors took nothing from the payment to be made by the South-Eastern Company, they would not have a balance of more than 3,000*l.* Moreover, as he had seen from the accounts at the office, the toll to the Croydon and Greenwich Companies had been accounted for only up to June 5, whereas in the traffic, credit had been taken for the receipts up to June 30. He trusted his statement had convinced the proprietors that he had done nothing for which he was not fully justified. (Hear, hear, hear.)

The CHAIRMAN said, he had distinctly stated that if interest on loans, &c., were to be calculated up to June 30, only 10s. a share could go as dividend; otherwise it would be 15s. One other point had been brought forward. Surprise had been expressed that the accounts had not been remodelled according to the Report of the Committee of Investigation. That Report was dated the 18th March, and the Directors had re-modelled the accounts from the 1st of January. When it was considered that they had had the South-Eastern accounts to make out this would not be surprising. Instructions had been given to remodel the whole of the accounts, and he hoped and believed this would be effected previous to the next meeting. (Hear, hear, hear.) Everything had been done that could be done. They had been told that other Companies kept their accounts in a better form, but how stood the London and Birmingham? In 1832, the estimates were 2,500,000*l.*, with 250,000*l.* for the extension to Euston-square; whereas up to the date of their last meeting, the actual expenditure had reached 5,832,000*l.* Compare this with the London and Brighton. (Hear, hear.) These undertakings ought not to be taken up singly.

Mr. PARSONS had no wish to pit one railway against another. Whether there were excess or not in the Birmingham Railway, they had, at least, methodical accounts *there*, showing how such excess had arisen.

The CHAIRMAN did not think the Birmingham Company had given these details while the works were in progress. In fact other Companies had been "in the same mess" as themselves.

Mr. PARSONS said, the books of the Birmingham Company always did exhibit that progressive account. With respect to the Brighton, he could not denounce the accounts in too strong terms. They differed *toto cælo* from those of the Birmingham Company. He would state without hesitation, that the Directors of the Brighton Company had no materials upon which at any time to form an opinion for the future. (Hear, hear, hear.) He had seen it stated in the *Morning Chronicle* that the excess over the estimates on the Brighton line had only been 59 per cent., whereas the truth was that the excess—and this, be it noticed, on a revised and not a Parliamentary estimate—was 140 per cent. (Hear, hear, hear.) It was not for the purpose of finding fault with Mr. Rastrick that he spoke; he dealt with figures, not with individuals. And he must dissent from the assertion of Mr. Rastrick, that the line was in "a more complete and efficient condition than any other railway in the kingdom." Mr. Heyworth could not for a moment imagine that it was so—that the Brighton Railway was in any respect equal to the Birmingham. Why, at Wolverton, the Birmingham Company had an establishment, for nothing like which the Brighton

Digitized by Google

had yet provided. When they spoke of outlay, they should consider *eventual* outlay.

Mr. RASTRICK said, many matters such as the carrying establishment, had been included in the original Birmingham estimate, while it had not yet been so in the Brighton.

[A considerable discussion ensued as to certain items in the Birmingham estimates, for which we cannot find room.]

Sir I. L. GOLDSMID contended that Mr. Locke ought to be called in by the Brighton Directors. (Hear, hear, hear.)

Mr. HEYWORTH—To do what?

Sir I. L. GOLDSMID—To prove whether what has been done, has been done fairly. (Hear, hear.)

Mr. RASTRICK (whose vehemence could not be repressed by his friends who surrounded him) inquired why Mr. Rastrick should not with equal fairness have been called in to report on Mr. Locke's estimate for the Grand Junction Railway, the cost of which had been increased from 740,000*l.* to its present amount? Why was he not called upon to investigate the professional conduct of Mr. Robert Stephenson or Mr. Brunel? [Great confusion ensued, during which there were loud cries for Mr. Parsons. Mr. Parsons, however, gave way to Mr. Heyworth.]

Mr. LAWRENCE HEYWORTH said, he must claim the indulgence of the meeting for a few moments on this subject, seeing that he was as deeply interested in the affairs of the Company as any individual in that room. What, he would ask, had gentlemen been spending their time about throughout the discussion which had just taken place, but in an endeavour to ascertain what they all well knew before they came into that room, namely, that the Brighton, like all other railways, had cost double, and even treble, the sum at which it was originally estimated? (Hear, hear). He would challenge any body to come forward and disprove that fact. Was it not well known that the Grand Junction was estimated at 1,040,000*l.*; but, although it must be admitted that it was the best managed line in the kingdom, was it not notorious that its ultimate cost exceeded 2,200,000*l.* Supposing that the Company had spent one million more than they ought to have done—[Mr. LEVY—Why let us have a dividend!]—how could they recall the money back? and he could not conceive for what the present agitation was carried on, unless for the purpose of knocking down the shares, so as to enable parties to buy theirs at a cheaper rate than it was now possible to get them for. (Hear, hear, hear.) He was sorry that Mr. Parsons and other gentlemen had spoken so disrespectfully—(loud cries of "No, no")—but he must say he thought that the position of Sir Isaac Lyon Goldsmid, put him completely out of court. (Hear, hear, hear.) The whole of the discussion which had already taken place could, in his opinion, have no practical tendency whatever, unless it were that of depreciating the shares. (Hear, hear.) He was desirous himself to counteract this tendency, and to take the consequences of the railway costing the 2,200,000*l.* The Chairman had clearly stated that the Company, with a revenue of 3,480*l.* per week, would be able to pay a dividend of 5 per cent.; and his experience in the progress and the revenue of railways told him, that 4,000*l.* was the minimum which they would eventually receive upon their railway. That experience also most powerfully told him, that until the country was again restored to a state of prosperity—which the recent depression of trade, from which their data must be taken, had by no means forwarded or favoured—they could not expect very considerable improvement. A plentiful harvest, abundant crops, and cheap provisions, would create a favourable reaction, not only in commercial but railway affairs, which would no doubt, amongst other beneficial results, cause the people to take themselves and their families to Brighton. This was the constant and universal feeling which was entertained, not only by himself, but by all the Railway Directors in the kingdom. The distress of the country was the principal cause to be assigned for the diminished revenue, not only of the Brighton, but of every other line in the kingdom. He would call the attention of the meeting to the fact that the Brighton line must eventually receive a vast accession of traffic from its near connection with Havre, and Paris, which would tend to increase the traffic of the line in as great a ratio as that of any other in the kingdom. He should wish this statement to go forth as a counteractive to the malignant statements which had been made.

Mr. PARSONS wished to make a few observations in reply to what he considered a rather harsh charge from Mr. Rastrick as to his (Mr. Parsons) misstatement of the original estimate of the Birmingham Railway. He (Mr. P.) would wish Mr. Rastrick distinctly to answer him whether he (Mr. R.) had asserted that 640,000*l.* constituted the estimate for the whole of the works upon that line. He (Mr. Parsons) had stated it at 750,000*l.* Did Mr. Rastrick mean to imply that the Parliamentary estimate for the works upon the London and Birmingham Railway of 640,000*l.* comprehended the whole of the works upon the line, including tunnels, bridges, earthwork, &c.?

Mr. RASTRICK explained, that this was an error which originated in a statement made in Le count's history of the Birmingham line.

Mr. PARSONS insisted upon the accuracy of his statement, but nothing further of a material nature was elicited, as it appeared eventually that Mr. Rastrick and Mr. Parsons were discussing matters of a totally different description.

Mr. PARSONS understood the Chairman to have said that with 3,425*l.* the sum of 5 per cen.t would be paid on the outlay of the undertaking.

The CHAIRMAN said, he took the shares, the interest on bonds, and loan notes, and then added 72,000*l.* a year as the expenses, out of 345,000*l.* The gross total was 2,000,000*l.*, exclusive of toll.

Mr. PARSONS—Did the Chairman deduct the toll to be paid?

The CHAIRMAN replied, that in the accounts up to the present day everything was paid.

Mr. ENTWISLE (a Director) said, he had estimated the receipts of June, and the expenditure. The receipts upon an average in June, were 3,925*l.* per week, and the expenditure was 47½ per cent. This included the actual amount of tolls, Government duty, expenses of police, guards, &c. [Deducting from this the interest on debentures of 45,000*l.* a-year, and adding the interest on the South-Eastern purchase, it would give at the rate of 42s. per share.

Mr. BENNETT observed that this statement was made up of "ifs" and "buts."

Mr. PARSONS said, they were much indebted to Mr. Entwisle for the attentive manner in which he had cast his eyes over the accounts. It was the only way in which they could possibly arrive at a prosperous and successful issue. Although the statements of Mr. Entwisle and the Chairman were at variance, still he hoped they would be realised. He (Mr. Parsons) had only been down the line twice since the last meeting. Once he carried a small portmanteau, but he found great difficulty in procuring the services of a porter. His attention, however, was directed to the number of policemen on the line. He had been curious enough to make a calculation, and the result was, that he found there was no fewer than 9 on the platform of the station at Croydon. When the printed statement of the Company came out, he noticed the very large charges which were made for police as contrasted with the charge for porters. As contrasted with the same charge on the Southampton line he considered them very disproportionate. On the first six months of the opening of the Southampton Railway the charge for police on a receipt of 144,000*l.* was only 127*l.*; while on the Brighton line it was 3,030*l.*, on receipts of 63,000*l.*, [A VOICE—including clothing?] The charge per mile therefore on the Southampton line was 16 per cent for police, while on the Brighton it was nearly 71 per cent. With respect to porters itwas exactly in the inverse ratio. He did not see the necessity for employing so many police. On one of the metropolitan railways there were no police, and in some parts of the North of England there were none.

A DIRECTOR asked, whether Mr. Parsons included the switchmen?

Mr. PARSONS—On some lines the Police include the switchmen. The case as respected the porters on the two lines was exactly the reverse. The charge on the Southampton Railway for porters during the last half-year was in excess over that of the Brighton. In 1840, the police on the London and Birmingham Railway, with their enormous business was 44 per cent. per mile, upon receipts of 405,000*l.* while theirs was at the rate of 71 per mile, so that in point of fact from these statements it would be perceived that the porters who were, what he might call the "useful" were in the excess; while upon the Brighton, the police, the "ornamental" were in the excess. In the case of the Brighton, the charge for police was 5 guineas upon the receipts—upon the Southampton it was 17s. per cent., and on the Birmingham, it was 1*l.* 16s. per cent.

Mr. BENNETT said, a gentleman of the name of Heyworth had addressed the meeting, and the burthen of his song was to obtain a dividend. Now it appeared to him, that the only way to get a dividend was to satisfy the public mind that the Directors could do so consistently with their duty to the shareholders. If the public were satisfied, they would then co-operate with the Company, by buying the shares in the market. The shares would then rise, and a good dividend be eventually declared; but so long as attacks were made in the public papers, and remained unanswered and unrefuted, so long would the concern travel down hill, and the shares eventually be worth nothing. It was folly to think that the mere prior circulation and reading of the Report would satisfy the public mind. He himself knew very little of figures, but the Report did not satisfy him, or those with whom he was connected. He (Mr. B.) thought that there was jobbing going on in the concern; and until that jobbing was got rid of, it was morally impossible that the concern could prosper. He saw before him one of the Directors, who he was certainly surprised to see present that day, after a recent examination which had taken place at Brighton. One of the Directors was examined under Wigney's bankruptcy; and in that case it became necessary to discover some property which had been concealed belonging to the bankrupt's estate. It appeared that some packages belonging to the bankrupt had been directed to and kept by Mr. Heaviside; and it was only after much trouble, and placarding it about the town, that it was at length restored to the creditors. He (Mr. B.) after such a circumstance, was surprised to see that gentleman there to-day. Statements had been made in the public press personally relating to the Chairman of the Company. That gentleman, however, had answered these charges manfully and honourably. (Applause.) Let them, therefore, go on clearly and regularly, seeing that every person connected with the railway not only did his duty, but that there was not the slightest suspicion attaching to any one. If this were to be done, it would eventually promote the well-being of the concern, so that the shares would not only be at a premium, but eventually pay a good interest. The sooner they set about reconciling these difficulties, the sooner would they get to the end of their journey. No one wished better to the Brighton line than he did, but he thought under the circumstances it was necessary that he should enter into this brief statement of facts. Mr. Levy had asked about the embezzlement which had taken place at Brighton. He (Mr. B.) was concerned for the delinquent; and he thought it was only fit that the circumstances attending that case should come to the knowledge of the shareholders. Mr. Ball, a clerk of the Company, was charged with embezzling monies belonging to the Company to the amount of 32*l.* Mr. Ball's friends applied to him on the occasion: and through the assistance of Mr. Faithfull the matter was arranged; but it was not with the mere arrangement of the matter that he wished the shareholders to be ac-

Digitized by Google

quainted. Although security was given by the friends of the delinquent, the money had to come from Mr. Rallett, the Superintendent, because he had recommended Mr. Ball to the situation, and it was his duty to supply the loss consequent upon the defalcation which had taken place. He (Mr. B.) conceived that this was a great injustice to Mr. Rallett. If Mr. Rallett, who was by no means a rich man, was to be called upon to pay the 321*l.* for recommending Mr. Ball, why should not the Directors, or their friends, who recommended Mr. Wood be called upon to pay the 1,500*l.* back to the shareholders? If the Directors could satisfy his, Mr. B.'s mind, upon this subject, he should return to Brighton much predisposed in their favour.

The CHAIRMAN said, the reply to the question of Mr. Bennett was obvious. In the recent instance they caught the delinquent, but in the other instance they did not. He would admit that the Directors were culpable in not taking security from Mr. Wood.

Mr. BENNETT wished to know whether he was to understand that because Mr. Wood was not caught, that was a reason why Mr. Wood's friends should not pay the money? Did the Directors shield themselves under that excuse?

The CHAIRMAN said, the Directors never attempted to shield themselves; they never concealed the fact, but left it entirely in the hands of the proprietors.

Mr. BENNETT—Was he to understand that because Mr. Wood was not caught, his friends were not called upon to pay the 1,500*l.*?

Mr. CATTLEY said the Directors had no reason to know that Mr. Wood had any friends to recommend him.

Mr. BENNETT—How came he in then? Who recommended him?

Capt. BEAUCLERC said that he, in conjunction with Major-General Hodgson and Mr. Shewell, had voted for the appointment of Mr. Wood, who at the time was Secretary on the South-Eastern Railway. He (Capt. B.), knew nothing of his previous character and life, for had he known that the slightest blemish attached to his reputation, he would at once have scratched and hooted him from all connection with the Company.

Mr. SHEWELL had first heard of Mr. Wood upon the Stock Exchange, but he was not aware of Mr. Wood's failure until he became connected with the South-Eastern Railway; and when the different companies united, it was agreed that Mr. Till should be one of the Secretaries, and Mr. Wood the other. Mr. Till had subsequently resigned.

Mr. ENTWISLE thought the Directors had exercised no hardship towards Mr. Rallett. After Mr. Wood's defalcation had been discovered, letters had been sent down to every department on the line, to see that there was a proper security given with every individual on the line. Returns of all the officers on the line with the amount of their securities were accordingly made to the Directors, with the exception of Mr. Ball, whose securities were professed to be in Mr. Rallett's hands. They thought that this was a great act of negligence on the part of Mr. Rallett, and that he ought therefore to pay the amount. (Hear, hear.)

Mr. LLOYD thought that Mr. Rallett had been sufficiently punished, and that he ought to receive the money back.

Mr. BENNETT conceived that the explanations which had been given did not alter the case in one iota as regarded its comparison with that of Wood. He had some observations however to make with respect to the system of exclusivenes which was observed at the Brighton terminus, with regard to the plying of the omnibuses. The only omnibuses which were allowed to run were those of Mr. Strevens, while Mr. Capps, and others, though they had made repeated appliaations, were refused that liberty by the Directors.

The CHAIRMAN—When the Directors opened the line, they put out tenders for parties to contract for the conveyance of passengers. Mr. Strevens gained the contract, and nad acquitted himself with great satisfaction to the Directors. The Directors did not wish to be exclusive, but if they were to allow every omnibus in the town to ply at the station, the scrambling and confusion would become interminable.

Mr. WALEY thought it was highly important that they should come to a definite conclusion with respect to the accounts which had been submitted to the meeting, seeing that they would most likely form the basis of all future accounts connected with the Company. (Hear, hear, hear.) He had taken a public part in these proceedings from the commencement, and he thought it was incumbent upon him to call the attention of the shareholders to the fact that, although the amount of interest due on the 15th July was not paid, and although the amount of mileage and toll to the Croydon Company was only estimated to the 6th of June, yet it ought to be taken into the account, as a liability as against the South-Eastern interest so as to leave the same result, made applicable to a dividend, and thus make the Company stand well with the shareholders and place it above the sneers of the public. With respect to the loan of 300,000*l.* it had been stated that the Directors intended to keep their faith with the shareholders by applying to Parliament to give validity to the security. Was it, however, the intention of the Directors in the event of any division of the assets, that the holders of the loan notes should go *pari passu* with the others. (No, no.) What he meant was, that if there was a division of the money in the shape of a bonus, would the loanholders be included *pro rata* in it?

The CHAIRMAN said, the matter was one of some difficulty, and that all the statements connected with it were at present before Sir William Follett. The Directors would not touch the money in any way, unless they had legal authority for it, and nothing further should be done in the matter, previous to the next public meeting.

Mr. HALLETT (of Brighton) inquired the estimated amount of the works now in progress on the line.

The CHAIRMAN replied that it had already been stated.

Mr. HALLETT—How do you propose to pay?

The CHAIRMAN—We have not money to do it with.

A PROPRIETOR said, he observed it was stated in the Report, that the sum of 357,410*l.* had been invested in the names of four of the Directors. When was that sum likely to be transferred to his Company, and was there any difficulty about it?

The CHAIRMAN replied that no difficulty whatever existed. It was optional with the South-Eastern Company whether they took the property or not. They, however, had sent in certain objections, one of which was, that all monies paid by the Brighton line since the opening should be disallowed. Their object, however, was to obtain time to investigate the accounts, and the Chairman of that Company had stated that there was no desire to throw impediments in the way. (Hear, hear, hear.)

The adoption of the Report was then put from the Chair, whereupon

Mr. PARSONS rose and said, he must beg leave emphatically to dissent from the adoption of the Report, for reasons he had before stated. He would not, however, divide the meeting on the subject.

Sir I. L. GOLDSMID made a similar protest, after which the Report was declared to be carried.

A PROPRIETOR wished to know whether ample security had now been taken from all the officers on the line?

The CHAIRMAN replied in the affirmative.

Mr. BENNETT wished to know by whom the intended Act with respect to the loan-notes was to be applied for?

The CHAIRMAN replied, that it would be applied for by the Company.

Mr. PARSONS inquired whether a holder of these loan notes would be entitled at the expiration of three years, to an equal proportion of the South-Eastern money for four of those loan notes, as he would for one of the original shares?

The CHAIRMAN again replied in the affirmative, in the event of their having the power to divide it among the shareholders.

After some further discussion,

Mr. LEVY rose and proposed that a dividend at the rate of 10s. per share, be declared.

Mr. BENNETT seconded the motion.

An amendment was then proposed and seconded that a dividend of 15s. be paid.

The amendment and afterwads the original motion were then put to the vote, when there appeared

For the amendment 37
For the original motion 40

Mr. PARSONS said, he thought that no persons ought to be permitted to pass free over the line unless they were exclusively employed on the Company's affairs. He understood that the Solicitors of this Company frequently travelled over the line which he thought ought not to be allowed. He would therefore move that the practice henceforth be discontinued.

Mr. BENNETT seconded the motion. He not only understood that the Directors and their friends travelled over the line, but also the friends and families of the superintendents.

The CHAIRMAN denied this assertion.

Mr. CASH objected to the motion. He thought it was making it too close a question.

A PROPRIETOR contended that if the Solicitors were not allowed a free pass, they would include it in their bills under the head of travelling expenses. He would move as an amendment, that it be left to the discretion of the Directors.

The motion, together with the amendment, were then put to the vote, when the amendment was carried by a large majority.

Captain HEAVISIDE then rose to exculpate himself from the charge made against him by Mr. Bennett, which he considered was of a nature too coarse to pass by unnoticed. The plain statement of the matter was, that Mr. Wigney had asked him (Captain Heaviside) to allow three boxes to be sent to his (Captain Heaviside's) lodgings, and he, as a friend of Mr. Wigney, had permitted them to be forwarded without being at all cognisant of their contents, or of the circumstances under which they were despatched to his house. (Hear, hear, hear.) He begged to disclaim having ever passed any of his friends down the line, and it was very well known that whenever he took his children with him, their fares were invariably paid.

Mr. PARSONS wished to know whether the Superintendents were allowed to give passes.

The CHAIRMAN replied, certainly not; and that a list of every person travelling over the line free of expense was every week laid before the Board.

Mr. WHISHAW, in some very appropriate remarks, said, that on comparing the first-class Brighton Railway fares with the usual charges of inside coaches, there was at least a difference of 25 per cent., while as regarded second class there was not a greater difference than 5 per cent. [The honourable Proprietor enlarged on this point; but our limits will not allow of farther detail].

Mr. BENNETT thought that reduced fares would tend greatly to the benefit of the line. When the railway was first opened it cost him 1*l.* 5s. from Brighton to town, now he could travel backwards and forwards for 20s.

A PROPRIETOR inquired what coaches were still running on the road.

A DIRECTOR believed there were only three.

The CHAIRMAN then stated that the dividend would be payable on the 15th of September next.

A special vote of thanks was then proposed to the Chairman for his conduct that day.

The CHAIRMAN, in acknowledging the compliment, said he was exceedingly obliged to the gentlemen around him for this renewed mark of their approbation, as it was more gratifying to him than ever at the present moment. There was, however, one subject which he could not permit to be passed over without calling the attention of the meeting to it. That subject was the appointment of Auditors, and it now remained with the meeting to determine whom the would elect to fulfil that office for the half-year ensuing out of the many gentlemen whom he saw around him.

After a brief discussion on the subject it was agreed that the question be postponed until the next meeting.

The meeting then broke up after a sitting of more than four hours. Under the circumstances we cannot pledge ourselves for the accuracy of every detail, but we believe the above will be found a substantially correct report.

NOTES TO THE TRAFFIC TABLE,
(on the opposite page.)

3. Main line, 53 miles; Tewkesbury branch, 2. — Total length, 55 miles.

4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone. The Company are now before Parliament for power to raise the capital to 500,000*l.*

8. Receipts include the Northern and Eastern toll, &c.

12. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester and Chester and Crewe lines, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 134½ (83½+21+31.)

14. The receipts include those derived from the Cheltenham and Exeter lines; the former opened for 18 miles, and the latter for 45. The divisor employed to ascertain the daily receipts per mile is therefore 181½ (118½+18+45.) The *rent* of the branch lines is together about 1,163*l.* per week. There is likewise a *toll* payable to the Exeter Company of a farthing per passenger and per ton of goods per mile travelled.

15. The dividends have been hitherto (up to 31st December, 1841) appropriated to completing the line and works.

17. The 80*l.* 17s. 3d. from goods, &c. is for toll only.

18. Ten per cent. is the maximum dividend allowed by the Company's Act.

19. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. The dividend is *nominally* at the rate of 9*l.* 10s. per cent., but to the original shareholders it is equal to 12*l.* 15s. per cent., as the dividend on the original shares is paid upon 100*l.*, although only 90*l.* has been called for; and on the quarter shares upon 25*l.*, although up to the 31st of December last only 5*l.* had been called for. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

20. The dividend is from the opening, and on the old shares alone.

21. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table.

22. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company. The sum applicable to the purpose of the dividend declared on the 10th of March, was 11,125*l.*, of which amount 10,051*l.* 17s. 1½d. had been earned prior to July 31st, 1841.

23. Capital of 993,300*l* includes new capital for widening the line, &c. The dividend of 7s. 6d. per cent. does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table includes the receipts from the footpath, but is exclusive of the Brighton, Croydon, and Dover toll.

24. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount. The Gosport branch is included in the length stated.

25. Including Toll, &c., from Sheffield Company, and after deducting omnibus charges, &c.

26. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

27. The 4,801*l.* 11s. 8d. are the receipts after deducting omnibus charges, and payments to other Companies.

28. The receipts for goods, &c., include, horses, 34*l.* 15s. 6d.; carriages, 58*l.* 10s. 0d.; dogs, 6*l.* 8s. 6d.; parcels, 233*l.* 7s. 4d.; cattle, 21*l.* 1s. 6d.; corn, 5*l.* 17s. 5d; heavy goods, 540*l.* 11s. 0d.; coal and lime, 124*l.* 10s. 0d. —Total, 1,025*l.* 1s. 3d.

31. The 3,850,000*l.* is the *nominal* capital on which dividends have to be paid; the amount actually raised is 3,000,000*l.* The details of the receipts are as follows—Passengers, 2,965*l.* 0s. 1d.; carriages and horses, 147*l.* 10s. 4d.; parcels, 201*l.* 15s. 1d.; mails, 50*l.* 5s. 9d.; merchandise, 1,072*l.* 8s. 4d.; minerals, 261*l.* 16s. 0d.; cattle, 30*l.* 0s. 2d. — Total, 4,728*l.* 15s. 9d.; including North Midland proportion of Manchester and Leeds traffic, amounting to 138*l.* 2s. 11½d., and amount received for Sheffield and Rotherham.

32. The receipts are after deduction of Liverpool and Manchester toll.

33. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 134*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 32½ miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

34. The capital of 533,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).

35. The returns are inclusive of Manchester and Birmingham toll.

38. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

A Subscriber.—*We would gladly "be gentle with the rod," if our duty to the public would permit. Is the "chastisement" undeserved?*

Humanitas.—*There is no legal enactment, but no doubt the Directors would be happy to attend to any practical suggestion on the subject.*

Birmingham and Gloucester Railway.—*We have not room for the letter of* An Original Shareholder, *and as the meeting is so near, this is the less to be regretted.*

The "private" note, dated Stamford Hill, *has been received. Had it not been so marked, we should have been glad to publish it.*

Railway Offences.—*A correspondent sends for insertion, under this head, a notice of the conviction of the two principal officers of a northern railway, for an assault on the town police; but unless we have full particulars, we cannot say whether the parties deserved the punishment or not, and therefore cannot insert the paragraph. We have not seen it noticed in the local papers.*

Mr. J. W. *(Glasgow).—We give all the quotations that are in the lists specified.*

M.—*We much regret our correspondent's misfortunes; unhappily his case is far from singular. We would advise him to delay for a time. We are willing to give advice, but if he will select particular lines, and refer to them by figures, we shall certainly give him what he asks—our "candid opinion." There are many objections to noticing these matters more prominently.*

A Brighton Shareholder *(Liverpool).—There will be plenty of time to discuss the subject. We shall be glad to hear again from our correspondent.*

A Shareholder, *on the remuneration of Directors, in reply to C., really advances nothing but an individual opinion, which, under the circumstances, is worth nothing.*

We wish all our correspondents would write legibly, upon one side only of the sheet, and not use the thin paper now becoming so fashionable. The additional postage would not be much, and a vast deal of needless trouble to us and our printers would be avoided.

A vast mass of matter is at the last hour shut out by the great length of the Brighton meeting. We trust our correspondents will excuse us.

RAILWAY EXPENSES AND RECEIPTS.
To the Editor of the Railway Times.

Sir, — Allow me to point out an error in the table of expenses and receipts inserted in your last number. The Birmingham and Gloucester mileage is set down at 170,000 miles, during the six months ending the 31st December, 1841. Now according to the Director's Report (*Railway Times*, No. 217, p. 236), the mileage of trains for that period was only 133,491 miles. So considerable an error of course vitiates all the calculations respecting this line. The cost per mile for locomotive power having been 18.29d. exclusive, or 19.42 inclusive, of the Lickey plane (including depreciation of stock), instead of 14.44 as stated by your correspondent. The Lickey cost 120.5d. per mile per train.

I do not know from what source your correspondent gets his other mileages, but it strikes me that others of his costs per mile are as incorrect as that which I have quoted.

I am, Sir, yours, &c.

LOCOMOTIVE.

August 3, 1842.

THE RAILWAY JOURNALS.

The Stamp Returns for the nine months ending the 31st of March last (published by order of the House of Commons), show the following results:—

RAILWAY TIMES	**113,374**
Railway Magazine	50,500

The total number of Supplement stamps (for Double Numbers) used by the *Railway Times*, during the above period, was 10,874, thus showing the ordinary circulation of the *Railway Times* to be more than double that of its contemporary.

THE RAILWAY TIMES.

SATURDAY, AUGUST 6, 1842.

Our readers will not expect that to-day we should go into any minute examination of the proceedings of yesterday's Brighton meeting. In fact, we have been compelled to sacrifice almost everything to what is (after all) but an abridged notice of the disclosures which transpired. To the earnest attention of all parties interested we recommend a careful consideration of our report. If they do not think that substantially there is great room for complaint on the part of the proprietors, then are we very much deceived. *Our opinion remains unaltered*, or rather, has received still further confirmation. We may have been unjust to individuals, and if so we shall be prompt to make every reparation in our power; but as regards the general affairs of the Company, we have nothing to retract—nothing to explain. Inquiry has been postponed, but come it must. Let the shareholders read Mr. Locke's letter, and say if we are not right. We make every allowance for the excited feelings of Mr. Rastrick, and therefore will not bandy harsh epithets with him; but can Mr. Rastrick, if he has any regard for his professional or personal reputation, allow matters to rest where they are? *We* but give voice to a feeling very generally entertained; and all the low abuse which can be heaped on the newspaper press in general, or upon the *Railway Times* in particular, will not improve the aspect of the question.

Next week we shall have something further to say on this all-engrossing topic. The matter is one of great moment, not only to the proprietors of the Brighton Company, but to every railway proprietor in the kingdom. The prominent part *we* have taken in the discussion of the various matters now in agitation, has had this general reference, more than any wish to expose or to triumph over the Brighton Railway Board in particular.

It would appear, from a Circular issued within the last few days to the proprietors of the North Midland Railway, that the approaching half-yearly meeting of the Company is not

Digitized by Google

likely to pass over in quiet. We had previously heard something of the matter in dispute, but preferred remaining silent in the hope that the Directors of the Company would see it to be their duty to descend from their official dignity, and for once communicate with the proprietors unreservedly, and without quibble or equivocation. We have been disappointed; and our duty to the shareholders of this unfortunate concern, and to the railway public generally, will not allow us longer to pass over the subject without remark.

It seems that a considerable number of the Sheffield shareholders, deeply discontented with the present position of the Company, met together, and organised a Committee of five gentlemen to communicate with the Directors. The gentlemen so nominated applied, as a first step, to the Chairman of the Directors, "respectfully requesting him to furnish the Committee with the names, duties, and salaries of all the engineers, assistant-engineers, officers and servants connected with the railway." Some delay took place, but ultimately the Board of Management in a resolution, furnished of course with the usual make-believes of anxiety to give information, refused to grant the particulars required—and why? Because forsooth "it would not be advisable to give detailed statements to local Committees of proprietors that could not be furnished individually to the shareholders!" Why not "furnished individually to the shareholders"? If our memory does not deceive us, a return somewhat similar to that now requested was moved for at the meeting held in Derby last autumn, on which occasion the then Chairman (Mr. GLYN) expressed his doubts as to the policy of such a proceeding, but stated that individual shareholders might readily obtain information upon such points. Cannot such information *now* be secured? The present North Midland Board took office professedly as reformers, but like many other *soi-disant* leaders of that class, it would seem as if place had considerably modified their views of what is known, and what ought to be known, to their constituents. Never did they take — never can they take—a more suicidal step than this refusal to disclose what every proprietor, in law, we believe, but certainly in equity and the fair spirit of partnership, has a right to demand. And why is this information refused? One so-called reason we have given above; the other is quite in keeping. It is because the inferences the requisitionists might draw from the details tendered to them "would, in order to be correct, require more specific and particular information than could be acquired by any except those who attend the Board and Committee meetings!" And pray why is this "specific and particular information" withheld? Why might it not accompany the information asked for? Why any mystery as to what information *could* be acquired by the attendants at Board and Committee meetings? Supposing an Engineer, or Superintendent, or any other first-rate official, to hold office with nominal duties but a large salary, what "specific and particular information" does it require to prove that such office ought not to be abolished? To show that the happy holder of the berth was a nominee or *protege* of the Chairman of the Board, or of an influential colleague, would show nothing; more especially as this same Chairman and his friends thought it incumbent upon them, for the prosperity of the concern, to cut off a shilling a week from the paltry pittance of policemen and porters. If people were rash enough to draw unwarrantable "inferences"—if, for example, they surmised that those who clamoured the most loudly against so-called jobs were themselves the most ready to practice and patronise them—if they drew the "inference" that opposition to judicious measures, by a section of a Board, was the most ready course to disgust and cause to retire those in whose management the public had confidence, leaving the field open for the exhibitions of their intriguing colleagues—if *these* were the inferences to be drawn from a production of the information most properly asked by the Sheffield shareholders, no doubt the Directors had good reason to refuse it; but ought such pretence to pass current with the proprietors at large?

It is gratifying to find, however, that this refusal of the Directors will lead to a far more extended and more important inquiry. And herein is seen the folly, not merely of the North Midland Directors, but of many other Railway Boards! Were they at once to grant the information called for—were they to profess (we say PROFESS, for so all-confiding are shareholders that *that* would do) an anxiety for a full and complete investigation into affairs, they might rely upon hearing little more of the matter; but, as it is, they inflame and exasperate the most peaceful-minded proprietors by their contemptuous disregard of the commonest inquiry. In more than one instance (and we are glad to find it is so) the reaction is reaching themselves.

As regards the North Midland Company the impolitic (probably the illegal) refusal of the Board has led, or will lead, to further disclosures. "The propriety [says the Sheffield Circular] of sending two gentlemen to Derby for the purpose of examining the book of accounts kept by the Board of Directors also formed a part of the consideration of your Committee; *but finding that a gentleman from Inverness, along with two other proprietors, had applied with similar views, and* MET WITH A DIRECT NEGATIVE, *your Committee deemed it useless to make any further application for the purpose.*" Was there ever infatuation—we might say insolence—equal to this of the North Midland Board? We should be glad to know what there is peculiar in this Company's Act to justify the Directors in refusing an inspection of their accounts? Matters have indeed come to a pretty pass, if proprietors are to be met with "a direct negative" when they desire to know how their money has been expended!

Success, say we, to the Sheffield Committee! We do not wish to prejudge the question as between them and the Directors, but when we find these Directors so apparently desirous to stifle inquiry, we cannot but suppose that there is something behind which fears the light. Our object at all times is to see a fair and full investigation established in all matters connected with railways, and in no case so much so as in one like that of the North Midland, where ultra-purism is affected.

On every account inquiry is necessary, and we trust will be carried out. To adopt the words of a writer in a local journal, every one knows that, in a concern of this magnitude, economy in the expenditure is of as much consequence as the income. Now, is there nothing unnecessarily expended on the Engineer-in-Chief, when there is little or nothing to do? Or on sub-Engineers who have large salaries, while they may have men under them who do the work for a mere fraction of those salaries? or on clerks, on policemen, or on the Directors themselves? Have the alterations that have been made in the buildings, &c. been necessary? and have the additions been improvements? Have the contracts entered into with other Companies been of advantage to the Company? Have the carriages, engines, and materials, used on the line, been procured by contract, and have those contracts had the advantage of fair and extensive competition? Is the charge for the carriage of goods of every kind fair and honourable, and remunerating to the Company? Are there no sinecures? Is there no favouritism? Is there no jobbery? On all these, and many other points, inquiry must be made at the general meeting, since those from whom better things might have been expected decline a preliminary investigation.

[Yesterday we received a printed circular signed by Mr. NEWTON, the Chairman of the Company, in reference to the manifesto of the Sheffield Committee, but it can scarcely be called an answer. We shall probably notice it in our next.]

IT is very clear, from what transpired at the Greenwich Railway meeting last week, that the Directors of that undertaking, or those of them at least who drew up and carried the official Report, are in favour of a return to higher fares than the present. We should regret, however, if without further trial they were to seek to carry their views into practice. These frequent alterations of charge, more especially from a low scale to a higher, are greatly to be deprecated, and upon no lines so much as those which, like the Greenwich, draw their principal support from pleasure-seekers.

Of course it is not reasonable to expect, and we should be the last to desire, that the Greenwich Company should run their trains at charges producing no profit, or less profit than an increase of fare appears likely to effect. This is a matter in which one may very safely set aside any strong feeling for the interests of the public which may be entertained on other matters affecting them and the Railway Companies relatively. What we are anxious for is, that the Greenwich Company should derive as much revenue as possible from the traffic of their line. If a shilling fare can be proved to be most likely to effect this object, let the fare by all means be a shilling. Here, however, the advocates of high and low charges are at issue, and we are inclined to side with the latter.

It may, we think, be regarded as settled that on such a line as the Greenwich, speed is not the only thing looked at by the public. Upon so short a distance, the time saved by the railway as compared with other modes of conveyance cannot be very great, and unless other things are pretty nearly equal, the railway will have powerful rivals. Now, how stand the fares? By river the charge is 4d.; by railway it is at least 6d.; while instead of possessing any superiority as to local position, the railway is far more difficult of access than the steam-boats. Under these circumstances it would be much more reasonable to fix the railway fares lower than those on the river, whereas the reverse is not only what actually exists, but it is proposed to make the one more than double the other!

The experience of the railway some years since is no fair guide under existing circumstances. The river competition is now much stronger than before, not only as regards reduction of prices, but with reference to the energy with which the traffic is conducted. When steam-boat fares averaged 9d. or 1s.,

Digitized by Google

the railway might have had some chance with fares of the same amount, but now that so important an alteration has taken place in the river charges, there can be no hope for the railway but in offering superior attractions, both in fares and accommodation. As respects the latter point, perhaps some improvement might be effected by the Directors.

Our opinion is, that the late reductions of charge on the Greenwich Railway were not carried sufficiently far. Enough has been done to detract from what we may call the regular receipts of the line, as distinguished from the casual, but not enough to tempt the public at large to avail themselves of the railway to the extent which with low fares can alone remunerate the Company. Let 6d. and 4d. be tried, as on the Blackwall line, and we are satisfied the result will be far more satisfactory than at present. It is no valid objection to a still further reduction to say, or to prove, that the Blackwall Company are not making money at *their* present prices. There may be in the position and circumstances of that railway counteracting influences (and we believe there are) which would not affect the Greenwich. A large increase of traffic upon the Greenwich line would not sensibly, certainly not in anything like a relative proportion, augment the current expenditure. The trains now run four times in the hour, and whether each carries 100 or 200 passengers, cannot, we should say, make any material difference in the expense of working. If by lower fares the 200 could be secured, the Company must be material gainers.

We trust this matter will meet with far more consideration than it can possibly receive at a public meeting. The Directors have of course bestowed upon it their best attention, but with all deference, we would earnestly recommend that a much more extended trial of the present rates be made (if a further reduction should be deemed inexpedient) before the suggestions of the Report are brought into practice.

One or two matters deserving of a passing notice were incidentally brought forward at the meeting of the Grand Junction Railway Company, of which a report will be found in another part of our present number.

And first, we would particularly call attention to the practical effects, as regards the public, of competing railways, alluded to in the respective cases of the Manchester and Birmingham, and Chester and Crewe lines. As respects the former, it seems that the result of opening will be such to the Grand Junction as to render it necessary to "revise [that is, increase] the rates of carriage and fares on the line, and thus protect the Company from the effect of this abstraction from their present traffic." The Chester and Crewe scheme, if we may believe the representations of the Grand Junction Chairman, savoured very much of a fraud in its origin—a fraud not only on the public, but on the Company, who were virtually forced to purchase the line. And what have the public gained, or what will they gain, by either the Manchester and Birmingham line, so far as it is a rival to the Grand Junction, or by the Chester and Crewe? Not a whit! On the contrary, there has in the one case been imposed the necessity of coming to an arrangement for purchase, the cost of which must of course fall ultimately and in some shape or other on the public; while as respects the other, the division of the traffic—ample for either undertaking—will, until the two concerns are really and truly consolidated, entail increased charges and diminished accommodation upon those who patronise either of them. We have from the first discouraged conflicting schemes such as these, and the more we see of their practical operation, the more satisfied are we that the so-much talked-of competition which certain parties seem inclined to encourage is, as regards railways, of all things to be avoided.

The result of the appeal made to the proprietors, relative to the erection of a church at Crewe for the religious improvement of the workmen, is most gratifying, and particularly when viewed in connection with the details of a similar case on the London and Birmingham Railway. These two important Companies have the high merit of setting an example which it would be pleasing to every right-thinking mind to see followed wherever circumstances will permit.

The surveys and plans of the proposed railway extension to Edinburgh and Glasgow are, it will be seen, fully completed; and the Report of Mr. Locke, which is described as being very favourable, may shortly be looked for. The scheme is one worthy of the best consideration, not only of the Grand Junction Railway proprietors, and the proprietors of other Companies connected with the route, but of the public at large. We shall await with much interest the publication of the promised Report.

We rejoice to find that the differences between this Company and the Manchester and Birmingham are now substantially set at rest. It is to be lamented that this had not been accomplished at an earlier stage of the negociations; but no doubt the Board diplomacy to which we referred in a previous notice of this unseemly dispute, and the legal and official profit thence accruing, prevented a speedier adjustment of difficulties. What have the parties achieved by their contest? What, except mutual ill-will, and jealousy, and suspicion as regards themselves, and odium and distrust as regards the railway system at large. Of all of these fruits the squabble (for it scarce deserves a more dignified epithet) has been most prolific, and we really believe that nothing but *shame* has even now brought it to a close. Had the shareholders of the two Companies acted as they ought to have acted, would it ever have proceeded so far?

It is somewhat remarkable, that the Directors make no mention of the late important case in which the Messrs. Pickford succeeded. On many accounts it merited notice in the Report. Perhaps they could not boast of the course themselves have pursued in this matter.

The statistics appended to the Directors' Report are exceedingly interesting, and do great credit to Captain Huish, under whose superintendence (we take this opportunity of congratulating the proprietors) the management of the Company's affairs has exhibited a most marked and pleasing improvement. Much of the difficulty in which the Grand Junction Company have been entangled, in more than one matter which has recently been before the public, might, we think, be readily traced to the effects of a system of official superintendence very different from that which Captain Huish has the good sense to carry out.

The article in last week's paper, which invited correspondents to give us information regarding the statistics of various Railway Companies, has been fruitful in producing communications. Several of these require further consideration, and additional information must be obtained to enable us to develope fully the capabilities and incapabilities of sundry schemes which are candidates for public support. In regard to the Brighton Railway Company the further details which have been furnished would have been valuable had they been in our possession previous to the general meeting of shareholders. It seems very clear that, except under altered Management, the Company will never pay a dividend to be remunerative to the shareholders. Take the revenue at 4,000*l.* per week, or 208,000*l.* per annum; deduct 50 per cent., 100,000*l.*, for the cost of working; 20,000*l.* for the Croydon and Greenwich toll; 8,000*l.* for depreciation of locomotive stock; 45,000*l.* for interest on 900,000*l.*; and 250*l.* per mile, or say 12,000*l.*, for maintenance of way and Government duty, 10,400*l.* per annum; where is the devisable income. The shareholder's echo indeed answers, where? The Irish echo, when asked by Paddy, "How do you?" replied, "Very well, I thank you." But neither this echo, nor voice in any echo, could answer satisfactorily the Brighton Railway shareholder crying out, "Where are my dividends out of net profits?" Unquestionably a *capital* answer could be given, but it would be not so much an answer as a bit of jocularity—"Take them out of one pocket and put them into the other. Pay up your subscriptions as capital, and we, the Directors, will return them to you as dividends, under a flourish of trumpets."

To our apprehension a recent sale of 200 shares, by the Chairman of a Railway Company in the east of London, indicates something like a similar state of revenue and expenditure in the Company over whose destinies he has so long presided. "Coming events cast their shadows before." A gentleman so enormously wealthy could not require to sell shares from want of money, and, therefore, all the argument in the world could never convince a man of plain sense that the sale was made except for one purpose only, viz., to secure such a price as the shares were not likely to maintain, and never to reach again. Is not such an act fraught with importance as a guide to others? If shareholders do not take warning, must they not be insensate? Would it not be equally wise for them to sell as for their Chairman? By these remarks we do not seek to blame the gentleman referred to. We view the act of sale as an indication of sagacity and forethought, and it then becomes our duty to try to enlighten the shareholders into a knowledge of the facts of annual revenue and expenditure. It is folly for them, or for any man, to be guided by anything else. Ask the Chairman what guides him? What made him sell? The Northern and Eastern revenue may be computed, from past receipts, at 1,500*l.* per week all the year round, or 78,000*l.* per annum. Deduct for expenses 50 per cent., or 39,000*l.* per annum; Eastern Counties' rent and toll, probably 16,000*l.*; and then interest of money on about 400,000*l.* borrowed, 20,000*l.*; Government duty, 3,900*l.*; leaving to be divided among the shareholders, *nothing!* Can the Chairman then be blamed for selling shares in this undertaking when they reach nearly to par value? The general meeting of the shareholders takes place next week, and if in the above statement there should be any mistake, the actual figures can be inquired into by any pains-taking proprietor. Is it possible that they can differ materially from this, unless by calling in aid imagination to double and treble the income by increased traffic? When a railway is completed, and

Digitized by Google

does not at its terminus reach to a centre in itself of congregated and increasing traffic and accumulating population, there can be little well-grounded hope of much additional revenue from travelling. Consequently, it would be folly not to take warning by the Chairman's act of sale; and as his character for shrewdness must probably have led many men to become proprietors, so the same dependence should be placed on his forethought, in having practically advised every friend to sell as soon as he can.

THE York and North Midland Railway pursues its prosperous course. To maintain the usual rate of dividend a small amount, it is true, has been subtracted from the reserve fund, but taking into view the effects of the late commercial and manufacturing distress, the falling short in the current receipts is very trifling.

The Report of the Directors, which we print elsewhere, is brief but satisfactory. The details of the traffic, which show that the number of third-class passengers was greater than the number of the two other classes combined, suggest matter deserving of the serious attention of the railway public at large.

It will be seen that the Company are neither gaining nor losing much by their lease of the Leeds and Selby line. The indirect benefits flowing from this arrangement are nevertheless neither few nor unimportant.

WE are glad to learn from the Cheltenham papers, that some enterprising and spirited individuals in that town have concluded arrangements with the Birmingham and Gloucester, the Birmingham and Derby, and the North Midland Railway Companies, in virtue of which they are enabled to supply excellent coal at a reduction of 20 per cent. on its present price.

The consumption of coal in Cheltenham, amounting to about 90,000 tons per annum, has hitherto been supplied from two sources. The Staffordshire collieries, from which there is water carriage to within 5 miles of the town, supply a rapidly-burning coal that makes a quantity of white ash, and averages from 19s. to 22s. per ton in ordinary seasons. The Forest of Dean yields a coal that is generally preferred to the Staffordshire, but having to be conveyed by road or tramway for the whole distance from the pits, it cannot be procured under 21s. to 22s. per ton.

The new Company are able, by their railway carriage arrangements, to bring the Staffordshire coal to *the cellars* of the consumers at from 15s. to 16s. 6d. per ton; and in place of the Forest of Dean they offer the Derbyshire Main, from the Clay Cross pits—a superior coal to any yet introduced into Gloucestershire—at from 16s. 6d. to 18s. per ton.

When the Derbyshire Main was first introduced by Mr. OAKES, the idea of its domestic use was much ridiculed by colliers, as the ordinary Derbyshire coal (such as may be seen cropping out on the sides of the cuttings on the North Midland Railway) is of a very inferior character, and almost wholly unfit for cokeing, or for domestic purposes; but the main seam, worked by Mr. STEPHENSON, is of a totally different character. It is, in fact, the first bed of the Newcastle series. From its great depth of 150 fathoms below the surface it has been subjected to an enormous pressure in certain stages of its formation, and is consequently highly bituminous. It is found in rich beds of great thickness, and has only to be tried to be appreciated, being superior to much of the sea-borne coal that supplies the London market.

We look at this important effect of railway communication with far more interest than attaches to the question of the success of individual enterprise, however well deserved. The reduction of the price of so important a necessary must, to a corresponding extent, benefit property in that attractive neighbourhood; whilst the transit of from 50,000 to 80,000 tons per annum of an entirely new traffic, created by railway facilities, will form no inconsiderable addition to the receipts of the railways made use of for the purpose. But above all, a step has been taken in inland traffic of great importance to railway interests, the success and the imitation of which will be equally beneficial to internal improvement and to the property of railway proprietors. We wish prosperity to Messrs. WILLIAMS & Co.

EVERY fact bearing on the "Toll Question" is at all times interesting. We have much pleasure, therefore, in giving publicity to the following statements with reference to the traffic on the Northern and Eastern Railway:—

Statement of Receipts, and Passengers booked at Shoreditch for Lea Bridge, Tottenham, Edmonton, Ponder's End, Waltham, and Broxbourne, and from each of those places to Shoreditch, in the two half-years ending June 30, 1841 *and* 1842.

In the half-year ending June 30, 1841, passengers, 161,290; receipts	£12,593	9	5
Deduct toll and Government duty	3,774	10	9
Net receipts	£8,818	18	8
In the half year ending June 30, 1842, passengers, 112,269; receipts	£11,939	9	0
Deduct toll and Government duty	2,654	1	2
	£9,285	7	10
Supposing the rate of fare now proposed and also the proposed rate of toll, had been in operation in the half-year ending June 30, 1841, when the number of passengers was about 45 per cent. more than at present, the receipts would have been	11,843	11	8
Toll and Government duty	3,374	11	8
	£8,469	0	0

RECAPITULATION.

The Company have received since the fares were advanced	9,285	7	10
Did receive whilst the low fares were continued	8,818	18	8
Would have received from the same traffic in 1841, if the fares and tolls had been then acted upon that are now proposed	8,469	0	0

Statement of Receipts, and Passengers booked at Shoreditch for Lea Bridge, Tottenham, Edmonton, and Ponder's End, and from those places to Shoreditch, in the two half-years ending June 30, 1841 *and* 1842.

In the half-year ending June 30, 1841, passengers, 64,542; receipts	£3,163	16	8
Paid toll and duty	1,344	14	4
Net receipts	£1,819	2	4
In the half-year ending June 30, 1842, passengers, 38,912; receipts	£2,184	16	2
Paid toll and duty	812	1	1
Net receipts	£1,322	15	1
Supposing the proposed rate of fares and toll had been in operation in the half-year ending June, 30th, 1841, when the number of passengers was 60 per cent. more than in 1842, the receipts would have been on the same passengers	2,676	0	8
Toll and Government duty	944	0	4
	£1,732	0	4

RECAPITULATION.

At the old fares and tolls the Company received	1,819	2	4
At the proposed fares and tolls would have received	1,732	0	4
Did receive at the advanced fares	1,322	15	1

THE Committee of the House of Commons appointed to "consider the propriety of making such alterations in the Standing Orders as may conduce to the improved conduct of the Private Business of the House," have made their Report, which has been adopted.

The Orders have been somewhat simplified, but so far as they relate to railway measures the alterations are not material. The following sketch of the discussion which preceded the adoption of the Orders, will indicate the main points:—

Lord GRANVILLE SOMERSET moved the consideration of the Report from the Select Committee on the Standing Orders revision. Alterations were recommended for the purpose of increasing public convenience, by making the Standing Orders more simple and more easily to be understood by the public. An important alteration was to reduce the number of the Committee from 15 to 11, and in future to make Chairmen of Committees on petitions members of the Standing Orders Committee. Another alteration was, that any member not being present at the time the Chairman shall be appointed, he shall not be eligible to serve on the Committee.

Mr. GREENE agreed with the alteration as recommended, but there was one Standing Order retained which he thought the House would do well to abolish, and that was the Order for Railway Bills being discussed on Tuesdays. He did not see why they should place Railway Bills on a different footing to other Private Bills. He would therefore move that the recommendation of the Committee be adopted, with the exception of that Standing Order.

Lord G. SOMERSET hoped his honourable friend would withdraw his amendment, and leave the subject for consideration for another session.

Mr. LABOUCHERE defended the Standing Order, and

Mr. GREENE withdrew his motion.

After a few words from Mr. C. Buller and Mr. Estcourt, the original motion was agreed to, and the Report was brought up.

IT affords us much pleasure to announce, that through the kindness, and we may add the policy, of the Directors of the Croydon Railway Company, the members of the Choral Society and their friends will hold their Annual Festival at the *Anerly Gardens*, adjacent to one of the stations on the Croydon Railway, on Tuesday next, the 9th instant, in the afternoon; and we have the additional gratification of learning, that on this occasion the Directors of the Greenwich Railway Company have consented to forego a portion of their toll, whereby the former Company are enabled to charge a very low fare to the Society.

It is expected that a numerous company will be present, not only to enjoy the performance of some of the works of our old and most admired composers of vocal harmony, executed with unusual precision and effect, but also to inhale the delicious summer breezes in these enchanting gardens, where several acres of wood-land have been laid out in the most elegantly ornamented, blended with the original rustic, style, comprehending the magnificent and stately oak, and all the lesser attractions of its primitive beauty.

—o—

IN the House of Commons there has been ordered, on the motion of Mr. Estcourt, a list "of the Private Bills which in the present session have been treated as opposed Bills, together with the number of days which the Committee on each such Bill has sat, the names of the members selected, and the number of days on which each selected member has served on such Committee; number of peti-

Digitized by Google

tions presented in conformity with the Standing Orders; number of petitions for leave to present petitions; number of petitions referred to Standing Orders Committee; number of petitions rejected by Standing Orders Committee; number allowed to proceed; number of Bills brought from the Lords; number of Bills read the first time; number of Bills read a second time, and committed; and number of Bills reported."

—o—

THE Stamp-Duties' Bill, which gives effect to the modification of the railway passenger tax, now only awaits the Royal Assent.

—o—

ON Thursday, in the House of Commons, a return was ordered (on the motion of Mr. Richard Hodgson), "stating the time at which the several trains carrying mails on each railway start, and the number of places in each journey where letters are delivered."

—o—

THE Railways' Regulation Bill received the Royal Assent on Saturday last.

—o—

THE fare on the Canterbury and Whitstable Railway in July, 1840, was 9d. per passenger, and during that month the number conveyed was 1,407. In July, 1841, the fare was reduced to 6d., when the number carried rose to 3,244; and in July of the present year, with the sixpenny fare, the number has still further increased to 4,116.

RAILWAYOFFENCES AND OFFENDERS.

RECENTLY, Joseph Grey, driver of a ballast-engine on the South-Eastern Railway, was fined by the Tunbridge magistrates 10*l.*, for neglect of duty in leaving a fire bar across the rails. The Superintendent of the line (J. S. Yeats, Esq.), has very properly made this case public by means of a hand-bill, "in the hope that it will deter others from neglecting their duty."

Not long since, Samuel Nell, a delivery porter in the service of the Leeds Railway Company, was charged at the Borough Court, Manchester, with stealing a sack of the sweepings of corn from the Leeds Railway station. Mr. Harding, solicitor, appeared for the prosecution, and Mr. Bent for the prisoner. A man, named Beaver, said he had been in the habit of buying corn sweepings for feeding pigs; and he purchased from the prisoner nine score, at 1s. a score. This was the usual price; but he sometimes bought them elsewhere for less. On being cross-examined by Mr. Bent, witness said it was usual for workmen to sell these sweepings; they were considered as perquisites; and the prisoner sold them openly, at a quarter to 1 o'clock in the afternoon, and without any appearance of secresy. The prisoner said he had orders from Mr. Bailey, a superior servant, to sell the sweepings; but had not an opportunity of paying the money into the office until he was apprehended. Mr. Hall, the general superintendent of the Leeds Railway station, said, the sweepings were the property of the Company, and the prisoner had no authority to dispose of them. Mr. Bailey was sworn, and denied having given the prisoner any authority to sell the sweepings. The prisoner was then committed for trial.

PROCEEDINGS IN THE HOUSE OF COMMONS ON RAILWAYS.

LIVERPOOL AND MANCHESTER RAILWAY.

July 30.—Mr. Speaker reported the Royal Assent to the Bill.

EVESHAM JUNCTION RAILWAY.

To the Editor of the Railway Times.

SIR,—Mr. Addison having at length discovered that "better part of valour" which he somewhat lost sight of in his earlier letters, I might be well content to leave the matter as it stands, my arguments and questions being so satisfactorily answered by Mr. Addison's assenting silence.

But as this is by no means the first time that a writer in your columns, when beaten from the field of his argument, has sought shelter by introducing personal questions, I owe it to your readers to expose the futility of this mode of defence.

It is, I believe, admitted by all authorities on the subject, that in all cases of *assertion* or of *evidence*, the value of the testimony depends on the personal character of the witness, and therefore challenges no credit when anonymously offered.

In *argument*, on the contrary, the character of the propounder is immaterial, because it is the weight and soundness of the argument only that commands respect, and these remain the same, by whomsoever they may be urged.

In the present case a scheme of a new branch railway is published. Being not altogether unacquainted with the subject, and deeply feeling the importance of the correctness of all future engineer's estimates, I animadvert on the amount of the estimate, and show that according to our experience of past works, it can scarcely be adequate. Mr. Addison volunteers a defence, in *propriâ personâ*, and having successively shown that his estimate is contrary to all experience on the subject—that his section is glaringly absurd—and that the case he cites as a precedent is inappropriate, and moreover does not bear him out even in point of cost—he tries to get off by demanding my name.

He shall have it, if the Evesham branch be ever made—when the actual cost can be compared with the original estimate. In the meantime, whether I wrote at the foot of my letter "I. K. Brunel," or "Robert Stephenson," "John Brown," or "Thomas Smith," equal value would attach to the arguments, similar replies be made to the queries of

COMMON SENSE.

August 3, 1842.

SOUTH-EASTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—Your correspondent's proposition that the "market price of shares is no criterion of their value," is unquestionably true—if confined to cases like that by which he illustrated his problem, viz.: the case of a line partially opened, and under the pressure of an immediate call.

The fact to which he drew attention, viz., that the price of Dover shares had gradually fallen during the 7 weeks which had elapsed from the opening, from 26*l.* 10s. to 23*l.* 2s. 6d., while the weekly traffic during the same period had gradually risen from 555*l.* per week to 846*l.* per week—(the next week was 911*l.* 15s. 3d.)—puts the truth of his proposition beyond controversy.

It becomes, then, as respects the proprietors of this line, an interesting practical question, what is the real value of a Dover share; and I will endeavour to give an answer to that question. I assume a thing to be worth that price at which it will pay 5 per cent. to the purchasers. Upon this assumption say that a Dover share is worth 30*l.*

The whole number of shares is 56,000.	
Therefore the share capital, at 30*l.* per share, is	£1,680,000
Add capital to be raised by loan at 5 per cent. .	700,000
Total	£2,380,000
To pay 5 per cent. on this amount a net income is required of	£119,000

Now assume that the Dover will, when completed and in full operation, take 4,000*l.* per week, a traffic certainly not one-half of what it will be if the lines from Calais to Paris and Lille are constructed.

However, to discard prospective traffic—

£4,000 per week is.....	£208,000	per annum.
Deduct 40 per cent. for tolls and expenses	83,200	
Net Income.....	£124,800	

Which leaves a surplus of 5,000*l.*, after paying 5 per cent. on our loan capital, and 5 per cent. on 55,000 shares, estimated at 30*l.* each share.

My object in making this calculation is not to revive speculation in those shares, for it is to speculation, I believe, that their present depression is ascribable. If I had such an object I should point out what an enormous profit these shares at their present price would have if the traffic of France, Belgium, and through Belgium the German traffic, is brought to Calais by continental lines. My real object and anxiety is to deter those proprietors who *can afford* to hold their shares from parting with them at a price, in my firm conviction, 30 per cent. below their real value—even if we assume that Dover is unable to retain the traffic which, for centuries, the shortness of its water transit has secured to it.

I am, Sir, yours, &c.

A PROPRIETOR.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—The meeting of this Company is advertised for the 18th instant, to declare a dividend. I trust the much-respected Chairman will examine into the *cause* of the delay hitherto shown, both in transmitting to the shareholders the accounts of the meeting, and cheques for the dividend—so loudly complained of by shareholders—so unprecedented in regard to other Companies' mode of doing business, and so palpably dilatory as to demand investigation.

I am, Sir, yours, faithfully,

DESPATCH.

Manchester, August 1, 1842

BIRMINGHAM AND DERBY RAILWAY—ACCIDENT.—The 5. 30. p.m. train from Birmingham to Derby, on Sunday last, had a narrow escape from being upset when running at high speed between Tamworth and Oakley Gate. It appears that a second-class carriage ran off the rails, and dragged the first-class carriage and the hind-wheels of a third-class off with it. After bumping over the ruts and sleepers for about a quarter of a mile, and knocking the parapet of a bridge considerably out of the perpendicular, the engine was stopped. Had the run-off carriages not been turned back again towards the line, by striking against the bridge, they would probably have tumbled down the embankment. The two injured carriages were left on the line, and the engine, with the passengers, who were all luckily unhurt, proceeded, with the third-class carriage attached, to Derby.—*Derby Reporter*, August 4.

EASTERN COUNTIES' RAILWAY.—The Eastern Counties' Railway works, in the neighbourhood of Chelmsford, are now assuming a gratifying and animated appearance. The viaduct across Duke-street is progressing rapidly towards completion, and a series of arches, extending from thence towards the gigantic bridge over the river Cann, are daily increasing in number. Across the Cann the bridge, which will consist of several arches about 40 feet high, is in a corresponding state of forwardness. At Widford considerable progress has been made in the deep cutting which will be continued through the hill, which in some parts has been already excavated to the depth of 70 feet. On the embankment leading from the Chelmer to the town field, workmen are busily employed in repairing the subsidence which it had undergone during the late winter; and in a few days, we believe, the tipping of earth will be recommenced at the extremity in the town field. Both here and at Widford the earth-waggons are conveyed along the line by powerful ballast-engines, which run both night and day, and we understand that an additional number of workmen are about to be employed, so that there is every reason to believe that the works (under Messrs. Sherwood, the contractors) will be prosecuted with the utmost vigour, and that an early completion of this great undertaking may be looked forward to.—*Essex Mercury.*

Digitized by Google

YORK AND NORTH MIDLAND RAILWAY COMPANY—GENERAL MEETING.*

On Tuesday last, the twelfth half-yearly meeting of the proprietary of this prosperous and influential undertaking, took place at the office, in this city; George Hudson, Esq., Chairman of the Directors, presided, supported by R. Davies, Esq., R. Nicholson, Esq., Thos. Barstow, Esq., John Hotham, Esq., J. Richardson, Esq., and T. Backhouse, Esq., Directors. There were also a number of very influential gentlemen in the body of the room among the proprietary.

The Secretary having read the advertisement calling the meeting,

The Chairman said, he believed that by the Act of Parliament the order of proceeding at their meetings was laid down, and that the first business would be to affix the common seal of the Company to the register of proprietors; he therefore moved the usual resolution to that effect, which was adopted, and the seal was affixed accordingly in the presence of the assembled shareholders.

The Chairman said, the next business would be the reading of the Report, copies of which had been distributed in the room. Since those copies had been printed a small addition had been made, containing information which had since been received, but which would be printed in the copies circulated in the usual way to all the proprietors.

Mr. Baker, the Secretary of the Company, then read

REPORT.

The Directors beg leave to report that the gross receipts on account of passengers and merchandize traffic for the six months ending the 30th of June, 1842, amount to the sum of 39,298*l.* 12s. 7d., which, with the sum of 229*l.* 18s. for rents and interest, make a total receipt of 39,528*l.* 11s. 1d. Taking into consideration the serious depression under which every branch of the commercial and trading interest has laboured for some time past, this amount cannot but be deemed satisfactory.

The amount paid during the same period on account of the expenses of working and maintaining the line is 14,647*l.* 15s., and for interest on debentures 4,187*l.* 7s. 10d., making the total disbursement 18,835*l.* 2s. 10d.

A statement is annexed of the receipts and payments on account of the Leeds and Selby line during the half-year, which shows a balance of 127*l.* 11s. 4d. in favour of the Company.

The Directors recommend that a dividend be declared of 2*l.* 10s. upon each whole share, and 15s. upon each half share, to be payable on and after the 16th of August inst.

To pay the proposed dividend it will be necessary to appropriate the sum of 954*l.* 5d. from the reserve fund, leaving the amount of that fund 5,226*l.* 16s. 5d. The Directors conceive that a portion of the reserve fund may fairly be applied to this purpose, as it was originally formed with a twofold object, viz., to meet contingencies and depreciation of stock, and also to equalise the half-yearly dividends when requisite, the former six months of the year being always less productive than the latter, whilst the expenses of working and maintenance are nearly the same.

The Directors propose to pay the Income Tax to which the Company will be liable in respect of the profits of the undertaking, without making any deduction on that account from the dividends to be paid to the shareholders.

The following are the detailed statements of the traffic during the half-year, viz.:—

Passengers—	No.
First class	38,554
Second-class	50,269
Third-class	97,270
Total	186,093
Carriages	421
Horses	1,875
Cattle	2,352
Sheep	41,098
Pigs and calves	2,504
	Tons.
Coal	12,530
Lime	3,424
Game, poultry, &c.	94
Fish	845
Grain	3,007
Wool, rags, &c.	1,140
Iron, stone, &c.	14,564
General merchandize	23,306

It is with feelings of disappointment and regret that the Directors report the result of the long pending litigation with Lord Howden, the origin of which is in the recollection of the shareholders. In March, 1839, the Court of Queen's Bench pronounced a judgment in favour of the Company, which, in the month of July following, was reversed by the Court of Exchequer Chamber. The Directors then resolved to appeal to the House of Lords, and in that determination they believe the shareholders fully concurred. After several postponements, the appeal was heard in the month of June last, when the House of Lords confirmed the judgment of the Court of Exchequer Chamber, thereby deciding that Lord Howden was entitled to receive from the Company the amount of his claim.

The Directors have much pleasure in reporting that the Newcastle and Darlington Junction Railway Act received the Royal Assent on the 18th of June last, and it will be their duty to unite with the several other Railway Companies interested in the completion of the new line in accepting a lease of it when completed, pursuant to the powers an provisions contained in the Act.

The Directors subjoin the usual cash statements.

(Signed) GEO. HUDSON, Chairman.

A General Statement of the Revenue Account from the 1st January to the 30th June, 1842.

INCOME.

	£ s. d.	£ s. d.

July 1, Balance	£127 11 4	July 28th, 1842, audited by us, JOHN SIMPSON RICHD. NICHOLSON JAS. RICHARDSON, Jun	

The CHAIRMAN—You have heard the Report which has just been read, and I shall be most happy to answer any question which may be propounded, or to give any information that may be required by any gentleman present.

No person having risen,

The CHAIRMAN said, it then became his duty to put the resolution to the meeting, that the Report be received and adopted, and that it be printed and circulated for the use of the shareholders. He felt justified in congratulating the meeting on the great success which had attended the Company. It certainly would have been more gratifying to the Directors had they been enabled to pay the dividend declared without taking any part of the reserved fund, but he considered such an appropriation perfectly justifiable, inasmuch as that fund had a twofold object, not only to meet contingencies and depreciation of stock, but also to equalize the half-yearly dividends when requisite.

T. LAYCOCK, Esq.—About the expenses in the trial with Lord Howden, did I understand that they will be only 650*l.*?

The CHAIRMAN—The loss to the Company will be but 650*l.*, taking into account the saving of interest between paying the money when it was first demanded in 1836, and having to pay it now.

Mr. LAYCOCK—I am surprised at the smallness of the sum.

The CHAIRMAN—Yes, it is very gratifying.

Mr. LAYCOCK—It is indeed encouraging to go to law.

The CHAIRMAN—If ever there was a case which should be pressed through all the Courts this was the one. He had no intention of using harsh epithets to Lord Howden, but he must say that this was one of the most cruel cases that ever occurred to any public Company.

J. PEASE, Esq.—How many times has it been removed?

The CHAIRMAN—We were first served with a writ from the Court of Queen's Bench, when we applied to the Master of the Rolls, who granted an injunction, staying Lord Howden from proceeding with his action. Our opponents then applied to the Lord Chancellor, who said, that if we were not liable in law, as we contended, we had better try that point in the Queen's Bench, and he dissolved the injunction. The suit then proceeded at common law, and to our plea Lord Howden demurred; on the demurrer being argued in the Queen's Bench it was decided in our favour. An appeal was then made to the Exchequer Chamber, when the decision was reversed, and ultimately the House of Lords upheld the judgment of the Exchequer Chamber. From the time when the judgment was gvien in the Exchequer Chamber we are liable to pay interest at the rate of 4 per cent., but we pay no interest prior to that date.

Mr. PEASE—Then that would make five Courts through which it has passed. About where is the whole expense?

The CHAIRMAN—About 1,400*l.*, but in estimating the loss to the Company, we are entitled to deduct the interest money which we have saved. It is not for me to say with what satisfaction Lord Howden can pocket this money, which he will clearly net without any consideration.

JOSEPH ROWNTREE, Esq.—Whether the expenses were great or small, I consider that the Directors are fully and entirely exonerated from any blame, because they had consulted the shareholders as to each step which was to be taken. I would direct the attention of the Chairman to another subject. I find in the general statement of receipts and payments, items to the amount of something like 27,000*l.*, which are represented as having been expended since the last meeting, and which are charged to the capital account. Is that so?

The CHAIRMAN—Yes; these items are charged to the construction account, to which they properly belong. A large portion includes the expenses in the building of warehouses and workshops.

Mr. ROWNTREE—It is desirable we should understand our affairs?

Mr. LAYCOCK interrupting—I think it very desirable.

Mr. ROWNTREE—For instance, there is an item for iron rails, chairs, pins, and turntable, 5,146*l.* 6s. 7d., is this an expenditure for new works, or for reparation?

The CHAIRMAN—Not one shilling has been brought to the construction account which has been incurred in ordinary repairs. We built the Normanton station in conjunction with the North Midland and the Leeds and Manchester lines. At this station one of the principal expenses was the turntables, chairs, rails, &c. There was also turntables for the goods' station at York.

Mr. LAYCOCK again interrupting—What will the Normanton station cost each Company?

The CHAIRMAN—About 6,000*l.* each.

Mr. ROWNTREE in continuation—Then there is the item of "Contracts for works, labourers' wages, &c., 11,827*l.* 11s. 2d."

The CHAIRMAN—In addition to the warehouses and workshops at York, we are building a warehouse at Bolton, and another at Castleford. We have expended about 2,500*l.* on cottages erected along the line.

Mr. ROWNTREE—In any question which I may ask, allow me to say that I do not in any way doubt the ability of the Directors. It is desirable that the common foible of adding expenses to the capital account which ought properly to be charged to the current outgoings, so common a failing with many large Companies—should not be fallen into by this Company, and it did strike me as extraordinary that we should now have in the construction account items of 5,146*l.* 6s. 7d. for iron rails, &c., and 1,224*l.* for timber and wood sleepers. I desired to know whether these materials had been used in extra works?

The CHAIRMAN—Yes. We built about 40 coke waggons, which consumed a large quantity of the timber. We paid an increased price per ton for coke, on account of not finding waggons; and on calculation, we found it was the cheapest to build waggons for ourselves. There was also the erection of a large shed at Castleford. We have likewise laid down additional rails at many of the stations.

Mr. ROWNTREE—But you have a separate item of 8,688*l.* for engines, tenders, carriages, and waggons?

The CHAIRMAN—Those are what we purchased ready made. On account of the merchandise station we have paid 3,011*l.*; about 1,400*l.* for cottages; and for the new workshops, 2 100*l.* Many Companies have pursued the plan of erecting all their workshops, warehouse, and stations, before they opened their lines; we opened without a station, and have built to our wants. By this means I have no doubt we have thereby saved large sums. Our workshops will not exceed a cost of 5,000*l.*, and had they been erected two years ago, they would probably have cost 3,000*l.* more.

Mr. BARSTOW—And the opening of the our line would have been retarded for at least a year.

The CHAIRMAN—Last year we gave credit to the construction account for 231*l.*, on account of interest, which we might have placed to the traffic account had we been so disposed. Then we lent 5,000*l.* from the traffic account to the capital account, for which we might have been charged interest very fairly, but we did not do so. It is clear, therefore, that we have not shown any anxiety to relieve the traffic account at the expense of the construction account.

Mr. PEASE—The general management of this line has indeed been excellent. Every one must be satisfied with it, and great credit is due to the Directors. Had the same economy and ability been displayed on all lines what a great national saving would have been effected. I have no doubt that on a line within 100 miles of York with such a regard to economy as prevails here, there might have been a saving of upwards of half a million.

The CHAIRMAN—We can assure you that had the concern been our own, and had we raised the capital amongst ourselves, we could not have been more anxious for its welfare. We feel glad that our exertions have been appreciated by the shareholders.

The Report was then adopted, and ordered to be printed.

The CHAIRMAN said, the next business was the adoption of a series of bye-laws which had been prepared, and which required the consent of this meeting before they could be enforced. He was happy to state that in no single instance had they found it necessary to enforce Lord Seymour's Act with reference to any of their servants; and he trusted that these bye-laws would long have to remain without being enforced.

The bye-laws were then adopted, and the Chairman again invited further inquiry.

Mr. PEASE—Is the maintenance of way under contract?

The CHAIRMAN—No. We retain it in our own hands, and shall continue to do so as long as we can maintain it as cheap as on other lines. We have our labourers living along the line—in cottages built by the Company, to which are attached gardens and piggeries; each labourer has 2s. a week deducted from his wages for rent, which about pays the Company for the outlay, besides it is a security to the line having so many of its servants stationed near to it.

Mr. ROWNTREE was anxious, as he now apprehended that the works were pretty complete, to know whether there would be any great additional outlay, and if the Directors could state what would be the total outlay of the concern.

The CHAIRMAN said, he did not anticipat any great additional outlay; but of course unless they were aware of the extent of business which they may do, it was impossible accurately to state. In his opinion they would not have to call on the shareholders for any more money.

Mr. ROWNTREE—That does not answer my question.

The CHAIRMAN—We have no power to borrow more money.

Mr. ROWNTREE—No, but we may overdraw our bankers.

The CHAIRMAN—Certainly that was possible. He could not pledge himself as to what would b the total outlay. They had paid 8,000*l.* to he Leeds and Selby Company for their stock, and had 13,000*l.* more to pay to them. Then there was the

Digitized by Google

claim of Lord Howden. The new workshops now erecting would not exceed 5,000*l.*, including furniture.

Mr. LAYCOCK said, then the present capital is 631,941*l.* 6s.

The CHAIRMAN—No. You are including items such as certificates, interest, and transfer fees. The capital ought to be taken as follows:—Debenture bonds, 167,500*l.*, calls, 438,380*l.*, which makes 605,880*l.*; add to which the loan of 5,000*l.* from the traffic account, and 12,326*l.* 6s. 5d., balance due to bankers, amounts to 623,206*l.* 6s. 5d., which is all the capital of the Company that has been expended. He hoped that they would not want any more calls, and that at all events they would be able to keep the 5*l.* in reserve until the line was extended to Newcastle, when he looked forward to a great increase in the business. He believed that their stock was in excellent condition—their engines were much improved since the last half-year—and he was sure that their stock account was smaller than that of any similar line.

Mr. LAYCOCK asked the Chairman about the debenture bonds which he stated were not yet paid off. Whenever that was done it would have to be done by new shares. Mr. L. considered such a step would depreciate the old shares, and considerable pains was taken by the Chairman to convince him to the contrary, but evidently in vain.

Mr. PEASE moved the thanks of the meeting to the Directors, and especially to the Chairman, for their great exertions on behalf of the Company.

This having been agreed to unanimously,

The CHAIRMAN briefly replied. He expressed his confidence they would never meet the shareholders with a less dividend, and he hoped that ultimately it would be increased, although it might be some time first.

The meeting then separated.

GRAND JUNCTION RAILWAY COMPANY —GENERAL MEETING.

ON Monday the half-yearly meeting of the proprietors of the Grand Junction Railway was held at the Cotton Sales' Room, Liverpool. The attendance was numerous. Previously to the business of the day being commenced, a printed list of the proprietors was handed to each of those present, from which it appears that the total number of those holding shares equal to five 100*l.* shares and upwards in amount (and consequently qualified to serve as Directors) is 960.

CHARLES LAWRENCE, Esq., the Chairman, on taking his place, requested Captain Huish to read the Report, a copy of which was supplied to all the proprietors present.

The following is a copy of the

REPORT.

The receipts of the railway, for the half-year just ended, are as follows:—

Coaching carriages, horses, parcels, and mails	£161,358	15	8
Goods, live stock, and coals	43,999	2	4
Rents, and interest on bank account, &c.	2,277	16	7
Total	£207,635	14	7

It could scarcely be expected that the revenue would remain altogether unaffected by the increased commercial depression of the last six months, weighing, as it has done, with peculiar severity on the districts intersected by the railway, and it will consequently be seen that the return of traffic for the half-year is less than that of the corresponding period of last year by a sum of 4,349*l.* 15s. 6d., the difference arising entirely from a diminution in the carriage of goods. The Manchester traffic has especially suffered in all its branches, and to an extent nearly double the above deficiency, thus exhibiting a positive increase in those departments of the traffic to which the Company must now mainly look for its future profits.

The total expenditure of the half-year does not exceed that of the corresponding period, although a new item of 2,100*l.* 2s. 3d. appears in the present accounts for maintenance of way on the Chester and Crewe branch. Several new engines, carriages, and waggons, have also been added to the stock of the respective departments, which are debited in the current expenses; and the Directors have the satisfaction to state, that their material of every description has been improved, and is in the best working condition.

The net profit for the half year is therefore 113,661*l.* 12s. 8d., to which must be added the reserve fund, amounting with interest to 8,826*l.* 4d., making a total of 123,487*l.* 13s.

The income tax, amounting to 1,826*l.* 18s. 11d., becoming payable to Government, will first have to be deducted for the three months ending 30th June; and the Directors, for the reason given by them on the last occasion of their meeting the proprietors, have again to advise that the sum of 5,000*l.* be placed to the fund for the depreciation and renewal of engines and other stock. From the balance they have now to recommend that a dividend of 5*l.* per cent. be declared, amounting to 110,165*l.*, leaving, after the above deductions, the sum of 5,495*l.* 14s. 1d., to be carried to the credit of the reserved fund, and applicable to future dividends. The depreciation fund, with the above appropriation, will consequently be, with interest, 10,040*l.* 7s. 6d.

The net receipt from Sunday travelling is 10*s.* per share of 100*l.*

The extensive workshops at Crewe being nearly ready for occupation, the Company's establishment for repairing stock will shortly be removed there; and the Directors are led to believe that the concentration and system which will then be obtained, will tend materially to reduce the future expenditure, and still further increase the efficiency of the various departments. The Directors have great pleasure in stating, that the mode they adopted for raising 1,000*l.* towards the erection of a church at Crewe appears to have been satisfactory, since the portion of that sum which has been claimed only amounts to 5*l.* 17s. 3d.

In their last Report the Directors alluded briefly to the anticipated opening of the Manchester and Birmingham Railway, and stated that their attention was directed to the working of the portion of line between Crewe and Birmingham. In the discussions which necessarily arose with the Manchester and Birmingham Company relative to the conduct of their traffic over the Grand Junction line, a difference of opinion upon points which your Directors considered of vital interest has for some time existed; as, however, the Board trust that they are now happily removed, it is unnecessary to dwell upon them at length. It may be sufficient to mention generally that, impressed with the importance of having the united traffic of the two lines worked together south of Crewe, both as a measure of public safety and economy to the respective Companies, your Directors have, from their first entrance upon negociations, continued to press this position as the basis of an amicable settlement.

The Manchester and Birmingham Company have acquiesced in this arrangement, and the amount of remuneration to be paid to this Company by the Manchester and Birmingham Company for performing this service has been satisfactorily settled. Your Directors have only further to inform the proprietors, that they have no doubt all minor points will be mutually adjusted, without the necessity of having recourse to arbitration; and they consider themselves justified in stating, that the arrangement is one which must tend to the advantage of the Manchester and Birmingham Company, while it relieves both Companies of a portion of their expenses, and this Company of the very heavy responsibility which would have attached to them, had they, under the peculiar circumstances of the case, encouraged the traffic of the two Companies being separately carried on.

In consequence of the relinquishment of the Manchester traffic, a considerable reduction will be made in the working expenses; but the Directors regret that it will be necessary, at the same time, to revise the rates of carriage and fares on the line, and thus protect the Company from the effect of this abstraction from their present traffic. The proprietors will bear in mind, that in August, 1839, while the Manchester and Birmingham Extension Bill was still pending, they were informed that any division of the traffic between two Companies would inevitably be the means of compelling the public to pay an increased price for the same accommodation, since it has only been by the great amount of its traffic that the Grand Junction Company has been enabled to conduct its business hitherto so economically to the proprietors, and, at the same time, so cheaply to the public. That, after these measures are adopted, a loss will still be experienced until a considerable increase shall take place in the Manchester traffic, and consequently in the toll payable to this Company, the Directors do not wish to conceal, but they think it right to state to the meeting that, having carefully considered their altered position, they see no cause to apprehend that the dividends of the Grand Junction Company will be less than 10 per cent. within the year, while they entertain a confident hope that they will exceed this amount.

The subject of a projected extension of the line of railway from Lancaster to Edinburgh and Glasgow has been alluded to in former Reports; and the Directors have the satisfaction to inform the meeting that the surveys and plans of the whole line have been completed, the Parliamentary notices lodged, and the estimates carefully prepared by Mr. Locke, his very favourable Report is now in the press, and will shortly be laid before the public.

The following gentlemen, viz.—Mr. Grant, Mr. Bold, and Mr. Walker, retire from the Direction on the present occasion; and as, by Act of Parliament, they are ineligible for re-election, it will now rest with the proprietors to select three Directors to supply their places at the Board.

The receipts on capital account to 30th June, 1842, were	£2,286,492	9	3
The expenditure	£2,280,590	3	0
Balance in Bankers' hands	5,902	6	3
	2,286,492	9	3
The total Receipts for the half-year were	207,635	14	7
" Expenditure	93,974	1	11
Balance	£113,661	12	8
Net proceeds of the half-year, as above stated	£113,661	12	8
Reserved fund with interest	8,826	0	4
	£122,487	10	0

Less set aside, viz.—				
For the depreciation and renewal of stock	£5,000	0	0	
For the payment of the first quarter's Income Tax in terms of the Act	1,826	18	11	
				6,826 18 11
				£115,660 14 1
The number of shares entitled to a dividend is equal to 22 033 100*l.* shares.				
A dividend of 5*l.* per share will amount to 110,165*l.*, viz.—				
On 10,918 £100 shares	£54,590	0	0	
10,918 50 do.	27,295	0	0	
5,000 26 do.	6,250	0	0	
Interest 10*s.* per share	£8,812	0	0	
Payable to proprietors, 15*s.* ditto	13,218	0	0	
	22,030	0	0	
				110,165 0 0
Leaving to the reserved fund				£5,495 14 1
Depreciation and renewal of stock fund, viz.—				
Set aside Dec. 31. 1841	£5,000	0	0	
Interest on ditto	40	7	6	
Set aside as above	5,000	0	0	
				£10,040 7 6

The CHAIRMAN said that the business of the meeting lay within a very small compass, being for the most part of a formal nature. With respect to the negociations with the Manchester and Birmingham Railway Company (as regarded the working of the line between Crewe and Birmingham), he was happy to announce that all differences of opinion were in a fair way of adjustment. It was but justice to state, that they were indebted to their late excellent Chairman, Mr. Moss, for this happy result; and he considered he would not be doing his duty did he not call the attention of the meeting to the unwearied and valuable services of that gentleman. (Applause.)

Among many other matters, the Chairman thought it would be interesting to the meeting to submit the following statistics, which involved the manner in which the railway had been worked, and which he thought highly creditable to his friend on the right, Captain Huish, who had devoted much of his attention in drawing it up:—

1. There had been no accident on the line during the half-year, nor had any passengers been killed on the line since it opened five years ago, excepting two gentlemen, who met their death by their own imprudence in leaping from the train when in motion.

2. Upwards of 7,000 troops had been conveyed on the line during the half-year, and principally within the space of one week. The authorities at the Horse Guards and the inspecting field officer have expressed their thanks for the manner in which this service was conducted.

3. The number of applications for missing luggage for the year ending 30th June, 1841, including articles of every description supposed to have been left on the Grand Junction line, was 100; the number recovered by the office was 79; and there is reason to believe that a great part of the remainder never came near us. In the last year the number said to have been left was 101; the number recovered 73.

4. The number of complaints by passengers and other parties against the establishment, for the year ending June, 1841, was 144, in which no blame could be attached to the Company or its servants, except in 44 instances. In the year ending June, 1842, the complaints had fallen to 101, in which the Company was to blame 27 times; this included all complaints arising from detentions and late trains.

5. The amount of compensation paid by the Company in the departments of coaching, goods, live stock, and general account, including all settled claims, was for the year ending June, 1841, 987*l.* 8s. 10d.; ditto ditto for the year ending June 1842, 618*l.* 5s. 8d., with a much larger traffic.

6. The decrease of Manchester traffic during the last half-year is 8,078*l.* The total decrease on the whole is only 4,249*l.* There therefore is an increase elsewhere of 3,729*l.*; of this, the increase on Chester traffic applicable to the 21 miles of that branch, is 3,205*l.* 2s.

7. That, with regard to the punctuality of the railway, it appeared that in twelve months ending June 1841, out of 4 172 trains of different classes, 3,686 were to time, or within fifteen minutes, leaving 536, or 12¾ per cent. out of time; that in the year ending June 1842, out of 4,172 trains, 3,912 were to time, or within fifteen minutes, leaving 260, or 6¼ per cent. out of time, being only half the amount of irregularity of the preceding year. That it must be remembered that the irregularities caused by connecting lines of railway, and the inevitable detention occasioned by deep snow, were included in these statements.

The CHAIRMAN then entered at some length upon the subject of the statement of traffic made by the originators of the Chester and Crewe line of

Digitized by Google

railway, on their applying for their Act of Parliament. It appeared that though the anticipated traffic could not have been more than 13,000*l.* a year in in the first instance, it had been magnified by those gentlemen to double to that amount in the accounts they had rendered. The Parliamentary statements, indeed, could not be depended upon; and it was melancholy to reflect that members of the House should legislate in so careless a manner. No less than 400,000*l.* had been expended on that line, yet the gross revenue was yet but 15,000*l.* Parliament had, he thought, thus sanctioned a competing line against them, which they were in a manner compelled to buy, and which would speedily have proved almost a total loss to the original proprietors, had it not fallen into other hands. (Hear, hear.) He was glad to say, however, that the traffic during the present year, as compared with the last, was on the increase.

Mr. Rotherham moved, and Mr. Bickersteth seconded, a resolution to the effect that the Directors' Report, and the accounts just read, be passed.

A PROPRIETOR expressed a wish, that before the motion was put, the interesting statistics, furnished by Captain Huish, should also be published.

The CHAIRMAN stated that he had no objection whatever.

Mr. L. HEYWORTH stated, there was a mistake in the statement made as regarded the Chester and Crewe length of line. They might expect a greatly increased traffic when the several resources of the line were more fully developed.

The CHAIRMAN admitted the fact, adding, that he had only alluded to the misrepresentations that had, in the first instance, passed current in Parliament.

Mr. L. HEYWORTH considered it of great importance that the misrepresentations alluded to, and the carelessness in admitting them, should go forth to the public. Parliament, had the line not been sold, would have saddled the public with a heavy loss, in the exorbitant prices which the original proprietors must have charged them to make up a per-centage for their deficiency. It was proper that this should be shown, so that greater caution might be hereafter practised.

It was then moved and seconded, in compliance with the recommendation of the Directors, that a dividend of 5*l.* per cent. be made on the clear profits to the 5th of June last, amounting to 110,165*l.*; and that the same be paid on the 15th of August instant.

Mr. L. HEYWORTH remarked, in concurring with the resolution, that if proper legislative measures were adopted to relieve the country from its present commercial depression, they might expect a more flourishing condition of their finances. ("Hear," and some disapprobation.) He felt confident that no adequate return could be expected until there was a different kind of commercial legislation; and he hoped that the present Administration would feel inclined to effect so desirable a change, and that those present would put their shoulders to the wheel and enable them to carry it out. ("Hear, hear," and some laughter.)

The meeting then proceeded to the election of three Directors, in the room of Mr. Grant, Mr. Bold, and Mr. Walker, who retired, and were not again (by Act of Parliament) eligible for re-election. Mr. John Moss, Mr. James Heyworth, and Mr. Joseph Sanders, were proposed, seconded, and unanimously appointed to the vacancies.

Mr. BICKERSTETH proposed a special vote of thanks to Mr Moss, their late Chairman, for his valuable services, which was carried with loud cheers.

Mr. Moss returned thanks in a brief and feeling manner, expressing the deep interest he should ever feel in behalf of the great concern in which they were mutually engaged.

The business of the meeting being now concluded, the chair was vacated by Mr. Lawrence, and taken by Mr. Moss, who moved a vote of thanks to the Chairman, and the Directors generally, whose exertions had been beyond all praise. He added, that for himself he felt perfectly satisfied, under all the untoward circumstances of the times, with the result of the past half-year. ("Hear, hear," and cheers.)

The motion was carried by acclamation, and the meeting separated.—*Liverpool Standard.*

RAILWAY PLEASURE EXCURSIONS.

GRAND JUNCTION AND LONDON AND BIRMINGHAM RAILWAYS.

FOR some weeks past the announcement by Messrs. Franklin and Ashcroft of a trip from Liverpool to "the great city" and back, for 28s., affording passengers a stay of three days to visit the "lions" of the latter, has excited considerable interest in the public mind; and, notwithstanding the circulation of numerous unfounded reports during the last fortnight, to the effect that the special train would not start on the day appointed, and that some advantage would be taken of those who had availed themselves of the liberal offer by purchasing tickets, the speculation will doubtless be profitable to the "contractors," and the "out" most agreeable to the journeying parties. By Friday morning, the whole, or nearly the whole, of the disposable tickets were sold. To avoid the inconvenience of receiving and "packing" so large a concourse of persons at the Lime-street terminus of the line, and passing them through the tunnel under the eastern part of the town, it was resolved that the trains should proceed from the Edgehill station; and on Saturday, and even Sunday, many of the intended passengers, in anticipation of the coming treat, surveyed the ground at that suburb; or, as was remarked in other words, "the running horses surveyed the starting post." It was at first announced, that the train would leave Edgehill at half-past 6 in the morning, but it was afterwards decided, for greater convenience, that it should be divided—the first part to leave at that hour, and the second at half-past 7; and this new arrangement was announced by placards and advertisements published on Saturday. Some delay, however, perhaps unavoidable, took place before all was ready for the "grand movement."

Yesterday (Monday) being the appointed day, some impatient stragglers were observed wending their way, each with a small quantity of a luggage, to the point of departure; and as the stated time approached, the throng continued to increase, including a great number of spectators. The whole congregated on and near the roads on each side the railway, opposite Mr. Vidler's hotel, at the top of the tunnel, and leading to the two entrance gates; and these long inclined planes, as well as the immediate lanes and fields, soon presented a dense mass of persons of both sexes, and of the several grades, from the wealthy and fashionably-clad lady and gentleman (who were not above accepting of a cheap ride), to the less showy but neatly-attired tradesman and artisan. There was also a considerable number of young persons.

At 6 o'clock a small portion of the expectant crowds were admitted by one of the gates, and to prevent confusion, others obtained entrance from time to time. Several police inspectors and officers were present; yet the crush at the north gate was for some time so great as the stated hour drew near—many of the portion being apprehensive that they would be left behind—that it was feared some accident might take place. Happily, however, no one was hurt, though not a few were subjected to the inconvenience of a desperate squeeze.

About half-past 6, the first train of carriages was brought up, and was shortly afterwards headed by two powerful new engines, the "*Sunbeam*" and the "*Tartarus*," both of which were decorated with small flags, including a royal standard. The impatience to obtain places was very great, and parties who wished to ride together were some time in finding all their friends, and accommodating themselves respectively in the same machine. Luggage was knocked about and stowed with great celerity; and, what with the shaking of hands and the "good byes" of the spectators, the scene was one of much interest and animation, the greatest good humour prevailing throughout. A great part of the train, from its great length, was backed down the branch line leading to the tunnel to Wapping, where most of the parties took their seats. All being at length ready, the whole moved off, at first slowly, at seven minutes before 7 o'clock, the delay of twenty minutes being apparently unavoidable. Amongst those congregated at the station to witness "the departure," we observed a great number of gentlemen belonging to the town, and including several of the Directors. The number of carriages in this first train was 22, namely, 20 second-class of the Manchester and Liverpool Company, and two first-class carriages in the rear. The whole of them were filled, and as each carries (in its three divisions) 24 persons, the number of passengers, in all, was 528. As the engines increased in speed, they were soon lost to sight amongst the trees. The walls fencing the fields, and the banks on both sides of the railway, for upwards of a quarter of a mile in length to the eastward, were lined with spectators, and several hundreds were also assembled at the crossing in Wavertree-lane.

The second train came up about a quarter-past 7 o'clock—the remainder of the passengers who were outside the gates having all been previously admitted into the yard. These trains consisted of 32 carriages, including five of the first-class description. All the second-class carriages in this train, with the exception of two or three, were those of the Grand Junction Company, which are more close and commodious than the same class (in the first train) of the Manchester and Liverpool Company, so that the parties who were delayed an hour beyond those in the first train, though losers of a short space of time, would not be losers of comfort. We observed several of these carriages (apparently four or five), that were either empty or had not their complement, as they had to take up some passengers a short distance from the town. Reckoning, therefore, that they were all filled, the train would take 768 persons, which, with the 528 by the first train, gives an aggregate of 1,296 in all. The train started at seventeen minutes before 8 o'clock, drawn by the engines "*Tantalus*" and *Lynx*;" the last, one of the oldest but the best engines on the line. It moved off in good style, amidst the acclamations of those present.

It was expected that these trains would be joined at Parkside by additional carriages from Manchester, and others from Preston (by the North Union), containing about 200 passengers from each place, availing themselves of the "cheap trip,"—thus increasing the whole number proceeding from this county to the metropolis to about 1,700. The precise number is not yet known at the Grand Junction Company's office, Mr. Ashcroft, the contractor, not having time to make up his books prior to his accompanying the last train; but the statement given will, we doubt not, be found to be pretty near the truth. The trip, which affords a rational recreation to those in moderate circumstances, appears to be highly popular; and a *second* will, we have reason to believe, be projected before the end of the autumn. That the speculation will be a profitable one to the parties who projected it, as well as to the railway proprietors, we entertain no doubt. The difference in price will be fully made up by the great number of passengers, and the proportionately small additional steam-power required. What profit will accrue to the contractors we know not, as the price charged by the Railway Directors has not transpired, nor are we informed of the subsidiary expenses. Some conjecture may be formed from the fact that the whole receipts, at 28s. a head, amount to 2,380*l.* — *Liverpool Standard* of Tuesday.

GRAND JUNCTION RAILWAY.

About 150 of our good citizens joined the train from Birmingham last Monday morning, in its trip, at a reduced fare, to Liverpool, returning on Wednesday night. The entire train, as we have understood, conveyed about 1,500 passengers, and

Digitized by Google

the journey was remarkably pleasant. A considerable number crossed the water to view that beautiful structure, the Menai Bridge—an excursion highly gratifying to the sight, but in the course of which not a few became most disagreeably affected under the influence of sea-sickness. We understand that an arrangement was entered into between the Grand Junction Railway Company and a Committee from the several Lodges in Birmingham of the Manchester Unity of the Order of Odd Fellows, by which a handsome sum is likely to be realised to aid that excellent institution, the Widows and Orphans' Fund belonging to that Order.— *Coventry Herald*, July 29.

BIRMINGHAM AND DERBY AND NORTH MIDLAND RAILWAYS.

About 400 persons left Birmingham, Tamworth, and Burton, on Tuesday morning, on a pleasure-trip by the Derby Railway to Matlock. The day being exceedingly fine, the party had an opportunity of viewing, under the most favourable circumstances, the beautiful scenery on the line, and especially the country between Amber Gate and Matlock. Some few of the visitors stopped at Derby, but the greater number proceeded onward, and passed the day amidst the romantic scenery around Matlock. They returned at 6 o'clock in the evening, greatly delighted with the trip, and without a single accident having occurred to any of the party to mar the pleasure of the excursion. We have no doubt that the next pleasure trip projected to this attractive spot will be joined by a still larger number of our fellow-townsmen. No other line from Birmingham presents, for the distance, so many attractions, or so great an amount of enjoyment, at so small a cost.—*Midland Counties' Herald*, Aug. 4.

RAILWAY ADJUDICATION.

IN RE THE GREAT NORTH OF ENGLAND RAILWAY EX PARTE SIR SAMUEL CROMPTON.

Vice-Chancellor Wigram's Court, July 27.—There is a usual clause in all Acts of Parliament enabling Companies to take land for the purpose of making railways or canals, or other works of that nature, that where from the circumstances of the land being in settlement, or other situation, owing to which there is no person immediately authorised to take and discharge the Company from the purchase money of the land taken, such money shall be paid into Court, until it can be applied according to the provisions of the settlement or other disposition, and all the costs of the necessary orders for paying in and taking out the money and investing it, shall be borne by the Company whose Act it is that has rendered the expense necessary. In this case the parties beneficially interested in the money paid by the Company for land, obtained a reference to the Master to inquire whether it would not be for the benefit of the estate that the money should be laid out on permanent improvements, drainings, &c. A question was made, whether, under the words of the Act, the costs of this inquiry should be paid by the Railway Company.

His Honour held that the Company were not bound to pay the costs of a proceeding not relating to any mode of investment of the money corresponding with the original uses of the land, but relating only to a different and arbitrary disposition of the fund, not considered or rendered necessary by the Act of the Company.

ACCIDENTS ON RAILWAYS *NOT* RAILWAY ACCIDENTS.

On Wednesday night, a fireman in the employ of the Manchester and Leeds Railway Company, of the name of John Smethurst, was killed at the Manchester station, through being run over by part of a goods train. The inquest on the body of the deceased was held on Thursday, before W. S. Rutter, Esq., when it appeared, from the evidence of James Smith, a fireman in the employ of the same Company, that about 11 o'clock on Wednesday night the deceased and himself left the shed where their engine was standing, and went across the line to the battlement of the bridge at Miles Platting. They there stood talking together, waiting for a goods train which was about to start for Leeds coming past, in order that they might afterwards take their engine down to the station, to be attached to another train which they were both going with. Witness saw the goods' train coming up, and, when it was a short distance from the bridge, he left Smethurst leaning over the battlements, and went across the line on which the train was coming up. When he got into the space between the two lines he turned round, and then observed another train coming down the line, the engine being within a very few yards of him. He maintained his stand between the two lines until both trains passed, and then observed the down train stop, and on looking to see what was the cause, he saw deceased lying across the line of that train. The deceased was dreadfully mutilated, and was lying between the fourth and and fifth waggon, there being 13 waggons altogether. Witness could not tell how the accident had happened, but supposed that deceased was following him across the line, and, not seeing the down train, was caught by it. Had deceased remained in the situation in which witness left him, he would not have been injured. It was dark at the time, so much so that a person could not be seen at a distance of 15 or 20 yards. The down train was coming very slow, and at no greater rate than witness could have walked. Henry Whittle, fireman of the down train, stated that the signal had been given to apply the break, in consequence of seeing another train in front of them with a light, and at the time the accident happened they were only going at the rate of two miles an hour. They saw nothing before them but the train at a distance, but witness felt the tender, which was in front of the engine, go over something, when he immediately applied the break, and the train was stopped. The deceased was then found in the position described by the last witness. The jury returned a verdict of "Accidental death." The deceased was 32 years of age, and has left a widow and five children.—*Manchester Chronicle*, July 30.

MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

Sir,—The letter signed "Sapere Aude," of which notice was given in your journal of the preceding week, has at length appeared, and if the writer had subscribed himself "One who wishes to invest at a price much below the real value of the shares," the whole tenor of the letter would have justly warranted the inscription.

I conceive, Mr. Editor, it is going much too far for any man to talk about more capital being required, or to dictate what dividend is to be paid, without being in possession of facts which can be known only to those who are invested with the management. I, for one, have confidence in the Directors, who manage the important interests confided to them not inferior to that of the best conducted railway in the kingdom. They have not, and I do not fear that they will, call for money they cannot beneficially employ; and respecting the dividends, it would be wise on the part of the Directors to state there would be no diminution, which would prevent the more timid holders from becoming a prey to those unprincipled jobbers ever ready to catch the unwary. But to the facts. "Sapere Aude" says, the receipts amounting only to the paltry sum of 109,000*l.*, a dividend of no more than 5 per cent. can be paid. To prove his ignorance of the affairs of the Company, and that he is only actuated by the motive I have already ascribed to him, I need only refer to the last Report, which shows a balance of 12,000*l.* reserved for the "maintenance and gradual increase of the present rate of dividend." This settles the point at once—shows the dividend can be paid; and, if the expenses of management have been reduced, and a revival of trade takes place, in addition to which the fact that this Company are borrowing money at a less rate than any other, the result will be, at no distant period, an increase of dividend may confidently be expected; and instead of the shares bearing the present paltry premium, they will soar to something like their neighbours, the Liverpool and Manchester; so close, indeed, are those two lines connected, that it would be fortunate if their interests were blended.

In conclusion, I would say to my brother-shareholders (no one will believe "Sapere Aude" is of the number), be not frightened by any one, nor gulled out of your share in that lottery which cannot fail, ere long, to bring you a valuable prize.

I beg to subscribe myself as before,

JUSTICE.

Manchester, August 1, 1842.

The late Melancholy Occurrence on the Croydon Railway.— Mr. H. Cramer has addressed a letter to the *Morning Chronicle*, explaining his conduct in reference to this affair. He says, "The whole 'head and front of my offending,' was to step from the third-class carriage, in which I rode, to the guard's seat on the carriage immediately adjoining—a distance of between three and four feet. There I instantly seated myself, and did not move until told by the unfortunate deceased to leave the seat, a request which I immediately complied with. He was then kneeling upon the roof of the carriage, having passed along the top of the train for some distance. Of the accident I was not aware, having resumed my former station, until apprised of it by a passenger. The deceased, after having been struck down, fell across the coupling chains connecting the two carriages. I immediately, in conjunction with another gentleman, sprang out of the carriage; and, at the risk of my life, as was evidenced at the coroner's inquest, lifted the deceased into the carriage. Such is a plain statement of the facts. Permit me to add, that my first movement was one which, if not actually allowed, has at all events been frequently practised on many lines of railway. This is an assertion which the experience of a juror at the inquest enabled him to corroborate. As an engineer too, and conversant with the management and working of railway trains, I felt in my own mind not the slightest apprehension of danger being likely to be occasioned by my behaviour."

Manchester and Leeds Railway—The Rail and the Road — Although the Oldham branch Railway has been open nearly four months, almost the same number of coaches continue to run on the turnpike-road to and from Manchester and Oldham as did before the opening of the railway; and what is still more extraordinary, that, though the Railway Company have made a serious reduction in their fares for the purpose of getting rid of the coaches, the old conveyances are still tolerably well supported. This curious state of things is to be partly accounted for by the fact of the coaches conveying passengers from the centre of one town to the centre of the other, whilst the railway merely extends from the outskirts of one town to the vicinity of the other. Hitherto railways have invariably broken up nearly all the coaches on much travelled roads, but betwixt Oldham and Manchester the reverse is the case, notwithstanding the speed and convenient arrangement of the trains, which are commendable.—*Manchester Chronicle.*

Accident on the Bruges Railway.—A letter from Bruges gives the following account of an accident on that railway on the 26th ultc.:—"An extra train, consisting of an engine and several carriages appointed for the conveyance of the Duke of Saxe-Coburg, brother to the King of the Belgians, ran against the eccentric at the Bloemendael. The engine was thrown off the rail, and one of the carriages was greatly damaged. Fortunately the engineer had greatly slackened the velocity of the train, or some deplorable event might have happened. Immediately the signal of distress was given, the director of the station sent on a reserved

Digitized by Google

engine and apparatus for replacing the train on the rails. This was done with promptitude and ability, so that the train was very shortly again in motion, and the accident would not have been perceived, had it not delayed the arrival of the train from Ghent until the road was cleared. The accident is imputed to the negligence of the man in charge of the eccentric, who has been dismissed."

NEWCASTLE AND DARLINGTON JUNCTION RAILWAY.—All Persons holding Scrip Certificates for Shares in the Newcastle and Darlington Junction Railway Company, are requested to transmit the same to the Secretary, at York, free of expense, on or before Thursday, the 1st day of September next, with their Names, Professions, and Residence distinctly written, in order that the same may be correctly entered in the Register of the Company.

The Secretary will give an Acknowledgment for the Scrip, and on the Completion of the Registry will exchange the same for Certificates under the Seal of the Company.

GEO. HUDSON, Chairman of the Board of Directors.
THOMAS FAULCONER, Secretary.

York, August 1, 1842.

TO RAILWAY AND BRIDGE CONTRACTORS, &c.—STOCKTON AND DARLINGTON RAILWAY.—The Drawings and Specifications describing the necessary Works in Piling and Erecting the Stone Piers for a New Bridge across the River Tees, near Stockton, may be inspected at the Office of the Company's Engineer, in Darlington, on and after Monday, the 8th day of August instant.

Tenders, written out on the printed forms only, to be lodged on or before Ten o'Clock on the morning of Friday, the 26th of August instant.

The Directors do not bind themselves to accept the lowest Tender.

Stockton and Darlington Railway Office,
Darlington, August 3, 1842.

SURREY.— Extensive and Beautiful Estate, well worth the attention of Capitalists.—To be SOLD, by Private Contract, by Mr. SAXBY, Estate Agent and Auctioneer, Guildford, an unrivalled Estate, containing about 1,600 acres, within a ring fence, embracing a due proportion of Wood, Arable, and Meadow Land, with four small Farms adjacent, situate in one of the finest parts of Surrey, 30 miles from London, and 8 from two principal Stations on the South-Western Railway, admirably adapted for Sporting, and well calculated to give importance to the Proprietor as a landowner. The Estate is principally free of Tithe, and almost wholly of Parochial Rates, and is Let to respectable Tenants at low Rents. The Woods are well stocked with Game, and are exceedingly congenial to the growth of Timber.

For further particulars, apply to Mr. Saxby, Guildford.

TO ENGINEERS, CONTRACTORS, FOUNDERS, &c.—To be SOLD, by Private Contract, the IRON SHIELD used in the Construction of the Thames Tunnel, and capable of being easily adapted for any other Tunnel or Roadway, &c., where difficult excavation is to be anticipated. The Shield was made by Messrs. Rennie, and consists of the best wrought and cast iron, containing about 40 tons of the former, and 140 tons of the latter, with 24 4-inch screw-legs of the best workmanship.

May be viewed at the Thames Tunnel Works, Rotherhithe; and Tenders will be received at the Company's Offices, Walbrook Buildings.

August 2, 1842.

Just published, in 8vo., bound in cloth, and lettered, Price 6s. 6d., the Second Edition of

A TREATISE on ENGINEERING FIELD-WORK: By PETER BRUFF, Engineer and Surveyor; Associate of the Institution of Civil Engineers. This volume, forming Part II. of the above work, contains an elaborate Treatise on Levelling, with its application to the purposes of Civil Engineering.

Recently published by the same Author,

Part I. of the above work, price 8s. 6d., comprising Surveying, as applied to engineering and other purposes.

"We again, with much pleasure, recommend this work to the student. We think it the best practicable work which has been published on the subject."—*The Civil Engineer and Architects' Journal.*

London: Simpkin, Marshall, and Co., and by order, of all Booksellers.

Lately published, price 2s. 6d.,

THE HYDRAULIC RAILWAY; being a carefully digested but plain Statement of the advantages to be derived, and the impediments removed, in establishing Hydraulic Propulsion on Railways; with a wide frontispiece of the Hydraulic Railway in operation, and a large drawing of its machinery. By J. G. SHUTTLEWORTH, the Patentee.

Sold by J. and J. Thomson, Market-street, and Simms and Dinham, Exchange-street, Manchester; J. Weale, High Holborn, London; and by all booksellers.

THE MANCHESTER AND LIVERPOOL PLATE GLASS COMPANY have just now on SALE a large quantity of Ground Plate Glass, suitable for Skylights, which they can sell in lots at 2s. 6d. per foot; also Siout Polished Plate for Conservatories at 3s. per foot; and a quantity of ditto for general glazing purposes, AT HALF THE "TARIFF PRICES." Also, several extremely Large Plates for Looking Glasses.

An extensive assortment of Dressing Glasses, with or without Mahogany Frames, to be sold considerably under the Tariff prices.

Every information may be obtained at their Manufactory, Sutton, St. Helens, Lancashire; or at their London Warehouse, 25, Soho-square.

By order of the Board,
J. L. GRUNDY, Company's Agent.

London, August, 1842.

LONDON AND SOUTH-WESTERN RAILWAY.—NOTICE is hereby given, That the next Half-yearly General Meeting of the Proprietors of this Company will be held at the Offices of the Company, Nine Elms, Vauxhall, on Saturday, the 27th instant, at One o'Clock in the afternoon, precisely.

And NOTICE is also hereby given, That the Books of the Company, for the Transfer of Shares, will be Closed on Monday, the 22nd, and remain Closed until Saturday, the 27th, instant, both days inclusive.

By order of the Court of Directors,
ALFRED MORGAN, Secretary.

Nine Elms, Vauxhall, August 5, 1842.

LONDON GRAND JUNCTION RAILWAY COMPANY.—NOTICE is hereby given, That the August Half-Yearly Meeting of the Proprietors of this Company will be held, pursuant to the Act of Incorporation, at the Company's Offices, 6, Basinghall-street, City, on Monday, the 15th day of August next. The Chair will be taken at One o'Clock precisely.

T. EDWARDS.

6, Basinghall-street, July 30, 1842.

LONDON AND DOVER (SOUTH-EASTERN) RAILWAY.—The Public are respectfully informed that the TRAINS now RUN for the conveyance of passengers, parcels, horses, and carriages from the London Bridge Station as under:—

To Tunbridge, stopping at New Cross, Croydon, Reigate, Godstone, Edenbridge, and Penshurst—9 30, a.m.; 11 30 a.m.; 2 30 p.m; and 5 30 p.m. SUNDAYS—8 30 a.m.; 6 30 p.m.

From Tunbridge, stopping at Penshurst, Edenbridge, Godstone, Reigate, Croydon, and New Cross—7 45 a.m.; 10 30 a.m.; 3 p.m.; and 6 p.m. SUNDAYS—8 30 a.m.; 6 30 p.m.

Horses and carriages can be embarked and disembarked at the New Cross as well as at the London Bridge station, at each of which post-horses may be had to convey carriages to or from any part of London, at a charge of 10s 6d., including post-boy. They will be in readiness also at the Tunbridge station on the arrival of every train to convey carriages to Tunbridge Wells, at 10s. 6d. each, including the driver, and to all other places at 1s. 6d. per mile.

Omnibuses ply for every train between the London Bridge station and the following coach offices, viz.:—Griffin's Green Man, Oxford-street; the Universal office, Piccadilly; the Cross Keys, Wood-street; the Swan with Two Necks, Lad-lane; and at any of Messrs. Horne and Chaplin's offices, at which, and at the London Bridge station, parcels may be booked for all places in connexion with the railway.

Full particulars and time-tables may be obtained at the London Bridge Station, and at the Offices of the Company, 10, Coleman-street.

By order,
JOHN WHITEHEAD, Secretary.

10, Coleman-street, June 1, 1842.

KING'S COLLEGE, LONDON.—DEPARTMENT OF ENGINEERING, ARCHITECTURE, ARTS, AND MANUFACTURES.—The Classes will be RE-OPENED on Tuesday, the 4th of October next.

Mathematics—Professor the Rev. T. G. Hall, M.A
Mechanics—Professor the Rev. H. Moseley, M.A., F.R.S.
Chemistry—Professor Daniell, F.R.S.E.
Chemical Manipulations—Mr. W. A. Miller, M.B.
Experimental Philosophy—Professor Wheatstone, F.R.S.
Geology—Professor Ansted, F.G.S.
Principles and Practice of Architecture—Professor Hosking, F.S.A., and Mr. A. Moseley.
Arts of Design and Architectural Enrichment—Professor Dyce, M.A., F.R.S.E., Director of the Government School of Design.
Machinery—Mr. E. Cowper.
Geometrical Drawing—Mr. T. Bradley.
Architectural Landscape Drawing and Colouring—Mr. Cotman.
Mineralogy—Mr. J. Tennant, F.G.S.
Land Surveying and Levelling—Mr. H. J. Castle.
Workshop—Mr. W. H. Hatcher.

Persons may enter as occasional Students for any special Lectures which they may desire to attend, upon payment of the Fees for the same.

Further information may be obtained at the Secretary's Office.

J. LONSDALE, Principal.

July, 1842.

MANCHESTER AND BIRMINGHAM RAILWAY—TENDERS FOR LOANS.—The Directors of the Manchester and Birmingham Railway Company are prepared to GRANT MORTGAGES (under the powers of their Act of Parliament) of the TOLLS and WORKS of their undertaking, as a security for loans of money in sums of not less than £500 on each mortgage, and for the periods of three, four, and five years, from December 25, 1841, at the option of the Lender. Interest warrants, calculated at the rate of £4 10s. per cent. per annum, and payable at the Company's Bankers in London or Manchester, on the half-yearly days on which the Interest will become due during the whole period of the Loan, will be delivered to the Lender with the Mortgages.—Particulars, explaining the peculiar eligibility of this Security, may be obtained at the Company's offices, No. 43, Piccadilly, Manchester; or at the office of Slater and Heelis, Princes-street, Manchester.

THOMAS ASHTON, Chairman.

Manchester, 17th Feb. 1842.

MANCHESTER AND BIRMINGHAM RAILWAY.—The Directors have the pleasure to announce, that the Manchester and Birmingham Railway WILL BE OPENED on the 10th instant, for the THROUGH TRAFFIC between MANCHESTER, BIRMINGHAM, AND LONDON, and the intermediate districts; and also in connection with the Grand Junction Company, between MANCHESTER AND CHESTER.

Further particulars will be announced in due time.

By order,
E. J. CLEATHER, Manager.

Manchester, August 2, 1842.

MIDLAND COUNTIES' RAILWAY.—NOTICE is hereby given, That the General Annual Meeting of the Proprietors of the Midland Counties' Railway Company for the present year, pursuant to the provisions of the Acts of Parliament relating to the said Railway, will be held at the Railway Station at Derby, on Saturday, the 13th day of August next, at Twelve o'Clock precisely, for the purpose of proceeding in the execution of the said Acts.

The Books which are kept at this Office for the Registration of the Transfer of Shares in this Company, will be Closed from Saturday, the 6th, to Saturday, the 13th day of August next, both days inclusive.

By order of the Directors,
J. F. BELL, Secretary.

Dated, Leicester, 27th July, 1842.

MIDLAND COUNTIES' RAILWAY.—A Requisition to the Directors of the Midland Counties' Railway is in course of signature, requiring them to call a Special General Meeting of the Proprietors, for the purpose of investigating the comparative economy and advantages effected by the use of Coal without Smoke, in lieu of Coke, as ascertained by the Engineers of the Company by trials made during the last 16 months, and deciding upon its general adoption.

The Requisition lies for signature at the Offices of the following Solicitors:—R. Yallop, Esq., 8, Furnival's-Inn, London; Messrs. W. and S. Parsons, Nottingham; and John Moss, Esq., Derby.

SHEFFIELD, ASHTON-UNDER-LYNE, AND MANCHESTER RAILWAY.—TENDERS FOR LOANS.—The Directors are prepared to grant Mortgages, under the powers of their Act of Parliament, for Loans of Money, in sums of not less than £200 each, and for periods of three, five, or seven years, at the option of the lender. Interest at the rate of 5 per cent. per annum will be paid half-yearly, for which interest warrants will be given for the period agreed on, payable at the Company's bankers in London, Manchester, or Sheffield.

Further information may be obtained at the Company's Offices in Manchester or Sheffield; at the Office of T. J. Parker, Esq., Sheffield; Messrs. Bagshaw and Stephenson, Manchester; or Messrs. Johnson, Son, and Weatherall, Temple, London.

By Order,
JOHN PLATFORD, Secretary.

Manchester, April 27, 1842.

PARISIAN BITUMEN COMPANY.—The Directors of the PARISIAN BITUMEN COMPANY beg to call the attention of Engineers, Architects, Surveyors, builders, and the Public, to the price, at which they will undertake to lay down their Bitumen, and to its applicability for pavements, roofs, lining tanks, &c.—also to the successful use of it as a cement in the Weirs on the Upper Medway, whereby great economy in the primary construction and future repairs are attained. The prices are as follows:—

Bitumen prepared for cement, per ton	£3 0 0
Covering viaducts or arches of bridges, catacombs, vaults, terraces, &c., to exclude damp, 1½ inch thick, per superficial yard	0 4 6
Paving pathways, granaries, warehouses, &c., 1½ inch thick, per square yard	0 4 6
Paving barns, court yards, tun rooms, wharfs, stables, &c., 2 inches thick, per ditto	0 5 6

The above charges do not include the cost of carriage, which must be borne by the parties by whom the work is required.

Mill Wall, Poplar, April, 1842.

Digitized by Google

BRISTOL AND GLOUCESTER RAILWAY.—The Directors of this undertaking will receive Proposals for LOANS of Money on Debentures, to be issued under the Provisions of the Acts of Parliament, in the month of October next, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest, at the rate of £5 per cent. per annum, payable half-yearly, at the banks of Messrs. Miles, Harford, and Co., Corn-street, Bristol; and Messrs. Barnetts, Hoare, and Co., Lombard-street, London.

For monies immediately advanced the security of Loan Notes, under the Seal of the Company, will be given, which may be exchanged for Debentures in the said month of October.

Tenders expressing the Sums and terms of years to be addressed to the undersigned, at the Company's Office, Exchange Buildings, Bristol.

By order of the Committee of Management,
ROBERT FLETCHER, Secretary.

Office, Exchange Buildings, Bristol, May 30, 1842.

NORTH MIDLAND RAILWAY.—NOTICE is hereby given, That the Books of this Company, which are kept at this Office for the Registration of Shares in the Company, will be Closed, in pursuance of the Act of Incorporation, from Saturday, the 13th August next, to Thursday, 25th of August, 1842, both days inclusive.

By order of the Board,
ROBERT FROST, Secretary.

Railway Station, Derby, July 26, 1842.

NORTH MIDLAND RAILWAY.—NOTICE is hereby given, That the Twelfth Half yearly General Meeting of the Proprietors of the North Midland Railway will be held at Derby, in pursuance of the Act of Incorporation, at the Railway Station at that place, on Thursday, the 25th day of August, 1842.

The Chair to be taken at One o'Clock precisely.

WILLIAM LEAPER NEWTON, Chairman.
ROBERT FROST, Secretary.

Railway Station, Derby, July 26, 1842.

NORTH MIDLAND RAILWAY.—Wanted in the Goods Department of the North Midland Railway, a Manager of talent and experience, and well acquainted with the Carrying Business.

Applications accompanied by testimonials, to be addressed, on or before the 10th of August, to

R. FROST, Secretary.

Secretary's Office, Derby, 21st July, 1842.

GREAT NORTH OF ENGLAND RAILWAY.—TO CONTRACTORS for PUBLIC WORKS.—The Directors of the Great North of England Railway are desirous of receiving Tenders for Excavating the Approaches and constructing a Bridge to carry the Yarm and Neasham highways under their Railway, also two Bridges and other works connected therewith, over the above highways at the Bank-top near Darlington.

Plans and Specifications for the Works may be seen at the Company's Office, in Northgate, Darlington, on and after Tuesday, the 16th, and Tenders will be received until Ten o'Clock on Friday, the 26th (only on printed forms supplied by the Company), and the Directors will meet on Saturday, the 27th inst., at Twelve o'Clock, to Let the Contract, when parties tendering, or persons fully authorised by them, are expected to be in attendance.

The party whose Tender may be approved will be required to give security to the amount of 10 per cent. on his Tender for the due performance of the Contract

The Directors do not bind themselves to accept the lowest Tender.

N. O'BRIEN, Secretary.

Darlington, August 3, 1842.

GREAT NORTH OF ENGLAND RAILWAY.—NOTICE is hereby given, That the Thirteenth Half-yearly General Meeting of the Proprietors of the Great North of England Railway Company, will be held at the Railway Office, Darlington, in the county of Durham, on Tuesday, the 30th day of August, 1842, at Twelve o'Clock at noon, at which time and place the Proprietors of the said Company or their proxies, lawfully constituted, are requested to attend.

The Books in which Transfers of Shares in the said Company are registered will be Closed, in pursuance of the Act of Incorporation of the said Company, from Tuesday the 23rd day of August, 1842, to Wednesday the 31st day of August, 1842, both days inclusive.

Dated this 12th day of July, 1842,

FRA. MEWBURN, Clerk to the Company.

Great North of England Railway Office,
Darlington.

TO CONTRACTORS.—The Advertiser, who has been for several years occupied as Engineer and Agent under different Contractors, and who can have the best testimony, both as to character and ability, wishes to make another engagement with any respectable party. He possesses a good knowledge of Bridge-building and Earth-work—measuring broken work—levelling—drawing—getting up estimates, &c.; would include keeping accounts, or make himself in any other way useful to his employer.

Address, S., *Railway Times* Office, Fleet-street.

DUBLIN AND DROGHEDA RAILWAY.—TO RAILWAY CONTRACTORS.—NOTICE is hereby given, That on and after MONDAY, the 15th day of August, Plans, Sections, and Specifications of the following Works will be ready for inspection, at the Company's Office, No. 22, Marlborough-street, Dublin, or at Mr. Macneill's, No. 9, Whitehall-place, London, viz.—

Contract No. 5, commencing in a field in the Townland of Skerries, and extending to a point in the Townland of Tankardstown, about 500 yards north of Balbriggan Harbour, a distance of 4½ miles.

Contract No. 6, commencing at the end of Contract No. 5 aforesaid, and extending to the south side of the river Nanny, a distance of about 4¼ miles.

Contract No. 7, commencing at the end of Contract No 6 aforesaid, and extending to the intended terminus at Drogheda, a distance of about 4½ miles.

The Contractor will be required to make and maintain all excavations, embankments, viaducts, bridges, culverts, drains, and fences, to complete the ballasting of the permanent way of the said railway over the whole of the said respective distances, and to keep the whole of the said works (except the permanent way) in repair for 12 months after their completion. The Contractor is to provide all implements and materials necessary for the said works, according to the plans, sections, and specifications.

The Directors of the said Railway will meet at their office, 22, Marlborough-street, Dublin, on Thursday, 25th August, to receive Tenders for the above-mentioned Contracts.

Printed forms of Tenders may be had at the Company's Office, where all Tenders must be lodged *before* the hour of meeting, endorsed, "Tender for Works," and addressed to the Chairman of the Board of Directors.

No Tender will be received which is not made according to the printed form.

The party whose Tender is accepted will be required to enter into a bond to the amount of 10 per cent. upon the Contract, and to give Sureties for the due performance of the Works; the names of such Sureties must be set forth in the Tender.

The Directors will not consider themselves bound to accept the lowest offer.

Parties tendering, or persons fully authorised by them, must attend at the Company's Office on the day appointed by the Directors for receiving Tenders, when the Tenders will be opened in the presence of the parties so attending.

GEORGE ALEXANDER HAMILTON,
Chairman of the Company.

GLASGOW AND PAISLEY JOINT RAILWAY—CONTRACT FOR MAINTENANCE OF WAY AND WORKS.—The Directors hereby give NOTICE, That they will receive on or before the 20th day of August next, Tenders for the Maintenance of the Way and Works of the Joint Line during five years after 1st September next.

The draft of the proposed Contract, containing a full specification of the works required to be done, will be seen on applying to the Manager at Paisley, who will meet, on Tuesday, the 9th day of August, all parties desirous of inspecting the works, and will walk over the line with them.

Forms of tenders, and detailed estimates, will be obtained on application to the Manager.

The Directors do not bind themselves to accept the lowest tender.

By order of the Directors,
JOHN BASS, Secretary and Manager.

Paisley Station, July, 1842.

NORTHERN AND EASTERN, BRIGHTON, CROYDON, DOVER AND SOUTH-EASTERN RAILWAYS.—Messrs. HORNE and CHAPLIN having effected the necessary arrangements for the conveyance of passengers and parcels by railway, and thence by coaches to the following places, beg to state, that places can be secured, and parcels booked at and forwarded from their several offices, where every information may be obtained as to the Hours of Departure, Rates of Fares, &c. &c., to

HORNE & CHAPLIN, Proprietors.

DOUCEUR.—An adequate DOUCEUR will be given to any Gentleman who can procure a SITUATION on any of the Railways (in this Country or on the Continent) as Superintendent of the Locomotive Department, whose qualifications and references will be most satisfactory and highly respectable, and on whom implicit confidence may be placed.

Address, real signature, A. B., Engineer, care of Willmer and Smith, News Agents, Liverpool.

NEW EDITIONS of the following useful Works are just published at the *Railway Times* Office, 122, Fleet-street:

I.

TUCK'S MAP OF THE RAILWAYS for 1842 throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

II.

ROBINSON'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Map, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Corrected to August. Price 1s., in cloth.

III.

ROBINSON'S RAILWAY DIRECTORY FOR 1842, containing the Names of the Directors and principal Officers of the Railways in Great Britain, derived from authentic sources, price 1s.

IV.

TABLES OF HACKNEY CARRIAGE FARES from the BIRMINGHAM RAILWAY to all parts of the METROPOLIS, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand with a Map of London. Price 6d.

V.

TABLES OF HACKNEY CARRIAGE FARES from the GREAT WESTERN RAILWAY to all parts of the Metropolis, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

THE TENTH THOUSAND.

Just published, *in a Sealed Envelope*, price 3s., and sent free, on receipt of a Post office Order, for 3s. 6d.,

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection, followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases, &c.

By J. L. CURTIS and Co., Consulting Surgeons, London.

TENTH EDITION—Published by the Authors, and sold by Balliere, Medical Bookseller to the Royal College of Surgeons, 219, Regent-street; Strange, 21, Paternoster-row, London; Guest, 51, Bull-street, Birmingham; T. Sowler, No. 4, St. Ann's-square, Manchester; G. Philip, South Castle-street, Liverpool; Fannin and Co., 41, Grafton street, Dublin; Drummond, 114, High-street, Edinburgh; and sold in a *sealed envelope*, by all Booksellers.

OPINIONS OF THE PRESS.

"This work, *a tenth edition* of which is now presented to the public, *ten thousand copies having been exhausted since its first appearance*, has been very much improved and enlarged by the addition of a more extended and clear detail of general principles, as also by the insertion of several new highly interesting cases. We feel no hesitation in saying that there is no member of society by whom the book will not be found useful, whether such person hold the relation of a *parent*, a *preceptor*, or a *clergyman*."—*Sun*, evening paper.

"This is a work that we fear there exists too much need for to cause us to hesitate to recommend it for general perusal. Every branch of those frightful maladies, whether the result of immoral habits or secret vices, is here succinctly treated, and divested of all medical technicality, plain and easy directions are given for the best mode to be pursued in all cases, however complicated or apparently hopeless. To the married, as well as the unmarried, this little work alike affords consolation and cure in peculiar cases, and we are doing a service to society in recommending it to general notice."—*Essex and Herts Mercury*.

"Messrs Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable."—*Magnet*.

Messrs. Curtis and Company are to be consulted daily at their residence, No. 7, Frith-street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. The communication must be accompanied by the usual consultation fee of £1, and in all cases the most inviolable secrecy may be relied on.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate-street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Brides, Fleet-street, Middlesex.—Saturday, August 6, 1842.

SHEFFIELD, ASHTON-UNDER-LYNE, AND MANCHESTER RAILWAY.—TENDERS FOR LOANS.—The Directors are prepared to grant Mortgages, under the powers of their Act of Parliament, for Loans of Money, in sums of not less than £200 each, and for periods of three, five, or seven years, at the option of the lender. Interest at the rate of 5 per cent. per annum will be paid half-yearly, for which interest warrants will be given for the period agreed on, payable at the Company's bankers in London, Manchester, or Sheffield.

Further information may be obtained at the Company's Offices in Manchester or Sheffield; at the Office of T. J. Parker, Esq., Sheffield; Messrs. Bagshaw and Stephenson, Manchester; or Messrs. Johnson, Son, and Weatherall, Temple, London.

By Order,
JOHN PLATFORD, Secretary.

Manchester, April 27, 1842.

BRISTOL AND EXETER RAILWAY.—Notice is hereby given, That the next Half-yearly General Meeting of the Proprietors of this Company, will be held, in pursuance of the Act of Parliament, at the White Lion Hotel in the City of Bristol, on Thursday, the 25th of August, at Twelve o'Clock. The Chair will be taken at One o'Clock precisely.

FREDERICK RICKETTS, Chairman.

Shares in arrear do not entitle the holders to vote.

The Transfer Books will be closed on Monday, the 15th of August, and not be re opened until after the said General Meeting on the 25th of August.

By order of the Board of Directors,
J. B. BADHAM, Secretary.

Bristol Office, 30, Broad-street, 5th of August, 1842.

NEWCASTLE AND DARLINGTON JUNCTION RAILWAY.—All Persons holding Scrip Certificates for Shares in the Newcastle and Darlington Junction Railway Company, are requested to transmit the same to the Secretary, at York, free of expense, on or before Thursday, the 1st day of September next, with their Names, Professions, and Residence distinctly written, in order that the same may be correctly entered in the Register of the Company.

The Secretary will give an Acknowledgment for the Scrip, and on the Completion of the Registry will exchange the same for Certificates under the Seal of the Company.

GEO. HUDSON, Chairman of the Board of Directors.
THOMAS FAULCONER, Secretary.

York, August 1, 1842.

AN ELEGANT AND USEFUL PRESENT.

Just Published, in One Volume, price 5s. 6d., handsomely bound, with gilt leaves, sides, and back, and illustrated by FOUR HUNDRED ENGRAVINGS,

PICTURESQUE EXCURSIONS; forming, by means of its engravings and descriptive letter press, a complete Guide to, and Remembrancer of, all scenes of interest connected with the following places and their neighbourhoods:—Richmond, Hampton Court, the river Thames from Kingston to the Nore, Margate, Ramsgate, Dover, Hastings, St. Leonard's, Brighton, Shoreham and its Railway, Worthing, Bognor, Southampton, Netley Abbey, Lymington, and the Isle of Wight. Edited by Arthur Freeling.

"A work in which the elegant and the useful are eminently combined."

London: Ackerman, Strand; *Railway Times* Office, Tilt & Bogue, and Bell & Wood, Fleet-St.; and all Booksellers.

CEMENT.—To ARCHITECTS, BUILDERS, and Others.—The PATENT STUCCO PAINT CEMENT.—Its extraordinary qualities are rapidly becoming well known and appreciated. It will adhere to any substance or surface—no wet, or damp, or frost, can have any effect on it—time hardens and improves it—a house covered with it becomes encased in stone—the cost is trifling. The invention is a fortune to Builders, and to all who are interested in house property, old or new. The sole agents for the Patentees are Messrs. MANN & Co., 5, Maiden-lane, Queen-street, Cheapside.

In Royal Octavo, 3s. 6d., cloth, lettered, with four Engravings.

TELEGRAPHIC RAILWAYS; OR, THE SINGLE WAY, recommended by Safety, Economy, and Efficiency, under the safeguard and control of the Electric Telegraph; with particular reference to Railway Communication with Scotland, and to Irish Railways. By WILLIAM FOTHERGILL COOKE, Esq.

Contents: Objects of the Treatise—Distinguishing Characteristics of present Railways—Evidence before Select Committee—Advantages of Telegraphic Communication—Mode of working the Blackwall Railway, by the Electric Telegraph—Description of the Electric Telegraph—Plan for a "Telegraphic" Railway—Course of an Express Train—Ballast Waggons—Permanent Obstruction—Crossing of Two Trains—Description of Signals—Concluding Remarks on Single Way—Mixed Lines—Scottish Junction Line—Irish Railways—Advantages common to Single, Mixed, and Double Lines—Public Confidence—Reduction of Stock—Income from Telegraph—Alertness—Adaptation to Wants of Country—Conclusion.

London, Simpkin, Marshall, and Co.; Liverpool, Wareing Webb, Castle street; Manchester, Simms and Dirham; Birmingham, Wrightson and Webb; Leeds, Slocombe and Simms.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secresy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

TO RAILWAY CONTRACTORS.—TO BE SOLD, a large quantity of Wrought-Iron Rails, Sydney pattern, and Cast-Iron Chairs, together with 196 Railway Waggons, lying on the South-Eastern Railway, at Leigh and Tudely, near Tonbridge.

Applications to be made to Mr. Thos. Cockson, 6, Calverley-place, Tonbridge Wells.

GREAT NORTH OF ENGLAND RAILWAY.—TO CONTRACTORS for PUBLIC WORKS.—The Directors of the Great North of England Railway are desirous of receiving Tenders for Excavating the Approaches and constructing a Bridge to carry the Yarm and Neasham highways under their Railway, also two Bridges and other works connected therewith, over the above highways at the Bank-top near Darlington.

Plans and Specifications for the Works may be seen at the Company's Office, in Northgate, Darlington, on and after Tuesday, the 16th, and Tenders will be received until Ten o'Clock on Friday, the 26th (only on printed forms supplied by the Company), and the Directors will meet on Saturday, the 27th inst., at Twelve o'Clock, to Let the Contract, when parties tendering, or persons fully authorised by them, are expected to be in attendance.

The party whose Tender may be approved will be required to give security to the amount of 10 per cent. on his Tender for the due performance of the Contract.

The Directors do not bind themselves to accept the lowest Tender.

W. O'BRIEN, Secretary.

Darlington, August 3, 1842

GREAT NORTH OF ENGLAND RAILWAY.—Notice is hereby given, That the Thirteenth Half-yearly General Meeting of the Proprietors of the Great North of England Railway Company, will be held at the Railway Office, Darlington, in the county of Durham, on Tuesday, the 30th day of August, 1842, at Twelve o'Clock at noon, at which time and place the Proprietors of the said Company or their proxies, lawfully constituted, are requested to attend.

The Books in which Transfers of Shares in the said Company are registered will be Closed, in pursuance of the Act of Incorporation of the said Company, from Tuesday the 23rd day of August, 1842, to Wednesday the 31st day of August, 1842, both days inclusive.

Dated this 12th day of July, 1842,
FRA. MEWBURN, Clerk to the Company.

Great North of England Railway Office,
Darlington.

BOLTON AND PRESTON RAILWAY COMPANY—TENDERS FOR LOANS ON MORTGAGE.—The Directors of this Company are prepared under the powers of their Acts of Parliament, to receive TENDERS for the LOAN OF MONEY, in sums of not less than £200, and for terms of 3, 5, 7, or 10 years, and to GRANT MORTGAGES of the said undertaking, and of the Rates, Tolls, or monies arising therefrom, as securities for such Loans, bearing interest at the rate of £5 per cent. per annum.

INTEREST WARRANTS, for the whole term for which the loan shall be made, will be delivered to the Lenders along with the Mortgages, and be made payable half-yearly, at the Company's Bankers in London, or Bolton, as may be preferred.

The Tenders are to express the sums, and the term of years for which the same are proposed to be lent, and to be addressed to the Secretary, at the Company's Office, Bolton.

By order of the Board of Directors,
PETER SINCLAIR, Secretary.

Bolton, 24th May, 1842.

SURREY.—Extensive and Beautiful Estate, well worth the attention of Capitalists.—To be SOLD, by Private Contract, by Mr. SAXBY, Estate Agent and Auctioneer, Guildford, an unrivalled Estate, containing about 1,600 acres, within a ring fence, embracing a due proportion of Wood, Arable, and Meadow Land, with four small Farms adjacent, situate in one of the finest parts of Surrey, 30 miles from London, and 8 from two principal Stations on the South-Western Railway, admirably adapted for Sporting, and well calculated to give importance to the Proprietor as a landowner. The Estate is principally free of Tithe, and almost wholly of Parochial Rates, and is Let to respectable Tenants at low Rents. The Woods are well stocked with Game, and are exceedingly congenial to the growth of Timber.

For further particulars, apply to Mr. Saxby, Guildford.

NORTHERN AND EASTERN RAILWAY COMPANY—GENERAL MEETING.

THE half-yearly general meeting of the proprietors of the Northern and Eastern Railway Company was held on Thursday, at the London Tavern, Bishopsgate-street, and was well attended; JOHN ROSKELL, Esq., Deputy-Chairman of the Board of Directors, presided.

The proceedings having been opened in the usual way,

The CHAIRMAN said, he had been honoured with the appointment of Vice-Chairman; and the unavoidable absence of Mr. Marshall, who, when the late Chairman had forced his resignation upon the Board, had been elected to fill the vacant seat, would account for the duty which devolved upon him that day. That the railway should have lost the services of the late Chairman was matter of very deep regret to every member of the Board—a regret in which he was sure the proprietors generally would participate. The bold measures which that gentleman had in the first instance originated for procuring money on his own personal responsibility and that of his colleagues—measures which could only have been propounded by a man of his character and standing, and which, by the aid of the Board generally, had been successfully carried out—showed how invaluable his services had been to the undertaking. To Mr. Crawshay was principally owing the position which the Northern and Eastern Railway held that day, as compared with its position and prospects some two years ago. In the course of the proceedings a special vote of thanks to Mr. Crawshay would be proposed—a vote in which the Board most heartily concurred, and which he believed would meet with the cordial voice of every proprietor present. (Hear, hear.) He should not at that stage of the business trespass further on the time of the meeting except to state, that the whole of the differences between that Company and the Eastern Counties' Company had that morning been fully adjusted, and nothing could be more satisfactory than the arrangement. (Much applause.) He would now, with the permission of the meeting, propose that the seal of the Company be affixed to the share register.

This was carried unanimously, and the seal was accordingly affixed in the presence of the meeting.

The SECRETARY (William Bourne, Esq.) then read the Report of the Directors, as follows:—

DIRECTORS' REPORT.

The Directors have now to congratulate the shareholders of the Northern and Eastern Railway upon the completion and opening of the line to Bishop Stortford, being to the northern extent of the Company's Parliamentary powers; and also upon the result of such completion.

The receipts of the railway for the last six months, ending 30th June, 1842, although including only seven weeks of the through traffic, are nearly double those of the corresponding six months ending 30th June, 1841, and cannot but afford the strongest proof that the confidence expressed in the ultimate resources of the Northern and Eastern Railway has been confirmed by experience, so far as at present permitted; and, upon the least sanguine calculation made upon the 11 weeks' receipts since the opening of the railway to Stortford, and which form an average of 1,578*l.* per week, there is sufficient assurance of the realization of the prospects of return to the shareholders for their investment in this undertaking.

In all new railways, as a matter of necessity, larger proportionate expenses are incurred in the first outset than will attach to future and more defined regulation. The obtaining passenger traffic, by inducing coach proprietors to leave the old and accustomed track, occasions extra expense in the first instance; and a further cost in the number of trains for the public accommodation has, upon all railways, been considered desirable, to induce the first use of the railway in preference to the ordinary modes of conveyance.

The gross receipts of the past six months, ending 30th June last, amount to 28,965*l.* 13s. 5d., which, with the balance of 162*l.* 16s. 8d. left undivided last half-year, gives 29,148*l.* 10s. 1d. The expenses, including toll to the Eastern Counties' Company, amount to 15,626*l.* 4s. 2d., leaving a balance of 13,522*l.* 5s. 11d.; and your Directors venture to recommend that 20s. per share, amounting to 9,072*l.*, be divided upon the last half-year, leaving 4,450*l.* 5s. 11d. applicable to the payment of rent to the Eastern Counties' Railway Company, which, though not due, has been incurred, and ought to be laid by out of the earnings of the present half-year; and they venture to hope that, now the coaches are firmly established on the railway, and that the public are satisfied with its entire efficiency, a reduction in the two items of cost referred to will in the present half-year be effected, without detracting from the full enjoyment of the railway by the public.

Your Directors, in calling your attention to the general account, have only to state that they, in common with all Railway Directors, have been, to a certain extent, disappointed in the original representations of their officers as to the ultimate cost of the line; but when they state that, according to the general accounts up to the 30th of June, and by a reference to the present unpaid liabilities of the Company, it appears that the railway will not exceed the cost of 30,000*l.* per mile, including engines, carriages, and traffic material, they do not feel that the shareholders have much cause of dissatisfaction in the excess of the cost beyond the original estimate; and it will be found, on reference to the final excess of other railways over the first prospects held out of their cost, that the Northern and Eastern Railway has not approached to such an extent of excess as many of the first lines of the kingdom have arrived at.

The extreme facility of the future working of the line has been secured by many very judicious and advantageous alterations of the originally projected line; and although an extra cost has, in furtherance of these objects, been necessarily incurred, the future saving in the working will repay an ample interest.

Your Directors have also to call to the observation of their shareholders, that, in consequence of the very limited proprietary which they had when they commenced their duties, and from the desire expressed on all sides that the calls should be made as light as possible upon the shareholders, large sums of money were necessarily borrowed, and at a heavy rate of interest, which interest could alone be charged to capital account, while the very work for the prosecution of which the debt was incurred could only be in an unfinished and unproductive state. This addition to the actual cost of the line has, in most other cases of railways, been individually borne by the shareholders; and, in the case of the Northern and Eastern Railway, the proprietors, for a considerable period of the unproductive state of the railway, have received interest upon the calls paid up, and which also could alone be carried to the cost of the railway. The payments for interest under these two heads amount to the very considerable sum of 28,984*l.* 11s. 4d., and are as follows:—

For interest on loans	£24,239 1 10
For ditto on capital stock	4,745 9 6

With reference to the further extension of the railway northwards, your Directors are more than ever impressed with the certainty that the most advantageous result would ensue from its being continued to Cambridge; and with this view, and the impediment which still exists to the making the branch to Ware and Hertford, they have not yet taken any steps in the latter project.

Your Directors cannot report the retirement of their late Chairman, in concurrence with his originally declared intention upon the completion of the railway to Stortford, without the expression of their unfeigned regret at the loss of his hitherto most invaluable counsel and services.

Your Directors have also to report the retirement of Mr. Tootal and Mr. Trueman from the Direction. The vacancy occasioned by the retirement of Mr. Moser has been filled by Capt. Mangles, a gentleman well calculated to assist in the advancement of the interests of the railway. As the services of these retired gentlemen were, in common with the rest of the Board, gratuitous, and their own avocations require all their attention, your Directors will now consider and determine the best means of securing a continued attention to the management of the railway.

WILLIAM MARSHALL, Chairman.

Statement of Receipts and Expenditure for the Half-year ending 30th June, 1842.

RECEIPTS.

Balance in hand, 31st December, 1841		£7,203	5 10
Cash received on account of calls		55,850	0 0
Interest on arrears of calls		183	6 7
Cash received on debentures		137,500	0 0
Rent of land		36	4 2
Total		£200,772	16 7
Balance brought down		£15,960	10 7

EXPENDITURE.

Law and conveyancing expenses		£4,250	18 9
Engineering, surveying, and valuing land		357	7 9
Land and compensation		7,844	1 7
Works of roads and stations	£104,637 10 6		
Debenture stamps	407 4 6		
Interest on loans	6,383 8 5		
Commission on debentures	221 7 6		
		111,649	10 11
Engines, machinery, carriages, &c.		13,087	0 3
Miscellaneous and Office Expenses, viz.—			
Office expenses, petty cash, stationery, printing, and advertisements	£1,408 6 9		
Salaries	275 0 0		
		1,683	6 9
Loans repaid		45,890	0 0
Balance carried down		15,960	10 7
Total		£200,772	16 7

General Statement of Receipts and Expenditure to 30th June, 1842.

RECEIPTS.

Amount received on account of calls		£429,480	18 2
Interest on arrears of calls, and profit on Exchequer Bills		2,225	19 11
Amount received in anticipation of calls, &c.		252,535	7 0
Amount received for debentures		190,000	0 0
Rent of land		46	14 2
Total		£874,278	19 8
Balance brought down		£15,960	10 7

EXPENDITURE.

Parliamentary and other expenses in obtaining Acts of Parliament, conveyance, and law charges		69,874	6 4
Engineering, surveying, and valuing land		17,020	8 11
Compensation and charges incurred upon the abandoned line		43,656	12 0
Land and compensation		170,211	17 9
Works of road and stations	349,055 16 8		
Interest on loans	24,239 1 10		
Debenture stamps	741 11 0		
Direction, as per former accounts	4,050 0 0		
Committee of Management	309 0 0		
Commission on debentures	221 7 6		
		378,597	17 0
Engines, machinery, carriages, &c.		47,369	19 4
Miscellaneous and office expenses, viz.—			
Office expenses, petty cash, rent, rates, and taxes, stationery, printing, and advertisements	4,610 14 2		
Salaries	8,941 6 2		
		13,552	0 4
Loans repaid		115,435	7 0
Rent to Eastern Counties' Railway Company		2,500	0 0
Balance carried down		15,960	10 7
Total		£874,278	19 3

Traffic Account, ending 30th June, 1842.

RECEIPTS.

Balance in bankers' hands		6,364	16 8
Amount received from passengers, and for conveyance of horses, carriages, &c.	28,551 0 8		
Amount received for parcels	434 13 9		
		28,985	13 5
Total		£35,937	10 1
Balance brought down		£13,522	5 11

EXPENDITURE.

Amount of dividend for the half-year ending 31st December, 1841		£6,789	0 0
Locomotive expenses:—			
Coke, oil, tallow, grease, &c.	£2,782 6 3		
Materials for repairs of engines	248 7 0		
Salaries of Superintendent and clerks, and wages of drivers, fitters, and other servants of locomotive department	2,577 18 7		
		5,608	11 10
Wages and clothing to conductors and guards, porters, gatekeepers, &c.		1,226	19 11
Stations' expenses:—			
Salaries, stationery, printing, &c.	£1,021 2 0		
Stores consumed at stations	355 10 9		
Gas	43 19 1		
		1,419	11 10
Toll to Eastern Counties' Railway Company	£2,739 10 6		
Mileage duty to Government	1,499 3 3		
Rates and taxes	439 18 5		
		4,688	11 8
Managing Director		250	0 0
Incidental expenses, consisting of repairs of carriages, insurance, water, and petty disbursements		600	0 11
Maintenance of way		1,253	0 0
Balance in hand		13,522	5 11
Total		£35,937	10 1

The CHAIRMAN having expressed his readiness to answer any question,

Mr. VIZARD (late Solicitor to the Company), inquired how it happened that when there was an available balance of only about 6,000*l.* they could divide 15s. a share, and now that the balance was upwards of 13,000*l.*, the dividend was only 20s.

The CHAIRMAN said, the dividend of 20s. very nearly exhausted the balance in hand, after allowing 3,500*l.* for half a year's rent to the Eastern Counties' Company. The rent of 7,000*l.* a year was not payable till January, but had been incurred in the last six months.

Digitized by Google

Mr. GAINSFORD said, there was a reserve of 4,450*l.*, and he understood that the half-year's rent to the Eastern Counties' Company was only 3,500*l.* What was to be done with the surplus 950*l.*?

The CHAIRMAN said, it was to be applied to the payment of interest on debentures, which interest had fallen due on the 15th of July.

Mr. GAINSFORD had understood that the rent was to be only at the rate of 5,000*l.* a year until the line should be opened throughout to Bishop Stortford, which had not been the case, except for a few weeks during the last half-year.

The SECRETARY said, the payment of the 7,000*l.* rent was not contingent upon the opening of the entire line, but upon the Eastern Counties' Company supplying the Northern and Eastern Company with certain premises. This was done in January last, so that the full rent of 7,000*l.* had to be calculated on the whole of the last six months.

Mr. LEVY inquired if the proposed dividend was to be paid exclusive of the Income Tax.

The CHAIRMAN said, the tax would not be deducted from individuals, but from the payments in bulk.

Mr. VIZARD did not see in the accounts of revenue and expenditure anything for interest.

The CHAIRMAN said, the interest on borrowed money was put down to capital, as the honourable proprietor would see by referring to the general statement of receipts and expenditure. No interest on debentures had accrued during the last half-year.

Mr. W. CRAWSHAY said, the interest could not be charged to traffic, as the road was only just completed.

Mr. GAINSFORD said, it had very properly been stated last half-year that there was no occasion to make any reserve from the money in hand, and there might be still more reason why there should be none on the present occasion, as before the next dividend other parties might join the Company, and thus share in what was now kept back, in addition to the revenue of the next six months. The 950*l.* after paying the half-year's rent, would give a further dividend of 2s. a share. (Hear, hear, hear.) Why was it not divided?

The CHAIRMAN had already explained that there would be chargeable to the current half-year interest on debentures due on the 15th of last month; and he thought it would be very improvident if they were not to meet that charge from the receipts of the same period. (Hear, hear, hear.)

Mr. CRAWSHAY said, the interest now due would absorb the whole of the 950*l.*

Mr. S. BELL inquired what was meant by the third paragraph of the Report relative to the expenses incurred with the coach proprietors.

Mr. CRAWSHAY said, considerable expense had been incurred in inducing coach proprietors to come upon the railway as soon as possible. A great many ten pounds a month had thus been paid, but with one exception all this source of expenditure was now at an end. He would be borne out in asserting that the Birmingham and Great Western Companies had paid much greater amounts in proportion than the Northern and Eastern Company.

Mr. BELL inquired why the Report was not circulated sooner. He had only had a copy put into his hands as he entered the room.

Mr. CRAWSHAY said, the most material portion, namely, the accounts, had previously been sent to every proprietor. The circulation of the Report had been delayed because up to that morning there had been a doubt as to a satisfactory arrangement with the Eastern Counties' Company. In fact, the original draft [here the honourable gentleman exhibited a printed copy] contained paragraphs that would not have been at all satisfactory. Fortunately that matter had now been arranged. (Hear, hear.)

Mr. BIDDER (C. E.) thought it his duty to make a few remarks upon that paragraph of the Directors' Report which alluded to the excess over the estimates. He begged to say that there had been no excess in the estimates of construction. When Mr. Robert Stephenson gave in his engineering estimate, the total amount was 470,000*l.*, including engines, carriages, and works. The Directors had themselves formed an estimate for the land, and for the cost of management and other contingencies, amounting to 250,000*l.*, thus making the total estimate for the line 720,000*l.* Subsequently Mr. Stephenson recommended certain alterations, which he then stated would reduce the expenditure by 50,000*l.* An Act of Parliament was afterwards obtained, and the line constructed according to the deviations recommended. The engineering estimates were therefore to be taken at 420,000*l.* Now it would be seen by the accounts that there had already been expended under this head 340,000*l.*; there were outstanding bills to the 30th June amounting to 67,000*l.*; bills since drawn 6,000*l.*, and the amount of reserve on the contractors' accounts and other liabilities about 7,000*l.*, making with other charges the total amount, under the head of engineering, paid and to be paid, 429,000*l.* In that sum, however, was included the interest accruing on the bills with which the contractors had been paid, and which interest, he was prepared to show, might fairly be reckoned at 17,000*l.* Deducting this, and adding 47,000*l.* for machinery, the grand total would be found to be 459,000*l.*, being an excess of 39,000*l.* over the estimates of Mr. Stephenson. It must be borne in mind that from want of ready money they could not always go to the best market, and indeed the Directors would recollect that there was the greatest difficulty in getting any one to take the contracts next Broxbourne and Bishop Stortford on the terms of credit which alone could then be offered. Moreover, when the estimates were framed, it was intended that the line should be opened first to Broxbourne, and then to Bishop Stortford, whereas there had been several intermediate openings, involving the expense of temporary stations. He believed the Company had lost 5 per cent. by not being able to go to market with ready money. This with the cost of temporary stations might be set down at 24,000*l.*, giving as the final result an actual expenditure for engineering of 435,000*l.* against an estimate of 420,000*l.*

Mr. CRAWSHAY would only say, in reply to one remark made by Mr. Bidder, that Mr. Stephenson had stated that the arrangements entered into with Messrs. Grissell and Peto with respect to the Broxbourne and Bishop Stortford contracts, had been quite as favourable to the Company as if these contracts had been put up to public competition.

The CHAIRMAN had a distinct recollection of Mr. Stephenson's statement to that effect.

Mr. BIDDER could not dispute the accuracy of Mr. Crawshay's recollection, as he (Mr. Bidder) did not hear what Mr. Stephenson had stated on the subject. He knew that Mr. Stephenson had made the best arrangement he could with Messrs. Grissell and Peto, and further, that these contractors did not realise more than a fair profit. The fact was, however, that the competition among contractors was so strong, that some of them were content at times to employ their capital without making any profit. He had heard Mr. Crawshay express his regret that the Company could not have gone into the market with ready money, as in that case 10,000*l.* might have been saved between Broxbourne and Bishop Stortford. In reply to a remark of Mr. Crawshay's, Mr. Bidder further said, that the Directors had arranged with Messrs. Grissell and Peto at a price 3,000*l.* above the lowest tender which had previously been offered by other parties. There was no blame attached to any one, and it was the necessity of obtaining credit that had led to this arrangement.

Mr. VIZARD said, it was now stated in the Report that the line would cost 30,000*l.* a mile; but if his memory did not deceive him, it had been held out, even down to the period of the last meeting, that the cost would not exceed 22,000*l.* a mile.

Mr. CRAWSHAY said, he had stated his opinion on this point at the last meeting from data supplied by Mr. Bidder, which statement, it would be recollected, he had called upon Mr. Bidder to confirm.

Mr. BIDDER said, it was so; but the 22,000*l.* a mile, included the Ware and Hertford branch, which the Directors were aware had been offered to be made for 10,000*l.* a mile. [Mr. CRAWSHAY—Quite true.] This would bring the average very near to 22,000*l.*

Mr. VIZARD complained that interest had been paid on calls.

Mr. CRAWSHAY said, this payment had been commenced before the present Board took office, and therefore *they* were not responsible for it. The payment had not been continued for more than two half-years.

Mr. GAINSFORD said, it was probably a very foolish plan, but it was now discontinued, and need not be further referred to. On looking at the accounts, he found that after deducting the toll to the Eastern Counties' Company, the expense of working the line was about 41 per cent. on the gross earnings. He thought this a very gratifying circumstance. He had seen it stated that on a weekly receipt of 1,500*l.* the working expenses would be 50 per cent., whereas at the same rate as the last half-year the working expenses on 1,500*l.* a week would be only about 33 per cent. Was the experience of last year a fair criterion?

The CHAIRMAN said, every item had passed in detail before him, and he had no hesitation in expressing his opinion that in most of the items they would be able still further to economise. (Hear, hear, hear.) They expected soon to have a considerable goods' traffic. At present they had to light seven engines for the passenger traffic; and he believed that, in addition, a goods' traffic, to the extent of 300*l.* or 400*l.* per week, could be carried on without any increase in the locomotive expenses. (Hear, hear, hear.)

Mr. LEVY was sure the opinion of the honourable Chairman was greatly to be depended upon. (Hear, hear, hear.) For his own part, he believed that the traffic in goods would be very great. He was satisfied that there would not be a better line of railway in the kingdom, if properly managed—not that he meant to say that it was not well managed now. He was glad that the quarrel with the Eastern Counties' Company had been settled; and he had no doubt that the next time they met it would be to declare a much better dividend. (Hear, hear, hear.)

Mr. BAGSHAW (a Director) begged to state, with respect to what had fallen from his learned friend (Mr. Vizard) relative to the payment of interest, that he (Mr. B.) had been opposed to such payment. It should be remembered, however, that the matter was fairly brought before the proprietors at the time, and that *they* determined the question. (Hear, hear, hear.)

The CHAIRMAN thought it due to Mr. Levy to state that he had waited upon the Board, and feeling a great interest in the prosperity of the railway had offered, if the Company could carry cattle to Stratford, to allow them to pass thence to London by the turnpike road toll free during the rest of the year. (Much applause.) [Mr. L. is the lessee of the turnpike tolls.] He thought this very much to Mr. Levy's honour. (Renewed applause.)

After some further conversation,

Mr. LEVY moved that the Report of the Directors be received, adopted, and printed for circulation among the proprietors.

Mr. VIZARD again adverted to the payment of interest on calls. He said it was in effect taking money from one pocket to put it into another, and characterised such a proceeding as "humbug."

Mr. CRAWSHAY indignantly disclaimed such a term. If there had been any "humbug"—any imposition—it rested with Mr. Vizard himself. Look at the Solicitors' bills of 64,000*l.* (Great confusion.)

Digitized by Google

Several voices called upon Mr. Vizard to retract the word "humbug."

Mr. GAINSFORD said, this Company had suffered much from the display of personal feeling on the part of those connected with it, not only in this instance, but in the negociations with the Eastern Counties' Company. The honourable gentleman strongly protested against such a course.

The CHAIRMAN said, it was quite a fallacy to imagine that personal feeling had ever been allowed to operate to the disadvantage of the Company.

After some rather warm remarks,

Mr. BELL moved that this discussion be stopped, which was carried.

Mr. SHUTER then seconded the adoption of the Report, and said the prospects of the undertaking were most satisfactory. It had only been opened throughout for seven weeks previous to the making up of the accounts, and yet they had a considerable available balance. (Hear, hear, hear.)

Mr. VIZARD referred to the paragraph in the Report which adverts to a future extension of the line, and said he ever had protested, and ever should protest, against involving the Northern and Eastern Company, as a Company, in such extension.

Mr. CRAWSHAY said, no steps could be taken in the matter without calling a special meeting.

Mr. BELL wished to know why a suggestion upon which it appeared nothing could be done had been inserted in the Report.

Mr. VIZARD would tell him—It was because large expenses would be incurred in connection with such extension, and then the proprietors would be told, that by sanctioning this Report they had lent their countenance to the scheme.

Mr. GAINSFORD said, if one individual shareholder objected to join in carrying out the extension, the Company, as a Company, could not undertake it. The law of partnership would not allow an unwilling partner to be dragged into schemes of which he disapproved, and which were foreign to the deed of agreement. He did not give any opinion as to the merits of the extension, but must protest against anything now done being considered to pledge the Company as to the future. They must have a new Act of Parliament to go on with the extension, and then individual proprietors who approved of the scheme could support it just as effectually as if it were taken up by the Company.

The CHAIRMAN said, the Directors had no intention of going to Parliament for such an Act without the sanction of a general meeting, and then the question could be discussed.

Mr. GAINSFORD wished it to be understood, that his observations did not refer to the branch to Ware.

Mr. BELL said, if Mr. Vizard would move that the paragraph alluded to in the Report be expunged, he would second it.

Mr. VIZARD accordingly moved an amendment to that effect.

Mr. BELL, in seconding it, said, he believed the extension would be advantageous to the Company, but he must protest against the proprietors being dragged into the scheme.

Mr. LEVY thought no good purpose could be served by the amendment, as it was clear that the Directors could not proceed, and would not attempt to proceed, until the matter had been further discussed. He hoped, for the sake of unanimity, the amendment would be withdrawn. (Hear, hear, hear.) The honourable proprietor strongly deprecated personal altercations in the management of public business.

Mr. VIZARD would not withdraw the amendment.

Mr. CRAWSHAY thought it right that the subject of the extension to Cambridge should be kept before the proprietors. If they did not carry it out, perhaps Parliament might allow other parties the power of forming other junctions, which would seriously affect the Northern and Eastern Railway. (Hear, hear.) He thought the omission of the paragraph referred to would be very prejudicial, as intimating that the field was open for other parties. (Hear, hear, hear.)

Mr. BELL said, if he had previously heard that explanation of the reason why the matter was alluded to in the Report, he would not have seconded the amendment. He hoped Mr. Vizard would now withdraw it. (Hear, hear, hear.)

Mr. VIZARD said, there was considerable weight in Mr. Crawshay's statement, and he would therefore withdraw the amendment. (Hear, hear, hear.)

The original motion was then carried unanimously.

Mr. HARVEY moved that a dividend of 20s. per share clear of the Income Tax, be declared, payable on and after Thursday, the 25th instant.

Mr. BELL seconded the motion, which was then put, and carried unanimously.

Mr. GAINSFORD suggested that 16 Directors was too large a number for a line of 29 miles (of their own).

The CHAIRMAN said, it was not proposed to fill up the three vacancies now existing, so that the number would be 13.

Mr. LEVY jocularly observed, that the goods' traffic would be so large that they would require the services of more Directors.

Mr. CRAWSHAY hoped that in that case they would secure the services of a gentleman so well qualified as Mr. Levy.

Mr. LEVY said, he must decline the honour. He preferred coming to the meetings of Railway Companies to find fault, rather than be found fault with. ("Hear, hear," and laughter.)

The CHAIRMAN said, the Board had given great consideration to the best plan of re-issuing the forfeited shares, and they would now suggest a scheme upon which they had no very strong feeling themselves, and upon which they did not now seek to take the sense of the proprietors, but merely to lay it before them.

The SECRETARY then read as follows :—

3,186 forfeited shares, to be sold by public auction, in lots of 10 each, subject to the payment of 10*l.* if sold at a discount, and 10*l.* in addition to the premium if bought at a premium; and to the further payment of the following instalments:—

£10 on January 1, 1843.
£10 on July 1, do.
£10 on January 1, 1844.
£10 on July 1, do.

Upon which first payment, and all subsequent instalments, interest will be paid at the rate of 5 per cent. per annum in lieu of dividend, unless the dividend upon the shares shall from time to time exceed the rate of 5 per cent. upon the amount paid up, in which case the rate of interest upon the said deposit and instalments shall be made proportionate with the per-centage of the dividend upon the shares upon each half-yearly amount.

Reserved bidding of the Company to be 5*l.* per share discount.

Mr. LEVY decidedly disagreed with this scheme, and recommended that the shares should be apportioned *pro rata* among the present proprietors.

A desultory discussion ensued, as to the necessity of *selling* the shares, during which Mr. Maynard, the Solicitor of the Company, reiterated the opinion which he had given at the last meeting, that by the Act a *bona fide* sale must take place, although the manner of that sale rested with the Directors. It was ultimately settled that a copy of the suggestion above made should be forwarded to every proprietor, who should be invited to express his sentiments on the subject.

Mr. GAINSFORD inquired, what liabilities were to be met by the re-issue of forfeited shares.

The CHAIRMAN said, there was 100,000*l.* due on bonds which must be met by the sale of shares. There were on acceptances 66,900*l.*, and other bills amounting altogether to 104,100*l.*

Mr. HARVEY saw, from the accounts, that a sum of 743,000*l.* had already been expended. Was he now to understand that two further sums of 100,000*l.* and 104,000*l.* had to be paid?

The CHAIRMAN said, the 100,000*l.* was included in the 743,000*l.* The 104,000*l.* would have to be added.

Mr. HARVEY made an inquiry respecting the call still to be made.

The CHAIRMAN said, it had been stated at the last meeting, that the call would not be required till next January. He hoped and believed that it would be deferred till then, but he would not pledge himself to the fact.

After some further remarks,

The CHAIRMAN called upon Mr. Bagshaw to propose the vote of thanks to Mr. Crawshay, to which he had previously alluded.

Mr. BAGSHAW accordingly, in a very forcible address, which called forth repeated plaudits, passed a high eulogium on his honourable colleague, expatiating upon his unwearied exertions in promoting the interests of the undertaking, especially for the bold and fearless steps which he had taken to rescue the Company from almost insurmountable difficulties. He congratulated Mr. Crawshay on the successful completion of his labours. He had laid the seeds of one of the best undertakings in the kingdom, and as surely as he was now addressing the meeting, would the line ultimately become the main trunk for the whole of the northern and eastern districts of England, and its revenue transcend that of any other railway. He begged to propose,

"That the thanks of this meeting be freely given to Wm. Crawshay, Esq., our late Chairman, for his untiring zeal and activity—his unwearied attention, to the concerns of the railway; and the expression of our sincere regret that circumstances should have arisen to prevent his future exertions being continued to an undertaking that, under his Chairmanship, has progressed to completion."

He did not think there would be a dissentient voice in that assembly, and, therefore, without the formality of waiting for a seconder, he would propose his motion, in the certainty that it would be carried by acclamation.

The meeting rose *en masse*, and amid great applause carried the proposition, whereupon

Mr. BELL said, he should be glad in order that the vote of thanks might be really what it professed to be, if Mr. Crawshay would give an explanation upon a subject of much importance to the Company. There could be no doubt that they owed much to the zeal and unpaid exertions of the Directors generally, and of Mr. Crawshay in particular, but nevertheless, it was desirable that the matter to which he alluded should be cleared up. The honourable proprietor then said, he had not been present at the last meeting, but had seen a report of the proceedings in the *Railway Times*. A call of 5*l.* had been made, but subsequently the Directors had issued a circular stating that it would not be required till January. The effect of this announcement was, that the shares rose in the market, whereupon, as he understood, Mr. Crawshay and another party had sold 200 shares, thus realising a considerable profit. Now, he wished to know if such sale took place after the circular had been issued, for in that case the deferring of the call might have been determined on with a view to affect the market, so as to enable Mr. Crawshay to realise a profit. The honourable proprietor strongly deprecated trafficing in shares by Directors, and concluded by stating, that the injury which must necessarily result to the Company from even the suspicion of such conduct on the part of a member of the Board, would form his justification in calling for an explanation. It might be that he should have to apologise to Mr. Crawshay.

Mr. CRAWSHAY said, he did not wish, and did not value, an apology from the proprietor. He had already stated under his own hand in the *Railway Times*, that he had disposed of 200 shares, even then retaining 400, some of which he had since parted with. He had as much right as any one in the room to sell any portion of his shares he pleased, but he denied having trafficked in shares. He had only bought the 600 and sold part of them, as already explained. Moreover, he had previously stated, that so far from the sale of the 200 shares being the *effect*, it was the cause of the determination of the Board at large to dispose of the forfeited shares when they saw with what facility the 200 were disposed of at a trifling discount. He appealed to the Board whether this was not the fact. [The BOARD—Yes, certainly.] Thus much as to any information which it might be supposed he had acquired in the Board-room.

Digitized by Google

When his connection with the Northern and Eastern Railway first commenced the shares were almost worthless. He with others had at that time pledged himself to hold 200 of the original 100*l.* shares, or 400 of the present shares, until the line should be opened to Bishop Stortford. That pledge he had kept, but the other 200 he had a perfect right to do with as he pleased. (Hear, hear, hear.)

Mr. HARVEY said this matter had been explained at the last meeting, to the satisfaction of the proprietors. (Hear, hear, hear.)

Mr. BELL said, *he* was not satisfied.

[Mr. Crawshay here adverted to the fact that Mr. Bell's brother had formerly been an officer in the Railway Company's service, and ascribed what he called the attack of Mr. S. Bell to the circumstances connected with his brother's resignation. Mr. Bell wholly disclaimed such motive. After a good deal of personal altercation, Mr. Crawshay expressed his regret that in the heat of the moment he should have alluded at all to Mr. Bell's brother. Under these circumstances, no good purpose could be served by reporting at length this part of the proceedings.]

Mr. BELL pressed for a statement of dates as to the sale, and energetically protested against the doctrine of Mr. Crawshay, that a Chairman of a Railway Company had as much right as other proprietors—moral right, for the legal right was undoubted—to sell his shares.

Mr. WM. ROUTH (a Director) said, the call had originally been made to fall due on the 1st of April, but had been postponed in consequence of the facilities offered for borrowing by the easy state of the money market. The circular announcing that fact was issued in the middle of April, and he found from the Company's books that Mr. Crawshay's shares were sold in June, and not before; thus showing that the issue of the circular and the sale of the shares had no connection. (Hear, hear, hear.)

Mr. BELL—The circular in April—the sale in June! The shares raised in the market, and then the sale!

Mr. LEVY said, he was glad Mr. Crawshay had sold these shares, for he (Mr. Levy) had bought some of them, and he believed they would soon be worth more than he had given for them.

The meeting seemed to be of the opinion that this subject should be dropped, and the Chairman said, he believed the vote of thanks had been carried by acclamation.

Mr. CRAWSHAY (who appeared much affected, and who was throughout his address greatly applauded) said, he was grateful for the mark of approbation and confidence thus bestowed upon him. Any little objection on the part of an individual would not weigh with him, nor would even the withholding of the vote altogether, for he could conscientiously say, that he had never taken one step since his connection with the Company but to promote its interests, nor was he conscious that he had omitted any exertion to secure that object. He believed no Company had encountered so many difficulties, and looking back on those difficulties, it was gratifying to find that the condition of the undertaking was now such that he was able to sell at 2 or 3 discount, when it was well known that at one time the shares were at a discount of 27 or 28. He thought he might say, without the imputation of vanity, that he himself had been instrumental—mainly instrumental—in raising the shares to their present position, and he had no doubt that if the proprietors had manfully decided on a recent occasion to sell those which had been forfeited, the stock would now have been at par. But whatever might be the nominal value of the shares, he had the pleasure of introducing to the meeting a proposal from highly respectable and responsible parties offering to lease the line for 5 years, paying 5 per cent. on the outlay, and dividing equally any surplus profit. The proposal had come before the Board through a most respectable solicitor, and the Board had thought it best to lay it before the proprietors, leaving them to deal with it as they might think proper.

The following letter was then read:—

"Sir,—I have been requested to inquire whether the Directors of the Northern and Eastern Railway Company would be disposed to negociate for the letting of their line upon the following basis, they being of course satisfied as to the responsibility of the intended lessees.

"A lease to be granted of the railway, with all the stations and carrying stock of every description for a term to be agreed upon, at a rent which shall secure to the proprietors 5 per cent. upon their outlay, and one-half of the surplus profits beyond that amount, such rent to commence upon the completion of the Hertford and Ware branch; and in the meantime the lessees to undertake the working of the line without remuneration, unless the profits shall exceed 5 per cent., in which case they should receive the same proportion of the surplus profits as before mentioned.

"The Directors to engage to complete the Hertford and Ware branch within 12 months, at a cost not exceeding 60,000*l.*, or the lessees would engaged to complete it for that sum, and take the amount in shares.

"The lease to contain all proper covenants for maintaining the railway and buildings in proper repair and working condition, the engines and carrying stock to be valued at the commencement and upon the determination of the lease, and the difference in amount received by or paid to the lessees as the case may be.

"In submitting this proposal I am desirous of adding that the parties whom I represent are deeply impressed with the conviction that the success of their enterprise will mainly depend upon the cordial co-operation of the Directors, and it is not their wish therefore to press it in any way unless it meets with their full concurrence; and should it be entertained by them in this spirit, I shall be prepared to communicate the names of the intended lessees, and to enter into immediate arrangements for carrying it into effect. I am, Sir, your most obedient servant,

(Signed) "CHAS. PARKER.

"Lincoln's-Inn Fields, July 29, 1842."

This announcement seemed to take the meeting very much by surprise, and a short discussion ensued, but ultimately it was considered desirable that no decision should be come to at present.

Mr. LEVY said, they had better keep the undertaking in their own hands. At any rate, if they let the line they should have the benefit of competition, and he was satisfied that equally responsible parties would pay 8 per cent. interest.

The CHAIRMAN said, a special meeting could be called on the requisition of a certain number of proprietors to discuss this matter.

Mr. STOBART inquired if there would be any reduction of the short distance fares consequent on the settlement of the dispute with the Eastern Counties' Company.

The CHAIRMAN replied in the affirmative.

Mr. CRAWSHAY brought forward a resolution granting a further indulgence of a year to Mr. John Williams, in respect of 562 shares of 100*l.* each, under circumstances which have been repeatedly detailed. The hon. gentleman spoke highly of Mr. Williams's private character, and of the exertions which he had from the first made to promote the advantage of the Company.

Captain PROBYN seconded the motion, which was unanimously carried.

It was understood that Mr. Williams should hold his interest in these shares on the terms embodied in the resolution of February last, with this difference, that he should now pay 5 per cent. interest instead of 6 per cent., the Company then paying 6 and now only 5 on money borrowed.

Mr. WILLIAMS made a suitable acknowledgment.

Mr. LEVY moved the cordial thanks of the meeting to the Chairman and his colleagues, for their exertions, and spoke highly of the prospects of the line.

The motion was seconded by Mr. Gainsford, and carried by acclamation.

The CHAIRMAN returned thanks, and the meeting broke up.

LONDON AND BIRMINGHAM RAILWAY COMPANY—GENERAL MEETING.

THE half-yearly general meeting of the proprietors of the London and Birmingham Railway Company was held yesterday, at the Euston Hotel, Euston-square; GEORGE CARR GLYN, Esq., in the chair.

The advertisement calling the meeting having been read,

It was unanimously ordered that the seal of the Company be affixed to the several registers of shares, which was done accordingly in presence of the meeting.

The minutes of the last half-yearly meeting, held in Birmingham in February, and of the special meeting held at the Euston station on the 1st of July last, were next read and confirmed.

The CHAIRMAN then spoke to the following effect:—Allow me, gentlemen, to claim your indulgence for a very few moments, before I bring forward a resolution founded on the Report of the Directors, which will be submitted for your approval. During the last six months, since we had the pleasure of meeting you for the purpose of declaring a dividend, railway matters and interests have not ceased to occupy a very leading place in public attention. There has been presented to Parliament a Bill for the further regulation of railways—a Bill gentlemen, which I do not hesitate to say, after the various interviews which passed between the deputations from the Companies and the Board of Trade, is, on the whole, calculated to do the interests of railways very considerable service. My only regret, gentlemen, in connection with the Bill is, that one clause, which was inserted in it on an understanding between the Companies and the Government, although pressed by the latter, was rejected by the House of Commons. I am aware that in many minds there has existed for some time past a feeling that the proceedings of the Board of Trade ought to be regarded with jealousy: I am, gentlemen, one of those who do not lose sight of the necessity of keeping our eyes open to that opinion, but dealing as I, in common with many others who feel an interest in railways, have had occasion to do, with the Railway Department of the Board of Trade, both under the existing and previous Governments, I feel it is only due to the officers of the Board to state that, they have always been ready to listen to our representations—to give us a candid hearing—and as far as their duty to the public would permit, to receive and act upon every suggestion with the best possible feeling. (Hear, hear, hear.) I am inclined to believe, gentlemen, that should this cordial co-operation continue to subsist, the Board of Trade, constituted as it now is, may become a valuable accessory to railway interests. I am convinced, gentlemen, of this, that it is not for us or to our advantage that we should seek not to be watched. Seeing that a great responsibility rests upon us, I think that publicity and vigilance on the part of the proprietors, and of those who are appointed to superintend the working of the system, are equally necessary and desirable. (Hear, hear.) Upon one other topic as connected with the public proceedings of railways I may be allowed briefly to touch, more especially as it has involved considerations of some importance to this Company. It may be in the recollection of honourable proprietors, although never before formally noticed in this court, that in the session of 1841 an application was made to the then Chancellor of the Exchequer, by certain Railway

Digitized by Google

Companies in Scotland, and the north of England, for an alteration of the passengers duties. It is but justice to the right hon. gentleman who then held that responsible office to say, that nothing could be fairer than the mode in which he dealt with the proposition. He admitted, as we admitted, that the existing mode of levying the duty was not the best and most equitable that could be suggested; but he replied, that he considered a compact had in this case been made with the railway interests generally, and therefore, that unless the Companies could come to a mutual understanding, he would not press the proposed alteration against the wish of any particular section. From the sudden close of that session, no further proceedings were taken in the matter, but early in the present session, we —and in that phrase I include the Companies connected with London and the two principal Companies in Lancashire—were apprised that a renewed application had been made to the newly-appointed Chancellor of the Exchequer, with a view to the modification of this tax. We were exceedingly surprised, gentlemen, on receiving that communication, to find that not only was an alteration proposed, but that the very mode of making that alteration was suggested. And when I tell you, gentlemen, that the proposal thus made would, if carried into effect, have quietly saddled this Company with an additional payment to the Tax-office of upwards of 6,000*l.* a year, without any return at all, you will not be surprised that we, in common with others similarly affected, felt it our duty to move in the matter. The result of the negociations which took place was, I am happy to say, most satisfactory. We at once met the deputation from the northern lines, and although they were placed in some difficulty from their previous conferences with the Chancellor of the Exchequer without concert with us, they did admit the comparative injustice of the position in which we were placed, and most earnestly co-operated with us to get the tax put upon a basis which should be equitable to all parties. The result of this arrangement is, that the tax is now to be changed from the imperfect and unequal mode of levying hitherto existing, to a duty of 5 per cent. upon the gross passenger receipts. On reference to the figures which you hold in your hands you will see, gentlemen, that now—even now—it does entail upon the London and Birmingham Company a little additional payment of duty, over and above what we have heretofore paid; but my colleagues and myself did not hesitate to make a trifling, and as I believe a temporary, sacrifice for the purpose of uniting in one body the whole railway interest. And I confess, gentlemen, I was the more particularly anxious to do this, because I feared that in future years an attempt would be made to increase the tax altogether, and felt that it was better we should come to a compact on a point like this of comparatively little moment. (Hear, hear, hear.) To pass, gentlemen, from public topics to those which more immediately interest ourselves, permit me to state that we have worked for the last six months, that is from the 1st of January to the 1st of July, without a single casualty of any moment having occurred. (Applause.) In that interval, gentlemen, we have heard a great deal of the comparative merits of four-wheeled and six-wheeled engines. It is not for me to impugn the practice of other Companies. They doubtless have sufficient reasons for the course they adopt, and all that we ask of them is, that they should allow us to continue a system which in practice has worked exceedingly well ever since the opening of our line—which certainly was not adopted by us without mature deliberation, and which I am convinced the more it is inquired into will still further show that the calculations which we entered into were not incorrect. (Applause.) I rejoice, gentlemen, that this question is being so fully investigated in a variety of quarters, because I believe the result will prove that in the course we have adopted we have not been forgetful of your interests, nor the interests of the public. (Hear, hear, hear.) It would be wrong, gentlemen, if I passed from this part of the subject without alluding for one moment to the state of our establishment. It has been the custom in this Company to make a portion of the remuneration of the most important part of our working establishment—I mean the engine-drivers, switchmen, and policemen—contingent on their good behaviour; and I am sure, gentlemen, you will be pleased to learn that the amount which we have paid during the last half-year in the shape of gratuities has been very greatly increased. (Applause.) This, gentlemen, I attribute in a great measure to our establishment at Wolverton, where we have now succeeded in placing our servants in that degree of comfort which we had always endeavoured to secure; and I hope that in a very short time I shall be enabled, through the contributions of those individuals who may feel so inclined, to announce to the Radcliffe Trustees that they may commence erecting that church which they propose to do whenever the private subscriptions—*private* subscriptions, gentlemen—reach a specified amount. (Much applause.) It is only right, gentlemen, that I should tell you that this Company, in common with all other Companies in the kingdom, has been seriously affected in its receipts by the existing commercial distress. We have not realised that increase of traffic which we had anticipated, and which we thought we might anticipate on fair grounds, but this, as I have already said, may be traced to the unexampled depression which has prevailed, and unfortunately still continues to prevail in the manufacturing districts of the country. Indeed, gentlemen, if you refer to the accounts now in your hands, you will find that the figures there given bear me out in this statement. But although our receipts have not come up to our expectations, and although they will not allow us fully to propose the dividend which will be submitted for your approval, yet there is another source of profit which has arisen to us within the last few months, and which we think it is but just and equitable should now be divided among you. I allude, gentlemen, to the profit realised on the sale of the shares which were not appropriated among the proprietors, and which will enable us to make up a dividend of 5 per cent. for this half-year. (Loud applause.) And, gentlemen, I accompany this declaration with an assurance, that your Directors, acting in the spirit which has invariably guided them, of never holding out expectations not likely to be realised, would not have considered themselves justified in proposing this increase did they not see strong reasons to believe that this 5 per cent. dividend for the half year—that is, 10 per cent. per annum—can be permanently maintained. (Much applause.) This dividend, too, is made without any interference with that principle which has been laid down by you at three consecutive meetings, of keeping up a fund fully and fairly proportionate to the depreciation of stock. (Renewed applause.) Those of you, gentlemen, who will take the trouble to walk across the way, will see that we have already begun to carry out those improvements at the terminal station which we announced to the proprietors, when we had last the pleasure of meeting them, it was our intention to effect. I can assure you that these alterations have not been undertaken before they were absolutely required, and I have no doubt that, without incurring any excessive cost, and without any great pretensions, we shall be able to afford to the public that accommodation which they have a right to expect, and which our position as the great connecting line with the north imperatively requires. There is one other point respecting which I wish for a moment to trespass upon your attention, namely, with respect to the accommodation of the through traffic. We are carrying out arrangements with this object, with the full intention, as far as rests with us, of completing them; but as yet they are not so efficient as we could desire. What course we may think it necessary at the next meeting to recommend to the proprietors, with reference to this matter, depends upon circumstances and causes which I cannot at this moment undertake to explain. Many persons are of opinion that a concentration of management might be effected, with advantage to the Companies and benefit to the public, but I merely allude to the subject to-day in order that you may not be taken by surprise should this matter hereafter become the subject of considerable discussion. One word, gentlemen, as to the proposed Warwick and Leamington Railway, which formed the subject of our late special meeting. Since that time, the prediction which I then ventured to utter has been fulfilled. The Leamington proprietors, with great discretion on their part, have abandoned to the London and Birmingham Railway Company the whole of their interest in the Leamington line, and we are in point of fact the possessors of that undertaking. (Hear, hear, hear.) It is our duty, gentlemen, to carry out the scheme with the strictest economy. We are prepared to go into an investigation of the accounts that have been rendered to us, and of the sections and estimates which have been prepared with that view. We do not feel ourselves bound implicitly to follow out the plans which have been handed over to us by the other Company, for if we can still further promote economy it shall be done, without reference to anything that is past. The resolutions appended to the Report will detail the mode in which we mean to deal with the creation of stock contingent on that undertaking; but it is not our intention to issue that stock to the proprietors during the current half-year. With your permission, gentlemen, I will now call upon the Secretary to read the Report.

The hon. gentleman resumed his seat amid loud applause.

The Secretary (R. Creed, Esq.) then read the Report as follows:—

REPORT.

The results of the operations in the six months which ended on the 30th June last, according to the accounts before the present meeting, are as follows:—

The gross receipts (omitting the charge on rents, 535*l.*), are.....

The expenses, including the allowance for depreciation of stock, interest on borrowed capital, and the charge on rents, are .....

The net profit .....

The produce of the traffic exceeds by £ [illegible] which was received under the following heads in the corresponding six months of 1841:—

Digitized by Google

Passengers, horses, carriages, dogs, and parcels ..	£1,841
Merchandise	3,245
Cattle	749
Total	£5,835

The working charges on the traffic, classed as follows, are on the other hand 15,163*l.* less, namely—

Maintenance of way, and repairs	£5,480
Locomotive power	5,820
Police	516
Coach traffic charges, comprising repairs of carriages	2,949
General charges	725
	£15,490
Less increase on merchandise charges, comprising repairs of waggons	327
Total decrease on working charges	£15,163
The interest on borrowed capital is also less by ..	5,123
And the charge for depreciation of stock, by	220
	£20,506
The duty on passengers, however, is more by £388	
And parish rates by	712— 1,100
Making the actual reduction of charge	£19,406
To which adding the increase in the traffic	5,825
And in the rents	509
The increase of net profit for the six months, as compared with the corresponding half-year of 1841, will be found to be	£25,750

The most pleasing feature of this increase is that it chiefly results from a progressive decrease in the charges on the Company's revenue, and particularly in that portion which immediately attaches to the working of the traffic, and which, as appears by the June half-yearly statements, has been successively reduced from 34*l.* 16s. 7d. per cent. to 29*l.* 10s. 7d. per cent. and 25*l.* 3s. 8d. per cent.

The expenditure on the capital account is, for the six months	£49,579
But deducting from this sum the allowance charged for depreciation of stock in the revenue account	14,325
The increase of the total charge is	£35,250

With the exception of 3,840*l.* paid for settlement of claims for compensation to owners and occupiers of land on the line, and 1,877*l.* for outstanding bills of the Company's Solicitors for proceedings in Parliament, the expenditure is for new carrying stock, for the purchase of land and houses, and for construction of works and buildings, calculated to meet the exigencies of the traffic, but on a portion of which outlay, viz. 5,921*l.*, rent will be received.

The Directors have contracted for the additional buildings which, as stated in their last Report, are required to complete the Euston station, on terms which, owing to the present comparatively low price of materials, and a close competition amongst many of the most eminent builders, are decidedly advantageous to the Company.

The profit, 31,268*l.*, which has been already realised by the sale of 1,074 of the unappropriated new 32*l.* shares, will be found stated in a separate account (C), and with the residue of the half-year ending 31st December, added to the net profit for the last half-year (after deducting 14,325*l.* for depreciation of the carrying stock), leaves a sum of 42,260*l.* 15s. 4d. at the disposal of the proprietors.

The Directors recommend that a dividend be now declared of 5*l.* per 100*l.* of the capital stock, amounting to 242,288*l.*, which includes the profit realised to this date on the sale of the above shares. They further recommend that the Income Tax, chargeable from the 5th of April on the share of profits of each proprietor, be accounted for and paid by the Company out of the profits of the current half-year.

Referring to the minutes of proceedings of the special general meeting of the 1st ultimo, which are appended to this Report, the Directors propose to create 5,406½ distinct and integral shares, of the amount of 32*l.* each, to represent the capital of 173,000*l.* authorised to be raised under the powers of the Warwick and Leamington Union Railway Act; such shares to be allotted, or the value thereof accounted for, to the London and Birmingham Railway proprietors, in proportion to the interest which they respectively hold in the capital stock of this Company, and in conformity with the regulations adopted on the occasion of the last creation of 32*l.* shares.

The Directors have to report the opening of the Manchester and Birmingham Railway on the 10th instant.

The dividend will be payable on the 20th instant, to the proprietors whose shares were registered on the books of the Company when closed, provided all calls on such shares are paid.

The proportion of the dividend which arises from the profit on Sunday travelling, is at the rate of 4s. 11¼d. per 100*l.* of capital on old shares; 1s. 2¼d. per 25*l.* share; 1s. 7d. per 32*l.* share; and 9d. per new 32*l.* share.

III.

At a special general meeting of proprietors, held in pursuance of the provisions of the Acts of Incorporation, at the Euston Station, on the 1st July, 1842, GEORGE CARR GLYN, Esq., in the chair, it was resolved unanimously:—

1. That the Directors be empowered, on behalf of the London and Birmingham Railway Company, to purchase the undertaking called the Warwick and Leamington Union Railway, authorised by an Act of the present session of Parliament, with all the rights, powers, and privileges given to the Company incorporated by such Act, and to carry into effect the said undertaking by such ways and means, and under such direction and management as they may see fit; or otherwise to purchase, from time to time, such share or interest in the said undertaking, and such participation in the said rights, powers, and privileges, and to contribute towards and assist in the execution of the said undertaking in such manner and in such proportion, as to them may seem expedient.

2. That in order to provide the funds necessary for the above purposes, the Directors be empowered (subject to the provisions of the Act authorising the said Warwick and Leamington Union Railway) to create from time to time such number of new shares, on the undertaking of the London and Birmingham Railway, and under such terms and conditions as they may see fit, and to borrow from time to time such sums of money on the credit of the Warwick and Leamington Union Railway, as they may deem necessary.

The Report was much applauded.

The CHAIRMAN moved, that the Report be received, adopted, and printed for circulation among the proprietors.

Captain WATTS, R.N., had great pleasure in seconding the motion. An unexpected pleasure was at all times the greatest pleasure; and while he expected from the declaration made by the worthy Chairman at the last meeting that the present dividend would not reach 4*l.* 15s., he was gratified to find, that instead of a diminution there had been an increase. (Hear, hear.) It appeared to him that the Directors of this Company were either the most fortunate or the best behaved set of men that could be placed at the head of a great undertaking. They never got into difficulties or scrapes, and from one end of the kingdom to the other he heard nothing of them but praise. (Hear, hear, hear.) He congratulated himself and his fellow proprietors on the present condition and brilliant prospects of the Company, for if there were any undertaking which more than another held out the prospect of progressive improvement, it was the London and Birmingham Railway. (Hear, hear, hear.) The gallant proprietor concluded with a high compliment to the admirable management and zeal displayed by the Directors.

The motion was then carried unanimously, as was also another for the payment of the dividend mentioned in the Report.

Mr. PARSONS suggested the propriety of establishing depots in central parts of London for the reception of parcels, and that the Directors be authorised to enter into negociations with other Companies for promoting this object, should they think fit.

The CHAIRMAN assured his hon. friend in all sincerity, that any suggestion emanating from him, who was, perhaps, more experienced in the working of railways than any other gentleman in London, should receive every attention from the Directors. He considered this suggestion a very valuable one.

A PROPRIETOR inquired if on paying up the uncalled-for instalments on the new 32*l.* shares, he would receive interest at 5 per cent.?

The SECRETARY replied in the affirmative.

The CHAIRMAN alluded to the holding of the half-yearly meetings in London and at Birmingham alternately, and stated that February was found very inconvenient for the Birmingham meeting, owing to the commencement of the Parliamentary session. The Directors had the power of holding either meeting in Birmingham, and he only alluded to the subject now in order that if hereafter the February meeting should be held in London, and the August meeting at Birmingham, the proprietors might not be taken unprepared.

Mr. PARSONS further suggested that the meetings should be held on some other day of the week than Friday, for the convenience of the journals specially devoted to railway affairs.

Captain WATTS referred to the payment of the last instalment on the original 100*l.* shares, fixed for January next, and inquired if the Chairman could state when it was likely any future calls on the new 32*l.* shares would be made. He hoped, not for his own sake but for that of others, that there would be some considerable interval between them.

The CHAIRMAN said, it was not the intention of the Directors to make the calls on the new 32*l.* shares early ones. They hoped to avail themselves of the present state of the money market to defer the calls for a very considerable time. The matter had received the best attention of the Board.

Captain WATTS said, it would be admitted that at one time the calls had been rather heavy on the poorer proprietors.

The CHAIRMAN could not admit that, considering the magnitude of the undertaking, the calls had been rapid. (Hear, hear, hear.) He would assure the gallant proprietor that when Mr. Creed and himself were examined before a Committee of the House of Commons, the Committee remarked that the Directors had gone to the full extent of their Act of Parliament in deferring the calls. (Hear, hear, hear.) The truth was, the Directors had rather strained the Act to relieve the proprietors. (Loud applause.)

Mr. BASSETT moved the warmest thanks of the proprietors to the Chairman and Board of Directors for their valuable services.

Mr. PARSONS seconded the motion, which was carried by acclamation.

The CHAIRMAN returned thanks. A gallant proprietor had called them fortunate. They were indeed fortunate in having so strong a proprietary, one which had placed so much confidence in their management of affairs, and had given them credit for doing their best for the promotion of the general interest. That confidence it should always be their endeavour to deserve. (Applause).

The meeting then broke up.

LEEDS AND SELBY RAILWAY COMPANY—GENERAL MEETING.

ON Saturday last, the annual general meeting of the shareholders in the Leeds and Selby Railway took place at Scarborough's Hotel, John Gott, Esq., in the chair. From the statement of the accounts submitted to the meeting, it appeared that the balance on the Company's income was 3,250*l.*, and the reserve fund 13,316*l.* 17s. 7d. The Chairman remarked that there was nothing in the accounts requiring observation, but connected with them there was a new feature which it might be necessary to allude to—namely, that the Directors had determined to recommend the shareholders to pay the Income Tax out of the reserve fund, still making the dividend 5 per cent., or, in other words, to raise the dividend by the amount of the tax. The succeeding proposition was: it moved and carried unanimously:—"That the dividend be two and a half per cent. for the last half year." After the passing of this motion, the Chairman said, that according to the regulations of the Act of Parliament four Directors should retire annually, and that those who would on this occasion have to vacate office were Messrs. Audus, Gatliff, Whitehead, and John Gott. A motion was submitted by Mr. William Williams Brown, and seconded by Mr. James Brooke, to the effect "that the four gentlemen just named be re-elected, and that they have the thanks of the meeting awarded to them for their past services," which was carried unanimously. Thanks were then voted to the Chairman, who briefly acknowledged the compliment, and the meeting separated.—*Leeds Intelligencer*, Aug. 6.

ACCIDENTS ON RAILWAYS, *NOT* RAILWAY ACCIDENTS.

ON Thursday afternoon a shocking accident took place in the tunnel of the Liverpool and Manchester Railway. The unfortunate man who has met his sudden and dreadful death, is Hugh O'Connell, one of the civilest and best-conducted persons on the establishment. It appeared, that after assisting in loading the quarter-before-five train to Manchester, the deceased proceeded with it up the tunnel about 90 yards, and then jumped off, just at the moment the down train from Manchester was coming in, and it is supposed that he fell upon the rail while it was passing, his body being found *completely cut into two*, just below the ribs. His left arm was also fractured. The guard of the incoming train states, that he feared some accident had happened, as he felt something passed over. The deceased has left a wife in confinement or near it, and six children, to deplore his loss.—*Liverpool Courier.*

MIDLAND COUNTIES' RAILWAY.

To the Editor of the Railway Times.

SIR,—Complaints regarding the expensive management of railways are for the most part too well-founded; but from the impossibility of giving any simple rule for estimating what ought to be the expenditure, relative to the gross revenue, the charge of mismanagement can seldom be brought home to the guilty parties.

It may be laid down as a general rule, that the longer a railway is, the higher the fares, the larger the traffic, the nearer it is to a coal district, and the more level the country it traverses, so that the embankments may be small, and consequently, that the maintenance of way may be cheaply contracted for, the less ought to be the expense of management relative to the gross revenue; and *vice versa*. If we test the management of railways and the value of Boards of Directors to their respective constituents by the above rule, the Midland Counties' Railway appears to be the most expensively, and for the proprietary, the worst managed railway in England. Its length is 57 miles. It runs through a coal district. The fares are nearly as high as any in England. Its traffic averaged, during the half-year beginning 1st July, and ending 31st December, 1841, about 2,800*l.* a week; and the country it traverses is nearly level throughout, so that there are no embankments of any consequence; all of which circumstances, separately and conjointly, should have diminished the expense of management. Notwithstanding, the expenditure during the half-year above referred to, without including any fund for depreciation of stock, and exclusive of interest of borrowed money, was no less than 51 per cent. of the gross revenue. And the maintenance of way cost at the rate of 250*l.* a mile per annum; whereas the maintenance of way on the Glasgow and Ayr line, from Paisley to Ayr, a distance of 33 miles, through a similarly level country, is contracted for under 90*l.* a mile per annum.

But what economy need be expected from a Railway Company, the Deputy-Chairman of which is permitted to be concerned in a contract for supplying them with coals. Such a permission is in its very nature calculated to give rise to a mutual system of gif-gaf jobbing. Suppose an inferior or a dearer article were furnished to the Company by the Deputy-Chairman than what could be procured elsewhere, would any Secretary, Superintendent, or other paid servant of the Company, dare to hint to the proprietary, or even to the other Directors, that such was the case? No; it would be preposterous to expect it.

But then it will be asked, is it legal that a person should be concerned in a contract for the supply of any article to a public Company of which he is a Director? Or in other words, is it legal that a Director should be allowed to buy from, and sell to, himself, when acting on behalf of the Company by whom he is paid for his services? Yes, to the disgrace of the Solicitor who wrote the first Act for making the Midland Counties' Railway, it is legal. To the 142nd clause, which prohibits any person interested in a contract with the Company from being chosen, or continuing a Director, there is the following insidious appendage, which practically nullifies the apparent intention and ultility of the clause—"unless re-appointed, and such re-appointment be confirmed at some general or special general meeting of the said Company."

But then it will be asked, why did not the proprietary prevent his re-appointment? I will tell you why. In every railway that has been opened throughout for a year or two, it will be found, that on an average 19-20ths of the shares are held by non-residents, that is, by persons who reside at a distance from the railway, and cannot conveniently attend the meetings of the proprietary. The greater part of these non-resident proprietors are totally unacquainted with any of the Directors. In the Midland Counties' Railway there are no fewer than 24 Directors, each of whom may on an average know one or two non-resident proprietors, whose proxies they obtain; and the other non-resident proprietors, from not knowing whom to send their proxies to, send none at all. The Directors form a combined body, that act in union in prearranging and carrying their own measures; whereas, the other shareholders consist of isolated individuals, that can seldom or never have any prearrangement, or preconcerted measures to carry. The consequence is, that the proprietary have no power in controlling the management. And though a fourth part of the Directors usually go out of office annually by rotation, yet from the circumstance of their being re-eligible, they are almost invariably re-elected. In short, Boards of Railway Directors are to all intents and purposes self-elected bodies, that vote their own allowance for management (usually either 50*l.* or 100*l.* a year each for doing nothing), and can carry any measure they choose in defiance of the proprietary.

Such a state of things, instead of being productive of economical or efficient management, has a tendency to create sinecure and overpaid berths, and begets a mutual system of jobbing among the Directors, Solicitors, Secretaries, Superintendents, Engineers, and Contractors of Railway Companies. If one Director has a friend, or poor relative, or old servant, whether qualified or not, that he wants appointed to a vacant berth, the others out of courtesy vote for him, in the tacitly understood expectation that at a future time the like compliment will be repaid; and thus the interest of the proprietary is sacrificed.

But though, for reasons already stated, the proprietary of the Midland Counties' Railway had practically no power in preventing the Deputy-Chairman from being re-appointed, after becoming concerned with a contract for supplying coke to the railway, the other Directors had; and yet, in contempt of the opinion entertained by every disinterested shareholder in Great Britain, namely, that no person ought to be allowed to buy from, and sell to, himself, when acting for the benefit of others by whom he is paid for his services, they re-appointed him. On this charge alone, I consider the guilty parties as being unworthy of the future confidence of railway proprietors. Let their names be published in the *Railway Times;* and let those who disapprove of their conduct vote them out of Boards of Direction as soon as possible.

It is no defence to say that the Deputy-Chairman offered to supply coke as cheap as any other person. The charge is, that he was re-appointed a Director after becoming concerned in a contract with the Company. And the shareholders are not to be led away by any statement from the Chairman to the effect that the Deputy-Chairman's services are of great benefit to the Company, when they know the fact that the Midland Counties' Railway, taking everything into account, is the most expensively managed of any in England, and in cost of construction has already exceeded the original estimates more almost than any other. Under the present management the shares are not, in my opinion, worth more than 65*l.*; whereas, under equally economical management with the York and North Midland Company, they ought to be worth 100*l.*

In order to retrieve the sinking circumstances of the Company, I would suggest that a new Act to amend the previous ones be as soon as possible applied for, containing the following particulars:—

1st. Repealing the objectionable appendage to the 142d clause previously quoted, the clause being perfect without it.

2nd. Reducing the number of Directors to 9 absolutely, and not optionally, as the proprietors, or rather as the Directors choose, to 12, as is permitted by a supplementary Act lately obtained.

3rd. Enacting that the 9 largest shareholders at each half-yearly meeting be Directors till after the next half-yearly meeting, with power to appoint a Chairman out of their own number. And in case of any Director being unable to act from distance of residence, that he be authorised to appoint any other shareholder, who can, to act as his substitute, and to receive the allowance for so doing. (This recommendation may be objected to, and need not be insisted on.)

4th. Enacting that the Chairman of the Directors shall receive a yearly allowance of 100*l.*, and each of the other Directors, or substitutes, 25*l.*; making the total allowance for Direction 300*l.* annually, instead of 1,200*l.* as at present.

5th. Enacting that each shareholder shall have votes either by himself when present, or by proxy when absent, in exact proportion to the number of shares he holds, and not in any diminishing ratio as the shares increase.

The preceding enactments would in a great measure correct improper underhand management, and what is exceedingly desirable, would exclude small jobbing shareholders from attempting to get into the Direction for the sake of the allowance therewith connected. In order, however, to produce economical management in every department, it is necessary to interest as many of the servants of the establishment as possible, in promoting it. The expenditure of the Midland Counties' Railway, exclusive of interest of borrowed money, but including rates, taxes, depreciation fund, and all other expenses, if managed with only tolerable economy, should not exceed 40 per cent. of the gross revenue. Now, I would suggest, that Secretaries, clerks, superintendents, engine-drivers, and guards, should have their present salaries continued, only provided the total expenditure, including every charge, except interest of borrowed money, be within 2½ per cent. of 40 per cent. of the gross revenue for the two previous half-yearly balances taken together. And for every 2½ per cent. that it exceeds 40, that their salaries and wages be reduced 10 per cent. And, on the other hand, for every 2½ per cent. that it is less than 40, that they be increased 10 per cent. If this principle be adopted, it may be safely predicted that the Midland Counties' Railway shares, before a twelvemonth, will be selling at 100*l.*, instead of 69½, which is their present price.

In looking back to the account of the half-yearly meeting in August last, I find that Mr. Jessop, of Butterley Iron-Works, Derbyshire, opposed the re-appointment of the Deputy-Chairman to be a Director, on the ground of his being concerned in a contract with the Company. On this account, I recommend all shareholders to withdraw their proxies from those who hold them, and send them under cover to that gentleman as soon as possible, as it is requisite that they be forwarded to the Secretary, by him, at least five days before the meeting of the proprietary. The following is the form of the proxy prescribed in the Act of Parliament:—

"*A. B.*, of ———, one of the proprietors of the Midland Counties' Railway Company, doth hereby appoint William Jessop, Esq., of Butterley Iron-Works, to be the proxy of the said *A. B.*, to vote or give his assent to, or dissent from, any business, matter, or thing relating to the said Company, and its said undertaking, which shall be proposed at any general or special general meeting of the said Company, when the said *A. B.* shall not be present, in such manner as he the said William Jessop, Esq., shall think proper. In witness whereof the said *A. B.* has hereunto set his hand (or common seal) the —— day of ———, in the year of our Lord 1842.

"*A. B.*"

Provided Mr. Jessop, and the other parties who are dissatisfied with the present Direction, get the majority of votes, they should limit, agreeably to the 137th clause of the Act, the allowance for Direction to 300*l.* a year. And as the Directors, agreeably to the 143rd clause of the Act, are obliged to obey the orders and directions of general meetings of the Company, they ought to be instructed at the meeting to attend to whatever recommendations in this letter are deemed expedient, and to whatever else may be considered for the interest of the proprietary. And for the purpose of seeing that the instructions given at the meeting be properly followed out, Mr. Jessop, and as many of

Digitized by Google

his coadjutors as possible, should be introduced into the Direction.

I am, Sir, yours, &c.,
A GLASGOW CITIZEN.

Glasgow, July 23, 1842.

[This letter has been in type for a fortnight, but put aside by the influx of other matter. It is now too late to affect the proceedings of the meeting, but as it contains matters of great importance to the proprietors we think it right to give it, although somewhat out of season.—ED. R. T.]

SOUTH-EASTERN RAILWAY—RAILWAYS IN FRANCE.

To the Editor of the Railway Times.

SIR,—It would oblige some of the holders of South-Eastern Railway shares if the Directors, Engineer, or any friend to the Company, would publish a plan of the railways in Belgium and France, through the medium of your widely extended and most useful paper. Or if there is one already published, can you inform me where to get it?

Yours, very truly,
C.

August 8, 1842.

[There is no such plan published as that referred to. There ought to be, and we trust soon will be. ED. R. T.]

SOUTH-EASTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—Having read in your last number a letter from a proprietor, as to the present value of Dover shares, and as his data and figures do not coincide with mine, I beg you will in justice give insertion to the following. There can be no difference as to the number of shares being 56,000, but the capital to be raised by loan is, by my calculation, 936,000*l.*, viz., under 1st Act, 450,000*l.*, under 2nd Act, 266,000*l.*, with an additional 100,000*l.*, and by the London Bridge Station Act, 120,000*l.*, making a total of 936,000*l.* Taking the local traffic at 4,000*l.* per week, which under present prospects is more than ample—

For 52 weeks		£208,000
Expenses at 40 per cent.	£83,000	
Croydon and Greenwhich toll	23,400	
Interest on loans, £936,000	46,800	
		153,200
Total		£54,800

Which surplus gives about 19s. 9d. per share, or at the present price of 23 about 4*l.* 13s. 1d. per cent. This line, Sir, must adopt low fares, as on its completion to Dover (and should the branch lines to Canterbury, Ramsgate, and Margate, be ever completed), the competition by coach, and particularly by steam-boats, will be very great, and in consequence low fares must be held out to the public to induce them to travel by the railway. In corroboration of this I may here remark, that the coaches that go direct to London from Hastings and St. Leonard's are crowded, whereas the railway coaches are usually not filled. This must arise from the disinclination that the public have to the trouble and annoyance of being changed from one mode of conveyance to another. "A Looker-on" in No. 239 of the *Railway Times* has given his reasons to account for the recent fall in these shares, in most of which I coincide, but I certainly do not think that more capital will be required to finish the main line, although it does not look well that the entire capital should be called up a year or more previous to the opening. The average of these shares, deducting 235,000*l.* as loss by reissue of forfeited shares is, according to my reckoning, 33*l.* 6s. 2d., or adding to the above the interest paid out of capital, the average is still further reduced to 31*l.* 13s. 11d.

In conclusion, I beg to remark, that certainly the quotations on the Stock Exchange are no criterion of the value of shares, but from the present abundance of money, and from other causes, am of opinion that these shares will have a still further fall before November.

I am, Sir, yours, obediently,
A SUBSCRIBER.

Bexhill, August 8, 1842.

BIRMINGHAM AND GLOUCESTER RAILWAY.

THE following are the Circulars elsewhere noticed:—

Tewkesbury, August 2, 1842.

SIR'—The depressed value of the Company's shares—the expressed disappointment by the trade—and the great diminution in traffic, has led a Committee of shareholders to give much attention to the mode of management now in operation, and the result is a conviction, that no improvement can take place until a revision has been made. They therefore, in conjunction with a large body of shareholders, signed a requisition to the Board for a special meeting to take into consideration the detail proposed to be laid by them before the proprietors. The Directors have refused to call a special meeting, as being so near the half-yearly general meeting advertised to be held at the Waterloo Rooms, Birmingham, on the 19th instant, at 12 o'clock, precisely. The Committee, in common with a large body of shareholders, consider the experimental mode of management adopted in the early part of last year to be an entire failure, and earnestly request your attendance at the meeting—or if unable, your co-operation by proxy addressed to me, in favour of myself or either of the gentlemen at foot,* selected as two of the largest proprietors in the undertaking.

The Committee consider the present state of the Company's affairs no criterion of the value of the investment, there are very many lamentable deficiencies in the produce of the different branches of traffic as compared with the Parliamentary estimates, and which, I would remind you, have since been confirmed by a Committee of proprietors appointed for that purpose.

The Committee are of opinion that many of these sources of income may be very considerably improved.

They are also of opinion, that the cost of working may be much reduced, and subjoin a comparative statement of the cost of different lines, from which it will be observed the cost of this line is nearly double that of others.

I am, Sir, yours, faithfully,
GEO. TATE, Chairman of the Committee.

Miles.	Comparative Cost of Working.	Per cent.	
65	Birmingham and Gloucester on the receipts	81	
83½	Grand Junction	44	Average 63 miles.
112¼	London and Birmingham	39	
20¼	Lancaster and Preston	25	
10	Manchester and Bolton	33	Average 35¾ per cent.
50	Manchester and Leeds	39	
27	York and North Midland	31	
31	Liverpool and Manchester	47	
169¼	Great Western	42	

(CIRCULAR.)

Office, 12, Waterloo-street, Birmingham, August 4, 1842.

The Committee of Directors having sent to each proprietor a cautionary note, relative to a circular letter signed "George Tate," consider it desirable to follow up this note with a more explicit statement in reply to the circular in question.

It is asserted by Mr. Tate, as Chairman of a "Committee of Shareholders," that "the Directors have refused to call a special meeting, as being so near the half-yearly general meeting."

The reply of the Directors to the requisition was as follows:—

"Resolved unanimously—That the Board, having given the requisition the best consideration, are of opinion, that as the general meeting is so near at hand, when it will be competent to the proprietors to inquire into the present system of management, and as the system will come under the review of the Board of Directors previous to that meeting taking place, when the accounts and other particulars will be before them, it is not expedient to call a meeting of the proprietors prior to the general meeting, and they therefore decline to comply with the requisition.

"That the Chairman be requested to convey the above resolution to Mr. Shaw and Mr. Ellins."

In addition to the reasons given as above for not calling a special meeting *prior to the general meeting*, the Board of Directors, while sitting, received from Mr. Ellins (who they understood had been chiefly instrumental in getting up the requisition) a letter, of which the following is a copy:—

"*To the Directors of the Birmingham and Gloucester Railway.*

"Gentlemen,—Being desirous of giving as little trouble as possible to the proprietary, I beg to suggest, on behalf of myself and the others who signed the requisition delivered to you on Thursday last for a special meeting, that the general half-yearly meeting about to be called be made special for the purposes of the said requisition, and I shall be happy to learn that this meets with your concurrence.

"I am, Gentlemen, your obedient servant,
"GEORGE ELLINS.

"Rigby, July 25, 1842."

Another assertion in Mr. Tate's circular is, that the "*cost of working*" the Birmingham and Gloucester Railway is "81 *per cent. on the receipts.*"

By referring to the last accounts laid before the February general meeting, the proprietors will find that this 81 per cent. must include the INTEREST OF BORROWED MONEY; which, though a charge against the revenue, cannot certainly be properly included under the head of "*cost of working.*"

The table, in the first line of which this assertion respecting the Birmingham and Gloucester Railway appears, contains also the "comparative cost of working" eight other railways. It does not appear that the interest of borrowed money is included in the expenses which give the proportions set against those railways respectively.

The intended comparison is therefore unfair.

The Directors, in conclusion, have to add, that the whole expenses of the half-year ended 30th June, are above 2,000*l.* less than those of the half-year ended 31st December.

(By order) GEORGE KING, Sec.

* Charles Shaw, Esq., Birmingham.
George Ellins, Esq., Rigby House, near Bromsgrove.

RAILWAY PLEASURE EXCURSIONS.

THE excursion of the Choral Society on the Croydon Railway, to which we referred last week, came off on Tuesday, and gave great satisfaction to all concerned. There were about 800 visitors to the beautiful gardens at Anerly.

We gave, on Tuesday last, a description of the scene at Edge Hill on the previous day occasioned by the departure of the trains for London. The trains reached London respectively at 6 and 7 in the evening, and the passengers were soon spread amongst the population of that vast city. On Tuesday morning numerous parties were to be seen threading their way through the crowded streets, gazing with astonishment at the unusual scenes around them, and anxiously inquiring for the various objects of interest and attraction which are to be found in such abundance in London. On the succeeding days, many availed themselves of the rapid and cheap modes of travelling by railway and steam-packets to visit the interesting spots around the metropolis. Greenwich, Woolwich, Gravesend, &c., were among the places thus visited, and many found their way to Windsor, in order, if possible, to have a peep at England's Queen, a desire which, we believe was gratified. The trains started, on their return to Liverpool, at 10 and 11 o'clock on Thursday evening. The whole number of passengers, however, did not return by them, many being unwilling to leave London so soon, preferring rather to pay the extra charge by the regular trains to a curtailment of their pleasures. We understand, that, in the course of a month or two, there will be another trip of the same kind.—*Liverpool Standard*, Aug. 9.

NOTES TO THE TRAFFIC TABLE,
(on the opposite page.)

3. Main line, 53 miles; Tewkesbury branch, 2. — Total length, 55 miles.

4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone. The Company are now before Parliament for power to raise the capital to 500,000*l.*

8. Receipts include the Northern and Eastern toll, &c.

12. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester and Chester and Crewe lines, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 134½ (83½+21+31.)

14. The receipts include those derived from the Cheltenham and Exeter lines; the former opened for 18 miles, and the latter for 45. The divisor employed to ascertain the daily receipts per mile is therefore 181½ (118½+18+45.) The *rent* of the branch lines is together about 1,163*l.* per week. There is likewise a *toll* payable to the Exeter Company of a farthing per passenger and per ton of goods per mile travelled.

15. The dividends have been hitherto (up to 31st December, 1841) appropriated to completing the line and works.

17. The 34*l.* 10s. 2d. from goods, &c. is for toll only.

18. Ten per cent. is the maximum dividend allowed by the Company's Act.

19. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. The dividend is *nominally* at the rate of 10*l.* per cent., but to the original shareholders it is equal to upwards of 11*l.* per cent., as the dividend on the original shares is paid upon 100*l.*, although only 90*l.* has been called for. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

20. The dividend is from the opening, and on the old shares alone.

21. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table. The traffic of the six months produced 63,326*l.*, and there was a balance from the previous half-year of 12,479*l.* Out of these two amounts combined, the dividend (after making certain deductions) was paid.

22. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company. The sum applicable to the purpose of the dividend declared on the 10th of March, was 11,125*l.*, of which amount 10,051*l.* 17s. 1½d. had been earned prior to July 31st, 1841.

23. Capital of 993,300*l* includes new capital for widening the line, &c. The dividend of 7s. 6d. per cent. does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table includes the receipts from the footpath, but is exclusive of the Brighton, Croydon, and Dover toll.

24. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount. The Gosport branch is included in the length stated.

25. Including Toll, &c., from Sheffield Company, and after deducting omnibus charges, &c.

26. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

27. The 5,170*l.* 13s. 11d. are the receipts after deducting omnibus charges, and payments to other Companies.

28. The receipts for goods, &c., include, horses, 41*l.* 5s. 0d.; carriages, 80*l.* 7s. 0d.; dogs, 3*l.* 5s. 6d.; parcels, 255*l.* 15s. 2d.; cattle, 261*l.* 7s. 0d.; corn, 2*l.* 13s. 0d.; heavy goods, 603*l.* 16s. 6d.; coal and lime, 113*l.* 15s. 4d. —Total, 1,127*l.* 4s. 6d.

31. The 3,850,000*l.* is the *nominal* capital on which dividends have to be paid; the amount actually raised is 3,000,000*l.* The details of the receipts are as follows:—Passengers, 3,115*l.* 18s. 10d.; carriages and horses, 202*l.* 9s. 3d.; parcels, 198*l.* 15s. 3d.; mails, 50*l.* 5s. 9d.; merchandise, 1,201*l.* 18s. 10d.; minerals, 292*l.* 18s. 8d.; cattle, 29*l.* 13s. 8d. — Total, 5,091*l.* 0s. 3d.; including North Midland proportion of Manchester and Leeds traffic, and amount received from Sheffield and Rotherham Company.

32. The receipts are after deduction of Liverpool and Manchester toll.

33. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 134*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 32½ miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

34. The capital of 533,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).

35. The returns are inclusive of Manchester and Birmingham toll.

37. The length stated includes branches.

39. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

Our Stamford *correspondent will, we think, find the average about* 50,000*l. per mile.*

E. C.—*Wait till after the meeting.*

A. B. *has our best thanks. He will see that we have made the necessary correction.*

Great Western Railway.—*A* Bayswater *correspondent complains bitterly of the want of suitable accommodation at the general meetings of this Company. We daresay the Directors will look to it. We shall be glad to hear from our correspondent on the other points of his letter so soon as the bustle of the meetings has gone over.*

What does A Looker-on *mean by his suggestion for the establishment of a pawnshop for locomotive engines near the London-road? He must be more explicit.*

Q. U.—*Much obliged.*

Scrutator.—*We cannot insert communications, of which copies have been sent simultaneously to other journals.*

H. H.—*The holding of shares by trustees will depend upon circumstances. We cannot see any (general) objection to the arrangement. Certainly such Trustees may act as Directors, if otherwise duly qualified.*

General Drainage and Distribution of Water.—*Mr. J. Bailey Denton, of Gray's Inn square, has just sent forth a very sensible pamphlet on this subject. It scarcely comes within our sphere, except that if Mr. Denton's plan were taken up, in its full extent, it would afford much employment to engineers. We recommend the subject to the attention of the parties more immediately interested.*

Inquirer *writes thus:—"Some of your able correspondents, who are concerned in the management of railways, or are engaged in the construction of locomotive engines, would oblige me very much by informing me why it is that such very heavy engines are now in general use on most railways, and what necessity there exists for such enormous machines?"*

Brighton Railway.—*Mr. Troup wishes us to state that he was the holder of 80 shares when he was first informed of the questionable proceedings of the Engineer and Directors, and before he parted with a single share he gave the shareholders timely warning to protect themselves. As they neglected to do so, he disposed of 79, and became a loan creditor, and the holder of one share only. We understand that next to Sir Isaac Lyon Goldsmid, he has a larger local interest than any other shareholder in Sussex.*

Taff Vale Railway.—*We give to-day, for the first time, the returns of traffic upon this line, and hope to be able to continue them weekly.*

A correspondent complains that certain of the officers of the South-Western Railway made themselves busy (under the sanction of their superiors) at the recent Southampton election. If the fact be so, we agree with our correspondent, that such interference in political questions is much to be deprecated.

Croydon Railway.—P. P.—*It will be seen by an advertisement, that something of the sort recommended has been adopted. We are glad of it.*

Cliens.—8, 12, 15. *The discount has been greater in all of them.*

Mulciber *should apply to a dealer in iron. We cannot speak practically on the subject.*

Lancaster and Preston Railway.—*A notice of the proceedings at the general meeting, held on Wednesday last, has reached us from three different quarters, but not in sufficient time to be made available this week. The pith of the meeting is given, when we say, that the lease of the line for 21 years by the Canal Company (which we were the very first to announce) has been unanimously agreed to by the proprietors.*

Yarmouth and Norwich Railway.—*We have in type a notice of the proceedings at the first general meeting of this Company, but it has been thrust out at the last moment. The resolutions will be found in our advertising columns.*

We wish all our correspondents would write legibly, upon one side only of the sheet, and not use the thin paper now becoming so fashionable. The additional postage would not be much, and a vast deal of needless trouble to us and our printers would be avoided.

THE RAILWAY JOURNALS.

The Stamp Returns for the nine months ending the 31st of March last (published by order of the House of Commons), show the following results:—

RAILWAY TIMES	**113,374**
Railway Magazine	50,500

The total number of Supplement stamps (for Double Numbers) used by the *Railway Times*, during the above period, was 10,874, thus showing the ordinary circulation of the *Railway Times* to be more than double that of its contemporary.

THE RAILWAY TIMES.

SATURDAY, AUGUST 13, 1842.

We refer with much satisfaction to the proceedings of the London and Birmingham Railway Company at their half-yearly meeting held yesterday. It will be seen that a dividend, for the half-year, of 5 per cent., being at the rate of 10 per cent. per annum, has been declared, and there is every reason to believe that in no future half-year will a smaller return be secured to the enterprising individuals whose capital has constructed the most important work in Europe.

To the sound and enlightened views of the Chairman on some matters of great interest to railway proprietors at large, we beg to call especial attention. They are worthy of the gentleman who expounded them, and of the colleagues with whom he is associated in the labours of office.

The very full statement of accounts which is appended to the Report, ought to be taken as a model by all the Companies. Some of the results of the last half-year's operations which these accounts so lucidly display, we shall endeavour hereafter to compare with the results on other lines, but in the meantime the following summary, for which we are indebted to the Directors' Report, deserves to be prominently put forward:—

The results of the operations in the six months which ended on the 30th June last, according to the accounts before the present meeting, are as follows:—

The gross receipts are omitting the charge on rents (565*l.*)	£393,731
The expenses, including the allowance for depreciation of stock, interest of borrowed capital, and the charge on rents, are	186,700
The net profit	£207,031

The produce of the traffic exceeds by 5,835*l.* the amount which was received under the following heads in the corresponding six months of 1841:—

Passengers, horses, carriages, dogs, and parcels	£1,841
Merchandise	3,245
Cattle	749
	£5,835

The working charges on the traffic, classed as follows, are on the other hand 15,136*l.* less, viz.—

Maintenance of way and repairs	£5,480	
Locomotive power	5,820	
Police	516	
Coach traffic charges, comprising repairs of carriages	2,949	
General charges	725	
	15,490	
Less increase on merchandise charges, comprising repair of waggons	327	
Total decrease on working charges		£15,163
The interest on borrowed capital is also less by		5,123
and the charge for depreciation of stock by		220
		£20,506
The duty on passengers, however, is more by	388	
and parish rates by	712	
		19,406

Digitized by Google

Making the actual reduction of charge	1,100
To which adding the increase in the traffic	5,835
and in the rents.....	509
The increase of net profit for the six months, as compared with the corresponding half year of 1841, will be found to be	£25,750

The most pleasing feature of this increase is that it chiefly results from a progressive decrease in the charges on the Company's revenue, and particularly in that portion which immediately attaches to the working of the traffic, and which, as appears by the June half-yearly statements, has been successively reduced from 34*l.* 16*s.* 7*d.* per cent. to 29*l.* 10*s.* 7*d.* per cent., and 25*l.* 3*s.* 8*d.* per cent.

The expenditure on capital account is, for the six months	£49,595
but deducting from this sum the allowance charged for depreciation of stock in the revenue account.....	14,325
The increase of the total charge is	£35,250

DISCORD appears to have intruded among the proprietary of the Birmingham and Gloucester Railway, in common with many other railway bodies, and the general meeting which takes place on Friday next will doubtless be the scene of some sharp discussions.

We have already intimated that certain of the shareholders, dissatisfied with the existing management, had got up a requisition for a special meeting, and we find, from documents issued by both parties, that the Directors have deemed it best to defer calling, for the present, such meeting, as it will be competent at the general meeting for the dissentients, or any other proprietors, to enter fully upon the merits and demerits of the mode now adopted in conducting the business of the undertaking.

The near approach of the general meeting would probably have rendered it inconvenient to comply with the wish of the requisitionists, but we confess that we should have preferred to have the somewhat novel system of management in use upon the Birmigham and Gloucester line more fully discussed than it is likely to be at a half-yearly assemblage of proprietors, when so many other topics of interest will be, or ought to be, agitated. If, therefore, the Directors had intimated their intention of calling a special meeting subsequently to the general meeting, on the understanding that *then* the consideration of the question of management should be brought forward and fully entered into, we think much good would have been the result. They would in that case have had an opportunity of laying before their constituents, in their periodical Report, the results of their past experience, and the grounds of their future confidence; and the proprietors, having maturely examined the data placed before them, would have come prepared to give a vote accordingly. As it is, the proceedings of the meeting on Friday next will probably be somewhat after this fashion:—the Report will be read, and its adoption moved; some of the requisitionists will then denounce *in toto* the present system of management; a long debate will thereupon ensue, branching into a variety of trifling or irrelevant discussions, till both parties being thoroughly tired, the vote will be taken, and, the Directors being in a majority, the meeting will break up without transacting any further business, except it may be declaring a dividend. There will be no inquiry into particular items of account—no explanations of particular transactions — no remonstrance as regards the past—no suggestions for future guidance. Perhaps an adjournment of the meeting to an early day might take place with advantage, after the usual business has been disposed of, and the details to which we have alluded have been discussed.

If there really be ground for well-founded complaint as regards the present management of the Birmingham and Gloucester Railway, we sincerely hope that the efforts of the requisitionists will suffice to remedy it by removing the cause. We confess, however, that we look with considerable suspicion upon their motives and movements when we find them including the interest of borrowed money in the "cost of working" the line, so as to bring the per-centage much higher than upon other railways which they specify. This, we think, could scarcely have been done unwittingly by parties who state that they have given "much attention to the mode of management now in operation." Why, then, was it done? Why seek to fix upon the Board of Directors the discredit of being so careless or so incapable that nearly the whole of the gross receipts are swallowed up by the expenses?

We are not apologists for mismanagement either on the Birmingham and Gloucester or any other railway, but we do not like to witness what has at least the appearance of unfairness in exaggerating real, and calling up imaginary, misdoings. Let the Directors have their acts fairly as well as fully canvassed, and whatever the result may be as regards the Board generally, or particular members of it, we are content. The proprietors must beware of becoming parties to schemes having for their object the gratification of personal pique or the attainment of personal aggrandisement. The Directors of the Birmingham and Gloucester Railway have had difficulties of no ordinary kind to contend against. They came into office at a period when the working staff of the undertaking was in the worst possible condition, and when the re-action which never fails to follow delusive statements of a prosperity which has no solid foundation—statements certainly neither made nor sanctioned by the present Board—was beginning to take effect. If, under all the circumstances, their success in administering the affairs of the Company has not been so marked as themselves anticipated, or as the shareholders could have wished, there may be much room for regret, although little or none for blame.

We say again, that we are anxious to see every abuse in the Birmingham and Gloucester, as well as in every other railway, promptly and effectually removed; but we would have the work of reform prosecuted with that discretion which we fear is wanting in some at least of the would-be regenerators.

We give elsewhere the statements and counter-statements which have been issued on the subject, and leave our readers to judge between the Directors and the "Committee."

Since the above was in type we have received a copy of a circular, dated the 9th instant, and addressed to the proprietors by the Chairman of the Directors, Captain C. R. MOORSOM. It is a very able, temperate exposition of many circumstances in connection with the management of the line, which ought to be known to the proprietors before they discuss the questions which will come on at the approaching meeting. We regret that our crowded columns will not permit us to reprint the entire document, but we cannot withhold the following extract:—

"Let me now bring to your recollection the circumstances under which, in March 1841, the Committee of Directors commenced the duties they had undertaken.

"You had been informed that 60,000*l.* was required to complete the stations, together with the locomotive and carriage stock. When the Committee proceeded to the investigation of the finances, they found that the debts alone amounted to considerably more than that sum, and that at least 172,000*l.* must be raised, to place the Company in the position which it had been said the 60,000*l.* would effect. At this time the condition of the engines was such, that little more than half of them were fit to work; the trains were more than once in danger of being stopped for want of engines; they were seldom within the time appointed for their arrival; the Company's servants were inexperienced, many of them inefficient; there was no proper division of labour among them; and, with the exception of the Resident Engineer's department, all was in a state of disorder. But, as the former state of things is sufficiently known to most of you, I need not enlarge further upon it. I only allude to it for the purpose of saying that, if that state could have been known by my colleagues and myself before we took office, we should, perhaps, have not been hardy enough to place ourselves in a situation of such responsibility, with such inadequate means. Nevertheless, it is well for you, perhaps, that we did not know what was before us; for we were thus led on, step by step, till it was too late to draw back: and the result has been that, acting in unison, occupying less time in debate than action, we have effected what no large Board could have done in so short a time—we have reduced to something like order, system, and economy, what was but a year ago the very reverse of all these. It is quite true that much remains to be done—the foundation is but laid, and the superstructure has to be completed; but, then, it is a foundation which will bear the building.

"I think I have a right on this occasion to say something of myself. How was it I became Chairman of your Board? I did not seek it. I was solicited by the Board, and by a body of proprietors holding together nearly one-fourth of the shares, and I consented as a matter of duty. The post conferred no honour, it brought no emolument, directly or indirectly, in any degree to be compared with the fatigue and responsibility it entails. I, at least, do not feel myself the party upon whom an obligation has been conferred.

"Thus summoned to assist in the management of a concern which I knew to be in a tottering state, but which turned out to be all but insolvent, I knew that a Board on the usual plan would be quite unfit to deal with the difficulties; and I therefore made it a condition, that the power should be conceded to a few, who would pledge themselves to a 'distinct, defined, individual responsibility' on a division of duties to be agreed upon. There was great difficulty in inducing any of the Directors to take the parts which, after two or three meetings, the Board proposed to four of their number, who at length consented, and to whom I think the proprietors are under great obligations. And now, after having witnessed and participated in almost as many systems of management of Boards and Committees, in the course of twelve years, as there have been forms of Government among the States of South America in the same period, I state decidedly, that none of them have worked so well as this Committee of the Birmingham and Gloucester Directors.

"Gentlemen,—It is your undoubted right to have your affairs managed in the way you consider best. It is equally my right to attach to my services the conditions which I consider necessary to render them most useful. The facts I have now stated are quite sufficient to establish the efficiency of the system of management that has been adopted. The only valid objection to the system is, that it requires a devotion of time and attention which few men in a situation to become Directors are willing to bestow under the ordinary inducements to take that office. For my own part, I have nothing to gain by remaining in office, and shall lose nothing I care for by quitting it. If, however, you think fit to continue to me your confidence, my exertions in

Digitized by Google

your service shall not be relaxed. If, on the contrary, you are disposed to withdraw that confidence, I shall willingly resign my trust to him on whom you may confer it."

We shall have abundance of time, when the press of the meetings has passed, to dissect very closely the Report of the Brighton Railway Directors and their Engineer, as well as the verbal illustrations and explanations supplied by both parties, and we assure them that it shall be done fully and fearlessly. In the meantime we shall content ourselves with glancing at a few of the more prominent peculiarities of the documents referred to.

Of Mr. RASTRICK we do not mean in this instance to say much. Mr. LOCKE's letter settles *him* entirely. That eminent Engineer states, in effect, that the Brighton Railway *might* have been constructed within the original estimates. Mr. RASTRICK has *doubled* (and before he has done, will *treble*) these estimates, and it is for *him* to show WHY the original calculation has thus, and to such an extent, been exceeded. *This he ought to do* (and we pray Mr. RASTRICK to mark our words), *this he will* be COMPELLED to do, before he can escape most damaging imputations. If he has an answer, let him give it; what he has given is mere surplusage.

With respect to the land; it was a most ingenious device of the Chairman to have prepared a voluminous statement of details upon which no man at a public meeting could enter. Why did not the Chairman—(to whom we willingly accord all the praise bestowed by the meeting for the tact and good-temper with which he met the difficulties of his position)—why did not the Chairman give a concise account of the principal purchases made; of *those, more especially, which were settled by his own individual exertions*, and without the interference of the Board? There may have been no family partiality displayed (although one can easily see how, even in Mr. HARMAN's absence, the relatives of the Chairman of the General Board, and of every sub-Committee in it, may have had "their claims allowed")—the whole transactions relative to the transfer of certain properties may have been fair and equitable, but what of this does Mr. HARMAN's voluminous return show? Do the shareholders at large—does the public—know that these land-bargains were all of them "favourable to the Company?" Is it clear that absolute value, and not favouritism or worse, has been the guiding-star of every official concerned? We need not give *our* opinion; the public, in the absence of the requisite details, will give *theirs*.

Then again as to the future liabilities of the Company. We have deliberately staked our character on the assertion that, *at least*, three millions sterling will be required to complete the London and Brighton Railway. We do not speak of providing a suitable establishment midway (such as the Wolverton and Swindon stations now are), but of completing the line fit for daily operations, and the indispensable accommodation at stations. The Chairman may give the exact amount, even to pence, which *he* deems sufficient to get rid of all works in hand (he does not venture to say what *further* works may be necessary), but who can tolerate the farce of pretending to decide upon the results of contracts of which it appears, from the admissions of the Engineer himself, not one-half are at this moment determined? As regards some of the contracts, we are told that the accounts are "not yet delivered"; and yet Mr. RASTRICK, and his friends in the Direction, boldly assert that such and such a sum will suffice! And to meet these liabilities the Company have—what? Among other available assets, a large number of unissued shares which they estimate at *par!* At par—while the shares are now at about 32 per cent. discount! Was there ever self-delusion equal to this? This very sum of money will be required in the course of a few months, and yet the market is to be inundated with shares at *par*, while many sellers, but few buyers, are to be found at 32 per cent. discount! This is certainly the strongest combination of bold assertion on the one side, and credulous simplicity on the other, which we have recently had occasion to witness.

The shareholders ought to make up their mind to one thing. *Not a farthing will they ever pocket, or profit, from the purchase-money to be paid by the South-Eastern Company.* We desire them to pay special attention to these remarks. We do not speak upon light grounds, nor from any wish to have our prophecy fulfilled. Fulfilled, however, it will be; and when that event shall take place the proprietors will remember our suggestive admonition.

One thing struck us as very remarkable in the Chairman's reference to the terms of the South-Eastern purchase. In the haste of getting up our last week's report, the observation to which we allude was omitted, but it was in effect that the South-Eastern Company, in the investigation now going forward as to the accounts of construction for the purchased portion of the Brighton line, would not be allowed to dispute the *fairness* of the charges which the Brighton Engineer and his superiors have incurred, the only thing necessary for the latter being to produce vouchers for the amounts paid, which amounts must be repaid by the South-Eastern Company. So that, if Mr. HARMAN's interpretation of the Act of Parliament be correct, the South-Eastern Company, having had no control over the works of these six miles during their progress, are now to be compelled to pay back whatever sums may have been negligently, recklessly (we will not say fraudulently) expended thereon—are compelled to pay a proportion of the price which those who *had* a check upon Mr. RASTRICK's whims, and did not exercise it, ought alone to encounter—are compelled to give 100*l.* for that which in real value may not exceed 50*l.*, and which they themselves could have called into existence for that sum—in a word, have all along been at the mercy of the Brighton Executive, to whom economy on *this* portion of the line might be a matter of very secondary importance. We do not allege, for really we know very little of the details of the portion referred to, that extravagance has *there* been more than usually rampant, but one can at once see that a fine field for abuses of all sorts was presented more particularly in those discreditable items of engineering accounts called "extra works," and in the *private* purchases of land. We cannot believe, however, that Mr. HARMAN *is* right in his view of the case, otherwise the South-Eastern Company have indeed made a blind bargain. It is true they had the option of declining to purchase, but when they heard the representatives of the Brighton Company boasting before a Parliamentary tribunal, and at their general meetings, that the works had been contracted for under the estimates, they might well deem themselves fortunate in being allowed to buy, not dreaming that Mr. RASTRICK's mode of framing *a contract* is such that, if we may judge from his enormous "extras," more than one-half of the work to be performed escapes mention. We shall look into the Act which regulates the purchase, and see how the matter really stands.

For the present we pause. We *know* that our strictures have already been productive of benefit to the shareholders in the increased vigilance of the Engineer-in-Chief and his subordinates over the outgoings. The case of the Brighton Railway we have fixed upon as a flagrant specimen of a bad system, and we shall continue to bring such cases before those who have an interest in railways beyond that of raising or depressing particular shares at particular times.

We very sincerely congratulate the proprietors of the Northern and Eastern and Eastern Counties' Companies, on the amicable settlement of the matters in dispute between them, as announced at the meeting of the former Company on Thursday last. The exact terms and full extent of the arrangements entered into we have not learned with sufficient precision to lay before our readers; but almost any arrangement which has ever been in agitation will be better for both Companies than the constant bickerings in which we began to fear they had got involved, and which could not have failed to be as prejudicial to their own interests as they were calculated to bring discredit upon the railway system in general.

For a notice of the various matters brought forward at the meeting we refer to the Report, which appears in another page. We deeply regret that the discussion on *one* point should have led to a personal altercation, which had nothing whatever to do with the merits of the question. Our own opinion upon the subject referred to has already been given, and we only regret that the position in which Mr. SYDNEY BELL happened to be placed, in consequence of the irrelevant matter already alluded to, appeared to detract (although most unfairly) from the weight which otherwise his sentiments could not but have exerted on the meeting.

The offer to take the line on lease at a fixed rent—if made *bona fide*, which from the statements of the late Chairman we are bound to presume it is—shows that a very considerable accession of traffic is speedily expected. When we are fully informed of the character of the arrangements with the Eastern Counties' Company and their probable effects, we shall be better able to give an opinion on the propriety of accepting or rejecting the offer thus made.

It will be recollected that on the occasion of the late meeting of the Edinburgh and Glasgow Railway Company, at which the question of Sunday travelling was so warmly discussed, Mr. M'NEILL brought a charge of forgery against the getters-up of certain Agnewite petitions, and for this he was very grossly assailed in the local journals by the *Reverend* Mr. GLASS, and stigmatised as a slanderer. It now appears, however, that Mr. M'NEILL was right, for within the last few days the reverend gentleman has, in a letter which appears in the Glasgow papers, admitted this much, and made a tardy apology to Mr. M'NEILL. We have no doubt that many other petitions, besides those so properly exposed by Mr. M'NEILL, would, if strictly scrutinised, be found similar to that which the Rev. Mr. GLASS so cordially patronised.

An attempt is making to get up another agitation for the meeting which takes place on

Digitized by Google

the 23rd instant, but it will, most likely, turn out a more miserable failure than the previous exhibition. How long are the proprietors of this great undertaking to have their attention distracted from the proper business of their periodical meetings by the intrusion of parties who have no legitimate connection therewith? We trust that no more deputations, either lay or clerical, will be suffered to waste the time of the shareholders by their sanctimonious ravings.

We are much pleased to learn that the advantages which the Eastern Counties' Railway will most unquestionably confer upon the county of Essex are about to be appreciated, by the formation of a branch line of railway from the seaport town of Maldon to the town of Braintree, with a junction at Witham, so affording to a rich and populous district the benefits resulting from railway communication. We understand that JOHN BRAITHWAITE, Esq., the able Engineer of the Eastern Counties' Railway, has inspected the line, and that the necessary surveys are already in progress.

The Manchester and Birmingham Railway was opened to Crewe on Wednesday. We must reserve the particulars till next week, in consequence of a pressure of other matter.

—o—

The Sheffield and Rotherham Railway Company held their general meeting in the course of the week, when a dividend was declared at the rate of 7 per cent., being 17s. 6d. on the original 25*l.* shares, and 7s. on the new or half shares, on which 10*l.* is paid up. We shall give the Report, &c., in our next.

—o—

We learn that Mr. Buck, the Engineer-in-Chief of the Manchester and Birmingham Railway, has just returned from Altona, and that he has undertaken to complete the railway from that place to Kiel in two years,

—o—

The receipts upon the London and Birmingham Railway amounted last week to the extraordinary sum of 20,672*l.*—a sum hitherto unequalled upon any railway in the world of the same length during the same space.

—o—

The Stamp Duties' Bill has received the Royal Assent. There is a clause in this measure which, had it not fortunately been already disposed of, would have set at rest the dispute between the Eastern Counties' and Northern and Eastern Railway Companies as to which shall pay the Government tax.

—o—

The Select Committee on Post-office communication between England and Ireland have reported (says the *Dublin Monitor)* in favour of the *shortest sea* passage from some port in Wales—either Holyhead or Port Dynllaen—to Dublin; the railway, already completed to Chester, to be extended to said port.

—o—

On the motion of Mr. Wallace, in the House of Commons, returns have been ordered, "in columns, of the sums paid annually for the salary, conveyance, and other charges of the mail guards upon each railway in the United Kingdom; and, as follows, to state the number and names of the mail guards on each line, with the amount of the salary paid him, and the cost of his conveyance, and other sums charged to the public for each respectively, with the sum total annually on each line for guards and expenses.

"Showing the names of those railways, and the length of each line, and the towns that mail bags are conveyed to without Post-office mail guards; also the number of times which mail bags are sent daily along those lines, with the sum paid annually to the Railway Company for taking charge of the mail bags, and sending them by the Railway Companies' guards, so as to contrast the cost of each mode of conveyance.

"To show the loss of mail bags, or the detention of mail bags, from carelessness of the Post-office mail guards; and a similar statement of loss or detention of mail bags on railways where there are no Post-office mail guards, and where the mail bags are sent under the charge of the Railway Companies' guards; in addition to the return ordered on the 26th day of July last, 'of the sums paid by the Postmaster-General to each Railway Company for the conveyance of the mails; stating the number of miles, and the rate per mile paid to each Company under each contract, and the total amount paid to each of the said Companies.'"

RAILWAY OFFENCES AND OFFENDERS.

On Monday a porter named James Catter, in the employment of Messrs. Chaplin and Horne, was fully committed for trial from the Marylebone police-office on a charge of having stolen a quantity of silk from a parcel which had come into his possession while employed at the Camden station of the London and Birmingham Railway.

At the Borough Court, Manchester, Mark Cooper, guard of a goods' train on the Manchester and Leeds Railway, was charged by Mr. H. Woollven, clerk in charge of the Hebden Bridge station, with being drunk when on duty. He was convicted by W. Maude, Esq. in the penalty of 3*l.* and costs.

MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

Sir,—Although I am fully aware you can but ill spare room in your valuable journal for the letters of your correspondents, whilst the half-yearly meetings are in the course of being held, I beg leave to request you will allow me to express the utmost surprise that the Directors of the Manchester and Leeds Company, notwithstanding the frequent remonstrances on this head so particularly directed to them, have again fixed the time for holding the half-yearly meeting *two months and one day (sixty-three days!)* after the end of the half-year! and even then the dividend will not be forthcoming for some time afterwards! For what purpose, I beg to ask, is this apparently very unnecessary delay; why not compel the clerks and Secretary to make up their accounts as early as the Grand Junction Company do, under their clever Manager, Captain Huish?

I am, Sir, yours, &c.

ŒCONOMICUS.

A few evenings ago, a luggage train, consisting of 80 waggons, left Hull for Selby and the interior; its length was nearly half a mile. Whilst on this subject we may be permitted to congratulate the public, as well as the Railway Company, on the success which has attended the establishment of a cheap pleasure train. The former have availed themselves of the opportunity thus afforded them of visiting the delightful neighbourhood of Ferriby and Welton, whilst the latter, we sincerely hope, have been amply remunerated for the accommodation they have supplied.—*Yorkshireman.*

LONDON AND BRIGHTON RAILWAY.

Sir I. L. Goldsmid, Bart., to John Cattley, Esq.

Dear Sir,—As you have two or three times done me the honour publicly to state that it was in consequence of my advice that you joined, and were still a member of the London and Brighton Railway Board, and as you seemed to imply that I was responsible for all the Directors had done, and was not at liberty to question any of their acts, I am anxious to explain how far my responsibility does extend, and to show that it was not hastily nor without deliberation that I advised you and others to join the Direction. I have now before me the official letter of the Secretary, and two letters of the Solicitor, showing that I was not only most strenuously urged to become a Director, but to endeavour to induce you and others to form part of the Board. I stated that I was most unwilling to comply with the request; first because, having made an arrangement for the sale of my land for a depot, and part of the line to Shoreham, I was afraid that some question might arise respecting it between me and the Company; and secondly, because I had no confidence in the estimates made by the Engineer in the midst of all the excitement of the Parliamentary contest—and on this latter ground I distinctly refused to join, or to induce any of my friends to join, the Board, unless Mr. Rastrick not only made a re-survey of the whole line, but also unless he was confirmed in his estimate by some competent person. In reply to the first objection I was assured that, as the agreement was made before the Act passed, and as the substance of a great part of the agreement was introduced into the Act, it was not in the slightest degree probable that any question could arise; and as for the second, it was immediately stated that my request should be complied with in the fullest manner, and I was asked whether I would be satisfied with Mr. Locke for that purpose. Personally Mr. Locke was a stranger to me, but as I recollected that he was one of the most distinguished engineers, I stated that I should feel confidence in the joint Report of him and Mr. Rastrick; and that if it were favourable, I would then comply with the Board. With the contents of that Report you are acquainted, and it was upon the faith of it that I became a Director, and induced you, Mr. J. Hodgson, Mr. Walker, and Mr. Cotesworth (whose names speak for themselves, and require no eulogium from me), to join the Direction. You will admit, therefore, I am sure, that before I took my seat at the Board, and advised you and others to become Directors, I exercised great caution, and that if I am in any way responsible for having brought you into the difficulties under which the Directors and the Company now labour, I did so in reliance on the reiterated opinion of Mr. Rastrick, confirmed by that of Mr. Locke. Under these circumstances I feel assured that you would not have interrupted me at the late meeting, if you had been aware of the contents of Mr. Locke's letter, and had known that that gentleman, to this very hour (after the works have been executed, and with the additional experience that he has obtained), considers the sum at which he estimated the works quite sufficient for their completion. On the contrary, you would have felt, and I think you will now feel, that in justice to me (who relied on Mr. Locke's opinion at the outset), in justice to yourself, to the Directors, to Mr. Locke, and even to Mr. Rastrick, we ought to have a thorough investigation, more especially as it has been acknowledged on all hands that the accounts have been kept in such a way that nobody can understand them, and when a dividend out of capital would have been the result, if I had not, before the late meeting, called the attention of the Accountant, and through him that of the Directors, to their inaccuracies.

Now, my dear Sir, with respect to your second

Digitized by Google

suggestion that I am as well as yourself responsible for the manner in which the affairs of the Company have been conducted, and especially in which their accounts have been kept, this responsibility must be understood with certain limitations. Boards are necessarily divided into Committees; and I was not a member of the Committee of Accounts. Again, since my difference with the Company, I scarcely could, or did, attend any Board or Committee, and was only prevented from resigning by the constant hope that the difference would be accommodated. And further, I am happy to say, I am not responsible for having spent for the proprietors, without any previous intimation of the intention of the Directors to do so, more monies than they were authorised to expend by the Act of Parliament, because I had resigned my seat before that expenditure took place. But notwithstanding all these circumstances, I acknowledge that for the time during which I was in the Direction, I am, as far as regards the public, responsible; and that responsibility is the very reason why I ought to be, and am, the more strenuous for an examination of Mr. Locke, and an investigation of the books of the Company.

My responsibility and yours arise from our having acquiesced in confiding the accounts to persons who now appear to have been unequal to the duty, and from our having trusted in the joint opinion of Mr. Rastrick and Mr. Locke.

Is this a reason why we should be now inactive? Is this a reason why, when the accounts have been declared by a Committee of proprietors to be unintelligible, and when we had last week a striking proof of their imperfection in the fact that mistakes were made in those prepared for the meeting, which were partly corrected in consequence of my remarking them—is their any reason why, under such circumstances, the attempt to remodel those accounts should be postponed from six months to six months? Is there not the strongest reason on the contrary, for doing what I should certainly have done if I had remained in the Direction—for refusing to leave the accounts of the Company under hands that have proved incompetent to the task, and for insisting that they should be at once remodelled, which ought to be done, for the satisfaction of the proprietors, by the same Committee whom they previously appointed with the assent of the Directors? Is there not the strongest reason, when Mr. Rastrick tells us that the enormous excess of expenditure over estimate could not be avoided, and when Mr. Locke (the other gentleman on whom we relied in the outset, and whose opinion Mr. Rastrick did not *then* despise as a check upon or confirmation of his own) tells us, in effect, that he thinks this excess *might* have been avoided—is there not the strongest reason for further consulting Mr. Locke—for further investigating these conflicting statements in order to endeavour to ascertain which is correct?

Are not the steps which I suggest necessary to relieve me from any past responsibility? I think they are. Are they not requisite to relieve you from your responsibility, both past and future? I believe that, on deliberation, you will think so. I believe that, on deliberation, you will find it impossible to continue to lend to the Management of this Company the sanction of your name, unless they be adopted.

Nor do I think that your confidence in Mr. Rastrick will be strengthened, when you consider that he, on whose judgment the expenditure of so large a sum rested, got up, at the public meeting last week, and on a subject being discussed on which, of all others, he should have been most anxious to court inquiry, endeavoured to divert the attention of the meeting from that question, by declaring that the 12 acres of land in the immediate vicinity of the town of Brighton purchased from me by the Company, and the injury done by them to my adjoining property, by the railway passing through the centre of it, and a depot placed in sight of my house, were not worth 300*l.*, although more than 30,000*l.* were paid to me; an opinion of which the laughable extravagance carries its own refutation with it, and shows how far it is safe implicitly to trust Mr. Rastrick's statements. But, at least, if you should still sanction the continuance of the present system of management, and you should hereafter find yourself involved, in consequence, in difficulties which you do not now forsee, I shall have the satisfaction of reflecting that you will not able to suppose that it was my advice which led you into them.

I remain, my dear Sir, very faithfully yours,
ISAAC L. GOLDSMID.
St. John's Lodge, Regent's Park,
August 12, 1842.

JOHN CATTLEY, Esq.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—I was not aware, until I read your Report of the late Brighton meeting, that an opinion I then expressed, that half of the mortgage money had been received at the office of the Company, was met by a contradiction, on the part of Mr. Cattley, one of the Directors, who is reported to have denied that one-tenth had been so received.

The observations I allude to arose out of an inquiry relative to the purport of a paragraph in the Report of the Committee, the answer to which devolved upon me.

I have since ascertained that your Report is correct, and in consequence called upon Mr. Cattley, who said he understood me to refer to the calls upon the shares, almost the whole of which, so far as I can judge from the examination which time allowed the Committee to make of a part of them, had certainly been paid to the bankers.

My statement, as appears in your report, applied to the mortgage money only, and it is not disputed; and had I heard Mr. Cattley's reply, an explanation would have at once ensued.

I am, Sir, yours, &c.
J. M. PARSONS.
Raymond Buildings, Gray's Inn, August 10, 1842.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—Excuse my trespassing on your valuable columns, as I saw in your last number an observation made by Mr. Harman, the Chairman of the London and Brighton Railway Company, in reply to Mr. Bennett, respecting the exclusiveness of the traffic at the Brighton terminus. Mr. Harman there states, that tenders were put out for parties to contract for the conveyance of passengers. I beg to say, this is the first and only instance I have had any knowledge of it.

I beg, Mr. Editor, to state, that I made two applications to the Directors, about the 3rd and 24th of August, 1841, on the occasion of the partial opening to Hayward's Heath, expressing my willingness to forego all to their interest for a portion of the traffic (not wishing to engross the whole, knowing there were other coach proprietors equally injured, though not in extent to myself); and those applications not having been answered, on the 14th September following I wrote to Mr. Wood, the late Secretary, requesting to be informed if my letters to the Directors had been received. He replied they had been laid before the Directors. I fully expected that my loss of business, &c., would have given me a consideration with the Directors, in which they would have found I had a prior claim on them.

Mr. Harman further stated, if they were to allow all the omnibuses in the town to ply at the station, the scrambling and confusion would become interminable; but let the Directors make a selection of those two or three coach proprietors, and pass a resolution that they should have a certain number of vehicles at the station, awaiting the arrival of every train, and the public would not only find a better accommodation, but a more respectable carriage for their use, as under the present arrangements there are seven, eight, and nine omnibuses plying for hire in Brighton, with scarcely a passenger in each, while the terminus is frequently left with an insufficient accommodation, and the public kept waiting at the station.

I am, Sir, your most obedient servant,
T. WARD CAPPS.
Brighton, August 9, 1842.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—I observe in your report of the Brighton Railway meeting that Mr. Rastrick was very impetuous and out of temper at a remark made about calling Mr. Locke in, and asks why he was not called in to review the Grand Junction. The answer is a very plain one, because the proprietors were well satisfied with Mr. Locke and his mode of executing their railway. Will Mr. Rastrick answer this question? Had he, as an engineer, ever superintended a work up to the time Mr. Locke finished the Grand Junction Railway, where 250,000 cube yards of earth had been moved. If so, where?

If Mr. Rastrick does not choose to answer this question, I may perhaps feel disposed to enlighten the public with some of Mr. Rastrick's performances as a *Civil Engineer*.

I am, Sir, your obedient servant,
A BRIGHTON SHAREHOLDER.
Manchester, August 8, 1842.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—Accept my best thanks for your exertions to put a stop to the proceedings of Messrs. Harman and Co.; for it is quite evident, by their Report of last January, that if exposure had not taken place, the expenditure and liabilities would by this time have been approaching towards 3,000,000*l.* I hope a special general meeting will be called.

I am, Sir, yours, &c.,
A SHAREHOLDER.

WEST LONDON RAILWAY.

To the Shareholders.

BROTHER SHAREHOLDERS,—In a very few weeks the half-yearly meeting *must* take place. Permit me most earnestly to entreat your attendance. It is evident the *present* Board can do nothing. The creditors are many of them gentlemen well suited for the Direction, and *of course* anxious to complete the railway. From *them* and *our own body* let us make a Committee, arrange everything of the *old* concern, and commence a *new* scheme, with *new* Directors, to bring the affair to a happy conclusion.

There is a judgment against the Company for 600*l.*, *ordered to be paid into Court* in a very short time; *if this be not done, our railway will be seized and sequestrated.*

Things are *not* so black as they seem; let us not "lose the ship for a hap'orth of tar." In conclusion, let me again impress upon you the necessity for *action*. Unless something be done at the half-yearly meeting, "*stat nominis umbra*," or "*fuit Ilium*" may be our motto.

I am, Gentlemen, yours, obediently,
A BROTHER.

MANCHESTER AND BIRMINGHAM RAILWAY—THE VIADUCT AT STOCKPORT.

[From *Bradshaw's Journal.*]

OF all the modern improvements which have originated in this country, the railway is perhaps the most important in its results, and calculated to be the most permanent in its advantages. Viewed in contrast with all other modes of transit, it presents infinite superiority, in its speed, its unerring certainty, and its cheapness, whilst its applicability to almost every district renders it of universal utility. Invested with these properties, it appears destined to work the most extensive changes throughout the land—changes at once affecting our commercial relations, our social intercourse, and our progress in the arts and sciences. Under its influence towns have been

Digitized by Google

called into existence, in localities where broad green fields formerly flourished—others, once filled with the busy caravanseries of mail and stage coach travellers along the great roads, have again become secluded rural villages—a revolution has taken place in the conveyance of our letters and the transit of our goods, and widely-distant cities have stretched out arms, and joined hands with each other. Not less remarkable are the changes produced by the railways in the general aspect of the country—tunnels have been pierced through lofty mountains—verdant meadows have been intersected, dark woods laid open—mighty rivers spanned—canals diverted—precipitous declivities filled up—hills cut in twain, and despite of all obstacles, highways of mathematical exactness laid down wherever utility directed. The magnificent stations which adorn the termini at Derby, London, Birmingham, and Liverpool, and the chaste Elizabethan structures which grace the North Midland Railway, bear witness of the impulse it has given to architecture, and testify to the elevation it is imparting to national taste, in rendering elegance subservient to usefulness, whilst the noblest triumphs of engineering skill are conspicuous almost on every line.

The view which accompanies this number embodies one of the most daring and stupendous works of art to which the railways have given birth. It occurs on the line recently completed between Manchester and Crewe, and exhibits a roadway actually reared above a populous town, and spanning a valley nearly a third of a mile in length. This splendid structure was designed by G. W. Buck, Esq., the talented projector of the skew bridge on the same railway, which calls forth the admiration of all who inspect it. The viaduct at Stockport is 1,780 feet in length, and is carried on 26 arches, 22 of which have a span of 63 feet. Its length, however, is not its most remarkable feature, but the great height at which the traveller is securely and rapidly carried across the valley below. The height of the parapet above the river is 111 feet, and the rails are about 120 feet above the foundations of the arches. From the top is obtained one of the most favourable views in England of a manufacturing town; far below, streets stretch out on either hand—mills and factories rise out of the dense mass of houses—and around, a forest of chimnies shoot into the air. The chief part of the town, lying to the east of the viaduct, appears in bold irregularity, the fine church of Saint Mary crowning the summit. The prospect towards the west is less artificial in its aspect, and shows that at an earlier period the landscape must not have been devoid of picturesque beauty. Viewed from below, the viaduct appears in all the vastness of its proportions, stretching, with giant strides, over houses and streets, and affording a series of vistas which serve to heighten the prospective; our artist, however, has been so successful in his delineation, as to render detailed description superfluous. The foundation stone of this gigantic undertaking was laid on the 10th of March, 1839, and the whole was completed in December, 1840, although it was not until the 16th of July, 1841, that the first engine and train passed over it. In height it exceeds the Menai Bridge by 4 feet. The quantity of stone used in its erection was above 400,000 cubic feet—and the bricks exceeded 11,000,000. For the information of the curious we may state, that such an amount of bricks, if laid endways, would describe a distance of 1,562½ miles; so arranged, they would reach from London to Ispahan in Persia; from London to Cairo in Egypt, or from the English metropolis to beyond Morocco in Africa, and they would exceed the whole length of the immense Montgolia wall which bounds the Chinese dominions on the north, and would considerably more than reach across the Celestial Empire; they would be above five times the length of Ireland, or ten times the length of the largest county in England, which is Yorkshire. The cost of its erection was upwards of 70,000*l.*

For most of the particulars embodied in the above hasty notice, we are indebted to the intelligent superintendant at the Stockport station.

BIRMINGHAM AND DERBY JUNCTION RAILWAY COMPANY — GENERAL MEETING.

[From the *Midland Counties' Herald* of Thursday.]

THE half-yearly general meeting of the proprietors of this Company was held at the Waterloo Rooms, Waterloo-street, Birmingham, on Tuesday last, for the election of Directors, and for the transaction of other business. There was a very numerous attendance of shareholders, including many large proprietors from London and distant parts of the country.

Shortly after 12 o'clock, the hour appointed for the meeting, HENRY SMITH, Esq., the Chairman to the Board of Directors, took the chair, and briefly announced the objects for which the proprietors had been called together—namely, to affix the Company's seal to the register of proprietors, to receive the Report from the Directors, to pass any resolution that they might think necessary in reference thereto, and to elect Directors in the place of those who went out by rotation. In the first place, however, he would request Mr. Kell to read the minutes of the last half-yearly and special meetings of the proprietors.

The same having been read,

Mr. CRAWSHAY hoped, in all future discussions on resolutions submitted by proprietors, that the number of shares, as well as the votes, would be stated, that they might not only appear on the Company's books, but go forth to the public. He had omitted making this suggestion at the last meeting, for on that occasion, although there was a great majority of votes against his amendment, there was not so large a majority of shares, a circumstance which had material influence on the public mind.

The seal having, by order of the meeting, been affixed to the register of proprietors, the Chairman proceeded to read the Report of the Directors, a copy of the accounts having been placed in the hands of the proprietors on entering the room.

REPORT.

The Directors have to report that, in accordance with the resolutions of the general meeting of proprietors held in February last, they have in the present session obtained an Act of Parliament empowering the Company to raise an additional capital of 100 000*l.*, and that the whole of the new shares created for that purpose at the general meeting on the 2nd of June last, have been accepted by the existing proprietors.

The power for creating this stock was accompanied by the usual power for raising, in addition, one-third of the amount by debentures. This the Directors have exercised, and the sum of 43,000*l.* has been borrowed under it. By this means the Directors have been enabled to postpone the first call on the new shares. It will, however, be necessary, now, to make a call of 1*l.* per share on the new shares. The second call of 1*l.* per share will be deferred as long as circumstances may permit; and so much only of the 100,000*l.* will be called for as, with the amount lately borrowed, will be required by the actual necessities of the Company.

The opening of the main line to Birmingham was reported in February last, and since that time the remaining works have proceeded as rapidly as circumstances have permitted. The communication with the Grand Junction Railway has been completed, and that with the Gloucester line, which was retarded by various circumstances, will be finished in a few weeks, together with that portion of the Birmingham station required for the more convenient accommodation of the mineral traffic.

The engine-house at Birmingham is nearly completed, and the Company will soon be enabled to concentrate their locomotive and repairing establishments for engines and carriages of every kind—a matter both of convenience and economy.

Between the 1st of January and the 30th of June last 82,682 passengers were carried by this railway without accident, making, since the opening of the line, a total of 494,072.

The amount received for passenger traffic in the last half year has been 21,572*l.* 13s. 2d., and for merchandise, minerals, and cattle, 7,727*l.* 12s. 6d., making a total of 29,300*l.* 5s. 8d, being an increase on the corresponding period of 1841 of 1,238*l.* 1s. This increase, though small, is entirely on the local trade, and principally on merchandise, and is so far satisfactory. That it is not greater may be attributed very much to the continued unexampled depression of the general trade of the country, which it is well known has had a similar effect in diminishing the receipts of nearly all the railways in the kingdom. The effect of this circumstance is strikingly exemplified by reference to a comparative classification of passengers for the similar periods of 1841 and 1842, the result of which is as follows:—

	First Class.	Second Class.	Third Class.
In six months ending June, 1841....	20,170	36,225	18,647
" " 1842....	19,554	38,080	25,098

being a reduction in the first class of 616, an increase on the second of 1,805, and on the third of 6,451.

This also shows that the formation of the direct line and the arrangements of the Company are convenient to the local population, and fairly leads to the anticipation of more favourable results with a revival of trade, a more general knowledge of the advantages of this line of railway, and the completion of those which lie between Exeter and Newcastle-upon-Tyne.

The Directors have provided such facilities for the promotion of the passenger traffic as it is in their power to offer, and they cannot but contemplate future advantages from the adoption of further arrangements (for the same end) in connection with the adjoining railways, to the consideration of which the attention of the respective parties has been called, and the results of which, it is evident, must be important.

The carriage of merchandise continues progressively improving, not only by an increase of the original, but by the addition of new branches of trade.

The amount received for traffic in the last half-year was 29,300*l.* 5s. 8d., and that of expenditure 17,492*l.* 12s. 9d., (being at the rate of 673*l.* per week,) to which must must be added 1,145*l.* 17s. 10d. paid for toll to the London and Birmingham Company, and 6,416*l.* 5s. for interest on debentures; making a total of 25,054*l.* 15s. 7d. It must be borne in mind that this is the result of the first half of the year, which is always the least favourable. Statements of the capital and revenue accounts will be attached to the Report.

In reference to the statement of expenditure in the revenue account, as compared with those preceding, the following explanations are offered:—

In the wages of the locomotive department an excess has arisen from the necessity of working the merchandise trains for a part, and the mail train for the whole of the half-year, by Hampton to Birmingham. All is now transferred to the main line of this Company.

The excess in the wages of the coaching and carrying department is caused by the establishment of the new stations at Birmingham and on the main line; to the credit of which, however, must be placed the diminished amount of the toll paid to the London and Birmingham Company, which included the services rendered at their station.

The expense for repairs is augmented, in consequence of the additional time during which the carriages have now been used, but in diminution of it must be taken the balance in favour of this Company on the carriage exchange account, which shows also the greater distance over which the carriages, &c. have travelled, and the consequently larger number that has been required.

In the charge for maintenance of way, the same principle in stating the accounts, has been adopted as heretofore; and it is consequently increased by that for the new line since its opening. With regard to the interest on debentures also, an additional charge on revenue is made for interest due on the last issue of them, calculated from the time at which the new line, on which the money borrowed was expended, was opened.

Of the power to reduce the expenditure of working the line which is afforded by the nearer completion of the works, and the possession of an independent station, every possible advantage has been already taken, and other changes will progressively be effected for the same end. The results of but few of these, however, appear in the present accounts.

The reduction which the Directors anticipated in the expense of maintaining the permanent way has also been effected. Heretofore this has been charged to revenue, at the rate of 180*l.* per mile; such being the average at which the contracts were made, and what it was supposed would be the charge at the present time. Except for a distance of 14 miles the old contracts have terminated, and the rate at which the remainder is taken now is 117*l.* per mile; but from Midsummer next the rate for the whole line will be at 117*l.* per mile, including sleepers and all materials except rails.

The Directors cannot quit this subject without pointedly alluding to it, as testifying most satisfactorily the excellent manner in which the works have been executed by their Engineer, Mr. Birkinshaw.

Referring to that part of the last Report in which the appointment of a Manager was alluded to, the Directors have to state that they have engaged the services of Mr. John Dixon, lately Manager of the Chester and Birkenhead Railway, and he has entered on the performance of his duties.

Connected with the changes which took place on the completion of the works, the Directors have to report the retirement of Mr. Birkinshaw.

The balance of revenue is 5,636*l.* 14s. 3d.; and the Directors recommend that a dividend be declared of 12s. on each old share of 100*l.*, and of 4s. on each new third share. The balance, 539*l.* 18s. 3d., they propose to carry to the next half-year.

The Directors who retire by rotation are Messrs. Beale, Peyton, and Ledsam.

In conclusion, the Directors can only assure the proprietary that they will continue to use their unremitting exertions to increase the traffic of the line, and to promote the interests of the Company in every way in their power.

The CHAIRMAN said, having now read the Report, he could only assure the meeting, that with respect both to the matters therein referred, as well as to the statement of accounts, he should be most happy, so far as he was able, to afford every explanation in his power. He was sorry that the Directors were not able to furnish copies of the accounts earlier, in accordance with the wish expressed at a former meeting; but they had found it to be totally impossible to make up the books before the present time. With this explanation for not being

Digitized by Google

able to do that which they would have been most anxious if they could to accomplish, he begged to move that the Report and statement of accounts be received and adopted, and the acts of the Directors confirmed.

Sir OSWALD MOSLEY, Bart., said, before the resolution was put to the meeting, he should wish for some explanation on matters which he was sure the Chairman would feel great pleasure in giving him. In the first place, it had been a source of great anxiety to himself and other shareholders to find that so great an expenditure had been incurred at the Birmingham terminus. It was most desirable, he admitted, on many accounts, to possess the advantage of a separate terminus at this end of the line; but when they saw the ineligibility, according to his view of the matter, of the situation chosen, it was a great source of regret that so great an outlay should have already taken place, and that that expense should be still continued. He should therefore wish to be informed what was the amount of the expenditure already incurred at the terminus, and what was the probable estimate of the outlay before the whole of the works were completed? He should also wish to know what mode was considered most eligible for forming the communication between their station and the Birmingham and Gloucester line? He believed the communication mentioned in the Report as formed with the Grand Junction Company was for goods only, but he was not quite certain whether passengers were included. Was it proposed to form the communication with the Birmingham and Gloucester station for goods only, or were passengers also included? Another question which he wished to put, arising out of the Report, was, at whose expense were these projected communications to be made? He understood from what transpired on a former occasion, that the expense of forming the communication with the Birmingham and Gloucester line was to be borne by that Company, and that the reason given for the works not being commenced then was, that the finances of the Gloucester Railway were in such a crippled state, that they could not at the time conveniently afford the necessary outlay; but he had since found, by reference to the Act of Parliament, that the junction to be formed was to be made under the direction and superintendence, and subject to the control of the Engineer of the Gloucester Company, but at the expense of the Birmingham and Derby Railway. He wished therefore to know whether they were to be at the sole expense of forming that communication, and what was the estimate of the expense? There was another subject which also arose out of the Report, and one respecting which it was very necessary that they should have some information—namely, the present state of the maintenance of way. By the accounts laid before them, it appeared this was an item of considerable expense, and the contracts which were entered into on that subject in 1840 were said to have expired; but according to his calculations, they would not expire till the end of the current year. The present was the third year of these contracts. One had been made with Mr. John Stephenson, another with Mr. Mulloy, and another with Mr. Copeland. If he understood the Report right, the two latter had ceased—they appeared to have come to a premature dissolution (for the time for which they had been originally let would not have expired till July, 1843)—and he therefore wished to know upon what grounds those contracts had been so dissolved? Another of the contracts which had been made with Mr. John Stephenson—he presumed for the 14½ miles of the line—was still in existence, and he wished to know how it was that this gentleman was the only one of the old contractors who remained at the present sum of, he believed, 190*l.* per mile? In any case it appeared that the concern had been benefitted, because they had now been enabled to let for 117*l.* what was previously let for 180*l.*, according to the lowest of the contracts referred to; but the contracts before entered into had been made under the cognizance of Mr. Birkinshaw, and at his recommendation. He must have considered it eligible for the proprietors, or otherwise, if ineligible, Mr. Birkinshaw must have found it erroneous, and the Company must have been involved in considerable expense beyond what it ought to have been. They were also informed in the Report that a fresh Manager had been appointed; but whether that gentleman was to execute the office of Traffic-master in the room of Mr. Wilson, or to execute any other office under the name of Manager, the proprietors were yet to be informed. Without meaning the slightest personal offence to Mr. Dixon, he would like to know whether he had under his control and management, from time to time, money belonging to the Company? and if so, whether the Directors had taken the necessary security? and to what amount? The next question which occurred to him was with respect to the retirement of Mr. Birkinshaw. He wished to know when it was that Mr. Birkinshaw had retired from his situation, and at what time his salary had ceased—whether it was upon the appointment of the new Manager, or whether it was continued up to the present time?

Mr. GEORGE STEPHENSON said, he would relieve the Chairman from the necessity of answering one of the questions put to him, by saying that he would have great pleasure in becoming security for Mr. Dixon to any amount.

Sir OSWALD MOSLEY—That is no answer to my question.

The CHAIRMAN, in rising to reply to the observations and questions of the honourable proprietor, said that one of the objects contemplated in the holding of general meetings at stated periods was to promote a good understanding between the proprietors and the Directors, and they could not expect to do that without entering into the fullest explanation on every subject upon which information might be wished for. The first question had reference to the site and cost of the Birmingham terminus, with respect to which it was said that considerable dissatisfaction existed. With regard to the cost, speaking from memory, he apprended that it would come to something like 80,000*l.*; it might possibly amount to 35,000*l.*; and with regard to the eligibility of the situation, all he could say was, that it had been chosen after much consideration on the part of the Directors, becuse the question must have necessarily arisen, whether it was better to keep the terminus on a low level with the rest of the line, or elevate it to the level of the adjoining railways. Assuming the possession of an independent station to be desirable, gentlemen must bear in mind the vast additional expense which would have been incurred if they had raised their line to the level of the London and Birmingham Railway, instead of adopting the course they had done, of keeping it on a lower level, and taking the best means they could for securing a communication with the other railways. They knew that the chief merchandise trade of their line, instead of coming to would go from Birmingham, and that therefore it would be better to go down to the station than to bring it up. With respect again to the coal and mineral traffic from Derbyshire, and timber from Hull, they considered that it would be far more important to have an easy communication with the canals than with the adjoining railways. There was another important article which they hoped to obtain hereafter—namely, corn. The reason why they had not carried corn hitherto was, not so much that they could not get it to carry, as that when it came to Birmingham it must be carried up hill. Taking these things into account, as well as the question of cost, the Directors considered that they best consulted the interests of the Company by making their terminus in such a situation as would enable them to communicate with the canals in preference to the railways. With respect to the communication with the Grand Junction Company, it was already known that it had been made, and that it had answered the purpose perfectly well; and by means of the same junction they had been enabled to communicate with the Gloucester line. As to the cost, it had been defrayed by the Derby Company, but having paid for it, they were entitled to and obtained a toll on all goods that passed over it. The Directors made the best arrangement they could, under the circumstances, with the Grand Junction Company, who had met them in a perfectly fair and honourable spirit. They gave the land for the purpose, and the Derby Company made the communication, receiving toll on all the goods that passed over it. The junction was for merchandise only, passengers being conveyed by omnibuses and other conveyances; but it was due to the Grand Junction Company to say that they had proposed to open a foot-road along their embankment from the Derby station to their passenger shed, a measure which would prove a great convenience to travellers wishing to pass from one station to the other, and which he believed would be carried into effect.

The Rev. Mr. BEDFORD—At whose expense is this communication to be made?

The CHAIRMAN—The Grand Junction Company would give the land, and we should propose to make the road.

Colonel BLANE—The carriages do not go at present up the incline.

Mr. BIRKINSHAW—They do occasionally.

The CHAIRMAN in continuation observed, that it was for some time a matter of doubt how the communication with the Gloucester line would be made, because it was believed that that Company, instead of bringing their station on the level of the London and Birmingham line, would have brought it down to the Derby Railway; but, unfortunately, they were not in a position to carry their original intentions into effect; and the communication which they should make with them would be one by *lift*, for everything, in point of fact, but passengers. The cost of making this junction, as in the case of the Grand Junction, gave them a right to toll on all merchandise that passed over it, consequently it would ultimately be no loss to the Company. With respect to the maintenance of way, the reason that the original contract was greater than the present one, arose from a circumstance which he believed was common to every railway. When the railway was taken out of the contractors' hands, it was necessarily incomplete, subsidence had not taken place, a variety of imperfections existed, which the working of a few years would obviate, and this was the reason why the expense was greater at that time than it was at present.

Sir OSWALD MOSLEY—But how came it that the contract expired with two of the contractors, and not with the other?

The CHAIRMAN explained that the notice served to Mr. John Stephenson was informal, and he thought proper to take advantage of the circumstance.

Mr. CRAWSHAY said he would like to know with whom the negligence lay in preventing the Company getting rid of this very disadvantageous contract, which had inflicted upon them a loss of 700*l.* or 900*l.*

The CHAIRMAN believed the amount of informality was, that they did not give Mr. Stephenson a strictly formal notice. With respect to the position which the new Manager was to fill, the intention of the Directors was to employ Mr. Dixon not only in taking the place of Mr. Wilson as Traffic-manager, but that he should be general Manager of the whole concern. It would be his especial duty not only to make himself acquainted with all the sources of their traffic, but to look into the state of the whole concern with respect to the number of persons employed in working the line, in order that he might be able to suggest to the Directors where men might be reduced, and how the working of the trains might be simplified and cheapened. After making himself master of these duties, he would be the General Superintendent of the railway, under the Board of Directors, and only responsible to them, suggesting improvements, receiving their orders, and conveying them to the other departments. In a word, he would be responsible for the good management of the whole concern; and he felt it due to Mr. Dixon to say, that from all he had seen of that gentleman he was perfectly satisfied that he would perform the various duties required of him with advantage to the undertaking.

Sir OSWALD MOSLEY—Is the office of Secretary at all concerned with Mr. Dixon's appointment?

The CHAIRMAN—Mr. Dixon was so far Secretary of the Company that he conducted all the general

Digitized by Google

correspondence connected with the traffic of the line. With respect to his position, there was no doubt that filling so responsible a post, money would from time to time pass through his hands; and there was no question that all persons in such a situation were expected to give security, and no gentleman could take offence at security being required. The Directors had given instructions that every officer in the service of the Company through whose hands money passed should give security, and that Mr. Dixon would be prepared to give all that was required they had been made aware since they had entered the room.

Sir OSWALD MOSLEY—But none, it appears, has yet been taken.

The CHAIRMAN—Mr. Dixon had not yet undertaken the whole of the responsibility of his office. Until lately, the practice was not, he believed, usual to take security from any officers in Railway Companies.

Mr. CRAWSHAY—But the Act of Parlirment requires it.

The CHAIRMAN—It is suggested.

Mr. CRAWSHAY—It is more than suggested; you are required to do so with all your officers.

Sir OSWALD MOSLEY—When does Mr. Birkinshaw's salary and duty cease?

The CHAIRMAN—Notice had been given of a diminution of his salary at Christmas last. Up to the 1st of July Mr. Birkenshaw was in the receipt of his usual salary, but after that time, if he remained longer, it was understood that it would be at a diminished salary, and he was now staying on these terms till Mr. Dixon was fully master of all the duties of his situation.

Sir OSWALD MOSLEY—Will the Chairman state the amount of Mr. Birkinshaw's salary?

The CHAIRMAN—500*l.* since the 1st of July. It was the opinion of the whole of the Directors that it would be advisable to retain Mr. Birkinshaw's services until he had finished certain works which were in progress, especially as it would only be a question of a few weeks. The double salary would cease in a month or six weeks.

Sir OSWALD MOSLEY said that the Chairman had answered his questions, but in some instances not quite so satisfactorily as he could have wished. With regard to the situation of the terminus, it was stated that corn, if brought to Birmingham, would have to be carted up hill; and he could not see how that could be made use of as an argument for choosing a low situation. There were, no doubt, good reasons, notwithstanding, for preferring the present site.

The CHAIRMAN explained that the remark he had made was that the warehouses in which the corn brought into Birmingham was put were on the banks of the canals, which were on the low level: and consequently if they brought 100 tons of grain from Derby to be delivered at Birmingham, they could take it direct from the station by canal.

Mr. OSWALD MOSLEY was unwilling to say another word on the subject, but his objection and that of others was that the situation of the terminus was ineligible for passengers, who were compelled to pay a heavy charge for the conveyance of themselves and luggage to the other stations. He knew that this circumstance had driven many passengers from the line. The honourable proprietor then proceeded to say that the explanation given in reference to the maintenance of way was not satisfactory to his mind, and blame unquestionably attached to the gentleman who had the management of those contracts, and that gentleman was Mr. Birkinshaw. The management of the whole concern appeared to be ceded to Mr. Dixon, who was not only to be the organ of communication with the Directors, but was also understood to be the general correspondent. Now, he did not wish, in the present state of the concern, to involve the Company in unnecessary expense, but he thought it an injudicious kind of economy to concentrate in one individual too much business. Without questioning Mr. Dixon's capacity for the duties required of him, he thought it a dangerous experiment to make one man general correspondent as well as Manager of the whole concern. The Chairman had also informed them that directions had been given to take security from the officers who had money under their control, but he could not help thinking it unfortunate that this had not been done before. They had had defaulters, one to a considerable amount: and if the practice had been earlier adopted, the securities for the parties would be made responsible for the loss. He knew, in the case of the defaulter at Tamworth, it was stated that Mr. Birkinshaw would pay the amount, and that the Company would be borne harmless in the matter, and he wished to know whether such had been the case? Circumstances of this kind only showed that the Directors ought to have abided strictly by the Act of Parliament, which provided that they should take sufficient security from any person appointed to the situation of Treasurer, Receiver, or Collector, before they entered upon the duties of their office. Words could not be more specific, and it appeared that orders had been only just issued to take security from the Company's officers. The honourable proprietor concluded by referring to the requisition which had been presented to the Directors for calling a special general meeting of the proprietors, and to the meetings which were held upon the subject in London, which he was unable to attend. He only knew what took place by the correspondence which he held in his hand, which he would read to the meeting. The letter was from Mr. Routh, stating that Mr. Carter had been in London, and had offered, on the part of the Directors, to afford the requisitionists every information required, adding that the Directors were, in fact, anxious to vary the existing Management, that the large shareholders should be more represented. Sir Oswald Mosley begged to know from Mr. Routh the fate of the requisition, and the result of the promises which had been held out.
